CANADIAN YUKON RAILWAY.

Report on the Stikine-Teslin Route.

By W. T. Jennings, M. Inst. C.E.

In August last the Minister of the Interior commissioned W. T. Jennings, M. Inst. C.E., of Toronto, to examine the country between Stikine River & Teslin Lake with a view to the construction of a railway line entirely within Canadian territory. Mr. Jennings proceeded to Vancouver, thence up the coast in the Government steamer Quadra, to Wrangel, Alaska, & from there by a small steamer via the Stikine River to Glenora, & on by canoe for 10 miles to Telegraph Creek, at the head of steam navigation, & distant from Wrangel 150 miles, & at an elevation of 540 ft. above sea level. On Sept. 25, Mr. Jennings left overland for Teslin Lake, returning to Telegraph Creek on Oct. 22, after a continuous journey of 350 miles. From Telegraph Creek he returned by canoe, reaching Wrangel Oct. 25. In presenting his report as under, it may be mentioned that this is the first time it has been printed in correct form. When brought down to Parliament as a blue book it was found that it had been hopelessly muddled in the printing, & an order has been given for its reprinting. We wish to acknowledge Mr. Jennings' courtesy in enabling us to give it correctly:

In reporting on the result of my observations for a railway route between Stikine River & Teslin Lake, I would first refer to the means of communication between the sea & a suggested point of debarkation on the river, by mentioning that the Stikine has been navigated by steamers to Glenora & Telegraph Creek, a distance of from 140 to 150 miles from the sea, since the early 70's when the Dease Lake & Cassiar mining excitement was at its height, but while so navigated during the open season, usually between May 1 & Oct. 20, the journey has almost invariably been considered slow, tedious & not without danger, partly owing to the inferior class of steamers used & partly to the fluctuating state of the water. At times the river is too low for speed with a reasonable cargo, or the stream may be very high & the riffles difficult to make headway against, with the additional danger of drift trees or snags getting foul of the steering gear or wheel. The latter danger is most to be feared where the channel is contracted, such as in Little & Klootchman's canyons, where, if any mishap occurred to the vessel's machinery, she would at once be carried against the rugged rock walls by the swift, swirling, disturbed waters, & sunk

by having her planking either torn out or stove in. The 96 miles between Wrangel & Little Canyon can be made by a powerful steamer in 1 day, whereas by reason of the swift & difficult water above it takes 2 days (morning of 2nd day, running in daylight only) more to reach Telegraph Creek, a further distance of only 54 miles, or 150 from the sea; therefore, with these facts before one, it seems reasonable that on a route where safe & speedy transit is contemplated it is advisable to commence the railway well down the valley

eastern termination of the granite spur through which the Little Canyon extends (in a straight cleft) & the mountain side, thence across the Ok-Sa-Ki-ee, a rather formidable mountain stream which will require a pile bridge of at least 100 ft. in length, also protection cribwork; from here to the Klootchman Canyon, some 10 miles from the Little Canyon, the course will be generally over flat lands, & occasional short jagged & sloping points of granite & changed rocks & avoiding as far as practicable by-channels or sloughs, some of

which will require to be closed by the introduction of rough cribwork.

At the Klootchman Canyon it is advisable to carry the line at some what higher level than ordinary to ease the curvature & avoid filling in the water where short, sharp indentations in the short line exist.

From the latter point broken flats & occasional rocky points will have to be crossed to reach the left shore at the Grand Rapid (a particularly swift section of the river), where the foot slope of the last spur of the Coast Range proper comes in close proximity to the river. Here a short, strong shed will be required, as it is evident that snow slides annually; passing this spur, a gravel bench will have to be cut into, thence the line will continue over the Doch-da-on, a stream very similar to the one before referred to, & on over bottom lands and along the river's side of an almost isolated ridge of granitic or altered rock facing the clear-water valley, & thence continuing on gravel benches & short, irregular rocky projections & across several minor streams to a point where the river may be crossed by a bridge about 775 ft. in length, placed at such an elevation as will ensure its safety during high waters periods when the water level is fully 15 ft. above its lowest mark.

Should it be desirable at a later date to continue a railway to the vicinity of Dease Lake or to meet a line from the Skeena or Nasse Rivers the ground ahead is favorable for construction at moderate cost. Again, should a route, now being examined by one of my assistants (via the Clearwater) be found practicable, the Stikine would likely be more advantageously

crossed lower down the river; however, of the Clearwater route I am unable at present to say more than that the valley of that river appears open & easy as viewed from the Stikine River.

From the crossing of the Stikine to the divide between the Tahltan & the Koketsi streams there is a choice of routes. The first by an immediate & steep ascent along the right slope of the Stikine valley, over rock & gravel formation & through an indentation in the range where Telegraph Creek has

THE HON. A. G. BLAIR, Q.C., M.P., MINISTER OF RAILWAYS AND CANALS.

at a point to be determined on below the Little Canyon & on the left bank of the river 96 miles from the sea.

The route from a point below the Little Canyon, where suitable dock & siding accommodation is to be had, on for 30 miles to a crossing of the river near Shakes Creek, has been laid down on the left side of the river as being the least subject to snow slides owing to the mountain slopes being more distant & less precipitous, & to enable the line to be carried through a depression between the

TELEGRAPH CREEK, STIKINE RIVER.

its rise in a regular glade-like pass at an elevation of 3,100 above the river level (at crossing), & distant 27 miles therefrom; thence down the easy pine-clad slope of Arthur Creek to the South Tahltan & on over flats & light rolling ground to Koketsi divide, 19 miles from the pass or 46 from the crossings. The grades on this section, particularly on the Stikine slope, will be severe, reaching in places to 4% to ensure moderate construction cost.

The 2nd route follows the right slope of the Stikine with a gradual rise over better ground than to be had on the Telegraph Creek route, to the eastern or tongue-like end of the range terminating at the confluence of the Tahltans and Stikine rivers, & where the mountains gradually fall away to high rolling timbered hills. The ascent to this point, some 1,200 ft., would be reached in 30 miles, over moderately inexpensive country with gradients which need not exceed 2%.

From this point the route continues along the right slope of the Tahltans, in places in steep & rocky ground, with only such light undulations in the grade line as local circumstances may economically demand, to near the Forks of the Sh. Tahltan where the stream should be crossed & the line continued on easy clay & gravel slopes & benches to the Koketsi divide, or to the same point as described for the 1st or Telegraph Creek route, a total distance of 59 miles from the Stikine crossing & 12 miles longer than by Telegraph Creek.

I would here point out that route no. 2 although longer has several advantages over the other to which due consideration should be given, viz.: the gradients are lighter, so that with the same engine power in about equal time heavier tonnage could be transported to Koketsi. The work of construction would be less per mile. It would approach 12 miles nearer the Dease Lake Disk & Tooya river basin than that via Telegraph Creek, therefore more favorably situated for future extension eastward to Dease Lake, or to meet a line from that district, or the sea coast, via the Naas or Skeena River valleys.

It is also possible that a route from here to Teslin Lake via the Tooya River is to be found, & as it may be inquired why that country was not fully examined, I would state that the time or means at my disposal was not sufficient to enable me to cover personally, or by assistants available, more country than was examined.

thence descending (200 ft.) slightly for 8 miles through a broken, lumpy & irregular looking valley, bounded on the north by the escarpment & slope of Level Mountain, to the head of the Doo-de-dontooya river at Me-a-de-le Lake, a total distance of 14 miles.

The route from the Koketsi divide is through an open valley as far as seen by me (2 miles), but I am informed by an assistant who examined it that towards the head it is a series of canyons & broken, irregular masses of rock intermixed with the gravel on slopes; however, by commencing to rise with a heavy gradient some distance back on the last section it is probable that a line may be obtained above the "canyon" portion of the walls, which are not usually very high in this section. The summit once reached, the descent (as viewed by me from an elevation of 4,000 ft. at Egnalls Mountains) would be made through a section of country apparently composed of broken & disconnected hills as above described.

No. 2, or the alternative route, would be 15 miles from Koketsi to the head of the east branch of Egnalls Creek, with a rise of 1,400 ft., thence in 7 miles a descent of, say 150 ft. to Me-a-de-le Lake, in all 22 miles from Koketsi, or 8 miles longer than no. 1 by the North Fork.

It is evident that with a distance of 15 miles in which to make the rise of 1,400 ft. a much easier grade can be had than by way of the North Fork, but I cannot advise such a course unless the whole of route no. 2 be adopted, when it would be an

At Koketsi (1,700 ft. above the Stikine crossing) there apparently occurs another choice of route for a short distance, & of which I again refer as nos. 1 & 2. No. 1 extends from Koketsi up the valley of the north fork of the Tahltan River to its head, distant say 6 miles, in Level Mountain (a vast basaltic & gravel covered plateau extending north to the Nahlin River 70 miles) & at an altitude of about 1,600 ft. above Koketsi,

object to incur the expenditure for additional mileage for the sake of obtaining easier gradients; again, within the limits of this part of the route are several alternative plans.

1st. To keep on easy ground, to the right of the Tahltan to Koketsi divide, thence along the southern margin of the lakes of same name, & crossing the stream at Profile rock, & there commencing an ascent of 9 miles along the side hill to the summit of Egnalls Creek, with a 3% grade, easy curvature & comparatively light work, thence from this point descending to Me-a-de-le Lake over the ground before referred to. 2nd. A line should be tried through a high depression north of Profile rock by commencing the ascent east of the North Fork crossing. 3rd. A minute examination should be made up Quartz Creek ravine, as it appears open to the north.

Only by an instrumental survey, with measured distances, can the proper route in this vicinity be determined, & the base of operations should be established by running up the North Fork & over the summit to Me-a-de-le Lake & returning by Egnalls Creek & the Koketsi to place of beginning.

From Me-a-de-le Lake, for the next 118 miles a line is common to both routes, & extends northward in a very direct course for 57 miles to the Nahlin river over flats, glades & gentle slopes in the valley near the base of the western shed of Level Mountain with a small percentage of curvature, easy gradients & light work. For a considerable proportion of the distance the country is timbered with a small growth of spruce, pine, scrub willow & alder, the spruce, however, predominating. The surface of the ground through the whole valley is covered with a deep growth of moss, & in places brush & coarse tufted grass. The soil consists of light clay, sand & gravel, with drift boulders & occasional masses of basalt & limestone.

The 7 or 8 streams passing over are small & unimportant, a short pile trestle being sufficient for each, the names of the largest being the Doo-de-dontooya, Massazooya-Ka-a, Tooya & Ka-hak.

The Nahlin River where crossed on the trail is at least 150 x 6, with 1% fall at flood, & runs in a valley, & is about 1,200 feet wide, 5 ft. deep, with 1-2 to 1 slope, but where the line is projected, at a point some 4 miles above the trail crossing, it runs in a much contracted V-shaped trough about 100 deep & 50 wide.

FIRST CANYON ON STIKINE RIVER ABOVE TELEGRAPH CREEK.

At the Nahlin River, Level Mountain or plateau terminates, but the high ground continues northward in a more elevated, irregular & mountainous form; & it is at the foot of its western slope & bordering the eastern edge of an extensive marsh & lake district called Grand Valley that the line is projected in a northerly course to a regular, easy rolling bench area reaching from the Cascades of White Swan River to & along the margin of Teslin Lake. On the section of 67 miles between the Nahlin & Teslin Lake several streams are crossed, but none of such importance as to require more than an ordinary pile structure. The soil is principally of a sandy gravel nature & very little rock will be met with on the location line.

From the Cascades & to the end of a river (which I have named White Swan) flowing into the extreme South of Teslin Lake, northward for many miles the slightly undulating gravel bench land covered with small spruce, etc., continues; therefore the point for a terminus need not now be defined, beyond the statement that it should be situated north of the shallow narrows & on the open portion of Teslin Lake at least 10 miles beyond where White Swan River enters its estuary-like southern end, thereby ensuring a longer season of navigation, as the shallow, contracted portion doubtless freezes over some weeks before the lake. As Teslin Lake & its outflowing river of same name will form the subject of another section of this report, I will only say that both lake & river are favorable during the open season for navigation by steam & other craft.

Should the Clearwater Valley prove favorable for railway or road construction, a very considerable saving in distance will be effected to Egnalls Mount, where the line may be united with any one of the routes above described, or it can be carried down the Sheslay River, some 10 miles, & through a gap near the north end of Hearts Mountains to the Doo-de-dontooya River, thence to a junction with the first line.

Provided all arrangements are made & the location determined upon by April, 1898, the line of railway by either route shown on the plan can be completed & in operation by September, 1898, at a cost of \$4,000,000, that portion situated on the Stikine River below the crossing, including the bridge, costing \$746,000 of the total amount.

Estimates.

Then follows a report on a track survey & examination of Teslin Lake & Hootalinqua River, by A. St. Cyr, D.L.S., for which we have not room in this issue.

Mr. Jennings also reports on 4 other railway routes as follows:—1. From Chilkat or Dyea Inlets to the Yukon River via Norden-skiold River, 245 miles, the cost of which, with all appliances for business, he estimates at \$5,635,000 or \$23,000 a mile.

2. From Dyea via Chilkoot Pass to Tagish Lake and thence to Hootalinqua River, 111 miles. Estimated cost \$3,030,000 or \$27,318 a mile.

3. From Skaguay via White Pass to Tagish Lake, thence to the Hootalinqua River, 123 miles. Estimated cost \$3,236,000 or \$28,309 a mile.

4. Via Taku Inlet and Nakinka River to Teslin Lake, 145 miles. Estimated cost \$3,485,000 or \$24,034 a mile.

Mr. Jennings also reports on a route for a trail from the Stikine River to Teslin Lake, & gives a lot of valuable information in regard to freighting.

The Contract with Mackenzie & Mann.

On Jan. 25 the Dominion Government, represented by the Ministers of Railways & Canals & of the Interior, entered into a contract with Wm. Mackenzie, of Toronto, & D. D. Mann, of Montreal, for the construction of a railway from the Stikine River to Teslin Lake. Following is a copy of the contract divested of a little of its legal verbiage:—

1. The contractors to lay out, construct, equip & fully complete a railway with proper terminal facilities from the navigable waters of the Stikine River in B.C., at or near the mouth of Telegraph Creek, Glenora, or the mouth of Clear Water River, northward to the navigable waters of Teslin Lake, a distance of about 150 miles, on or before September 1, 1898, the railway when fully completed to be of the general standard & gauge of the Kaslo & Slocan Ry. in B.C., & according to specifications to be approved by the Minister of Railways.

The railway shall be the property of the contractors but shall be subject to inspection & approval by an engineer to be named by the Minister of Railways before being accepted as complete by the Government.

For the purposes of the season of 1898 & of complying with the requirements of this contract in respect to the completion of the line on or before September 1, it shall be sufficient if, on or before that date, the contractors have the rails laid in such a manner as will permit of regular & efficient operation of the railway, although the whole work be not fully completed, & if the railway be sufficiently equipped for such operation. The location of the railway between the points mentioned shall be such as the contractors may decide upon without filing plans thereof prior to completion, provided that the grant of land hereby contracted for shall not be made upon a larger mileage than the Minister of Railways considers reasonably necessary for traversing the distance between the terminal points.

2. The Government shall submit to Parliament at its next ensuing session a measure for the necessary Act confirming this agreement & authorizing the Government & the contractors to carry it out, also incorporating the contractors & such others as may become shareholders into a company under the name of the Canadian Yukon Ry. Co. or other name approved by the contractors, with power to acquire & carry out this agreement, & with all necessary powers to build & operate the railway & an extension thereof northward to Dawson City or thereabouts & an extension southward to a point in B.C. to be designated by the Government & capable of being made an ocean port, also a railway from the waters of Lynn Canal to Port Selkirk or thereabouts,

by way of Chilkat Pass, also branch lines of railway from any points on the Co's railways to any property owned by the Co., also lines of railway from any navigable waters to any property owned by the Co.: Provided that the power to build the line from Lynn Canal to

line of railway shall be authorized by Parliament to be constructed from Lynn Canal or thereabouts or from any point at or near the International Boundary between Canada & Alaska into the Yukon District, & for five years from said date no aid in land or money shall be granted to any person or company other than the contractors & the contractors' Co. to assist in building any such railway.

5. The contractors & the contractors' Co. shall be entitled to receive in preference to any other person or company during 10 years from September 1, 1898, such aid or assistance in land or money as the Government may be authorized & may see fit to grant in aid of a line of railway from the Stikine River to an ocean port in B.C., provided that the contractors or contractors' Co. are willing to undertake construction of same at once & completion thereof within a reasonable time upon receiving notice from the Government.

6. The tolls to be collected by the contractors or contractors' Co. upon the railway between Stikine River & Teslin Lake shall be 1st fixed by the Governor General in Council, & shall not be liable to reduction until the railway has been in operation for 4 years, but the tolls shall be reduced by the Governor in Council by 25% from & after such 4 years, & after the railway has been in operation 7 years they shall be reduced by 25% off the tolls as previously reduced, but after the railway has been 10 years in operation the tolls shall be subject to the general railway laws of Canada in that behalf.

7. The land granted to the contractors or contractors' Co. hereunder shall be free from taxation for 10 years from the granting thereof, except municipal taxation by an incorporated city, town or village within the Yukon Provisional District.

8. The contractors shall immediately construct a practicable sleigh road from the mouth of Stikine River to Teslin Lake & shall provide suitable shelters or stopping places for travellers at intervals of not more than 25 miles along the road, the road & stopping places to be available for use at the earliest possible moment & in any event not later than 6 weeks from the execution of this agreement.

9. The contractors or contractors' Co. shall provide or arrange with others to provide steamboat transport of freight & passengers between the terminus of the railway on Teslin Lake or other terminus northerly thereof and Dawson City to & fro.

10. The contractors shall within 10 days

after the execution hereof deposit with the Government in cash or approved cash security \$250,000 as security that the railway from Stikine River to Teslin Lake will be completed & equipped in accordance with the terms hereof, & on the railway being completed & equipped & accepted the security shall be returned to the contractors, & if it be deposited in cash, interest at the rate of 3 per cent. per annum thereon shall be paid for the time it has been deposited.

11. In aid of the construction of the railway from Stikine River to Teslin Lake the Government shall grant to the contractors for each mile of railway 25,000 acres of land to be selected as hereinafter mentioned from the Yukon Provisional District & from that part of the Northwest Territories of Canada lying west of the Mackenzie River and Liard River & north of the 60th parallel of latitude, such land to be vested in the contractors upon the railway being completed and accepted as complete by the Government & upon the land being selected as hereinafter set forth.

12. The lands shall be selected by the contractors along base lines & the base lines may be of two kinds: 1st. The contractors may take as a base line a line which will correspond with the general course of any lake, river, stream or watercourse, such line to be determined by survey or approximate survey

MR. WILLIAM MACKENZIE.

Port Selkirk & the branch lines & lines from navigable waters shall not be exercised without the consent of the Governor-General-in-Council.

The Act of Incorporation to give the Co. sufficient powers to build & otherwise acquire & operate docks, wharves & lines of steam & other vessels in connection with its railways & property, also telegraph & telephone lines, also to carry on mining and smelting operations & such other powers as may be necessary to operate & conduct all business connected with & incidental to the development & working of the lands (to be granted by the Government as hereinafter provided) & the minerals therein, including power to issue land grant bonds & bonds secured by the Co's undertakings.

3. Upon the incorporation of the Co. & upon the assignment by the contractors to such Co. of this agreement & upon the Co. covenanting with the Government to carry out the same, & upon the railway from Stikine River to Teslin Lake being completed & accepted, the contractors shall be relieved from personal responsibility hereunder & the Co. shall be thereafter deemed to be the parties of the second part hereto in lieu of the contractors & shall be bound as such, & be entitled to their rights hereunder.

4. For 5 years from September 1, 1898, no

MR. D. D. MANN.

to the satisfaction of the authorized agent of the Minister of the Interior, & to follow the general course of the lake, river, stream or watercourse for the required distance. The contractors may take as a base line a line commencing at any point located by them &

Mr. Jennings' estimates, on page 3, are for a standard gauge railway, equal to that required of bonused railways by the Government, & as if done under a manager of construction for the Government.

The Construction of the Line.

Directly the contract with the Government was signed, Messrs. Mackenzie & Mann made all construction arrangements with characteristic promptness. Mr. Mann at once left for the Pacific coast, establishing his headquarters at Vancouver, & was followed a day or two later by T. H. White, C.E., of St. Thomas, Ont., well known in connection with C.P.R. construction work, particularly that of the Pasqua branch in Assiniboia. J. H. Kennedy, C.E., and E. E. Weldon accompanying him as assistants.

One of Mr. Mann's first moves was to charter R. Dunsmuir & Sons' steamer Joan to transport men & supplies from Vancouver to Wrangel, & to secure a Canadian island north of the entrance of the Portland Canal for a point of transhipment.

Mr. Mann started to press representatives that the first thing to be done was the construction of a sleigh road through to Teslin Lake. The first party to go north consisted of some 200 or 300 men & 50 or more teams to establish camps at regular intervals of 25 miles. It is the intention to make this road a permanent winter route, & at these camps accommodation will be furnished for travelers and horses similar to that provided at any ordinary stage route hotel. Arrangements were at once made for an exploratory survey of the country, to locate the line & get timber.

According to Mr. Mann, by the time navigation on the Stikine River opens, which will probably be before May 1, a portion of the line will be graded & ready for the rails, & these & the rolling stock, which have been ordered in the East, will be taken up. The force of men will be increased as soon as a larger number can be worked to advantage, & by the time construction work is well started at least 4,000 men will be employed. "As you are aware," said Mr. Mann, "we have to complete the line according to the terms of our contract with the Government by September 1, & shall thus have to do some speedy work. In fact, it will probably be the quickest job in railway construction ever carried out on this continent. We will pay our men good wages and will employ as many local men as possible, but owing to the short

time allowed for the work & the number of hands required we shall have to get men from outside places as well. Taking May 1 as the date of the opening of navigation, we will have 120 days in which to lay between 140 & 150 miles of railway. According to the contract we have to furnish transportation from the mouth of the Stikine River to Dawson City, & shall thus run steamers on both the Stikine and Teslin Lake and Hootalinqua River. These are now being built in the East and will be brought out in sections and put together here. Of course, a large amount of supplies will be needed, & these will be principally bought in Vancouver & Victoria,

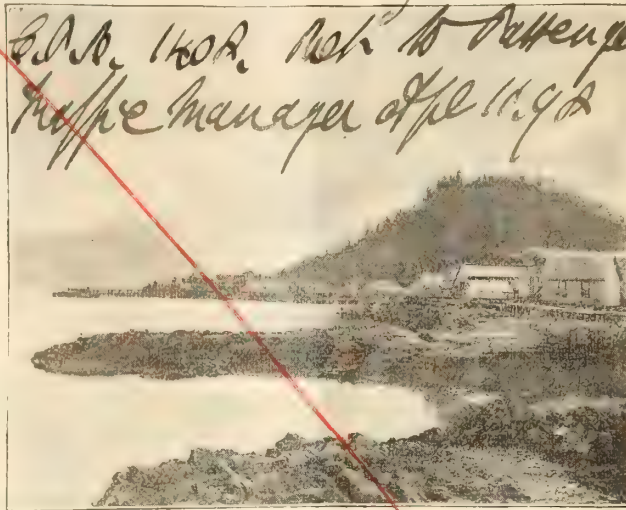

"I believe," said Mr. Mackenzie recently, referring to hostile United States legislation, "that everything will be arranged amicably. In any event, Canadians have a right to navigate the Stikine River, & steamboats can ply on it for 5 months of the year. We have three outfits already and the line is being located. Until this work is completed there is no necessity for rushing men north. We begin track-laying operation in April. At least 4,000 men will be employed. It is probable that the Government will eventually extend the projected Teslin Lake road southward to a point on the Canadian seaboard, for instance, to a point on the Alice Arm, or on the Portland Canal."

Act to Confirm the Contract.

Within a few days after the opening of Parliament last month the Minister of Railways introduced a bill to confirm the contract & to incorporate W. Mackenzie, D. D. Mann & Roderrick J. Mackenzie, & such others as may become shareholders, as The Canadian Yukon Railway Co., with head office in Toronto, or such other place in Canada as the directors may select & with a capital stock of \$10,000,000, in \$100 shares, subject to increase under certain circumstances. When not inconsistent with the provisions of the bill, the Railway Act and amendments to apply to the Co.'s railways, but section 57 of that Act is not to apply to Mackenzie, Mann & Mackenzie, or to their executors or administrators. The directors are authorized to create preference stock. Section 89 of the Railway Act, which prohibits companies dealing in the shares & securities of

other companies, is not to apply to this Co. Powers are given as to owning & operating steamers, docks, elevators, or to acquire & operate mines, make & supply electric light, heat & power, & construct & operate telegraph & telephone lines. Bonds, etc., not exceeding \$25,000 a mile may be issued & additional issues may be made, secured by mortgage on lands.

The bill gave rise to a long debate, in which the contract was vigorously denounced by all the Conservative speakers with one exception, and an amendment protesting against it was moved. At the time of writing (Mar. 5) the debate is still in progress.

WRANGEL AS IT WAS.

in both of which places we shall open offices."

Mackenzie & Mann have purchased from the Great Falls & Canada Ry. 80 miles of narrow-gauge rails, 4 locomotives and a number of cars, to be used in the construction & operation of the new road.

The men constructing the sleigh road to Teslin Lake are under the superintendence of Neil Keith, a well-known western contractor. As soon as the railway line is located 1,000 more men will be sent in to grade, & it is expected 4,000 men will be employed altogether. The contractors expect to put through some 250,000 or 300,000 tons of supplies this year.

VICTORIA JUBILEE BRIDGE.

The Grand Trunk's New Structure at Montreal.

On May 4 last work was begun on the replacing of the famous tubular Victoria bridge over the St. Lawrence River at Montreal, by truss spans, to be known as the Victoria Jubilee Bridge. Work has proceeded so satisfactorily that the masonry of the abutments & 18 piers has been completed. One span of the superstructure at the west end of the bridge is in place & the larger part of the material for the remaining spans is manufactured and ready for erection.

It has been popularly supposed that Robert Stephenson, the famous English engineer, designed the Victoria bridge, but the late Myles Pennington, in his "Railways & Other Ways," says that while Stephenson was the consulting engineer, to Alex. M. Ross must be given the credit of being the suggester, plan-

ner & designer of the structure. Mr. Ross had been connected with many railways & public works in Great Britain before he visited Canada. He came here on behalf of English capitalists in 1852. John Young, Commissioner of Public Works for Quebec, pointed out to Mr. Ross the importance of bridging the St. Lawrence. Mr. Ross, after inspecting the locality, suggested the construction of an iron tubular bridge, & returned to England in the fall, carrying with him soundings & plans of the bridge as designed & located by him. In August, 1853, a complimentary dinner was given to Robert Stephenson at Montreal, when he acknowledged that an abundance of information had been brought to him in England by his esteemed friend Ross, & that he was able to get a good idea of what the bridge was to be before he came to Canada. He added that it was one of the proudest days of his life when he was called to confer with the engineers of the G.T.R. on bridging the St. Lawrence.

The construction of the bridge was an undertaking of great engineering & practical difficulties, but money, perseverance & skill overcame them all. Mr. Pennington gives some idea of the discouragements which were met with. The contractors had to contend with a roaring rapid 2 miles wide, shoves of ice from 3 to 7 ft. in thickness & from 15 to 20 square miles in extent, coming along slowly but surely, with a pressure of millions of tons. Before building a cofferdam wherein to erect a stone pier it was necessary to put down above the site mooring cribs to hold barges & steamboats in position while the building of the cofferdam was in progress. One winter a large staff was employed cutting holes in the ice & putting down wooden cribs which were weighted with heavy blocks of stone. This was done to save time in spring, but when the ice shove came it cleared away all the cribs & carried the stone into the very spot where the cofferdam was to be erected. Thus the whole winter's work, instead of being of any advantage, was attended with very much loss, both in time & money, for in the spring new cribs had to be put down,

been largely augmented by the cost of alterations & repairs.

The tubular form of bridge, then already in use for the railway bridge over the Menai Straits in Wales, was adopted. The tubes were constructed of boiler iron & were 16x20 ft. in sectional area, with a simple plate floor & roof, instead of the cellular construction adopted in the Menai Bridge. The bridge is 9,144 ft. long, the total length of the ironwork being 6,592 ft. There are 24 piers & 2 abutments, containing 100,000 cu. yds. of masonry, the thickness of the piers at the water line being 18 ft., except for the 2 piers of the channel span, which are 28 ft. wide. There are 25 spans, 24 of these ranging from 242 to 247 ft. in length, and the centre or channel one having a length of 330 ft. The height from the water to the bottom of this tube is 60 ft., & the bridge has a grade of 1 in 130 from each end to this span. The total weight of iron in the tubes is 9,044 tons, & the area for painting in each coat was 32 acres. The greatest depth of water is 22 ft., & the average rate of the

FIG. 1.—THE VICTORIA TUBULAR BRIDGE.

ner & designer of the structure. Mr. Ross had been connected with many railways & public works in Great Britain before he visited Canada. He came here on behalf of English capitalists in 1852. John Young, Commissioner of Public Works for Quebec, pointed out to Mr. Ross the importance of bridging the St. Lawrence. Mr. Ross, after inspecting the locality, suggested the construction of an iron tubular bridge, & returned to England in the fall, carrying with him soundings & plans of the bridge as designed & located by him. In August, 1853, a complimentary dinner was given to Robert Stephenson at Montreal, when he acknowledged that an abundance of information had been brought to him in England by his esteemed friend Ross, & that he was able to get a good idea of what the bridge was to be before he came to Canada. He added that it was one of the proudest days of his life when he was called to confer with the engineers of the G.T.R. on bridging the St. Lawrence.

The construction of the bridge was an undertaking of great engineering & practical

& the stones strewn over the bottom of the river had to be fished up one by one before the building of the cofferdam could be commenced. The stone for the first pier was laid July 22, 1854, by Sir Cusack Roney. On November 24, 1859, Vice-President Blackwell of the G.T.R., Attorney-General Cartier, of Quebec; Jas. Hodges, Superintendent of the bridge construction; A. M. Ross, Engineer; W. Shanley, Major Campbell, Messrs. Gzowski, Macpherson, Forsyth, Captain Rhodes & others were the first to cross the St. Lawrence by the new bridge. Mr. Blackwell was on his way to England to attend the Grand Trunk meeting, & was able to report himself as coming via Victoria Bridge. On August 25, 1860, the last stone was laid & the last rivet driven by the young Prince of Wales, on which occasion a grand banquet was given near the bridge, at which addresses were delivered by the Prince, the Duke of Newcastle & others. To commemorate the event Mr. Blackwell presented a gold medal to the Prince & bronze medals to the officers of the G.T.R. The bridge cost \$7,000,000, which sum has

current is 7 miles an hour. The contractors for the bridge were Peto, Brassey & Betts. Fig. 1 is a general view of the bridge. Fig. 2 shows in more detail some of the end spans, with the iron casings of the ends of the tubes, which form refuges for the trackmen. It also shows the side openings for ventilation.

The smoke and gases from the locomotives in this long iron tunnel made the atmosphere very foul, and within recent years a strip of the plating along the centre of the roof was removed, the roof being reinforced by riveting angle irons along each side of the opening. Rust & corrosion (from the products of combustion, damp, & the drippings of brine from refrigerator cars) have made inroads upon the ironwork, & while these did not reach such an extent as to impair the safety of the structure, yet they, in connection with the incapacity of the single track bridge to provide properly for all the traffic, led the Company to decide upon erecting a new superstructure, which has been designed under the direction of the Company's Chief Engineer, Jos. Hobson, to whom THE RAILWAY & SHIPPING

WORLD is indebted for much of the information contained in this article.

THE NEW BRIDGE.

The masonry of the piers is being extended on the upstream side, to meet the requirements of the enlarged superstructure, but this addition is only above the water table of the cutwaters of the piers, as the present foundations are ample for the new work. The extension varies from 21 to 25 ft. On the downstream side the piers are being extended upward in line with the old masonry so as to give the additional width required for the new bridge. The masonry is of limestone ashlar, & the contractor for the extension of the piers is Wm. Gibson, M.P., of Beamsville, Ont., who has done a great deal of bridge & culvert work for the G.T.R., as well as the approaches to the Sarnia tunnel. A part of the walls and portals of the abutments of the bridge had to be taken down, & the upper portions of the piers (at their south ends) are also being taken down to such an extent as to admit of lengthening the piers as above described. Examination of the masonry showed that the material removed would be unsuitable for use for the external masonry, & it was thought it might be employed for the backing, but when it was removed it was found to be quite unsuitable, as it crumbled under slight pressure. Each course of the new masonry is to be of the same depth as the course of the old masonry of which it becomes an extension, & all the masonry will be built of dimension stone, all faces being pick or hammer dressed. The vertical joints in each course must overlap those in the course below by at least 12 ins. The backing will be of squared or dimension stone, of the same thickness as the face stones. Following is an abstract from the specifications for the masonry work:

The face of the stones forming the ice breakers shall have a 2-in. margin draft all round, & shall be dressed off between to a uniform surface with a point or pick. All these face stones are to be clamped together, both vertically & horizontally, with iron. The horizontal clamps to be $2\frac{1}{2}$ ins. wide, $\frac{1}{2}$ -in. thick, 24 ins. long; these are to be turned down $2\frac{1}{2}$

ins. at each end, & embedded their whole length and thickness in the stone. The vertical bolts are all to be 1 in. diameter, & to pass through the horizontal clamps & the vertical joints of the stones, to be let into the course below at least 9 ins. and to be secured thereto by fox-tail wedging.

Coping stones of piers & bridge-seats of abutments shall not be less than 5 ft. in length, nor less than 30 ins. in width. The top & face of each stone to have a 2-in. tooled margin draft, & to be neatly bush-hammered between. String courses & pedestals to be dressed in the same way as copings. The sides and ends shall be dressed so that vertical joints shall not exceed $\frac{1}{4}$ -in. in width.

FIG. 2. END SPANS, VICTORIA TUBULAR BRIDGE.

The ends will be fastened together, on top, by clamps 12 ins. long, 2 ins. wide & $\frac{3}{4}$ -in. thick, let 3 ins. into each stone, two to a joint, & to be placed where directed, the whole of these stones to be set in full Portland cement mortar, made in the proportion of 1 part cement to 1 of sand.

Every stone of the masonry must be set in a full bed of mortar & beaten with a heavy wooden maul until a solid bearing has been secured, the vertical joints must be fully flushed and filled up, using for the purpose "swords" or rammers, & where necessary to insure perfect filling, grouting must be resorted to. Each course must be properly levelled throughout its whole extent.

The mortar must be composed of the best Portland cement, & clean, sharp, coarse & properly screened sand, thoroughly mixed in approved proportions; these will be generally 2 parts of sand to 1 of cement, but they may be varied at the option of the engineer, according to the quality of the material. The cement & sand must be well mixed in a dry state; then enough water must be added to make mortar of a consistency that can be properly handled by a trowel. Mortar must be made in small quantities & only as required. Re-tempering of mortar that has partly set will not be permitted.

The face joints of the masonry must be raked out to a depth of 1 1-2 ins. & pointed with pure cement mortar.

Mr. Gibson is allowed the use of the company's rails on the top of the bridge covering, on which a repair car had formerly been run, & as a consequence the work is being carried on in a manner astonishing in its simplicity.

The stone is reduced to its proper dimensions at Mr. Gibson's quarry at Crookston, near Madoc, Hastings County, & is transported on flat cars to the Point St. Charles end of the bridge, where a powerful steam derrick picks it up block by block & places it upon the car on top of the bridge covering. The car is moved by steam power to a point directly over the pier upon which the masons are at work. Here a travelling derrick takes the stone from the car & lowers it over the side of the bridge to the position that it is destined to occupy in the masonry, & its adjustment follows. One unacquainted with the method that has been adopted might picture to himself a huge pile of false work & scaffolding or a flotilla of barges as the necessary accessories of an undertaking so great. To the visitor the absence of anything of the kind is as much of a surprise as the simplicity of the plan that has been adopted. The bridge is supported by 24 piers & 2 abutments. The piers vary in height from 30 feet at the ends of the bridge to 60 feet on either side of the central span, the increased altitude being necessary to allow of the passage of vessels up & down the river.

THE SUPERSTRUCTURE will consist of 24 spans of pin-connected,

DOMINION BRIDGE CO. (LIMITED)

Montreal and Lachine Locks, P.Q.

Steel Bridges for Railways and Highways, Steel Piers and Trestles, Steel Water Towers and Tanks, Steel Roofs, Girders, Beams, Columns for Buildings.

A LARGE STOCK OF

ROLLED STEEL BEAMS, JOISTS, GIRDERS, CHANNELS, ANGLES, TIES, Z BARS AND PLATES ALWAYS ON HAND in lengths to thirty-five feet.

Tables, giving Sizes and Strength of Rolled Beams on application.

Post Office Address, MONTREAL.

G. E. EVANS, Agent, Canada Life Building, TORONTO, ONT.

through steel trusses, each 254 ft. long, c. to c. of end pins, & one of 348 ft. over the steamboat channel. The trusses will carry two railway tracks to be used by ordinary steam railway trains, as well as by electric railway cars, & the floor beam system will be extended beyond the trusses sufficiently to carry a 10 ft. roadway & a 5½ ft. sidewalk on either side.

The details of one of the 254 ft. spans are shown in fig. 4. It has parallel chords & inclined end posts, & is divided into two panels of 25 ft. 4¾ ins. c. to c. of pins, the depth of truss is 40 ft., c. to c. of pins, & the width between trusses is 31 ft. 2 ins. c. to c. The top chord is of trough section, 28 ins. deep, having four web plates, a top cover plate & eight flange angles. The pins in this chord are 6, 7 & 7 1-2 ins. diameter. The posts are of I-beams & built-up sections, & the diagonals are eye-bars, with turnbuckles on the counters in the two middle panels. The bottom chord is composed of 8 in. eye-bars, with 7 1-2 in. pins, the thickness & number of bars varying with each panel. The end pins are

a guard timber outside each rail. On each cantilever end of the floor beams will be two lines of 20 in. I-beams for the roadway, & a 15 in. channel on the end of the beam. These carry the roadway timbers, which will be similar to the track ties, but 12 ins. apart. Upon these timbers will be laid a flooring of 4 in. plank for the roadway & sidewalk.

Across each end of each masonry pier (parallel with the bridge) will be laid seven 24 in. I-beams (100 lbs. per foot), 19 ft. long, the ends of which will be riveted to the end floor beams. On each set of I-beams will be 2 wall plates 4×5 ft., 1 1-2 ins. thick, upon which will rest the shoes of the trusses. The shoes at the expansion end will have nine rockers, 4 ft. 3 in. long, 3¾ ins. wide, & 7 ins. high, the top & bottom having curved faces. A variation in temperature to the extent of 150° is provided for in the expansion bearings. Between the floor beams, carried by the I-beams on the piers, are 15 in. I-beams which support the floor system across the pier.

The channel span of 348 ft. will have curved

weighing 284,000 lbs. on a length of roadway of 54 ft., followed by a uniformly distributed train load weighing 4,000 lbs. per lin. ft. The distribution of the engine loads is shown in one of the accompanying illustrations.

4. A moving load in either direction on each of the roadways of 1,100 lbs. per lin. ft.

5. A live load on each footwalk of 200 lbs. per lin. ft.

To provide for wind strains and vibrations in the 254 ft. spans, the bottom lateral bracing is proportioned to resist a lateral force of 450 lbs. per lin. ft. of span, 300 lbs. of this being considered as a moving load & as acting on a train of cars at a line 8 ft. 6 ins. above the base of the rail. The top lateral bracing is proportioned to resist a lateral force of 150 lbs. per lin. ft. of span. For wind strains in the 348 ft. span, 35 lbs. are added in each of the above cases.

Following are some extracts from the specifications:

Bed plates (on masonry) for the trusses are to be made of cast-steel. These castings shall be free from blow-holes, true to pattern

FIG. 3.—ABUTMENT AND END SPANS] VICTORIA JUBILEE BRIDGE.

8 1-2 ins. diameter. The floor beams are plate girders 66 ft. 3 ins. long, suspended from the pins by I-beam hangers, the girders extending beyond the trusses to carry the roadways & sidewalks. The girders are connected by longitudinal & diagonal bracing. The trusses will be connected by transverse struts between the top chords, & between the posts, the latter struts being 15 ft. 1 in. below the top chords, giving a clear headway of 23 ft. 1 1-2 ins. from base of rail to the lower struts of the overhead lateral bracing. There will also be the usual horizontal & vertical lateral bracing, as shown in the plan & cross section, fig. 3.

Upon the central portion of these floor beams are carried 8 lines of stringers of 24 in. I-beams, 4 under each track, 2 ft. 5 1-2 ins. c. to c., the inner lines being connected by vertical diagonal bracing. Across these beams are laid pitch pine ties, 10 x 10 ins., 4 in. apart in the clear, these ties being long enough to carry both tracks. There will be two tracks of standard gauge, 13 ft. c. to c., with

top chords to the main trusses, but the plans of this span have not yet been finally adopted.

The railway tracks will be used not only for ordinary trains, but also for electric cars, thus affording a more frequent service between Montreal & several small towns on the south shore. These cars will be run between the times of the regular trains, & interlocking switch & signal plants will be installed at each end of the bridge at the junction of the electric railway with the bridge tracks.

The trusses are designed for the following loads:

1. The total weight of metal in them, amounting to 5,910 lbs. per lin. ft. of span.
2. The weight of the wooden floor beams, planking, sidewalks, guard timbers, railings, rails & fastenings, etc., amounting, in the aggregate, to 2,800 lbs. per lin. ft. This, with the weight of metal, gives the assumed dead load of 8,710 lbs. per lin. ft. of span.
3. A moving load in either direction on each of the two tracks, consisting of two consolidation engines & tenders coupled, each

& of a workmanlike finish. When tested in specimens not more than 2 ins. long, & of at least 1-2 in. uniform sectional area, it must give the undermentioned results:

Ultimate strength.....	67,000 lbs.
Elastic limit.....	34,000 "
Elongation in 2 ins.....	20%

All steel must be made by the open-hearth process, & shall contain not more than 0.08% of phosphorus in acid steel, or 0.04% in basic steel, & each kind must be of uniform quality.

All tests for tensile strength, limit of elasticity & ductility shall be made on samples cut from the finished material after rolling, & shall be at least 12 ins. long, & shall have a uniform sectional area of not less than ½-sq. in. All broken samples must show a silky fracture of uniform color.

When material is to be annealed or otherwise treated before use, the specimen representing such material is to be similarly treated before testing.

The heads of eye-bars & enlarged ends of rods shall be made by upsetting or forging into shape. Welds in the body of the bar will

C.P.R. ANNUAL REPORT.

A Gratifying & Interesting Statement.

The 17th annual report of the directors for the year ended Dec. 31, 1897, was issued Feb. 26, over the signature of the President, Sir Wm. C. Van Horne, & reads as follows:

A balance sheet of the affairs of the Co. at Dec. 31, 1897, together with the usual statements and schedules are herewith submitted.

The gross earnings for the year were \$24,049,534.05
The working expenses were 13,745,758.76

And the net earnings were \$10,303,775.89

Add interest earned on deposits and loans \$74,001.48

Add interest due from Duluth, South Shore & Atlantic Ry. Co. on consolidated bonds held by your Co. against debenture stock issued. \$601,390.00

Less advanced by your Co. 442,065.00

159,325.00

Add interest from Minneapolis, St. Paul & Sault Ste. Marie Ry. Co. on bonds held by your Co. against debenture stock issued. 107,380.00

340,700.48

\$10,044,482.37

Deduct Fixed Charges accrued during the year, including interest on land bonds. 6,783,367.26

The surplus for the year was. \$3,861,115.11

From this there has been charged off the 1/2 yearly dividend on preference stock; 2/2 paid Oct. 1, 1897. \$167,413.33

And 1/2 yearly dividend on ordinary stock; 1 1/2% paid Oct. 1, 1897. 975,000.00

1,142,413.33

Leaving balance. \$2,718,701.78

From this there has been declared a 1/2 yearly dividend on preference stock of 2/2 payable April 1, 1898. \$196,613.33

And a dividend on common stock for the last 1/2 year of 2/2 payable April 1, 1898. \$1,625,000.00

\$1,625,000.00

The working expenses for the year amounted to 57.16 % of the gross earnings, & the net earnings to 42.84%, as compared with 60.80 & 39.20% respectively in 1896. The earnings per passenger per mile were 1.82c. & per ton of freight per mile 0.78c., as against 1.83, & 0.75c. respectively in 1896. Following is a statement of the results of working by months:

Month. Earnings. Expenses. Net Earnings.

Jan. 1,312,024.09 939,580.99 372,443.10

Feb. 1,272,094.42 887,271.11 384,823.08

Mar. 1,528,944.61 1,008,731.77 520,212.84

April. 1,067,850.11 699,716.80 368,133.31

May. 1,090,213.12 1,104,725.28 87,487.84

June. 2,000,576.58 1,111,149.28 886,127.30

July. 2,107,002.22 1,192,043.35 914,358.87

Aug. 2,023,114.08 1,227,707.87 795,406.21

Sept. 2,314,529.07 1,284,638.03 1,029,891.04

Oct. 2,799,001.37 1,375,000.00 1,424,001.37

Nov. 2,390,150.00 1,350,718.01 1,039,431.99

Dec. 2,322,742.44 1,269,287.95 1,053,454.49

Notwithstanding the unfavorable results of the last 13 months of the year the directors are able to report a substantial increase in the earnings & profits of the Co. The improvement in the traffic of the Co. is due in large measure to the mining development in British Columbia; the mining development in the Lake of the Woods district also contributed in no small degree. The discovery of extraordinary deposits of gold in the Canadian Yukon Territory has contributed appreciably to the general improvement, & is likely to contribute vastly more in the immediate future, for the movement in that direction can hardly be said to have commenced until within the past few weeks.

Under the arrangement given by the shareholders at the last meeting, the directors entered into an arrangement with the Dominion Government providing for the immediate construction of a railway from Lethbridge, Alberta, through the Crow's Nest Pass to a connection with your line at Nelson, B.C., 340 miles. This line has been completed to within 12 miles of the Crow's Nest Pass, at the summit of the Rocky Mountains, & the work beyond is well advanced. It is expected it will be completed to Kootenay Lake before the end of August. On reaching Kootenay Lake a temporary connection will be made with Nelson by means of a train ferry, whereby a through train service may be established, pending the completion of the railway along the shore of the lake to that point 60 miles distant. The Dominion Government has entered into an agreement with the Co. to assist the undertaking to the extent of \$11,000 a mile, & the balance required will form part of your capital expenditure. This agreement will be submitted for your confirmation. It is worthy of remark that the maximum gradients on the Crow's Nest line through the Rocky and Selkirk ranges of mountains are only 1 ft. in 100 (with compensation for curvature), or barely 1/2 the maximum of any other railway crossing either of these ranges. This much-needed Canadian outlet for the Kootenay mining district, afforded by the Crow's Nest Ry., will give a decided impetus to mining and smelting, & is certain to add largely to the earnings of the Co.; but that the fullest advantage may be derived from it, & that the interests of your Co. may be protected in Southern B.C., it is necessary to move on westward from the Columbia River at Robson, the western end of your line, so as to reach the Boundary Creek District—about 100 miles—during the present year, & your authority in this regard will be asked. The opening of mines in the Boundary Creek district has been retarded by the lack of transportation facilities, but the mineral deposits have been proven to an extent sufficient to justify the belief that this is the richest district yet discovered in the Province. As a preliminary step towards the construction of the Crow's Nest line, the shareholders at their meeting on May 10, 1893, authorized the purchase of the section of the Alberta Railway between Dunmore, on your main line, & Lethbridge—109 miles—for \$976,590. This purchase was consummated early in January last. The section of the Crow's Nest line west of the summit of the Rocky Mountains is being constructed under the charter of the B.C. Southern Railway Co., the acquisition of which, for an almost nominal consideration, you will be asked to approve. The work is being carried on by the officers of your Co. & on its completion the railway will become the property of your Co. at the actual cost of construction. Through the B.C. Southern Ry. your Co. acquires about 3,350,000 acres of land granted to that Co. by the Province of B.C., & also acquires 6 square miles of valuable coal lands near the Crow's Nest Pass—an amount of coal lands quite sufficient for the protection of the public as well as the Co., if need be, against unduly high prices. The lands first mentioned are all adjacent to the railway as it is laid out between the Crow's Nest Pass & Kootenay Lake. They have not as yet been examined in detail, but will no doubt prove a valuable asset. The lands are not taxable until leased or alienated. The coal deposits made accessible by the Crow's Nest Ry. are of great extent and extraordinary character. The aggregate thickness of the beds in the immediate vicinity of the railway exceeds 125 ft., and the coals are of excellent quality and make superior coke, the latter being of especial consequence as affecting the smelting of ores; & in this connection it is worthy of remark that the mining districts of southern B.C. are exceptionally fortunate in possessing an abundance of coal, a boundless supply of lumber, numerous water-powers, a healthy climate, & close at hand, agricultural districts, affording cheap and plentiful food.

Arrangements have been completed, subject to the approval of the Dominion Parliament, whereby your Co. may acquire the Columbia & Western Ry., extending from Robson to Rossland, 33 miles, for \$800,000. With this property will be acquired the smelting works at Trail Creek, & about 270,000 acres of land in the vicinity, these being included in the purchase price named. Rossland having become the principal mining centre in B.C., it was necessary either to build an independent line to that place or acquire the Columbia & Western Ry., & the latter was clearly the wiser course. Your authority for the acquisition of this property will be asked, & you will be asked to approve the construction of a line 32 miles in length, connecting the Columbia & Kootenay Ry. with Slocan Lake, which was demanded by the Slocan mining district & which your directors felt obliged to carry out last year, anticipating your authority.

You will be asked to approve a lease of the St. Stephen & Milltown Ry. 4 1/8 miles in length at a rental of \$2,050 a year. This line affords access to a number of saw mills & manufacturing in the vicinity of St. Stephen, N.B.

The Montreal & Ottawa Ry. is now practically completed to the city limits of Ottawa, & is expected to be in readiness for traffic at the beginning of the coming summer.

The results of the purchase of the Columbia & Kootenay steamers, as authorized by the shareholders a year ago, have been most gratifying. Additions have already been made to this fleet & more boats are required.

The directors have anticipated your authority in purchasing 2 ocean steamships for the new trade of the Canadian Yukon (Klondike) district. These steamships are intended to ply from Vancouver & Victoria, & are far superior to any now engaged in the trade, & should secure to your Co. a large share of it. Your directors have also caused to be put under contract 11 steamboats, costing approximately \$350,000, for the lakes & rivers in the Southern B.C. mining districts, & for river service in the Canadian Yukon trade.

Your railway has been maintained in excellent condition & has enjoyed its usual immunity from serious accident. Two hundred & forty-seven miles of the principal lines of the Company were relaid with heavy rails (70 & 80 lbs. a yard) during the year. The sudden increase of traffic, subsequent to the last annual meeting, made necessary considerable expenditures on capital account for rolling stock, grain elevators & for terminal & station facilities, mining spurs, sidings & spurs for new industries, &c., which were not anticipated at that time, & the directors will ask your approval of these expenditures. They will also ask you to authorize them to make liberal provision for rolling stock, improvements of roadway, additional repair shops & various other matters, in order that your railway may be well prepared for the large traffic ahead, which now seems assured.

The rapid increase of traffic on the line between Montreal & Toronto makes it necessary to take steps towards the double tracking of that section of the Co.'s line, the traffic having now practically reached the limit of the capacity of a single track line. Your authority to proceed with this work as it may be conveniently & economically done will be asked.

Two hundred & fifteen timber bridges aggregating 5.7 miles were replaced with permanent work—masonry, steel or embankments—during the year.

A grain elevator of 1,000,000 bus. capacity was erected at Owen Sound & another, built of steel, & having a capacity of 1,500,000 bus., at Port William.

Since the close of the year your Co.'s shares in the Pacific Postal Telegraph-Cable Co. have been sold to an operator in the hands of the Commercial Cable Co., & your directors propose, with your approval, to expend a considerable part of the proceeds of this sale in

Two hundred & fifteen timber bridges aggregating 5.7 miles were replaced with permanent work—masonry, steel or embankments—during the year.

A grain elevator of 1,000,000 bus. capacity was erected at Owen Sound & another, built of steel, & having a capacity of 1,500,000 bus., at Port William.

Since the close of the year your Co.'s shares in the Pacific Postal Telegraph-Cable Co. have been sold to an operator in the hands of the Commercial Cable Co., & your directors propose, with your approval, to expend a considerable part of the proceeds of this sale in

the extension & perfection of the Co.'s telegraph system in Canada—extensions & improvements which will add to your already handsome profits from this source. In connection with this sale your interests have been secured by a contract for the interchange of business with the same telegraph system for 20 years.

Your Co. has acquired the individual holdings of shares in the Chateau Frontenac Co., amounting to \$80,000, & now holds all of the stock representing this hotel at Quebec—a property which is not alone profitable in itself, but brings a large amount of passenger traffic to the railway.

The Co.'s telegraph, express, grain elevators, sleeping-cars & lake steamers all afforded increased net earnings, & these, with the profits from the Pacific Steamships, **exceeded the interest on the whole of the consolidated debenture stock of the Co.**

Your Co. had nothing to pay on its guaranty in respect of the Minneapolis, St. Paul & Sault Ste. Marie Ry., but the improved conditions in the Western States did not begin to be felt by the Duluth, South Shore & Atlantic Ry. until late in the year, & the deficit of that Co. was \$442,065, as already stated.

During the year \$151,000 of the 4% consolidated mortgage bonds of the Minneapolis, St. Paul & Sault Ste. Marie Ry., \$131,000 of the 4% consolidated mortgage bonds of the Duluth, South Shore & Atlantic Ry., & \$518,750 of the 5% first mortgage bonds of the Montreal & Ottawa Ry.—all guaranteed by your Co.—were purchased with the proceeds of £145,875 4% consolidated debenture stock, a considerable saving in interest being thereby effected.

During the year your directors contracted for the sale of one million pounds 4% preference stock to apply on capital expenditures already authorized, including a portion of the Crows Nest Ry. construction, & the portion of the proceeds received before the end of the year was so applied.

Arrangements permanently assuring the traffic interests of the Duluth, South Shore & Atlantic Ry. west of Duluth having been made, the amount advanced to that Co. for the acquisition of the Duluth & Winnipeg Ry. has been returned to your treasury.

The land sales for the year were 199,482 acres for \$665,740, an increase over 1896 of 111,604 acres, or 127%, & an increase in the amount realized of \$356,812, or 112%. The net amount realized from town sites was \$100,267, as against a deficit of \$7,860 in 1896.

The recovery in the prices of farm products,

& especially of wheat, has given vigor to agricultural development in the Canadian Northwest, & the directors anticipate a much larger increase in the land sales of the new year. The fact that a great majority of the established farmers in that part of the country realized from their crops & cattle in 1897 more than their lands & improvements had cost them, must result in a new & large movement of settlers in that direction. The business of Canada seems to have returned to its normal condition & prosperity is the rule in nearly all sections of the country.

Index to the Railway Act.

An index to the Railway Act of Canada, & its various amending acts, has been issued by J. Leslie, of the Department of Justice, Ottawa, & R. R. Cromarty, Manager of the Canada Law Journal, Toronto. The index was prepared by W. Vaughan, barrister, who was for a number of years Secretary to Chief Solicitor Clarke, of the C.P.R., & will undoubtedly be found very useful not only to lawyers, but to every railway man who wants to consult the statutes relating to railways. It is published by the Canada Law Journal Co., Toronto. Price, \$1.

THE CANADIAN PACIFIC RAILWAY COMPANY.

Dividends for the half-year ending December 31st, 1897, have been declared as follows:

On the Preference Stock, 2 per cent.
On the Common Stock, 2½ per cent.
Warrants for the common stock dividend will be mailed on or about April 1st to shareholders of record at the closing of the books in New York and London respectively.

The preference stock dividend will be paid on Friday, April 1st, to shareholders of record at the closing of the books at the Company's London Office, 1 Queen Victoria Street, London, E.C.

The common stock transfer books will close in London at 3 p.m. on Friday, February 25th, and in Montreal and New York on Tuesday, March 8th. The preference stock books will close at 3 p.m. on Tuesday, March 8th. All books will be re-opened on Thursday, 7th April.

By order of the Board.

CHARLES DRINKWATER.

Montreal, Feb. 14th, 1898.

Secretary.

The Hall Signals at Montreal.

The Canadian Pacific Railway has recently completed the installation of a system of automatic electric block signals between Windsor Street station, Montreal, & Montreal Junction, a distance of about 5 miles of double track road. The system was installed by the Hall Signal Company, of 44 Broad Street, New York City. The signals are of the disc type & are placed on wooden posts, located to the right of the track they govern, & consist of a home & distant signal on each post; home signal, red, governs first block; distant signal, green, governs second block; one above the other, with the exception of the last east-bound signal at Montreal, & the last west-bound signal at Montreal Junction, which are arranged for special movements of trains.

The home or top signal (red) governs the block immediately in advance of the signal. The bottom or caution signal (green) indicates the position of the next signal in advance, or of the second block ahead. If an engineer upon approaching a signal finds both at clear, he knows that the track is clear for two blocks ahead. If he finds the home signal at clear, & the caution signal displayed, he knows that the second block ahead is occupied & he must be prepared to stop before passing the next home signal. If he finds both the home & distant signal displayed, he will of course come to a stop before entering the block.

The road is divided into sections or blocks of about one mile each, the signals being located at the entrance to the block. They are operated by the rail circuit on what is called the "Normal Danger Plan." That is, all signals show danger or stop, except when a train is approaching, in which case they will show clear, providing the track they govern is clear of trains, & there are no open switches or broken rails, & if the apparatus is in complete working order. The signals are controlled directly by a track circuit, which consists of a battery placed at one end of the block, & an electrical instrument, or relay, at the other end of the block near the signal. Normally the current flows from one pole of the track battery to one rail of the track, along this rail to & through the relay located at the signal, & back to battery by means of the other rail, making a complete circuit holding the relay closed. The signals themselves are operated from a local battery, the circuit of

which is controlled by the relay referred to above. Therefore, a signal can only be cleared when its relay is closed.

The ends of the rails are electrically separated from each other at the entrance to and the end of each block. Therefore, each track section has its own track circuit. When a train passes a signal, the current from the track battery which had been passing through the relay at the entrance of the block, is shunted through the wheels & axles of the train, causing the relay to open, breaking the signal circuit, causing the signal to go to the danger position by gravity.

The local circuit which operates the signals is conducted by means of weatherproof copper wire, strung on the telegraph poles by the side of the road in the usual manner. The batteries are all placed underground, away from the frost, and are of the gravity type for track circuits, & Gordon-Burnham type for signal circuits, each signal being provided with a separate battery.

In addition to the signals for the information of the engineers, there are small miniature signals or indicators placed at each switch, & so arranged that they will show danger (red) when a train on the main line approaches the distant signal which is connected with said switch. When it is necessary to open a switch leading to the main line, the switchman must first look at the indicator. If this shows clear, he knows that there is no train approaching, in which case he will open the switch, which will at once set to danger the home signal protecting the block in which the switch is located, and the distant signal in the next block back.

In the case of a cross-over, the opening of either switch would immediately block both tracks. At Windsor Street yard special arrangement has been provided in order to govern the entrance to the yard, as it is sometimes necessary to run trains a short distance against traffic.

Distant bells are also provided so that the switchman is informed when a train is approaching the yard, & indicators located in switch-house advise him the position of the signals.

This system of automatic block signals is believed to be the first application of this character that has been introduced into Canada, although the Hall Signal Company has installed a large number of them in the United States.

In response to an inquiry as to how the signals are working, Manager Tait, of the C.P.R. Eastern Lines, writes THE RAILWAY & SHIPPING WORLD: "We are having very satisfactory results with the Hall automatic electric block signals on our track between Montreal & Montreal Junction, as you will see from the enclosed working statement from Oct. 17, '97 to Feb. 17, '98: No of days in operation, 123; approximate no. of trains daily, 40; no. of

Delay of 2 minutes to each failure as per rules.

General Superintendent Leonard, of the Ontario & Quebec Division, writes: "These signals are giving the best of satisfaction, notwithstanding the very severe weather we have had, and I have no doubt they will prove eminently satisfactory."

The record above given is certainly a very good showing, in view of the unusually severe weather experienced in Montreal this winter. Among the causes of failure are a number of cases where the locking-gear failed to work in the signal instrument. It should be explained that any failure of this lock, or in fact any part of the apparatus, produces a danger signal, causing an unnecessary stop. The system does not display a safety signal when the apparatus is out of order. The locks have been readjusted & it is not expected any more trouble will be caused on that account, & that the next quarterly report will most likely be even better than the last.

In the accompanying illustrations fig. 1 shows the signals on post, the two discs on the top signal being colored red, & those in the bottom signal green. Figs. 2 & 3 give interior views of the signal case, fig. 2 showing "danger" position of signal (by gravity), & fig. 3 "safety" position of signal (by electro-magnetism).

Last September the despatching office for the Manitoba division of the Northern Pacific was removed from Winnipeg to Grand Forks, North Dakota. Superintendent Vanderslice now says the removal, which was thought to be only temporary, is likely to be permanent.

A Prince Albert, Sask., paper is authority for the statement that on a recent day night a horse & vehicle were carried nine miles on the cow-catcher of a locomotive on the C.P.R.'s Prince Albert branch. The horse had started home without its owner, & was picked up en route by the locomotive.

TORONTO, CANADA, MARCH, 1898.

PUBLISHERS' ANNOUNCEMENT.

THE RAILWAY & SHIPPING WORLD takes its place to-day in the field of periodicals for the purpose of representing the transportation interests of Canada—steam & electric railways and shipping—and the allied express, telegraph & telephone interests.

It is not entering into competition with any existing publication, as while the field of what is known as trade journalism is well filled in regard to almost every other industry & interest, there is no other publication in Canada devoted to the transportation interests.

Hitherto the officials of Canadian transportation companies have had to depend on foreign publications for their "trade" reading, & careful enquiry among them shows that only a small minority get any periodical devoted to their business. Necessarily the space devoted by foreign publications to Canadian matters is limited, & of secondary importance. THE RAILWAY AND SHIPPING WORLD will endeavor to give a full & accurate record of everything transpiring in Canada relating to the interests enumerated above, supplemented by technical & other articles of interest & value to the class of readers to which it addresses itself. Its publishers believe in performances rather than promises, & will content themselves with saying that no effort will be spared to make the publication a thoroughly up to date one, editorially, typographically, & in every other respect. Illustrations will be freely used whenever they can be made to serve a practical purpose.

In political affairs, as such, THE RAILWAY AND SHIPPING WORLD has no interest, & is absolutely independent of either party, but this does not imply neutrality, & it will not hesitate to freely criticise whenever public interests so demand.

It is also absolutely independent of any railway or other corporation, & while being entirely impartial in giving the facts in regard to the operations of all these corporations, it will never forget that it is a Canadian publication first, last & all the time, & that it is its duty to do everything possible to assist in the development of transportation as far as possible within Canadian territory & to Canadian ports.

The St. Clair Tunnel Co. is contemplating converting the motive power for the tunnel from steam to electricity. Ever since the casualty of Nov. 28, the officers of the Co. have given the subject of electrical propulsion considerable attention, & it is reported they have now about decided to equip the tunnel with electrical power.

TO ADVERTISERS.

For the past six months diligent work has been done in building up a subscription list, so that while a new periodical, THE RAILWAY & SHIPPING WORLD has to-day a circulation that it would have taken considerable time to secure, had nothing been done in advance of publication.

Its publishers make the statement, & guarantee its reliability as a basis of all advertising contracts, that THE RAILWAY & SHIPPING WORLD reaches:

Every official of every steam railway in Canada, in the executive, purchasing, operating, transportation, mechanical, freight, passenger, engineering, financial, accounting & legal departments.

Every official of every electric railway in Canada.

Every manager of a steamboat line in Canada, & every manager or owner of every steamboat carrying passengers & freight for hire in Canadian waters.

Every official of every express, telegraph & telephone company in Canada.

Hitherto manufacturers & other advertisers have been unable to reach the above mentioned purchasers by using any one publication. It does not pay Canadian advertisers to use United States transportation periodicals, as no single one of them has a general circulation throughout Canada, the comparatively limited number of their subscribers in Canada being divided up among a score or more of them. On the other hand United States advertisers wishing to reach Canadian purchasers are unable to do so through any single publication on their side of the line, & even if they advertise in all the U. S. transportation papers, it must be borne in mind that these papers are taken by a very limited number in Canada.

THE RAILWAY & SHIPPING WORLD simply presents these facts for the consideration of advertisers, to whom its publishers will be happy to quote rates on application.

PRESSURE ON SPACE.

Instead of having a dearth of matter for publication, THE RAILWAY & SHIPPING WORLD finds itself in the position of having far more than can be accommodated within the limits which have been fixed on for the present. So much space has necessarily had to be devoted to the Canadian Yukon Railway, the Victoria Jubilee Bridge, the ocean & river navigation to the Yukon, & the C.P.R. annual report, that a considerable amount of matter relating to other railways has had to be held over, & it has been found impossible to give any space to the electric railway, express & telephone interests in this issue. These departments will be commenced in the next issue, & will form important & regular features of the publication.

The Council of the Quebec Board of Trade has adopted a resolution calling on the Dominion Government, in case it removes the western terminus of the Intercolonial R'y to Montreal, to give such aid as will ensure the construction of the Quebec bridge, & also to establish the workshops of the Intercolonial at Quebec.

The Minister of Railways and Canals.

Considering the magnitude of modern railway enterprise & the growing importance of transportation as a subject of pre-eminent interest to the public, there could scarcely be a more responsible position in any cabinet than that held by the minister of railways & canals. This is especially true of Canada, with her vast areas, destined to support an empire, & as the country becomes more thickly populated, the solution of the problem of adequate transportation will tax the ablest minds. Naturally, the Dominion Minister of Railways & Canals, the Hon. A. G. Blair, presiding over one of the most important departments of public affairs, occupies a large place in the minds of all Canadians.

Of Scotch descent, the Hon. Andrew George Blair was born in Fredericton, N.B., March 7, 1844. He was educated at the Collegiate School of that place, & entering the profession of law, was called to the bar in 1866. In October of the same year he married Annie, eldest daughter of George Thompson, of the Educational Department, Fredericton.

For twelve years he practised his profession most successfully, gaining a reputation for ability & integrity. His political career began in 1878, when he was Liberal candidate in the County of York, N.B. He was victorious in this contest, but, on a petition being filed against his return, he resigned, again contested the constituency & was elected. His ability was quickly recognized in the House of Assembly, & in 1879 he was chosen leader of the Provincial Opposition, a little body consisting of only six members in a House of 41. By 1882 he had 17 followers, & in March, 1883, he defeated the Harrington Ministry & was called to form a cabinet. In the ministry he occupied the office of Attorney-General. The public verdict remained in his favor during the successive contests of 1886 & 1890; but in 1892 he was defeated for York & elected for Queen's, on the resignation of the member-elect, Mr. Hetherington. For 13 years he was Premier of New Brunswick; & in 1896 resigned the premiership & his seat in the House of Assembly to enter a wider field. When promotion from the Provincial to the Federal arena called him to Ottawa, it was the unanimous opinion of his party that the right man had been called from New Brunswick. In July, 1896, he was sworn in as member of the Privy Council, and appointed Minister of Railways & Canals in the Cabinet of Sir Wilfrid Laurier. He was elected for a seat in the Commons on Aug. 25, 1896. Already his department has been called on to deal with two of the most important transportation questions that have arisen within the last decade, the opening of the Kootenay districts of B.C. by the construction of the Crow's Nest Pass Railway, & the connection of the Yukon gold fields by means of an all-Canadian route; & the whole Dominion has watched with intense interest the Government's railway policy regarding the two western gold fields.

Mr. Price, Private Secretary to General Superintendent McGuigan, of the G.T.R., has been appointed chief clerk in the office of M. C. Sturtevant, Car Service Agent at Montreal.

Carlos Warfield, Private Secretary to F. A. Heinze, has, according to the Anaconda, Montana, Standard, been romancing about the price paid by the C.P.R. for the Columbia & Western Ry., claiming that Mr. Heinze got what he first asked, \$1,250,000, & retained important holdings in the district. As a matter of fact the C.P.R. never entertained any idea of paying that figure. The purchase price for the railway from Robson to Rossland, 33 miles, for the smelting works at Trail Creek, & half the C. & W. Co.'s land grant, about 270,000 acres, was \$800,000.

THE CROW'S NEST.

Progress on the C. P. R. Line to the Kootenay.

The line is now located from the eastern terminus at Lethbridge, Alberta, to the crossing of the Kootenay River at the upper end of Kootenay Lake, a distance of, say, 287 miles, & preliminary surveys have been made to Nelson, B.C.

For the first 80 miles the line passes over what is called a prairie country, but very heavy grading is encountered, as well as the heaviest bridge work on the line. This is owing to the necessity of crossing St. Mary's River, Belly River, Pincher Creek & South Fork Old Man River, & the many coulees met with in order to reach these crossings. Following is a list of the principal structures on the 1st 80 miles:

Mileage.	Total Length.	Maximum Height.	Truss Spans.
3.2	405 feet	110 feet	
7	420 "	105 "	
7.1	390 "	98 "	
7.8	450 "	75 "	
8.0	660 "	65 "	
8.3	490 "	130 "	1X150 D.H.T.
8.5	400 "	95 "	1X100 D.H.T.
8.8	400 "	90 "	
9	500 "	75 "	
9.6	200 "	90 "	1X150 D.H.T.
10	300 "	55 "	1X100 D.H.T.
10.3	400 "	55 "	
10.6 St. Mary's River	2750 "	65 "	2X150 D.H.T.
12.2	660 "	120 "	1X150 D.H.T.
14.4	450 "	75 "	
14.7	500 "	135 "	1X100 D.H.T.
15	300 "	50 "	
16	630 "	130 "	1X100 D.H.T.
26.5 Belly River	495 "	30 "	
58.3 Pincher Creek	710 "	110 "	1X150 D.H.T.
69	240 "	60 "	
67.1	375 "	70 "	
70 S. Fk Old Man Riv.	935 "	135 "	2X150 D.H.T.
79.3 M. "	190 "	20 "	1X150 T.H.T.

From mileage 80 to 105.8, where the line reaches the summit of the Rocky Mountains, the work is heavy, with a considerable amount of rock excavation. From the summit westward for 16 miles the work is also heavy, & involves the use of 2 tunnels & some 6 bridges from 60 to 200 ft. each in length.

The next 37 miles, following down the valley of the Elk River to the crossing of that stream, consists of earth & rock work with very heavy clearing & 2 bridges of 100 ft. span each. Elk River is crossed by 3 spans of 150 ft. each, & from there to the crossing of the East Kootenay River at Wardner, about 23½ miles, the earth work is heavy, & there are 3 bridges of, say, 80 ft. span each. It is proposed to cross the Kootenay River near Wardner by 3 spans of 150 ft. each, 1 span of 130 ft., & a swing span with a clear opening of 60 ft. From Wardner to Cranbrook, 23½ miles, the line passes through a park-like country, with the exception of about 5 miles through what is known as Isidore Canyon, where there is a considerable amount of rock excavation. From Cranbrook to the head of Moyie Lake, 12.7 miles, the earth work is moderately heavy. The line follows the east shore of Moyie Lake for about 8 miles, & the work is heavy, being almost entirely rock, with 1 tunnel of 500 ft. in length.

After crossing the Moyie River, 1 mile below the lake, the line follows the west side of the valley 21 miles, then turning to the westward & following up the valley of a small stream for 3 miles it reaches the summit between the Moyie & Goat River waters, in doing which the work is heavy. From this summit to the head of Kootenay Lake, 35 miles, the work is heavy, with a considerable amount of rock excavation & trestle bridging.

The maximum grade used in either direction is 1 ft. per 100 or 52.8 ft. per mile, & the sharpest curvature 12 degrees 47.8 ft. radius, but curves as sharp as this have only been used in a few places & compensation for same allowed.

The grading was commenced July 14 last, & has been completed from Lethbridge to the summit, & the bridging well advanced, track

being laid on 63 miles. The grading westward from the summit is now being proceeded with rapidly, & the entire work is covered by contractors.

Station buildings & water tanks are being erected at average distances of about 18 miles. These vary in design according to the requirements of the locality. The track is being laid with 60 lbs. steel, though 72 lb. rails will be used on a large portion of the B.C. section.

A very large proportion of the line from the summit of the Rocky Mountains westward passes through a densely wooded country, on a portion of which fire has destroyed a large amount of what would now have been valuable timber, but there are still considerable tracts of land on or in the vicinity of the line where excellent fir, spruce, larch & cedar, can be procured. Valuable coal deposits are found close to the line in many places for 35 miles on either side of the summit, & rich veins of galena and silver are being opened up in the vicinity of Moyie Lake. The country passed through in Alberta is an excellent grazing one, & ranching on both large & small scales has been successfully carried on for a number of years. There are also considerable tracts where land suitable for mixed farming can be met with, especially in the vicinity of Pincher Creek & in the valleys of the Old Man & Belly Rivers & their tributaries, and these could be greatly increased by irrigation. West of the summit considerable tracts of land suitable for either grazing or farming are met with in the valleys of the Elk, Kootenay, Moyie & Goat Rivers; & between the Elk & Moyie Rivers the country passed through, consisting of bench lands with glades of timber & occasional sloughs, is especially suitable for stock raising.

The Manager of Construction for the C. P. R. Co. is M. J. Haney, of Toronto, whose headquarters are at Macleod. The Chief Engineer is Hugh D. Lumsden, C.E., of Toronto, by whom the foregoing particulars have been prepared. The following facts gleaned from other sources may be added:

The line has been ballasted as far as Pincher Creek, & is in splendid condition for traffic. West of the summit of the Rockies between 40 & 50 contractors, & between 3,000 and 4,000 men, are at work, & Mr. Haney expresses confidence that the line will be completed as far as the coal mines in May & to Kootenay Lake by October next. This will give the company a 60-mile stretch of deep water to Nelson, but the location of this last section of road is now being revised, & the work will be carried forward with as much energy as the eastern sections.

Two seams of coal are being opened, each about 6 feet thick, on the north & south sides of Coal Creek. By the time the railway reaches the mines, probably 8,000 or 10,000 tons of coal will have been mined & awaiting shipment. The capacity of the mines from then on will be from 500 to 1,000 tons a day.

A correspondent of the Calgary Herald who recently went over the route, contributes the following: From Goat River Landing, on Kootenay Lake, the present western terminus of the Crow's Nest branch, to Macleod, the eastern terminus, is one crowded panoramic scene of busy men, horses & machinery, engaged in pushing forward construction. At Macleod are situated the headquarters from where all operations are directed. At this point between 300 & 400 men are continually at work—in the offices, stores, yards, machine shops, saw mill, & constructing new buildings. At least one construction train a day leaves Macleod for the end of the steel. A siding is constructed here, where mountains of hay & foothills of oats, & great warehouses of provisions and clothing for the thousands of men & teams employed are stored until they are freighted to the different camps. By the assistance of powerful headlights, night shifts work on the bridges as well as day shifts,

and the timbers are sent from the mill numbered & ready to be put into position, so that 125 men with the assistance of chutes, hoists & other modern machinery can handle 150,000 ft. of bridge timber every 24 hours.

The system of freighting is worthy of mention. To get the supplies into the various camps is a large undertaking, as from 3,000 to 4,000 men & the enormous number of horses consume an immense quantity of provisions. For freighting purposes the distance has been divided into 2 divisions, with Wardner as the centre point. The western division is supplied from headquarters on Goat River, & the eastern division from the Macleod headquarters. Porter Bros. have the contract for freighting from the west, & Strevel & Buchanan from the east. There are over 200 teams engaged in freighting & the demand is not supplied. This number will need to be doubled, as most of the supplies for the spring & summer must be freighted in before the road breaks up. To facilitate freighting operations the company has erected large warehouses at 40 mile distances from the end of the steel to Goat River Landing, which will be filled with supplies, & the different contractors can obtain what they want from these distributing points.

Several towns are springing up along the line, principal among which are the temporary western terminus where connection will be made with Nelson & West Kootenay by steam boat; Moyie City, which is situated on Moyie Lake, & near which is the St. Eugene mine, & several other valuable & promising mining properties; Cranbrook, the market for 25,000 acres of farming land & a C.P.R. divisional point; Wardner, the present centre of activities, & Coal Creek, which is situated in the centre of the coal mining district.

There is great variety of climate in the 287 miles distance. At the western terminus & for about 12 miles east there was no snow & very little frost, but a good deal of wet weather. From the snow line east until the summit was reached there was snow enough for sleighing & the weather was calm & cold, but not severe. When the summit was left behind the atmosphere was noticed to be disturbed with a gradually increasing wind until Crow's Nest Lake was reached, when the wind became almost a hurricane. The mercury dropped as suddenly as the wind rose. This windy weather continued until Macleod was reached.

The route of the Crow's Nest Branch is shown on the C.P.R. map opposite the last page of this issue.

A telegram from Wardner, B.C. announced the arrival there on Feb. 23 of the commissioners appointed by the Dominion Government to enquire into the alleged grievances of men employed on the Crow's Nest Pass branch construction. The general grievances appeared to be cost of transportation from eastern points, owing to alleged misrepresentation of employment agents, insufficient medical attendance, & the low rate of wages. Not a single complaint was made by any of the men in Egan & Co.'s camps, & many of the grievances from other parts of the line were, on investigation, found to be groundless.

The Westinghouse Air Brake.

One of the most important manufacturing industries which has gone into operation during the past year in the Dominion, is that of the Westinghouse Manufacturing Co., Limited, which has established itself permanently in Hamilton, Ont. This company has the sole & absolute control of all the privileges connected with the manufacturing & sale of the Westinghouse Air Brake in Canada.

The fact that strenuous efforts are being made by both the governments of Canada & the United States to compel railway companies to apply proper safety appliances &

...this, such as have been demonstrated to be of sufficient use, dress & merit, in the production of the & primary, to all rolling stock, including locomotives, passenger cars, & freight cars, makes the fact of the Westinghouse works having been established here of great & special importance to the railway companies of the Dominion. From the fact of the Westinghouse Air Brake having become a recognized standard, not only of the American continent, but of the world, and that it has already been applied to more than 550,000 freight cars in Canada & the United States, in addition to all the passenger cars & the majority of the locomotives, it becomes almost imperative that the same system must be generally adopted in this country, as the successful operation & maintenance of an apparatus of this character can only be secured by having it absolutely uniform & interchangeable. It is an undoubted fact that the reason why the railways of the Dominion have been somewhat tardy in regard to the general adoption & application of air brakes to their rolling stock, has resulted from the other fact that the apparatus was not manufactured in Canada, & that to import it meant to them, on account of the customs duty on this class of material, an increase in cost over that paid by the railways in the United States of 30 per cent., or practically \$12 a car. This obstacle has been entirely removed by the Westinghouse Co. establishing its works in Canada, & in addition to this, the Co. is furnishing employment to a large number of Canadian artisans.

The original Westinghouse Air Brake Co. was organized in Pennsylvania in 1869, & its early patents contained all the elements of novelty & real merit, of what is now known as a science, & which enabled it to secure the patents which then formed, & which are

now, in some modified form, better adapted to present requirements, & contain all the elements that go to make up a satisfactory & efficient air brake apparatus.

The development of the air brake business has been most carefully pursued, & additions & improvements have been made from time to time, until it would almost appear as though the acme of perfection had now been arrived at, & that we have to-day, in the Westinghouse Air Brake, one of the best & most important mechanical safety devices of the age.

The air brake business is not by any means confined to America, but has extended to England, France & Germany, in each of which countries there have been established for some years large works for its production, the markets of China, Japan, Russia & South America, being supplied with the apparatus by the home company in Pittsburg, Pa.

Occasionally is seen here and there some paragraph emanating from persons badly informed upon the subject, that the Westinghouse Co. is more or less of a monopoly. Assertions of this kind, however, cannot be well sustained, from the fact that whenever the question to its title to the rights which it now enjoys has been presented before the courts in any matter of litigation, the Company has invariably been sustained; & in addition to this it might be well to note that, without in any way being coerced by competition, it has constantly, on account of its improved methods & special machinery, been enabled to reduce the price of the apparatus to about one-half of that which it originally cost the railroad companies. Every care is being exercised by the Company to maintain & care for the general efficiency of the apparatus, & it annually spends large sums of money for the instruction of trainmen in the proper care & manipulation of the brake apparatus, & by

furnishing inspectors at its own expense, the services of whom are, at all times, at the disposal of any railway company, for such purposes as they may be required.

The more important business of the air brake companies at present is, & for some time in the future will be, the equipping of freight cars. Recent statistics show that some 550,000 cars have been equipped in Canada & the United States, which is probably about 35 or 40 per cent. of all the available cars at present in use in North America.

The increased weight of the modern locomotive & car has made it absolutely necessary that a power brake should be used to control them, & the fact of their being so controlled practically increases the capacity of the railways which have their rolling stock so equipped. It is well known that the old time schedule for freight trains was from 15 to 20 miles an hour, whereas, at the present day, it is not at all unusual to run heavy through freight trains on comparatively passenger schedule. This fact can only be attributed to the other fact, that these through trains are air-braked throughout, thus placing their control entirely in the hands of the engineer, & the entire handling of the train is similar in every respect to that of the ordinary passenger train equipped in the same way, with which most readers are quite familiar.

The capacity of the Hamilton works is quite equal to all the requirements of the railways in the Dominion, & they are kept actively engaged by the trunk lines, including the Grand Trunk, Intercolonial & Canadian Pacific, in the manufacture of freight brakes, & other apparatus of a similar character; it being the intention of these companies to have their entire rolling stock equipped as fast as possible.

The Hamilton Works, as a manufactory, is quite a model machine shop. The machinery,

The HAMILTON BRIDGE WORKS CO., Limited, * Hamilton, Canada.

STEEL BRIDGES FOR RAILWAYS AND HIGHWAYS.

Steel Structural Work, Steel Piers and Trestles, Steel Water Towers and Tanks, Steel Turntables, Roofs, Buoys, Caissons, Steel Beams, Channels, Angles and Plates, always on hand.

Estimates Furnished on Application.....

Every Facility for the Construction and Launching of Steel and Iron Ships.

which is most modern, & in the majority of cases of special design, is well arranged, & the buildings, which are well lighted, & cleanly in every respect, have been adapted in every particular to the requirements of the Company, not only with a view to facilitating its own interest, but also with due regard for the comfort & health of its employes. The works are situated in the eastern part of the city, & in close touch with the Grand Trunk, Canadian Pacific, & Michigan Central railways.

Efforts are being made to establish, in various parts of the Dominion, works for the manufacture of automatic couplers for freight trains. This is another safety appliance which has received the attention of the governments of the several countries as being of absolute necessity, more especially in the protection which they afford to men who handle cars in the capacity of brakemen. Several large companies are engaged in the manufacture of this material in the United States, & the product of each of these manufacturers has some special features which recommend them to the railway companies. Much time has been given to the subject of couplers by the master car builders of Canada & the United States, with a view to having the different makes of couplers sufficiently uniform in such particulars as to allow of more or less the necessary character of interchangeability; & certain rules have been established by these parties to which all couplers must conform, the most important of which is known as the vertical plane principle, & standards have been adopted which control the height of the coupler from the rail, & other detail connected with its application.

The recent act of the United States Congress in regard to the application of safety devices to all rolling stock, the limit of which would have expired in January, 1898, has been extended for two years; but there is little doubt that the railway corporations having become convinced of the importance of this subject, without any regard for the extension of time, will continue to use their best efforts to have their rolling stock equipped with these appliances at as early a date as their finances, & the facility for handling their cars for this purpose, will allow.

The Wabash in Canada.

Over a year ago arrangements were made between the Grand Trunk & Wabash Ry. Co.'s by which the latter used the former's tracks for passenger service between Windsor & Niagara Falls, by way of Glencoe Jct., Komoka, London, Woodstock, Paris, Hamilton & St. Catharines. Under a new arrangement which went into effect Mar. 1, the Wabash has secured facilities for a passenger & freight service from Windsor to Buffalo & Suspension Bridge, as explained in the following circular issued Feb. 23, signed by General Manager Hays, of the G.T., & Vice-President & General Manager Ramsey, of the Wabash:

"TO ALL OFFICERS, AGENTS & EMPLOYEES OF SOUTHERN DIVISION: The G.T.R. having leased the Wabash Ry. Co. trackage rights over that portion of the G.T. extending from Windsor, Ont., to Black Rock Station (Buffalo), N.Y., via Glencoe Jct., St. Thomas, Welland Jct. & Ft. Erie, also from Welland Jct., via Allanburg Jct., to Suspension Bridge, N.Y., that line will hereafter be used jointly by the two companies, & will be designated as the SOUTHERN DIVISION. Effective Mar. 1, 1898, G. C. Jones is appointed Joint Superintendent of the Southern Division, with headquarters at St. Thomas, Ont. He will have the appointment of, & full control over, all subordinate officers, agents and employes of the Southern Division, & of the operation, maintenance & care of the joint section, & will have control of all trainmen, engine-men & other employes of both the G.T. & the

Wabash, while engaged in the handling of trains, cars, or engines thereon. Officers, agents & employes of the Southern Division will be governed by the rules & regulations prescribed by the G.T. for the guidance & conduct of its own employes, & such other special rules as may from time to time be issued by the Joint Superintendent. The Joint Superintendent, operators, dispatchers, agents & all others employed upon the repairs & maintenance, & in the operation of the Southern Division, are in the joint employ of the G.T. & Wabash Co.'s, & shall render to each Co. such services as they may be called upon to render within the scope of their position or employment, & shall be subject to dismissal if they decline, neglect or refuse to render such assistance or service to either Co. as such employes are usually called upon to render."

The freight traffic under the new arrangement has already commenced, but the Wabash passenger trains are still running via London & Hamilton, & probably will for two or three months, until the track east of Glencoe Jct. is improved so as to fit it for fast service.

The expense of maintenance & operation of the Southern Division will be borne jointly by the 2 roads, each of which will use it on an independent basis, in so far as the securing of business is concerned. Each will have its freight & passenger agents in the field, as though they were rival roads side by side. The usual amount will be paid by the Wabash road for the use of the tracks, based on the number of cars hauled & the amount of traffic carried. Stories that earnings are to be pooled by the 2 roads are denied by Messrs. Hays & Ramsey.

The Wabash also has the right to use the Erie belt line from the International Bridge at Fort Erie, around the city to the local freight houses, yards & tracks of the Wabash in Buffalo. The Wabash also has full rights in the use of this property equally with the Grand Trunk, & with the Erie from Suspension Bridge to Buffalo. It can take passenger, freight, mail or express traffic, local or through. Interchanges with G.T. lines are to be made at Black Rock, Suspension Bridge & Buffalo instead of at Detroit. Canada transit freight will be in bond. The Wabash has an equal & joint right with the G.T. in the use of the 2 ferry transfer boats between Windsor & Detroit.

By this arrangement the Wabash parallels the Michigan Central from Windsor to Buffalo & Suspension Bridge. Its mileage is 226.6 miles from Detroit to Suspension Bridge, as against 227.4 via Michigan Central, & 230 via the G.T., by way of London & Hamilton. From Chicago to Buffalo it has a much shorter line than either the Michigan Central or the Lake Shore, the mileage of the direct lines being as follows: Wabash, via Fort Erie, 512; Michigan Central, via Fort Erie, 520; Nickel Plate, 523; Wabash, via Niagara Falls & Suspension Bridge, 523; Michigan Central, via Suspension Bridge & Niagara Falls, 535; Lake Shore, 540; Grand Trunk, via Suspension Bridge, 541. From St. Louis to Buffalo the Wabash mileage, via Fort Erie, is 722; Wabash via Toledo & Lake Shore, 722; Big Four 731. The Wabash short line from Kansas City, via Hannibal & Decatur, to Buffalo is 949 miles, while the shortest line from Kansas City, via Chicago, is 981, & the shortest line, via St. Louis & the Big Four, is 1,008.

A prominent railway man in Detroit, speaking of the deal, said: "It is certainly a profitable one for the G.T., which has 3 lines between Detroit & the Niagara River, & it certainly cannot make them all pay. Mr. Hays plan to induce the Wabash to take one was wise, & if he can dispose of the other in a similar manner he will do a great thing for his road. It is all right for the Wabash, too, for it can now get the long-looked-for outlet from the West & at the same time greatly assist the G.T. by turning freight over to it."

An official of the Wabash, said in an interview: "There will be a great change in the passenger arrangements between Chicago & Buffalo before long. The branch from Glencoe east has not been used very much lately, but it will now be greatly improved, & miles of the old track will be replaced with 80-lb. rails. After the road is fully repaired there will be an opportunity for good time between Chicago & Buffalo, and even New York. Our line will be the shortest from Chicago to Buffalo, & as the Erie road is making better time than the Empire State Express, between New York & Buffalo, it will be possible to make a connection with that road that will clip a slice from the time now made between New York, Buffalo, Detroit & Chicago."

Mr. Jones, who up to the date of his appointment as above, was Asst. Supt. of the Middle Division of the G. T. at London, is a former Wabash man. He took with him from London Chief Dispatcher Wm. Armstrong to be Chief Dispatcher of the new division, also dispatchers A. B. Munson, G. Clarke & F. Arnum. S. S. Russell, Secretary to Superintendent Fitzhugh, of the Middle Division, has gone as Mr. Jones' chief clerk. H. Ferguson, General Roadmaster of the Middle Division at London, & who also acts as General Roadmaster of the Southern Division, has appointed R. Bagnall Roadmaster between Windsor & St. Thomas, with office at Chatham; & W. G. Smith, Roadmaster between St. Thomas & Niagara Falls, & Welland Jct. & Black Rock, with office at St. Thomas.

G. R. Layher is appointed Local Freight Agent of the Wabash at Buffalo. He was formerly connected with that line at St. Louis, & for the past year has been agent for the G.T.R. at Buffalo & Black Rock.

T. J. Costello is appointed Trainmaster of the Wabash's Buffalo Division, office at Buffalo.

It is said the Rome, Watertown & Ogdensburg, Ontario Despatch, Lehigh & Wabash & Hoosac Tunnel freight lines will operate with the Wabash over the Southern Division. The Wabash will now send over the G.T. all freight that was hitherto turned over to the Nickel Plate, Lake Shore, B. & O. & M.C.R. Ten Wabash engines & 9 cabooses with the necessary tools were brought from Detroit to Windsor on Feb. 26, for the new line; the duty on them amounted to nearly \$13,000.

The G.T.R. has been ferrying an average of 250 cars a day between Detroit & Windsor, & it is expected the 2 ferry boats will now have to carry as many or more for the Wabash.

Under the will of the late D. A. Stewart, C.E., engineer of the C.P.R. Western Division, the Winnipeg Free Kindergarten gets a bequest of \$100.

C. B. Cumpston, chief train dispatcher at Fort William, Ont., has been appointed assistant to C.P.R. Superintendent Niblock, of Medicine Hat, Assa. Mr. Cumpston is stationed at Calgary.

J. B. Lambkin, the newly-appointed passenger agent in Montreal (on the International R'y.), was the hero of an interesting incident during the Fenian raid. He was then a trumpeter in the Ottawa Field Battery, & when the Battery was ordered to Prescott on active service he was considered too small to ride a horse, & was consequently under orders to stop at home. With this state of things, however, he was far from content, & smuggling his uniform out of the house, he dressed himself in the old St. Lawrence Ottawa Railway Station, afterwards stowing himself away in a freight car & was this way taken to Prescott, where he joined the Battery. Whilst a member of Princess Louise Dragoon's (180th Regt.), Mr. Lambkin was a herald to H.R.H. Princess Louise.

TRAFFIC & FINANCE.

C.P.R. Earnings & Expenses.

For 1897, 1898.

	1897.	1898.	Increase.
7th to 14th...	\$3,000	\$3,000	\$0
14th to 21st...	52,000	52,000	0
21st to 28th...	70,000	70,000	0
Total	\$127,000	\$127,000	\$0

The earnings for the 1898 earnings were:

C.P.R. Land Sales.

The great improvement in Manitoba & the Northwest Territories is emphatically shown by the following figures:

	Acres.	Amount.	1897.	1898.
Jan.	22,044	9,943	87,000	\$14,872
Feb.	1,000	1,000	25,000	27,873

Grand Trunk Finances.

The Grand Trunk statement for the half-year ended Dec. 31, 1897, shows net earnings of \$3,936,600. The surplus, after payment of all fixed charges is \$1,336,500. This makes the total surplus for the year \$1,349,622. The deficiency of \$1,301,022, which was accumulated in the years preceding 1897, is thus cleared off, and about \$50,000 remains to the good. This is rather better than was looked for.

The Canadian Gazette, London, Eng., says: The directors of the G.T.R. have issued a statement much more favorable than any put before the shareholders since 1893. In 1894, 1895 and 1896 there was a debit to revenue after providing for debenture interest, & at the end of 1896 it had got to £267,000. But so successful was 1897 that the whole of this adverse balance has been cleared off, & there is £10,200 to be carried forward. The guaranteed stock amounts to £5,219,000, & ranks for 4%, so that but for the debit to revenue brought forward the full rate could have been paid, & as much left over as equals about 2% on the 1st preference.

The earnings for January & February were:

	1897.	1898.	Increase.
Jan.	\$1,916,332	\$1,639,614	\$276,718
Feb.	272,410	272,410	0
Total	\$2,188,742	\$1,912,024	\$276,718

The net earnings of the Quebec Central Ry. for '97 were \$159,995, as against \$128,311 for '96.

The Yukon & Stickeen River Trading & Transportation Co., Ltd., was registered in England, Feb. 8, with a capital of £50,000 in £1 shares.

The net earnings of the Minneapolis, St. Paul & Sault Ste. Marie Ry. for the 11 months to the end of Nov., '97, were \$1,565,329, as against \$1,397,098 for the corresponding period of '96.

The accounts of the Buffalo & Lake Huron Ry. Co. for the half-year ended December 31, show a disposable balance, after providing for interest on the bonded debt, of £14,210, which admits of the payment of a dividend of 5s. 3d. a share, leaving £425 undivided. This line is leased in perpetuity to the Grand Trunk for a rental of £70,000 a year. The annual dividends for the past 31 years have been the same, 5s. 3d. a share. The £10 shares are quoted at 13½ to 14, & the 1st. & 2nd. mortgage 5½ per cent. bonds, both of which are irredeemable, at 142 to 145.

OFFICIAL RAILWAY CIRCULARS.

Canada Atlantic.

CANADA ATLANTIC TRANSIT CO., Operated by C.A.R. Co. OTTAWA, Jan. 15., Geo. J. Harris is appointed General Western Agent of these Companies, with office in Chicago, Ill., Wheeler Building, No. 6 Sherman Street, Room 35. C. J. Smith, General Freight Agent; Approved, E. J. Chamberlin, General Manager.

CANADA ATLANTIC TRANSIT CO., Operated by C.A.R. Co. OTTAWA, Jan. 25. The following appointments take effect Feb. 1; Jas. Ritchie, General Eastern Agent; C. H. Hurlburt, New England Travelling Agent; D. A. Kimball, Contracting Agent; with office at 196 Washington Street, Boston, Mass. C. J. Smith, General Freight Agent; Approved, E. J. Chamberlin, General Manager.

CANADA ATLANTIC FAST FREIGHT LINE, OTTAWA, Jan. 25. Jas. Ritchie is appointed General Eastern Agent, effective Feb. 1, vice Royal Whiton, resigned. Commencing at once, all traffic in bond for export via Boston should be consigned in care of Mr. Ritchie, 196 Washington Street, Boston, Mass., to whom all communications respecting export traffic, also copies of way-bills & through bills of lading should be addressed. G.T.R. circular 817, of Sep. 16, 1895, & C. A. F. F. Line east bound billing list No. L. 1 should be amended accordingly. C. J. Smith, Line Manager.

Canadian Government.

MONTREAL, Jan. 22. The jurisdiction of the General Freight & General Passenger Agents of the Intercolonial R'y is extended over the Prince Edward Island R'y. Effective Feb. 1. A. H. Harris, General Traffic Manager.

MONTREAL, Jan. 22. J. Campbell is appointed Car Accountant of the System, with headquarters at Moncton, N.B. Effective Feb. 1. A. H. Harris, General Traffic Manager.

MONCTON, N.B., Jan. 22. Jas. B. Lambkin is appointed District Passenger Agent, with headquarters at Montreal, in charge of all passenger matters West of Dalhousie, N.B., in-

clusive. H. A. Price is appointed District Passenger Agent, with headquarters at 132 Hollis Street, Halifax, N.S., in charge of all passenger matters East of Dalhousie, N.B. Effective Feb. 1. Jno. M. Lyons, Gen. Pass. & Ticket Agent. Approved: A. H. Harris, General Traffic Manager.

MONCTON, N.B., Jan. 22. A. W. Morrison is appointed General Baggage Agent of the System, with headquarters at Moncton, N.B. Effective Feb. 1. Jno. M. Lyons, Gen. Pass. & Ticket Agent. Approved: A. H. Harris, General Traffic Manager.

MONCTON, N.B., Jan. 22. Jas. Hardwell is appointed Division Freight Agent, with headquarters at Board of Trade Building, Montreal, in charge of freight matters in connection with the System West of & including Dalhousie, N.B. He will also act as Foreign Freight Agent. Wm. Robinson is appointed Division Freight Agent, with headquarters at St. John,

N.B. in charge of the System St. John to Moncton inclusive, & North of Moncton to & including Eel River, N.B., also Point du Chene Branch & the Prince Edward Island Ry. Agents East of Moncton will continue to report direct to, & receive their instructions from, this office as heretofore. Effective Feb. 1. J. J. Wallace, General Freight Agent. Approved: A. H. Harris, General Traffic Manager.

MONCTON, N.B., Jan. 22. Owen Cameron is appointed Freight Claim Agent of the System, with headquarters at Moncton, N.B. All communications as to claims for loss, damage, overcharges, etc., should be addressed to him. Effective Feb. 1. J. J. Wallace, General Freight Agent. Approved: A. H. Harris, General Traffic Manager.

MONCTON, N.B., Jan. 22. H. H. Schaeffer is appointed Weighing Inspector, and J. F. Nelles, Assistant Weighing Inspector, with headquarters at Moncton, N.B. Effective Feb. 1. J. J. Wallace, General Freight Agent. Approved: A. H. Harris, General Traffic Manager.

Grand Trunk.

WESTERN DIVISION, DETROIT, MICH., Jan. 17. The following changes take effect this date: A. R. McIntyre, Asst. Superintendent in charge of train, car & telegraph service on all districts; office, Battle Creek. F. L. Corwin is appointed Trainmaster 27th, 28th and 29th districts, including also C. S. & M. portion of 25th district; office, Detroit. V. A. Cooper has been assigned to other duties. A. B. Atwater, Supt.; Approved, F. H. McGuigan, Genl. Supt.

MONTREAL, Feb. 15. Marshall C. Sturtevant is appointed Car Service Agent, headquarters at Montreal, with full charge of distribution & use of all passenger & freight car equipment of this System, & of foreign cars upon this Co.'s lines, including the prompt loading, unloading & forwarding of cars, giving special attention to movement of manifest or time freight, & trains carrying the same. He will also order all foreign cars required, & officers of other roads are requested to communicate with him when in want of G. T. System equipment. Division officers will comply with his instructions relative to movement & distribution of cars, & movement of time freight. All reports relative to car mileage & accounts will be sent, as heretofore, to W. H. Rosevear, General Car Accountant, Montreal. Effective Feb. 15. F. H. McGuigan, Gen'l Supt.; Approved, Chas. M. Hays, Gen'l Manager.

TO ALL CONNECTIONS. MONTREAL, Feb. 23. The G.T.R. having leased to the Wabash Ry. Co. for a long term of years the joint use of that portion of its railway between Windsor, Ont., and Black Rock station (Buffalo), N.Y., via Glencoe, St. Thomas, Welland Jct. and Fort Erie, also between Welland Jct. (via Allanburg Jct.) & Suspension Bridge, N.Y., the Wabash Co. will, on & after March 1, be entitled to the revenues accruing in connection with the operation of its own trains over the joint section specified—which will thereafter be known as the "Southern Division" of the G.T.R. All communications in connection with the business of the Wabash Ry., over the line referred to, should be addressed direct to the officers of that Co. at St. Louis, Mo. The above arrangements will make no change in the relations now existing between the G.T.R. and its connections, except as they may be hereafter advised. Chas. M. Hays, Genl. Mgr.

MIDDLE DIVISION, TORONTO, Feb. 28. The following changes and appointments are effective Mar. 1:

L. J. Ferritor, Asst. Supt., vice G. C. Jones, promoted. Office, London.

C. S. Cunningham, Trainmaster. Toronto to Hamilton; Burlington Jct. to Hamilton; Niagara Falls to Sarnia Tunnel; Komoka to Kingscourt Jct. via Glencoe; Welland Branch; Harrisburg to Tilsonburg Jct.; Petrolia Branch; & Middle Division crews running over joint track—Southern Division. Office, London.

A. S. Begg, Trainmaster. Toronto to Sarnia Tunnel via Stratford; Galt & Elmira Branches; London & St. Mary's Branch; Buffalo to Goderich; Hamilton to Port Dover; Port Dover to Tavistock Jct.; Port Rowan Branch. Office, Stratford.

H. E. Whittenberger, Trainmaster. Harrisburg to Southampton; Harriston to Owen Sound; Parkhead Jct. to Wiarton; Stratford to Palmerston; Listowel to Kincardine; Palmerston to Durham; Hyde Park to Wingham Jct. Office, Stratford.

J. A. McLardy, Chief Train Despatcher. Toronto to Hamilton; Burlington Jct. to Hamilton; Niagara Falls to Sarnia Tunnel; Komoka to Kingscourt Jct. via Glencoe; Welland Branch; Harrisburg to Tilsonburg Jct.; Petrolia Branch. Office, London.

Joseph Baxter, Chief Train Despatcher. Toronto to Sarnia Tunnel via Stratford; Galt & Elmira Branches; London & St. Mary's Branch; Buffalo to Goderich; Hamilton to Port Dover; Port Dover to Tavistock Jct.; Port Rowan Branch; Harrisburg to Southampton; Harriston to Owen Sound; Parkhead Jct. to Wiarton; Stratford to Palmerston; Listowel to Kincardine; Palmerston to Durham; Hyde Park to Wingham Jct. Office, Stratford.

E. H. Fitzhugh, Supt. Approved, F. H. McGuigan, Genl. Supt.

MIDDLE DIVISION, LONDON, Feb. 28. Roadmasters T. Turner & P. Nelson having resigned, & R. Bagnall & W. G. Smith being transferred, the following changes & appointments are effective Mar. 1:

A. Bruce, Roadmaster, Stratford. North Parkdale to Sarnia Tunnel; Galt & Elmira Branches; London & St. Mary's Branch.

J. Piper, Roadmaster, Toronto. York to Hamilton; Burlington Jct. to Hamilton; Stoney Creek Cut-off; Hamilton to Port Dover.

J. Carey, Roadmaster, Hamilton. Suspension Bridge to London; Welland Branch.

W. Young, Roadmaster, Sarnia. London to Sarnia Tunnel; Komoka to Kingscourt Jct., via Glencoe; Petrolia Branch; Point Edward Branch.

W. McGar, Roadmaster, Stratford. Buffalo to Goderich; Stratford to Listowel.

T. Lockhart, Roadmaster, Palmerston. Guelph Jct. to Southampton; Harriston to Owen Sound; Parkhead Jct. to Wiarton.

P. Earle, Acting-Roadmaster, Brantford. Tavistock Jct. to Port Dover; Port Rowan Branch; Tilsonburg Jct. to Harrisburg; Harrisburg to Guelph Jct.

C. Dallas, Roadmaster, Wingham. Palmerston to Durham; Palmerston to Kincardine; Hyde Park to Wingham Jct.

H. Ferguson, Genl. Roadmaster. Approved, E. H. Fitzhugh, Supt.

Wabash.

BUFFALO DIVISION. BUFFALO, N.Y., Feb. 21. T. J. Costello is appointed Trainmaster of Buffalo Division, office Buffalo, N.Y. Effective Mar. 1. A. E. Robbins, Supt.; approved, H. L. Magee, Genl. Supt.

BUFFALO DIVISION. BUFFALO, N.Y., Mar. 1, effective this date. J. E. Muhlfeld is appointed General Foreman of Machinery & Car Department, office at St. Thomas, Ont. A. E. Robbins, Supt.; approved, H. L. Magee, Genl. Supt.; J. B. Barnes, Supt. Motive Power & Machinery.

GENERAL CLAIM DEPARTMENT. ST. LOUIS MO., Mar. 1. J. L. Head, Assistant Claim Agent, Peru, Ind., will have charge of settlement of Wabash stock & fire claims on Buffalo

Division of this Co.'s lines. All reports of stock struck & fires set out along right-of-way by Wabash trains will be sent to him at Peru, through the offices of the Master Mechanic & General Roadmaster respectively. Henry A. Lloyd, Genl. Claim Agt.; approved, J. Ramsey, Jr., Vice-Pres. & Genl. Mgr.

PERSONAL MENTION.

R. A. Corbett, C.P.R. station agent at Fort William, Ont., has been appointed that company's ticket agent at Skagway, Yukon district. A. J. Boreham, of the C.P.R.'s Winnipeg ticket office, succeeds him at Fort William.

Heretofore the C.P.R. has had three city freight canvassing agents in Toronto, C. W. & H. C. McMullen & W. Bain. Under date of Jan. 24, General Freight Agent Tiffin announced the appointment of C. W. McMullen as city freight agent, in charge of all city canvassing, with office at room 208, Union Station. The other two canvassers are retained & will report to him.

Mrs. W. R. Tiffin, wife of the G.T.R. Superintendent at Allandale, Ont., died suddenly on Feb. 21, during her husband's absence from home. She was about to retire for the night, when she fell, dying almost immediately. She was 50 years of age, & leaves 3 sons. The funeral took place at London, a special train conveying the body, mourners & a number of friends from Allandale, Barrie & Toronto.

The Hamilton Bridge Works Company.

These works, under the management of Henry Szlapka, Chief Engineer, have a decidedly business-like appearance these days. The shops, which are running to their utmost capacity, are under the supervision of A. Phoenix, Superintendent, whose energy keeps things humming. The Co. has been most successful in obtaining large contracts for heavy railway bridges for the C.P. & G.T.R., & other railway corporations. The Queen St. subway, Toronto, was lately built by this Co. The centre girder for the Grand Trunk double track crossing alone weighed 80,000 lbs., length 96 ft. overall, & 10 ft. 6 in. deep, shipped from the works in one piece. The most important & difficult contract ever undertaken by this Co., was the building & erecting of the Stoney Creek arch for the C.P.R. in the Selkirk Mountains, a stupendous task. As for highway bridges wood has been nearly entirely superseded by steel. Steel highway bridges are thoroughly in evidence in these works. Structural work, in which steel has also taken so prominent a place of late, forms a large item in its output, & the Simpson building in Toronto bears testimony to this statement. The Co. does a large business outside of bridge building. It is now busy with an extensive steel roof for the Western Departmental block at Ottawa to replace the wooden roof which was burnt off. The metal work for the Soulanges Canal lock gates is also another large Government contract. The Co. also has a contract for the feeder pipes, about 8 ft. in diameter, & for the power house of the Cataract Power Co., of Hamilton, which proposes to bring electric power from St. Catharines to Hamilton. A large assortment of exceedingly heavy steel bridges on the C.P.R. Crow's Nest Pass Branch have recently been turned out. There are under way a number of other miscellaneous structures. The steel bridge on the C.P.R. at Colborne, built at the Hamilton Bridge Works. The Co. is under the control of the Messrs. Henderson, whose name is prominent in many large undertakings is well known.

TELEGRAPHS & CABLES.

Vancouver Island Cables.

The first telegraph connection with Vancouver Island belonged to the Western Union Telegraph Co., consisting of a cable 10 miles in length between the then territory of Washington, via San Juan Island, & Vancouver Island. It was removed after the laying of the Dominion Government cables as mentioned below.

The present cables were laid by the Dominion Government in 1881, & were taken over by the C.P.R. Co. in 1886. The route of the present line from Vancouver to Victoria is as follows: Pole line through the woods from Vancouver to Point Grey, 12 miles; 24 miles of cable from there to Valdez Island; pole line along that island through the woods for about 3 miles; cross over to Gabriola Island by a long aerial span; pole line for 6 miles along a roadway on the island; 1 mile of cable to Vancouver Island, landing at a point about 10 miles south-east of Nanaimo; pole line through the woods to Nanaimo, & thence along the E. & N. Ry. to Victoria. The conductor in these cables is composed of 7 strands of copper wire, weighing 107 lbs. per knot; insulator, 150 lbs.; & a sheathing, over an adequate serving, of 12 No. 8 or 9 galvanized iron wires.

Between Gabriola & Valdez Islands the currents are so swift & the bottom so rocky that a cable cannot be used, & recourse was had to a long aerial span, supported on trees about 200 ft. in height, with the branches & tops cut off so as to present a small surface to the wind. An extra span on two other trees is maintained, so that, in case of the one in use breaking, communication can be quickly regained. The repair of these spans is carried on under great difficulty. The wire can only be carried across at slack water, which lasts only a few minutes at turn of tide, & it must be raised free of the water before the tide turns or it will be either broken or carried away. Sometimes a week is spent before the wire can be successfully erected. The land line stretches between Vancouver & Nanaimo have been subject to considerable interruption from falling trees, etc., & owing to their great height, it is out of the question to cut a trail wide enough to be free from this annoyance. To have repairs made as quickly as possible, line men are stationed at Vancouver, Valdez Island, Nanaimo, & latterly on Gabriola Island.

To avoid the difficulty & danger of frequent interruptions, the C.P.R. Co. concluded last year to lay a cable the whole way from Vancouver city to Nanaimo, a distance of 40 miles. The old cable had only one conductor, which was sufficient to carry all the business of Vancouver Island, but looking forward to the large increase expected by the people of Victoria, owing to the Yukon excitement, & the development of the mineral resources of the island, it was decided to lay a three conductor cable. One of these conductors will connect at Nanaimo with a through wire to Victoria, & will be quadruplexed, so that four messages can be simultaneously transmitted over the one circuit. The second cable conductor will be connected with a second wire through to Victoria, giving communication with all intermediate offices, & in case the quadruplex cannot carry the entire business of Victoria, this will furnish a fifth circuit. The third cable conductor will, for a time at least, be used for Nanaimo business with the Mainland, but if necessary will be carried to Victoria with a third wire & quadruplexed.

The cable has been made by the Telegraph Construction & Maintenance Co., London, Eng. It was originally intended to bring it by steamship from London to Halifax, & then across the continent by rail. To accomplish this, the cable would have had to be coiled in a tank on the steamship so that each turn

would average the same length as when coiled on the cars after being transhipped at Halifax, so as to avoid kinks. It weighs about 220 tons, & would require a train of 13 or 14 cars to transport it. This was quite a proposition, as any accident happening to the train would perhaps ruin the cable. However, the C.P.R. recently purchased two steamships in England for use on the Yukon route, & as they were to leave London about the time the cable would be finished, the original shipping instructions were cancelled, & arrangements made to transport the cable by SS. Tartar direct from London to Vancouver, & it is now on the way.

Although actually only 40 miles of cable are required for the work, 45 miles have been secured. The cable will be laid almost immediately on its arrival. The following is a portion of the specifications for the manufacture of the cable: Each of the 3 conductors to be composed of 7 strands of copper wire twisted together, containing not less than 98 per cent. of pure copper, & weighing 100 lbs. per nautical mile. Each conductor is then insulated with gutta-percha weighing 100 lbs. per nautical mile, & then served spirally with a saturated tape. The 3 insulated conductors are then twisted together & served with the best tanned jute, free from knots, & with 14 best extra galvanized iron wires, .203 of an inch in diameter, each sheathing wire to be treated with bituminous compound, & the sheathed cable to be covered with two coatings of tape, laid on in opposite directions, & saturated with compound. The insulation resistance of each conductor to be not less than 4,000 megohms per nautical mile.

THE WESTERN UNION TELEGRAPH CO.,

with which the Great North Western Telegraph Co. connects, is extending its wires from Seattle, Wash., to Victoria, B.C. The work between Seattle & Port Angeles is proceeding as rapidly as possible. The cable, which will be laid from Port Angeles to Victoria, has been ordered, & it is expected that communication will be had with that place by this new route in the course of a few weeks.

C.P.R. Telegraph Improvements.

Not many years ago it was quite a feat to work a telegraph wire for a greater distance than, for instance, Montreal to Toronto; & in bad weather it was difficult to work even half that distance. Better construction improved this, & the invention of automatic repeaters still further extended the working distance. It was found that circuits requiring more than two automatic repeaters were unsatisfactory. To lengthen out the different sections recourse was had to larger wires (iron), the size being increased by steps from 300 to 570 lbs. a mile.

Copper is only about one-sixth of the length (electrically) of iron; but its use was for a long time prevented by the much greater cost of the material, & the fact that, owing to its delicate nature, it had to be handled with extreme care; & the cost of stringing it is nearly double that of iron. The telegraph business has increased so enormously of late years between important centers that many more wires have had to be erected, & stringing heavy iron wires had to be discontinued & light copper wires became a necessity. The size has been gradually increased.

The Yukon excitement, & the greater prosperity now prevailing throughout Canada, has resulted in an enormous increase of the telegraph business between the far West & Eastern Canada, & the present facilities of the Canadian Pacific Railway Co.'s Telegraph will probably be insufficient to carry it during the coming summer, therefore the Co. has decided to largely increase them. In addition to numbers of new wires connecting interme-

diate points, a through wire from Montreal to Vancouver is to be erected immediately. In order to get the greatest amount of work out of this wire it is to be composed of copper, weighing 300 lbs. a mile. It is being manufactured by the Dominion Wire Manufacturing Co. at Lachine, according to specifications drawn up for the highest grade that can be obtained, & will be subjected to severe mechanical & electrical tests before shipment. When completed the wire will cost in the neighborhood of a quarter of a million dollars, the total weight of copper being about 440 tons.

It will be used only for business between the east & the Pacific Coast, Montreal working direct with Vancouver, with automatic repeaters at Fort William, Ont., & Swift Current, Assa. This wire will be worked duplex, i.e., two messages transmitted at the same time in opposite directions. At present Montreal works direct with Winnipeg, with repeaters at Sudbury and Fort William, & all messages are received & re-transmitted at Winnipeg; but with the new wire Vancouver will be brought as close, practically, to Montreal as Ottawa is.

It is expected that between 200 & 250 men, divided into gangs of 20 each, will be engaged on this work.

Telegraph Office Changes.

GREAT NORTHWESTERN.

Offices opened: St. Michel Station, Que.; Cascades Point, Que.

Offices closed: St. David's, Ont.; Winthrop, Ont.; Osnabruck Centre, Ont.; Rosebank, Man.

CANADIAN PACIFIC.

Offices opened: Comaplix, B.C.; Esquimalt, B.C.; Harrison, B.C.; Notch Hill, B.C.; Lear Springs, B.C.; Seventh Siding, Crow's Nest Pass Ry., Alta.; Anson, Ont.

Offices closed: Bird's Hill, Man.; Caron, Alta.; Cheney, Ont.; Dinorwick, Hoard's Station, Ont.; Kenilworth, Ont.; Deschambault Station, Que.; Vaucluse, Que.

Cow Bay, N.S., has been changed to Port Morien.

At Qu'Appelle, Assa., recently, Hartley Gisborne, for the past 16 years District Superintendent of Government telegraph lines in the Northwest Territories, was presented with an address & silver tea-set by the employees of the service, on his leaving it in consequence of J. S. Macdonald, of Moose Jaw, having been appointed in his stead. Mr. Gisborne is removing to Winnipeg.

J. Galt, W. Hespeler, R. J. Campbell, F. A. Drummond & F. W. Heubach give notice of their intention to apply for incorporation under the Manitoba statutes, under the name of the Manitoba District Telegraph & Delivery Co., to maintain & lease electric call boxes, to supply messengers, to deliver parcels, collect accounts, post bills & distribute handbills, & to print & publish the same. The head office is to be at Winnipeg; capital stock \$10,000.

The Commercial Cable Co's report for 1897 gives the revenue from operating the cables, after deducting all expenses & reserving \$11,750 to meet depreciation of spare cable, as \$1,200,155.53, as compared with \$1,123,653.46 for 1896, an increase of \$76,502.07. The revenue from the land lines, after deducting all operating expenses & setting aside \$60,000 to a land lines depreciation reserve account, amounted to \$645,185.59. The net revenue of the combined systems was \$1,845,341.12, out of which has been met the interest on the 1st mortgage bonds & debenture stock amounting to \$640,000, & dividends of 7% & bonus of 1% on the capital stock, absorbing \$800,000, a total of \$1,440,000, and leaving the balance of net revenue for the year \$405,341.12.

NOTICES TO MARINERS.

Dominion Department of Marine and Fisheries.

All bearings, unless otherwise noted, are magnetic & are given from seaward; miles are nautical miles; heights are above high water, & all depths are at mean low water.

No. 8, Feb. 1, Wreck of Gerona.—The position of the steamer Gerona which sank on Jan. 1 last, between Seal Island & Cape Sable Island, off the S.W. coast of Nova Scotia, has been fixed by the Master of the Dominion steamer Newfield. The wreck lies in 20 fathoms water with Bon Portage light bearing N. E. by E, $\frac{1}{4}$ E., distant $5\frac{1}{2}$ miles. Sealing Island light bearing W. by N. $\frac{3}{4}$ N., distant 8 miles. Cape Sable light bearing E. by S. $\frac{1}{4}$ S., distant 9 miles. When the wreck was examined the 2 top-mast heads of the vessel showed about 11 feet above water at low tide. It is proposed to moor a green iron can buoy about 50 yds. S.S.W. from the wreck. This affects Admiralty chart 335.

No. 9, Feb. 15—1. Beacon Rock beacon, Nanaimo, destroyed.—The beacon on Beacon Rock, in Nanaimo harbor, Vancouver Island, B.C., was destroyed by collision with the steamer Willapa on the night of January 26th. A platform buoy, with cage, has been moored on the rock pending the re-erection of the beacon. This affects Admiralty charts 573 & 2512, & B.C. pilot, 1888, pg. 145.

2. Red sector in Cape Beale light.—The revolving white light shown from Cape Beale light station, at the entrance to Baynes Sound, Pacific coast of Vancouver Island, has heretofore been obscured to the northward of an east bearing, so that vessels losing the light were warned that they were approaching foul ground. From & after May 1 next the light will be rearranged so as to show revolving red into Barclay Sound, between the bearings of east & approximately S. S. E. Vessels are warned that within the sector of the red light there are numerous dangers. The sector of white light will remain as heretofore. This affects Admiralty charts 584, 592, 1911, 1917 & 2531, B.C. pilot, 1888, pg. 274, and Canadian list of lights & fog signals, no. 1161.

No. 10, Feb. 16—1. Increased Height of Palmers wharf light.—The mast light established in 1894 on Palmers wharf, Crapaud harbor, was last year raised 10 ft. in height, & is now elevated 20 ft. above high water mark. The mast carrying the lantern from which the light is shown is 18 ft. high, from the wharf to its top. This affects Admiralty charts 1651, 2000 & 2034 & Canadian list of lights & fog signals, 1887, no. 375.

2. Height of mast, Wrights range.—The mast on which the lantern of Wright's front range light, in the same harbor, is hoisted is 11 ft. high from its base to the top of the slatwork. This affects Canadian list of lights & fog signals, 1887, no. 373.

3. Change in illuminating apparatus, St. Peters Island light.—Referring to notice to mariners no. 2 of 1897, mariners are advised that on the opening of navigation in the spring of 1898 the fixed red light heretofore shown from the lighthouse on St. Peters Island, Hillsborough Bay, will be replaced by an occulting white light, giving an occultation of 6 seconds every $\frac{1}{2}$ minute. The illuminating apparatus will be dioptric of the 6th order. The light should be visible 14 miles from all points of approach, except where obstructed by the high ground of St. Peters Island. This affects Admiralty charts 1651, 1738, 2034 & 2516 & Canadian list of lights, 1897, no. 370.

No. 11, Feb. 24—Port Elgin Range Lights.—The information given in notice no. 5 of 1898 with regard to the Port Elgin range lights having been found to be incomplete, & in some respects inaccurate, it is cancelled,

& replaced by the following: Instead of the single light at Port Elgin, on the east shore of Lake Huron, described in list of lights, 1897, under the no. 993, there are now 2 pairs of range lights, arranged to lead into the port through the deepest channel. All 4 lights are shown from lanterns hoisted on masts, with sheds at their bases. Before the opening of navigation in 1898 the masts & sheds will be painted white. The front mast of the south range stands upon the shore line about 1,500 ft. southwardly from the south end of the Government landing wharf. Approximate position, taken from Admiralty chart no. 519: Lat. N. $44^{\circ} 26' 15''$, Long. W. $81^{\circ} 23' 30''$. The mast is 14 ft. high. The light is a fixed white light, elevated 16 ft. above the ordinary level of the lake, & should be visible 4 miles in the line of range. The illuminating apparatus consists of a pressed glass lens. This light was established in 1895. The back mast of the south range stands 70 ft. E.S.E. from the front one. It is 18 ft. high. The light is a fixed red light, elevated 20 ft. above the lake & should be visible 4 miles in the line of range. The illuminating apparatus consists of a pressed glass lens. This light was established in 1895. The front mast of the east range stands on the Government landing wharf, near its north-east extremity. It is 14 ft. high. The light is a fixed white light, elevated 23 ft. above the lake, & should be visible 9 miles from all points of approach by water. The illuminating apparatus is dioptric of the 7th order. This light was established in 1884, but has since been moved. The back mast of the east range stands on the shore on the east side of the harbour, 680 ft. N.E. from the front mast, & is 16 ft. high. The light is fixed red, elevated 25 ft. above the lake, & should be visible 4 miles in the line of range. The illuminating apparatus consists of a pressed glass lens. This light was established in 1895. Vessels entering Port Elgin should bring the south range lights in one, & stand in on the range until the east range lights are brought in one, & then follow the east range into the dredged harbour between the breakwater & the landing wharf, leaving the front light on the starboard hand, to clear the wharf. This notice affects Admiralty charts 519 & 678, & the substance of it should be entered in the Canadian list of lights & fog signals instead of no. 993.

British Columbia Inland Steamers

The C.P.R. Co's fleet on the inland waters of B.C. has already assumed pretty extensive proportions. On the Columbia River & Arrow Lakes, between Arrowhead & Trail, the Co. has the following:—The Lytton, taken over from the Columbia & Kootenay Navigation Co., 150 ft. long, capacity about 50 passengers & 100 tons freight. Her sister boat, the Nakusp, was burned last fall, & will be replaced by the Co. at an early date. The Kootenay, built at Nakusp last year, length, 180 ft., accommodation for about 130 passengers and 300 tons freight. The Rossland, recently completed at Nakusp, length 180 ft., with accommodation for about 75 passengers. She is intended for passengers, mails & express only & will make fast time. The Trail, a freight boat, about 170 ft. long, capacity about 300 tons freight. The tug-boat Columbia tows the transfer scow from Arrowhead to Nakusp, where connection is made with the Kaslo & Slocan Ry. without breaking bulk. The transfer scow carries 8 cars. There are also 12 scows which carry bulk freight between Arrowhead, Robson & Trail.

On Kootenay Lake are 2 steamers, the Nelson & Kookanee, each about 160 ft. long, with capacity for about 75 passengers each & about 200 tons of freight. The Kookanee is a pretty fast boat. There are also a number of scows. The Co. is now building at Nelson a tug, & a transfer barge with a

capacity of 100 tons, for temporary terminus of the Crow's Nest Branch, at the southeast end of Kootenay Lake & Nelson, where connection will be made with the Co's Columbia & Kootenay branch.

On Slocan Lake the Slocan, length about 150 ft., long, capacity about 50 passengers, boat, with limited sleeping accommodation, say for from 25 to 30 people. She runs between Rosbery, on the Nicola River, & Slocan City, the terminus of the Slocan Lake branch of the Columbia & Kootenay Ry. There is also a small boat, the Wm. Hunter, & a car barge.

On Okanagan Lake is the Slocan, a steamer, running between Okanagan Landing & Penticton.

The Pelson Iron Works.

This Toronto firm has a lot of marine & other work on hand. The principal contract is for a flat-bottomed stern-wheel steamboat for the C.P.R. for use on the Stikine River, & one for another company for the Stewart River, reference to which appears on another page of this issue. The firm is also building machinery to be put in another Stikine River boat, which the C.P.R. is building at Vancouver.

The following marine work is also under construction: Fore & aft compound surface condensing engine for Capt. French, New Westminster, B.C.; fore & aft compound surface condensing engine for Capt. Mahers, New Westminster, B.C.; fore & aft compound jet condensing engine for the Brockville, Ont., Navigation Co.; large marine boiler for H. West, New Westminster, B.C.; composite steam launch for T. Eaton, Toronto, for use in the Muskoka Lakes, to make a speed of 16 miles an hour.

Among its general work under way is the following: 250 H.P. high speed engine & 2 large locomotive boilers for the Crow's Nest Pass Coal Co.; power plant for the Stewart, Hartshorn Co.; window shade roller manufacturers, Toronto; three Heine safety boilers, 250 H.P. each, for the Toronto Electric Light Co.; one Heine safety boiler, 250 H.P., for the Gutta Percha Rubber Co., Toronto, and 1 of 150 H.P. for the T. Eaton Co., Toronto.

Canadian Pacific Navigation Co.

The C.P.N. Co. is arranging for the shipment of goods direct to Dawson City without touching at a U. S. port, the object being to avoid bonding privileges or other customs arrangements. The navigation of the Stikine River, through the strip of Alaska at the mouth, is by virtue of treaty rights, free to Canadians as to United Statesers. Taking advantage of this, the C.P.N. Co. intends to run a line of small steamers from Port Simpson up the Stikine River. Connection will be made with these steamers by the Co's vessels from Vancouver & Victoria, & Wrangell will not be touched at all. The new steamer being built up there will thus be partially diverted to Port Simpson.

It is recalled that several years ago a steamer, the Western Slope, ran from Port Simpson right up the Stikine to the Canadian line, & in 1878, when the U. S. Government began to show a somewhat similar spirit to what it is doing now, of trying to prevent Canadian vessels doing any of the carrying trade, the steamer, being on the Stikine for some seasons, the C.P.N. intends to utilize include the R. P. Rithet, Yosemite & some others.

The C.P.R. Co's R.M.S. Empress of India, passed through a heavy snow storm in the second week of February. Her bridge was wrecked & library stove in, but \$500 has repaired all

Marine Notes of Interest.

The S. S. Algonquin is being repaired at Toronto, under the supervision of Captains McLaughlin & Craig.

Mrs. Thomas Donnelly, wife of the Government Steamboat Inspector at Kingston, Ont., died suddenly Mar. 2, aged 40.

The Department of Public Works has asked tenders for constructing a wharf & approach at Honora Bay, Manitoulin Island, Ont.

Dr. R. S. McMan, of Winnipeg, has been appointed ship-surgeon on the R. M. S. Warimoo, sailing between Vancouver & Australia.

Troop & Son, St. John, N.B., have placed an order in England for building a steel steamer, 300 ft. long, 45 ft. beam, to be named the Canada.

A steamer is being built at Fort Frances, Ont., by Coates & Mosher to ply on Rainy Lake between Mine Centre, Rainy Lake City and Bell City.

A. J. Corriveau, of Montreal, and others are making application to the Dominion Parliament to incorporate the Montreal & Lake Champlain Canal Co.

The Donnelly Dredging & Salvage Co., of Kingston, has ordered 2 new 10 in. centrifugal pumps from London, Eng., each having a capacity of 3,500 gallons a minute.

The Kingston, Ont., Locomotive Works recently launched a steel barge, the Coburg, 180 ft. long, 35 ft. beam, & to carry 50,000 bushels of grain on a draft of 11 ft.

The Dominion Government, in view of the greatly increased fleet now on the Pacific, is taking measures to ensure much more rigid inspection of ships sailing from B.C. ports.

Chief Engineer Black, last season in the Steamer Hamilton, has been transferred to the steamer now building for the Richelieu & Ontario Navigation Co., & is superintending the construction of the machinery.

The Hudson's Bay Co.'s business between Hudson's Bay & England is done by the Erik, which leaves London about the end of May & goes to Fort Churchill by way of the Labrador coast & Hudson's Straits, for the Co.'s business only.

The Propeller Persia has been acquired by W. A. Geddes of Toronto & Jacques of Montreal, Capt. Crangle & J. H. G. Hagarty, of Toronto, having sold their interest. The Persia, under command of Capt. Scott, will run on the Montreal-Toronto route with the Ocean.

The customs statistics at Fort William, Ont. for 1897 are: Total vessels, 429; tonnage, 557,179; bushels of wheat shipped, 16,711,226; oats, 215,805; barley, 11,959; flax, 96,376; flour, 83,078; barrels pulpwood, 714 tons; coal arrived, 138,134 tons; duty collected, \$97,666.77.

For several weeks rumors have been in circulation to the effect that the Ogdensburg & Chicago Transit Company boats would not run to Ogdensburg; but, instead, would run in connection with the Canada Atlantic Ry. It is now said the Transit boats will run to Ogdensburg this season as usual.

The North Shore Navigation Co.'s steamer City of Collingwood, & the Great Northern Transit Co.'s steamer Majestic, will form a line this season from Collingwood & Owen Sound, going via the north of Manitoulin Island to Sault Ste. Marie, Port Arthur, Fort William, Duluth & intermediate ports.

The C.P.R. Co. has purchased the Troup wharf & warehouses at Wrangel, Alaska, for \$12,000. The wharf is to be extended to 600 ft. in length, with a width of 60 ft., & necessary shed accommodation is to be built in connection with the C.P.R. boats to Telegraph Creek. Wrangel is reported to be a lively place, & buildings bring fancy prices.

The tug being built by Capt. Angus Campbell Elliot & Hale at Nelson, B. C., will be completed about the middle of March. It is 80 ft. long, 14 ft. beam, with 6½ ft. draft of water. The machinery is now on the road from Ontario, & when completed the tug will be one of the best boats of its kind on the inland waters of B.C. It will be used for towing on Kootenay Lake.

The steamer Rosedale, which ran ashore, & is now in drydock at Kingston, Ont., has been sold by the underwriters to the Edwardsburg Starch Co. of Cardinal. There were several tenders put in for the steamer, the former owners, Hagarty & Crangle, of Toronto, making an offer. The Rosedale will be repaired at once & will be again sailed this season by Capt. Ewart.

The steamer Filgate, running between Montreal & L'Isle Grosbois, & the steamer Chateaugay, running between Chateaugay & Lachine were put up at auction in Montreal, Feb. 15, the Filgate being placed on the list at a valuation of \$25,000 & the Chateaugay at \$22,000. The Filgate fell to R. Gagnon for \$8,500 & the Chateaugay was bid in by Mr. Rodier at the same figure.

The steamer Shrewsbury has been purchased by the Thousand Island Steamboat Co. from Buffalo parties. She is a very fine & fast steamer, classing A1, built at Bath, Maine, in 1888, at a cost of \$85,000, & will be an important addition to the Folger system. She is a little larger than the steamer Empire State, having a carrying capacity of 1,200 passengers. She will be one of the American Line between Kingston & Montreal this season.

A Collingwood correspondent inquires of the Marine Record. "What steamer on the lakes has the deepest water bottom? Has the Centurion 72 ins. of a water bottom?" The Record replies: "The deepest water bottom on the lakes is found in the new steel steamer building for the Bessemer Steamship Co. at West Bay City, Mich., which is 72 ins. The tow barge, building for the same owners, has a water bottom of 5½ ft., all others range from 30 to 60 ins., the Centurion having only a 54 in. water bottom."

A Kingston, Ont. despatch says the red light at Snake Island is not in a satisfactory

position & the Department of Marine will have it shifted from its present location. For some hundred feet east & southeast of Four Mile Light runs a bed of flat rock, not covered with sufficient water to allow heavily laden boats to pass over it. Another local improvement to be instituted by the Department is the buoying of the old ship channel.

The movement to establish a car ferry line between Port Stanley, Ont., & Conneaut Harbor, Ohio, has assumed definite shape. Docks will be constructed at Port Burwell, Ont. Hingston & Woods, of Buffalo, have received the contract for dredging. It is said this ferry line will enable the Michigan Central & Canadian Pacific, principally the Vanderbilt line, to compete with the Grand Trunk for the coal business. The Bessemer road is back of it, too.

The Tunisian is the name of the Allan Line's latest new boat. She is now upon the stocks, & is expected to be ready by April, 1899. She will be the largest vessel which has ever entered the port at Montreal. Registered tonnage 10,000 tons, length 510 ft., beam 59½ ft. She is to be a modern boat in every respect, with magnificent passenger accommodation, and enormous carrying capacity. Her speed will be about 16 knots. The other new Allan liner, the Castilian, will reach Montreal, on her 1st trip, about the middle of next July.

The C.P.R. steamer Kootenay, while making a landing at Robson, B.C., recently ran into a submerged rock in the middle of the river & stove a hole in her hull, which is believed to be 18 in. square. Had it not been for the fact that the steamer is provided with air-tight compartments it is certain that she would have sunk. The boat was moored safely & all on board landed without accident. There was about 4 ft. of water in the compartment in which the hole was located. It may be necessary to put the steamer on the dry dock for repairs.

On what is known as the Edmonton route to the Yukon, The Hudson's Bay Co. has a steamboat, the Athabasca, plying on the Athabasca River, between Athabasca Landing, about 100 miles north of Edmonton, Alberta, & the Grand Rapids, from which point freight has to be transferred in boats to Fort McMurray. From this point the steamboat Grahame runs to Fort Smith on the Slave River, where a transfer is made to the Wrigley, a screw steamer which goes across Great Slave Lake, & down the Mackenzie River to its mouth, a distance of about 1,300 miles. These steamboats are used for the business of the Hudson's Bay Co., & the Co. does not undertake to carry passengers & freight on them.

BY OCEAN AND RIVER

To the Great Yukon Gold Fields.

Never before in the history of mining was there such a mad rush to a new Eldorado as that settling in for Canada's northern gold fields. Never has existed a more alluring region for treasure-seekers, and never were there such facilities for spreading the news to every corner of the known world. Six months ago, people were appalled at the thought of thousands going to the Yukon. To-day, the invading army is numbered in the hundreds of thousands. A Wall Street financial firm recently ascertained from the mayors of all the cities and towns in the United States a rough estimate of the numbers in each intending to set out for the Yukon, and found that the total exodus from the United States alone is likely to exceed 200,000. Probably as many more treasure-seekers will leave other parts of the world; so that the northern gold fields have every prospect of a population of half a million within two years.

Heretofore, the vessels of the Canadian Pacific Navigation Co., of Victoria, B.C., sailing from that port and Vancouver, and those of the Pacific Coast Steamship Co., sailing from San Francisco and transferring passengers at Seattle, Wash., and Victoria to other steamships of the same line for northern points, have been ample to accommodate all passengers, but with the rush to the gold fields the northern waters have become fairly alive with boats, and countless numbers of vessels are under construction for the new traffic. At one time the C.P.N. Co.'s steamers made regular trips during the summer months from Victoria and Vancouver to Alert Bay, Ft. Rupert, River's Inlet, China Hat, Gardiner's Inlet, Port Essington, Ft. Simpson, Ft. Wrangel, Sitka and Juneau. Of late years their steamers went only to Ft. Simpson and intermediate points; but recently an extended service was announced to Queen Charlotte Islands on the first of each month, and steamers have gone on the Yukon route, leaving Victoria and Vancouver weekly for Wrangel, Juneau, Dyea and Skagway. The Pacific Coast Steamship Co.'s boats conducted excursions from San Francisco, Puget Sound ports, Vancouver and Victoria, to Sitka and northern points, transferring passengers to the north-bound steamers at Seattle and Victoria. These were, practically, the only vessels of importance plying between Pacific Coast ports and the southern coast of Alaska.

But travellers bound for the interior of Alaska, for the great unknown country on each side of the Yukon River, generally entered the region by another and longer route. They took ship with one of the two big trading companies, the Alaska Commercial Co., or the North Am-

erican Transportation and Trading Co., which practically controlled the trade of the vast interior. The boats of the trading companies ran between San Francisco, calling at Pacific ports, and St. Michael's, an island 70 miles north of the Yukon's mouth. St. Michael's was the headquarters of Arctic and Yukon trading. Here miners and traders were transferred from the ocean vessels to the shallow-draught river steamers, which carried them 1,370 miles up the Yukon to Forty-Mile Creek. The fame of the gold fields has transformed the face of the far northern seas. Where two trading companies and two navigation companies once monopolized all traffic, there are now hosts of vessels, ready on being prepared, to handle the greatly increased travel. Twenty-six vessels were scheduled to sail from Vancouver and Victoria for northern points

possess the largest and finest fleet of any of the lines conducting a service from England to Cape Colony. Both the steamships have been employed in the trade for the South African gold and diamond fields.

The Tartar was built by Aitken & Mansel, of Glasgow. She is classed 100 A1 at Lloyd's, and is three-masted, schooner rigged. Her gross tonnage is 4,425; length, 376 ft.; breadth, 47 ft.; depth, 33.3 ft. She is fitted with triple expansion engines, by T. Richardson & Sons, of Hartlepool, the diameter of cylinders being 36, 58 and 94 ins., respectively, length of stroke 60 ins., and working pressure 160 lbs. She is fitted throughout with electric light, and has refrigerating plant and cold chamber for the storage of fruit, vegetables, milk, etc. From the commencement of her career in the South African mail service the

Tartar has been a great favorite with passengers. She has a character for comfort and speed only exceeded by a very small number of the vessels employed in the South African trade.

The Athenian was also built by Aitken & Mansel, of Glasgow, and has always been regarded by passengers as a most comfortable vessel to travel by. She is a three-masted schooner, classed 100 A1 at Lloyd's, of 3,882 tons. Length, 365 ft.; breadth, 45 ft.; depth, 33 ft. In 1886, when the demand for higher speed in the Cape mail service was observed, the Union Steamship Co. put her in the hands of T. Richardson & Son, of West Hartlepool, who converted her engines from the compound system to the more modern and neces-

sary triple expansion type, thereby materially increasing the speed of the ship at sea with little addition to the expense in coal.

As was the custom when the Athenian was built, the first-class accommodation was put aft, on the main deck, the cabins being extremely lofty. The dining saloon is large and airy, extending right across the ship, tastefully decorated and lighted by skylights leading from it on to the spar deck. On the upper, or spar deck are a few deck cabins, which are highly prized by passengers who are fortunate enough to secure one for themselves. The second-class accommodation is nearer the middle of the ship, just forward of the engines, and may fairly be described as comfortable and clean, with perfect ventilation. Smoking-rooms are provided for both first and second class passengers on the upper deck. The third

class accommodation is in the fore part of the ship, four cabins being provided, each berth being fitted with patent cushions in the place of the old wooden bunk. She is fitted with refrigerating apparatus and electric light.

Both vessels were built and hauled and refitted since they passed into the possession of the C.P.R. Co. Great interest was excited at the departure

THE C.P.R. CO'S S.S. ATHENIAN.

between Feb. 10 and March 31, and this without including the craft leaving Seattle and San Francisco and not calling at Canadian ports. One ship-builder alone has orders for 14 new steamers for Yukon travel. Old vessels are being overhauled to join the fleet of north-bound steamers. To keep account of the different transportation companies, preparing to handle the traffic, would be impossible, but brief mention of a few of the vessels booked for northern ports will give some idea of the activity among shipping circles.

THE C.P.R. CO'S STEAMSHIPS.

First in importance are the two steamships, the Tartar and the Athenian, recently purchased by the C.P.R. Co. from the Union Steamship Co., of London, Eng., which pos-

THE C.P.R. CO'S S.S. TARTAR

LOOKING DOWN STIKINE RIVER AT GLENORA.

of the Tartar for Vancouver, B.C., to call on the way at Tenerife, Rio, Coronel and Callao. The C.P.R. was represented by T. Skinner, a member of the Board; Archer Baker, European Traffic Agent; A. Piers, Superintendent of Steamship Lines, and H. Moody, Deputy Secretary. Capt. Waite, former captain of the Tartar and now Shore Superintendent of the Union Line, was also present. Capt. Archibald, commander of the C.P.R. Co.'s H.M.S. Empress of China, and an old Orient Line captain, is in command of the Tartar, which has a small passenger list and a full cargo, including the C.P.R. Co.'s cable to be laid between Vancouver and Nanaimo. The Athenian sailed from Southampton on Feb. 12 for Vancouver, under command of Capt. Mowat, formerly of the C.P.R. Empress line, and both vessels are expected to be there early in April, when they will commence a service between Vancouver, Victoria and Fort Wrangel, one of them leaving the B.C. ports every Monday and Thursday. These steamers are far superior to any on the service, and as they are not likely to be beaten, they are sure to become highly popular.

OTHER OCEAN STEAMSHIPS.

The Washington and Alaska Steamship Co., in addition to its two steamers, recently chartered the S. S. Cleveland to run to Skagway and Dyce. The little steamer Augusta, 41 tons burden, left Seattle to engage in carrying trade between northern oceanports. The

Mocking Bird hailed from the Sound and plies between Dyce and Skagway. There is the City of Nanaimo, carrying no freight but the personal effects of the passengers, for whom it had its accommodation increased, and which is now prepared to carry 200 passengers. The bark Richard III. is to be used by the same company for freighting exclusively. A company sent Capt. Chas. Hackett to London to select several steamers of some 1,200 tons register, with ample passenger accommodation, to sail direct from London for Victoria, Fort Wrangel and Dyce, and afterwards to ply between Victoria and Dyce. There is also the Barbara Boscowitz,

formerly making Skeena its northern terminus. The Centennial Alaska Transportation Co. will operate steamers between Victoria and Vancouver and Wrangel, Skagway and Dyce, putting on this route the Centennial, a British built iron steamship of 2,075 tons, 450 passenger accommodation, and formerly of the P. and O. line. The Centennial will also make a special trip to St. Michael's in June. The Alaska Transportation and Development Co., of Chicago, plans a weekly service between Seattle and St. Michael's, having 6 steel steamships for the ocean and 6 light draught steamers for the river. The Maitland-Kersey Transportation Co. has already purchased the S. S. Monte Cristo for traffic between Wrangel and the mouth of the Stikine, where there is intricate navigation at certain stages of the tide, but over this the Monte Cristo can run with upwards of 100 passengers with comparative safety, as may be judged from the following dimensions:—Keel, 90 ft.; beam, 22 ft.; draft, 13 ins. Plans for a very fast twin-screw launch have been prepared. She will be 70 ft. long and will be used principally for

the accommodation of the members of the company in addition to doing some towing on the Upper Stikine.

The sealing schooners, Oscar, Hattie and Fawn, and the S. S. Transfer, are being rigged out for Alaska freight and passenger business. Maitland Kersey, promoter of the Canadian Development Co., has arranged for the construction of 7 steamboats for the northern service. Another big steamer is in course of construction for Captains Fuller and Crane. This steamer is to have accommodation for 250 passengers. The Sound steamer, Utopia, has been taken off the Vancouver route and will run to Alaska ports. The Empire Transportation Co. will run 5 vessels, now being overhauled in Cramp's yard, the Ohio, the Indiana, the Illinois, the Pennsylvania and the Conemaugh. The Oceanic S. S. Co.'s boat, Australia, will be withdrawn from Honolulu trade to run to Dyce, Skagway and St. Michael's. This list of vessels engaged in, or preparing for, Yukon traffic, gives some idea of the activity in Pacific coast shipping circles.

On the Stikine River.

Already Mackenzie and Mann are at work on the Stikine River—Teslin Lake route to the Yukon; and a volume of freight and passenger traffic, exceeding anything known in the history of transportation, is likely to pass through Wrangel and up the Stikine during the coming season.

Esplanade East, Foot of Sherbourne Street, -:- TORONTO.

Fort Wrangel, on an island off the mouth of the river, was the second settlement in southeastern Alaska after Sitka. It is 80 miles in from the ocean and its harbor is mountain-girt, and Wrangel, consequently, has colder winters and milder summers than

valleys, with occasional canyon walls and generally steep lower slopes, while high undulating and mountainous country form the surroundings. From Telegraph Creek southward for some 30 miles, or to the inland border of the Coast Range, high gravel terraces or benches of a fairly regular level and out-line are noticeable, especially on the east side of the valley, while near the water low benches are of more frequent occurrence, greater extent and few rocky projections on the river sides. About 116 miles from the sea the Clearwater River, a large tributary flowing through an open valley, enters from the north-west. Below the Clearwater and on to within 20 miles of the sea, the general course

of the valley is south, and it is from 1 to 3 miles in width, but the river makes many bends and swings from side to side of it, and the bottom lands are more frequently divided by sloughs or by channels cut during freshet seasons through the silty and loose formation. The Klutchman and Little Canyons being almost exceptional points where there is only 1 channel, confined between rugged but receding rock walls, respectively 300 to 400 feet apart and $\frac{1}{2}$ of a mile in length at the former, and 100 to 150 feet apart for $\frac{1}{4}$ of a mile at the latter. In both cases the direction of the river between the rocky shores is straight. "Below the Little Canyon and on to the sea the flat lands increase in extent and the by-channels in number and volume. The Och-sa Kieen, Soud, Porcupine and Iskoot Rivers flow into the Stikine from the east at varying intervals, besides many small streams from glaciers and mountain clefts on both sides. The Iskoot River, which is the largest of the tributaries named, enters 35 miles from the sea, and 10 miles below it the Stikine changes direction to the west, passes out through the main range of mountains and on through an expansive valley to its wide delta-like mouth on the coast line, some 12 miles north of Wrangel and in latitude $56^{\circ}40'$ N. and long. $132^{\circ}20'$ W. The range of mountains cleft by this river valley is principally of granite rock and grand to look upon, as the peaks are lofty, rugged and irregular, and some five or six large and many small glaciers are yet to be seen, but, with few exceptions, they are "dead." The whole valley and slopes to the timber limit are clothed with cottonwood, spruce and alder trees, which decrease in size and quantity as the interior is reached. The Stikine River is usually navigable for powerful steamboats of suitable design to Glenora or Telegraph Creek, a distance of 150 miles, between the 1st of May and a date sometimes well on in October, dependent of course on the openness of the season and the amount of rain and snowfall. Its width varies from half a mile on the lower river to 500 feet above. The depth is generally good, and the channel is remarkably free from snags, sunken rocks or boulders. At Little and Klutchman Canyons, respectively 96 and 106 miles from the sea, during high water periods when many drift trees are running, it is with considerable risk that the passage through these contracted reaches are made, and delays are common, as drift-wood is liable to become foul of the rudders or wheels. The first 50 miles from the sea, or to the Great Glacier, is very good water with a moderate current not exceeding 3 miles per hour, while from this point upwards the channel becomes somewhat more tortuous and contracted, with an increasing general rate of current varying from 3 to 8 miles per hour; however, the exceptionally swift sections are few and usually not over a half mile in length. A powerful river steamer should be able to make the Little Canyon in one day's run from the mouth of the river, and the Glenora or Telegraph Creek on the second day. The sum of \$5,000 could be advantageously spent in removing snags and boulders and in placing permanent cables for use in the heavy water, principally above the Little Canyon."

The trip from Wrangel to Glenora on the river steamers usually occupies about 36 hours, and Canadian territory is entered about 40 miles from the mouth of the river. A few months ago, Telegraph Creek was an aggregation of 40 or 50 cabins, with one store, but

BANK OF STIKINE RIVER, SHOWING HIGH WATER MARK.

any place along that coast. The first settlement was made by Admiral Baron Wrangel, who sent a subordinate officer from Sitka to build a stockade and to prevent the Hudson's Bay Co. maintaining trading-posts on the Stikine River. After much diplomatic controversy, Russia leased a 30-mile strip from Dixon Entrance to Yakutat to the H.B. Co., renewing the leases until the transfer of Russian America to the United States. The old fort was the scene of an exciting life among the Hudson's Bay officers and their men, owing to the hostility of surrounding natives. The discovery of the Cassiar mines and the influx of miners were the next important events in the history of Wrangel, and U.S. troops occupied the barracks from 1875 to 1877. After the abandonment of mining up the Stikine, a great quiet reigned in the little town. There was a saw-mill left. The traders' stores still remained and natives exposed their quaint curios in vain. For a second time in its history, Wrangel is revived by a mining boom and houses are now going up, stores are being erected and new wharves are every day pushing out over the waters of the harbor, as if in the twinkling of an eye. Hotels and lodging-houses, such as there are, are packed, and big structures, to accommodate the incoming crowds, are in course of erection.

After a sea voyage of more than 700 miles, passengers and freight are transhipped from the ocean to the river steamers. Here, the sea is described as frequently very boisterous. Then begins a trip up stream to Glenora and Telegraph Creek. The Stikine River is thus described by W. T. Jennings, C.E.: "The Stikine River and its branching head waters rise in the Cassiar Mountains between latitudes $56^{\circ}20'$ and $59^{\circ}20'$ N. and longitudes 128° and $131\frac{1}{2}^{\circ}$ W. The main stream and its upper feeders, the Tanzilla, Tooya, and Tahlitan, gradually converge and eventually unite in one grand watercourse within a distance of 16 miles, and from 10 to 26 miles above Telegraph Creek, which is at the extreme head of steamboat navigation and distant from the sea, at Fort Wrangel, 150 miles. The feeders (excepting the Tooya) and main river run as a rule in deep and more or less contracted

of the valley is south, and it is from 1 to 3 miles in width, but the river makes many bends and swings from side to side of it, and the bottom lands are more frequently divided by sloughs or by channels cut during freshet seasons through the silty and loose formation. The Klutchman and Little Canyons being almost exceptional points where there is only 1 channel, confined between rugged but receding rock walls, respectively 300 to 400 feet apart and $\frac{1}{2}$ of a mile in length at the former, and 100 to 150 feet apart for $\frac{1}{4}$ of a mile at the latter. In both cases the direction of the river between the rocky shores is straight.

"Below the Little Canyon and on to the sea the flat lands increase in extent and the by-channels in number and volume. The Och-sa Kieen, Soud, Porcupine and Iskoot Rivers flow into the Stikine from the east at varying intervals, besides many small streams from glaciers and mountain clefts on both sides. The Iskoot River, which is the largest of the tributaries named, enters 35 miles from the sea, and 10 miles below it the Stikine changes direction to the west, passes out through the main range of mountains and on through an expansive valley to its wide delta-like mouth on the coast line, some 12 miles north of

GLENORA RAPIDS, STIKINE RIVER, LOOKING UP.

the process of transformation has been at work there, as well as in Wrangel.

Lying on the beach at Wrangel is the hull of the old river boat that plied the Stikine during the first boom. This moss-grown relic of former shipping is all that is left of the

Rudder Grange, which used to clear \$135,000 a season. When its machinery gave out, the old stern wheeler was transformed into a hotel. Then it became the rendezvous for wandering Chinamen, who worked the deserted piers. After the Rudder Grange fell to

other transportation companies are preparing to take a hand in the traffic.

The Dominion Government has decided to send immediately the Chief Engineer of Public Works, L. Coste, and the Chief Engineer of Marine, Lieut.-Col. Anderson, to the Stikine River and over the Canadian route to Dawson City, for the purpose of seeing what improvements are necessary to overcome obstructions to navigation. It is the intention to erect a wharf at Dawson.

The C.P.R. Co. is having 10 light draft, flat-bottomed stern wheel steamers built for the Stikine River. Seven of these are being built of wood, 3 in Vancouver and 4 in Seattle, Wash. The other 3 which will have steel hulls, are being built in To-

ronto, one of them by the Polson Iron Works. The 3 being built in Toronto will have a length over all of 161 ft. 6 ins.; length, from stern to transom, 140 ft.; breadth moulded, 30 ft.; depth moulded keel plate to beam at side, 5 ft.; at centre, 5 ft., 7 1-2 ins. The engines will be 1 pair high pressure, non-condensing type, with cylinder 16 ins. bore, 72 ins. stroke. The boiler will be of the locomotive fire-box type, of ample capacity, and to pass Govern-

ment inspection for 175 lbs. working pressure. The construction of the hull throughout will be of open hearth steel, except the bottom, which is to be B.C. fir to the turn of the bilge. There will be two fore and aft water-tight bulkheads, and several cross water-tight bulkheads athwartships. The decks and deck houses will be of wood, and, with the bottom, will be put in by the C. P. R. Co. at the Pacific Coast, where the boats are to be completed by the end of April. The boats will have a draught of 18 ins. when light, with a capacity for 100 tons of freight and 200 passengers each, and will have a speed of 15 miles an hour in quiet waters. It is expected that the hulls and

machinery will be sent from Toronto during this month to Vancouver, where they will be put together. The use of steel for the hulls will render the boats much lighter than if built of wood. The seven wooden ones being built at the coast will have similar dimensions. The Hudson's Bay Co. are having two steamboats built for the Stikine. They will be 140 ft. long and 32 wide, capable of carrying about 100 passengers and 80 to 100 tons of freight, and will be lit by electricity. The B. C. Iron Works, Vancouver, are manufacturing the machinery, and J. H. Moir, New Westminster, is building the boats. Until July, three of Mackenzie and Mann's boats will run on the Stikine, but after that they will be transferred via the Yukon to Teslin Lake. Maitland Kersey's Co. is also preparing to handle the river traffic. J. Todd, who has had 20 years' experience navigating the Missouri, and Messrs. Hagerty and McCaskey, recently went to Victoria to supervise the building of 3 steamboats for the Stikine route. The steamers are to be 156 ft. over all and 33 ft. beam. The boilers and machinery are being constructed by Jas. Reese & Sons, of Pittsburg. Four other stern-wheel steamers are being constructed in Vancouver for another company which is competing for a share of Stikine transportation. W. J. Stephens, of Victoria, is building 3 stern-wheel steamers for a B. C. syndicate and a twin-screw boat for a Tacoma firm. The former are to be used on Lake Bennett, and the latter on Teslin Lake. F. M. Rattenbury and W. E. Dowler, of Victoria, also have under supervision the construction of river steamers for an English syndicate. The Stikine Navigation Co. was recently incorporated to engage in the northern transportation business.

From Telegraph Creek to Teslin Lake, pack trains will have to be used until Mackenzie and Mann have completed the railway across country a distance of some 130 or 140 miles. Sections of the line will be used as soon as completed. The trail from Telegraph Creek to Teslin Lake is through an undulating country, partly covered with scrubby timber. The road built by the Government follows a comparatively flat country, the swampy land being

KLUTCHMAN CANYON, STIKINE RIVER, LOOKING UP.

ruin, few boats except canoes were seen on the Stikine. Occasionally the H. B. Co.'s boat, the Caledonia, beat her way against the current, carrying supplies to trading-posts. The steamer made two trips from Port Simpson to the Stikine River and up to Telegraph Creek in 1896 and two in 1897; and her time, according to Mr. Ogilvie, from Fort Simpson to Wrangel, averaged 16 hours. The Caledonia draws, when loaded, 4 feet of water and only on the tidal flats at the mouth of the river was she bothered by shallow water. "At some points," reports Mr. Ogilvie, "short bends with a swift current required the aid of a line to surmount, but this was more to keep her in the channel than to help up. Sudden rises in the river also bring down lots of driftwood, which compel tying up until it abates. Her average time of ascent was about 37 hrs., exclusive of the time lost wooding up. Her average time of descent was about 14 hrs., including time wooding up and all stops. This boat is 150 ft. long, 24 ft. 4 in. beam, 2 engines, 1 cylinder 16 in. bore and 6 ft. stroke; steam pressure allowed 130 lbs; average used 90. Wheel makes ordinarily 24 revolutions a minute in dead water, but ascending swift current as many as 35 are made. Her average rate in dead water is about 10 1/4 miles an hour. Her rate up the Stikine is about 4 miles an hour and down about 12 1/2." The Caledonia was recently sent to New Westminster to have her machinery transferred to a larger hull with lighter draught. The new hull is to be completed on April 15, when the Caledonia is to go north for the purpose of carrying Klondikers up the Stikine. The old hull is to be converted into a barge to carry fuel for the river steamers. Besides the Caledonia, the Alaskan, a flat-bottom, stern-wheel, old craft in the last stages of dilapidation, made a trip in October, 1897, taking up prospectors at a charge of \$100 each, and taking ten days for the journey to and from Glenora.

Such has been the navigation of the Stikine in the past, but next summer will witness a marvellous transformation. The boats of the C.P.R., the C.P.N. and H. B. Co., alone will make a large fleet on the river; and many

other transportation companies are preparing to take a hand in the traffic. The Dominion Government has decided to send immediately the Chief Engineer of Public Works, L. Coste, and the Chief Engineer of Marine, Lieut.-Col. Anderson, to the Stikine River and over the Canadian route to Dawson City, for the purpose of seeing what improvements are necessary to overcome obstructions to navigation. It is the intention to erect a wharf at Dawson. The C.P.R. Co. is having 10 light draft, flat-bottomed stern wheel steamers built for the Stikine River. Seven of these are being built of wood, 3 in Vancouver and 4 in Seattle, Wash. The other 3 which will have steel hulls, are being built in To-

LITTLE CANYON, STIKINE RIVER, LOOKING UP.

corduroyed. The railway contractors are to construct and to have ready during this month a good road from the mouth of the Stikine to Lake Teslin, with suitable stopping places every 25 miles.

Once at Teslin Lake, all will be compara-

tively plain sailing. Another fleet of stern-wheel steamers will be waiting, and in three days—the time given by a surveyor, who has passed a long service in that country—a passenger should arrive at Dawson City. On Lake Teslin, which is from 2 to 5 miles wide and 80 miles long, a steamer is now completed, and arrangements are being made for the placing of many others on the lake prior to or on opening of navigation. Lumber is plentiful around the lake for the construction of boats and batteaux by those who wish to prospect en route, and last season a number of craft, each capable of carrying three or four passengers and five tons of freight safely to Dawson City, were easily constructed in two days.

There is clear navigation from the head of Lake Teslin to Dawson City, with but one rapids—that of Five Fingers—along the entire distance, and this, with care, is reported to be usually navigable on the northern or right-hand channel. Out of Lake Teslin flows the Hootalinqua or Teslin River, which, after being joined by the Big Salmon River, is known as the Lewis, which is followed to Fort Selkirk, where, with the Pelly, it forms the Yukon, of which it is the principal source.

It is said that by the arrangements which are being made on the Teslin route the trip from Vancouver to Dawson City will be made in a fortnight during the early part of the season; and it is believed that with the railway in operation this time will be cut down to about a week.

By the Yukon River.

"Starting from Victoria, or Vancouver," says Wm. Ogilvie, of the Yukon River route to the gold fields, "we make our way by an ocean steamer to St. Michael's, about 2,700 miles from Victoria or Vancouver. The steamer approaches St. Michael's a greater or less distance as she draws more or less water. A boat drawing 12 ft. or less may come within a mile of it—one of greater draught has to anchor further out. The cargo is discharged on lighters, towed by small steamers to the warehouses of the several companies. From here up to Dawson or other points on the Yukon, passage is made on stern-wheel steamers, of which there are at present 7 or 8. Four belong to one of the trading companies, three to the other, and one or two to other parties. The time taken in ascending the river from St. Michael's to Dawson, supposing we have fair weather continuously, is from 14 to 18 days. The steamer has to fight its way up this long stream against a stiff current, with, in low water, shallow places at several points: also there is much time lost procuring wood. Much of the fuel at present used is cut by Indians, and piled up along the banks. For the first 500 miles upwards the fuel consists entirely of driftwood, as there is no timber in the vicinity of the river large enough to be utilized for that purpose. Above this point timber is plentiful, but green. The boat is tied up to the beach, all hands available sent ashore, trees cut down, generally carried on board in long lengths, and sawn into proper lengths for furnace use on board. Much of this is entirely green, as what little dry wood was scattered along the bank of the river has been pretty well used up. In the future much delay will be caused to steamers on this account, as the wood gets further and further from the river. Heretofore, there were

only 3 or 4 steamers plying on the river. Next summer there will probably be 25 or 30. These will use up in a single trip all the wood cut, as the steamers now on the river use from 16 or 18 cords a day to 24 or 30.

"Through the kindness of Capt. Kennedy of the Alaska Commercial Co.'s steamer Alice, I am able to give her dimensions and the log of one of her trips. Capt. Barr of the North American Transportation and Trading Co. kindly gave me from his logs the distances from point to point along the river as he deduced them from the travelling rate of the steamer. I am inclined to think his distances are overestimated and that a survey of the river will prove it shorter than he puts it. Dimensions of steamer Alice: Length 165 ft.; beam 32 ft.; depth 8 ft. Compound tandem engines, but no condenser, high pressure cylinder, 14 in. bore, low pressure, 22 in. Length of stroke 6 ft. Steam pressure 150 to 180 lbs., consumption of wood per day 16 to 18 cords. She can carry about 500 tons, but when so loaded draws too much water for the river (about 5 1/2 ft.). In 1896 she made a trip from St. Michael's to Fortymile as follows; the distances are by Captain Barr: St. Michael's to mouth of Yukon, 72 miles, 9 hrs. 40

season, it has never been repeated since. The fastest round trip on record, from and to St. Michael's, was made by the same Co.'s steamboat Alice, in 1897. It took less than 22 days. As a rule, the trip occupies a month. We may generally count on several days detention at St. Michael's. There high winds render it impossible for the river steamers to make their way over Behring Sea to the mouth of the river. The same detention may be caused on the return trip, and the steamer may have to lie in the mouth of the river for days. Then, again, the channel at the mouth is shallow and crooked, and as it is only open for 3 or 3 1/2 months in the year it is impossible to mark it, and even if we could do so it is not permanent, for the ice drifting about in the shallow water in Behring Sea often ploughs up the mud in ridges, making barriers across places which were heretofore good, deep water. In 1896 a boat ran on to a barrier near the mouth of the river and lay there for 14 days before the wind and tides combined raised the water high enough to enable her to float. To enter the country by this route we need not contemplate arrival at Dawson much earlier than the middle of July. The ice in the river breaks about the middle of May, but

Behring Sea, as a rule, is not open until the last 10 days of June—indeed, in 1896 it was not until July 7 that the ocean steamer could approach St. Michael's."

St. Michael's is on an island in Norton Sound, 70 miles north of the Yukon's mouth, and is the commercial capital for the Yukon and Arctic regions. Besides the trading warehouses and officers' houses, there are a Swedish mission and school and some other church mission-houses in St. Michael's. Since the rush north ward set in, St. Michael's has expanded greatly, the new structures consisting chiefly of lodging-houses, hotels and saloons.

Instead of half-a-dozen steamers plying the Yukon, as heretofore, there is likely to be a fleet of 50 steamers on the river this summer. The Alaska Commercial Co. is now having constructed 14 large river steamers and a large number of barges to be used in the navigation of the Yukon between St. Michael's

and Dawson City. Maitland Kersey states that steamers are now being built in England for use on the Yukon River by his company. These steamers will be shipped in sections and put together in B.C. The C.P.N. Co. has river steamers to connect with its ocean vessels. A few weeks ago, a stern-wheel steamer, named the Research, destined for the Yukon, was launched in London, England. She draws 2 ft. 6 in., has a speed of 10 knots, and carries stores for 15 months. Her 22 passengers are to live in her commodious deck house after reaching Dawson City.

Anticipating the great river traffic, the U.S. Government is sending Prof. Pritchett, of the Coast & Geodetic Survey, to Alaska, to make an examination of the delta of the Yukon, for the purpose of locating & marking the deep-water entrance to the river. For this Congress has appropriated \$10,000, and the 30 men composing the party leave San Francisco for the north in April.

It is quite an easy thing to build a boat, but, according to President Maitland, of the Alaska Trading & Navigation Co., a boat to the Yukon is not for the same sort of that would do for other service. The largest Yukon river steamer,

RAPIDS ABOVE SHAKES, STIKINE RIVER, LOOKING DOWN.

min., mouth of Yukon to Nulato, 576 miles, 81 hrs. 30 min., Nulato to mouth of Tanana, 249 miles, 36 hrs. 30 min., mouth of Tanana to Fort Yukon, 456 miles, 60 hrs. 25 min., Fort Yukon to Circle City, 88 miles, 21 hrs. 10 min., Circle City to Fortymile, 156 miles, 47 hrs. 40 min., Fortymile to Sixtymile, 97 miles, 19 hrs. 15 min. This makes the total running time from St. Michael's to Fortymile 255 hrs. and 25 min., or ten days, 15 hrs. 25 min., the distance being 1,597 miles. In addition she must have lost 4 to 6 hrs. at least per day cutting wood and loading it.

"After we get up the river some 1,300 miles we strike what is known as the Yukon Flats. These flats were no doubt the site of a lake ages ago, now filled up with numberless islands and channels, most of which are too shallow, crooked and narrow for steamboat passage. The sand and mud drifts about in them, changing the course of the steamboat channel, and every year appears to be getting more and more difficult of navigation. In the summer of 1895 water remained high until well into September; the result was that one of the Alaska Commercial Co.'s steamers, the Arctic, made 5 passages from the mouth of the river to Fortymile. This is the record

A of water, & stuck last season. Flat-bottom boats, 195 ft. long & 36 1-2 wide, drawing 21 ins. when loaded, & made of wood, are supposed to be the most practicable for the river. A boat of this kind will carry 100 passengers & 300 tons of freight. It can be placed on land in the winter & used for an hotel. The bare hull, covered so that it will float with either side up, is towed by an ocean steamer from Seattle to St. Michael's, & the machinery is shipped as freight. One ocean steamer can tow 2 of these hulls. The expenses of running the boats are high. River captains on the Yukon command a salary of \$250 a month, & they are paid that the year round on contract, although the season of navigation commences about June 20 & closes about October 15 or 20. Pursers are paid \$200 a month on a year's contract, & pilots get \$175 a month. A river steamer can make only 2 round trips from St. Michael's to Dawson City in one open season. Many have tried to make 3, but were generally stuck in the ice on the latter half of the trip. Mr. Turner does not see how the thousands of people who will be carried to St. Michael's in the ocean steamers will find their passage up the river to Dawson City. One ocean steamer carries 500 to 800 passengers, while a river steamer on the Yukon can, as a rule, carry only some 200.

The Sintram is being sent north from San Francisco to St. Michael's, the first of several new steamers for the Yukon. The old whaler, Lew Williams, has also joined the river fleet. Capt. Armstrong & Mr. Barber are putting on the Yukon a boat of about 126 tons. Having sold their old steamer to the eager miners, the Jesuit Fathers of San Francisco are having a new steamer, 92 by 22 ft., built to run between their Yukon mission stations.

Moran Bros. Co., Seattle, Wash., write THE RAILWAY & SHIPPING WORLD that in addition to the torpedo boat Rowan, which is nearing completion for the U. S. Navy, it has under construction in its yards at Seattle 17 river steamers & 25 barges. Of the steamers 14 are being built for the Yukon Co., the other 3 being for the Seattle & Yukon Steamship Co. The steamers for the Yukon Co. consist of 6 vessels 260 ft. long & 50 ft. beam, six 175 ft. long & 35 ft. beam, & two 100 ft. long & 22 ft. beam, all of the stern-wheel light draught type. The first 12 are designed & fully equipped for passenger & freight service. They are to have 3 decks, with the best cabin accommodations. Two steamers building for the Yukon Co. are tow boats for river & coast service. The river barges are also being built for the Yukon Co. They are to be 30 by 120 ft. with flat bottom. They are intended to carry a deck cargo only & are to have a freight house on deck. These steamers & barges are for service on the Yukon River, & are to be delivered at the time navigation opens on the river the coming season. Their approximate value is \$1,000,000. The vessels under construction for the Seattle & Yukon Steamship Co. consist of 2 steamers designed & equipped for passenger & freight service, 190 ft. long & 32 ft. beam, & a tow boat 100 ft. long & 22 ft. beam, all of the stern-wheel, light draught type. The approximate value of these is \$100,000 & they are also to be in service during the coming season on the Yukon River. The machinery for all these steamers was designed by Moran Bros. Co. & is being built by it in its yard at Seattle. The first steamer is to be equipped with a complete electric light plant. Moran Bros. Co. also operates a ship yard at Dutch Harbor, Unalaska, where it has under construction 2 passenger river steamers, 190 ft. long & 32 ft. beam, & 1 river tow boat 120 ft. long & 26 ft. beam, all of the stern-wheel type. A fourth steamer is being constructed there by it, which is 140 ft. long & 28 ft. beam. The hull for this vessel is of steel & was purchased in Toledo, Ohio, & shipped

west in sections. It is being reconstructed with new house & cabin, fully equipped for passenger & freight service. Several river barges are also being constructed at this yard. All the vessels being built at Dutch Harbor are to be delivered in the early spring to the North American Transportation & Trading Co., for whom Moran Bros. Co. has already constructed several steamers now doing satisfactory service.

The Polson Iron Works, Toronto, is building for the Yukon & Klondike Pioneers Co., for the Stewart River, a tributary of the Yukon, a flat-bottomed, stern-wheel steamer, 58 ft. long & 10 ft. beam, which when light will draw about 12 ins. of water & will have a speed of 12 miles an hour.

Through the courtesy of Passenger Traffic Manager McNicoll of the C.P.R., we are able to give at the back of this issue a copy of his Co.'s excellent map showing its routes to the Yukon gold fields, which will be found valuable to refer to while reading this article.

Richelieu & Ontario Navigation Co.

Senator Forget, the President, presided at the annual meeting in Montreal, February 6. The report stated the gross receipts for the year were \$688,026.09, operating expenses \$552,950.94, fixed charges \$26,945.09, & the net profit \$108,130.06. Two semi-annual dividends of 3 per cent. each amounting together to \$81,000 were paid, leaving \$27,130.06 to be carried to surplus.

Notwithstanding some unfavorable circumstances, such as cold weather during most of the spring & part of the summer, & the laying up of one of the Western steamers in the middle of the season on account of smallpox, the earnings show a gratifying increase over the previous year both in the gross & net results.

Carrying out the intention of this & previous boards of paying off the Co.'s floating liabilities, a sale of \$150,000 of stock was made at par on Nov. 2 last. As a result of this sale & of the general operations for the year, the statement shows \$15,280.17 cash on hand, as against a floating debt of \$188,989.34 on Dec. 31, 1896.

In conformity with the deed of trust, 38 bonds of £100 sterling each, amounting to \$18,493.32 have been withdrawn & cancelled, making a total to date of \$36,013.32. The Co.'s hotel at Tadouac has continued to show satisfactory results, & in consequence of its inability to accommodate the visitors offering, an enlargement of the building was made during last autumn by which its capacity has been increased over one-half.

With the view of meeting the want for larger steamers on the line between Toronto & Montreal, the directors, in Nov. last, entered into a contract for a modern first-class passenger steamer, 277 feet in length, to be ready for the ensuing season, & at the same time made arrangements for the necessary capital for her construction by the sale of 2,400 shares of stock at par. It is the intention to build another steamer of similar class for the same route to be ready for the season of 1899.

Following is the financial statement:—

The report having been unanimously adopted, the following were elected directors: Hon. L. J. Forget, W. Wainwright, F. C. Henshaw, Hector MacKenzie, E. B. Garneau, C. O. Paradis, Jas. Swift, Jos. Lewis, J. K. Osborne, R. Forget & W. Hanson. This is the same board as last year with the addition of J. K. Osborne, of Toronto. At a directors' meeting held afterwards, Senator Forget was re-elected President, & W. Wainwright, Vice-President.

THE NEW STEAMBOAT.

Following is a description of the steamboat Toronto, now being built, and which is to be completed this season to run between Toronto and Prescott:—Length over all, 277 ft.; breadth of hull, 36 ft.; breadth over guards, 62 ft.; depth of hull, 14 ft.; draft of water, 8 ft. 6 in.

The hull will be of open hearth steel with 4 water-tight bulk-heads. It will have considerable dead rise on the bottom with sharp lines forward and aft, permitting easy propulsion. The general shape of the hull under water is based on experience gained with the Niagara Navigation Co's steamboat Corona, of Toronto, which is considered a decided success, both in regard to economy and speed.

The engines will be inclined triple expansion with 3 cranks and 3 cylinders, respectively 28, 40 and 74 in. in diameter and 6 ft. stroke, each built for a working pressure of 175 lbs. of steam per square in., and for a speed up to 40 revolutions, with feathering paddle wheels 22 ft. in diameter, with curved steel buckets.

The boilers will be 4 in number, of Scotch pattern, 11 ft. in diameter and 11 ft. 6 in. long. Each boiler will have 2 furnaces of Adamson type, 40 in. in diameter, fitted with the Howden system of hot draft.

The general outfit, including anchors, chains, windlasses, steam capstans, fire & life-saving apparatus, water-tanks for trimming purposes, steam steering gear, steam heating, waterworks & artificial ventilation plant, & electric light plant for 700 lights, will be of the latest & most approved designs.

The passenger accommodation will be of the same general description & ornamentation as that of the steamers of the New York & Fall River Line, & more especially that of the steamboat Plymouth, with 2 tiers of staterooms in the upper saloon & a capacity for sleeping 400 passengers, in addition to crew, & with the dining-room on the highest deck forward.

The average time-table speed will be 17 miles an hour, with a capacity for 20 miles when required, which will permit of more convenient hours of sailing being arranged for than at present.

J. F. Wardner, the founder of Wardner in East Kootenay, B.C., will probably engage in the Yukon transportation business.

\$1 A YEAR.

The Minister of Marine.

Of Canada's varied & rich resources none should be more prized than the fisheries; & in a country whose vast lakes are inland seas & whose great rivers are the channels of a nation's commerce marine interests can never take second place. It is over the Department of Marine & Fisheries that the subject of this sketch, the Hon. Sir Louis H. Davis, K.C.M.G., presides.

Sir Louis Davis was born in Charlottetown, P.E.I., May 4, 1845. His father, the Hon. Benjamin Davis, M.P.P., of that city, was the son of Nathan Davis, who was one of the pioneers of the Island, coming to the colony in 1812. Sir Louis received his early education in Central Academy, Charlottetown, afterwards attending the Prince of Wales College & completing his professional education at the Temple, London, Eng. He was called to the Bar of P.E.I. in 1866, & six years later married the fourth daughter of the late Dr. A. V. G. Wiggins. A Liberal in politics, Sir Louis soon became prominent in his party, being Solicitor-General for the Island in 1869, again in 1872-73, & leader of the Opposition in the Legislative Assembly until Sept., 1876, when he became Premier & Attorney-General. In March, 1879, his administration resigned. In Nov., 1880, he was appointed Q.C., & in 1882 was elected to the Dominion Parliament, being again returned in 1887, 1891 & 1896. In the Federal House he became known as a shrewd & able critic, & a dashing & fervent debater. At the general convention of the party held in Ottawa, June, 1893, he was chosen leader of the Liberals of the Maritime Provinces. When the change of government took place the ability & services of the Maritime leader were recognized & he was sworn as member of the Privy Council & appointed Minister of Marine & Fisheries. His re-election was by acclamation. The activities of Sir Louis have not been confined to purely political matters. As President of the Merchants Bank of P.E.I., counsel for the tenantry before the P.E.I. Land Commission, & Canadian counsel before the International Fishery Commission at Halifax, he has become prominent as one whose interests are identified with those of the Maritime Provinces. In 1897, on the completion of the 60th year of H.M.'s reign, he was appointed Knight Commander of the Order of St. Michael & St. George, a fitting recognition of his public services. Sir Louis is a member of the Church of England.

A new office has been created on the G.T.R. Prof. McLeod, of McGill Observatory, has been appointed to have full charge of the transmitting of time over the wires, as well as the company's clocks & employees' watches.

J. A. Richardson, heretofore Canadian Passenger Agent of the Wabash, with office at Toronto, has been appointed District Passenger Agent with headquarters at Toronto and St. Thomas. He will have immediate supervision over passenger business originating in Canada.

MEETINGS, REPORTS, &c.

The Grand Trunk's Semi-Annual.

The half-yearly meeting of G.T.R. shareholders, held at the Cannon St. Hotel, London, Eng., April 5, was most enthusiastic.

The directors' report presented shows a net revenue surplus for the half-year ended Dec., 1897, of £275,263, being an increase of £236,177 over the corresponding half-year of 1896. The passenger traffic decreased £151,728 compared with 1896, however. Freight & live stock increased 410,960 tons, & the earnings per train mile increased 7d. The working expenses decreased nearly 7%.

The Chicago & Trunk shows a deficit of £49,467, being £17,950 better than 1896. The Detroit & Grand Haven shows an increased net revenue of £21,373, leaving a net deficit of £2,174 on revenue charges.

The directors report that an agreement has been entered into granting the Wabash R. Co. joint use for 21 years of a portion of the G.T. lines, between Windsor & Black Rock station & the G.T.R. in Buffalo. The

SIR LOUIS H. DAVIES, K.C.M.G.

agreement provides that the Wabash pay the G. T. a rental commencing at \$275,000 a year, to be increased at the end of every 5 years by \$25,000 a year, until it reaches a maximum of \$350,000 a year, at which rental it will continue for the remaining 6 years of the agreement.

The directors regret to report that amicable relations with the C.P.R. have been interrupted in consequence of the unwillingness of the C.P.R. Co. to agree with its U. S. competitors & the G.T. upon equal passenger fares to & from western points. The negotiations which are now in progress it is hoped will result in a satisfactory adjustment of the disputed matters.

The directors record a high appreciation of the great ability displayed by General Manager Hays in promoting the interests of the Co. & of the exertions manifested by him & his staff towards the achievements of the remarkable results attending the working of the road in the past half-year.

The opening remarks of Sir Charles Rivers-Wilson, President, were warmly received, be-

ing punctuated with cheers as he recapitulated the heavy decrease in the expenses & the increases of revenue under the new regime. He gave great credit to the administrative ability of the staff in Canada, & praised them in the highest terms for the remarkable results, as shown by the statements up to the end of 1897.

"The Co. is not now only free from debt, for the first time since 1890," he continued, "but has more than enough cash on hand to meet the outstanding liabilities."

But while this was satisfactory the shareholders must be prepared for an expenditure from the capital account owing to the necessity for strengthening the line in order to haul heavier loads. This would begin on the Portland Division, and they would in June begin saving £8,000 yearly by a reduction of interest owing to the redemption of the 6% bonds. The expenditure from the capital account would be spread over a series of years so as not to cripple any particular year. The President said the Victoria Jubilee Bridge at Montreal was progressing satisfactorily. He expressed the belief that an agreement with the Government in regard to the Intercolonial running powers would soon receive statutory sanction, & said the principle which the present board had always followed was to seek the maximum amount of business at the minimum cost. He congratulated them upon the results of this policy, which, he said, was best illustrated by the fact that the road during the last half-year had hauled 25.4 freight cars per train, compared with 22.8 during the preceding half year.

He especially congratulated the meeting on the building up of the Portland trade. The G.T.'s proportion of the earnings on the Montreal and Portland line was for 1897 almost double that of 1896, & three times that of 1895. He, however, said nothing in reply to the criticism of the G.T. building up foreign ports.

Referring to the rate war he made a long exposition of the differences with the C.P.R., beginning with the Toronto & North Bay disputes. He insisted that the G.T. had, by repeated proposals for arbitration and otherwise, done everything to avert the war. He declared the C.P.R. desired an exclusive contract with the G.T.R. in order to weaken the Chicago connection & damage the G.T.'s connecting roads to Chicago. The G.T.R., he said, would never give up its close alliance with its allies. On the larger question of differentials & the Klondike business, he said the C.P.R. had yet to prove its title to a differential. The negotiations would be continued next month, when it was believed an agreement would be reached. He did not believe that Sir Wm. Van Horne was serious in threatening to build a new parallel line from Toronto to North Bay. He could not conscientiously recommend the English public to find the money. He did not grudge Sir Wm. Van Horne and Mr. Shaughnessy their pride in the C.P.R., but he believed they would soon see the error of their ways & come to an agreement. He also declared the future was filled with the brightest promise, &

concluded with a warm eulogy to Mr. Hays & his staff, which was much cheered.

Mr. Girdlestone, of Bristol, who recently visited Canada, gave a eulogistic description of the property, but was howled down by the meeting.

An attack upon the board was made by Mr. Baker, of Bristol, who declared there was no truth in the statement of the President regarding the G.T.R. not beginning a rate war, which, according to Mr. Baker, was brought about in the interest of the U. S. allies of the road.

The President denied Mr. Baker's assertion, & apologized to Mr. Girdlestone for the meeting's behavior.

The report of an agreement with the Wabash Railroad for access to Detroit was adopted unanimously.

The retiring directors were re-elected as follows: Sir C. Rivers-Wilson, Jos. Price, G. Allen, G. Von Chauvin, J. A. Clutton-Brock, Col. F. Firebrace, A. Hubbard, Sir H. M. Jackson, L. J. Seargeant, A. W. Smithers, Lord Welby of Allington, Sir W. Lawrence Young. The retiring auditors were re-elected as follows: G. B. Newton & F. Whitney, London, Eng.; W. M. Ramsay & T. Davidson, Montreal.

Canadian Pacific Annual Meeting.

The annual meeting of the C.P.R. shareholders was held in the Board Room of the Co.'s offices in Montreal, April 6. The proceedings were just about as they always are at these meetings. President Sir Wm. Van Horne took the chair sharply at noon, flanked by his able lieutenants Messrs. Shaughnessy, Drinkwater & Ogden. Representative capitalists from all over Canada as well as some from England & New York were present, also John Morrison, the venerable critic of the management, his hands full of memoranda, the result of an evidently thorough dissection of the annual report. The President moved the adoption of the report, which was published in our last issue. Mr. Morrison made an even more lengthy & sarcastic criticism of the management than customary, the President joined heartily in the laughter aroused by the blunt jokes made at his expense, put the motion to adopt the report to the meeting, & solemnly declared it carried. Then the usual batch of formal resolutions about the leasing of side lines, etc., was adopted with impressive formality, the balloting for direc-

tors began, & the meeting was practically over.

In moving the adoption of the report, Sir William said: "In submitting the annual report of the directors for your approval, a brief explanation of our difficulties with the American transcontinental lines may not be out of place.

"For a number of years prior to 1894 the C.P. had, by agreement with the transcontinental lines, been allowed certain differential rates on passenger traffic between the Eastern States & Eastern Canada & the Pacific Coast. The principle of differential rates when applied to our case was not a new one. It was adopted a great many years ago as a means of adjusting the difference in conditions between competing lines, & differentials are in use today for this purpose in various parts of America, & even between the Atlantic seaboard & Chicago, where they are accorded to certain of the trunk lines, including the G.T. In 1894 the situation of the C.P. as regards through passenger traffic had considerably improved, & a new agreement was made whereby the C.P. differentials on transcontinental passenger traffic were reduced & were confined in the east to a restricted territory. They applied to all points on the Pacific Coast. At that time there was not much travel to & from Alaska, but a few months back it became apparent that it would soon reach large proportions, & about the opening of the present year, & just as the new stream of travel was setting in, we discovered that the agreement of 1894 was being violated by our competitors. Our agents bought quantities of tickets at the agencies of the Great Northern & Northern Pacific Co.'s, not only at our differential rates, but far below them. The evidence was unquestionable, & the facts as to the broken rates & as to who broke them are not now denied by anybody.

"We called the offending lines to account for their violation of the existing agreement, & they replied that they had decided to no longer consent to differential rates on Pacific Coast traffic, & they asked for a meeting concerning the question. We insisted on their restoration of the rates & terms of the existing agreement as a condition precedent to a meeting. They refused, & we then, after notice, published an open tariff making such rates as the provisions of the law & the interests of the C.P. seemed to require.

"The question at issue at this time is not whether there shall or shall not be differential rates; that question we are prepared to dis-

cuss on its merits when a meeting is held for the purpose of revising the agreement of 1894. The question now is whether, as a condition precedent to a meeting of the lines interested for the purpose of revising this agreement, the rates & conditions ante bellum shall be restored. We have a right to insist on this, but in the interest of peace we have been willing to leave to disinterested arbitration the question as to whether the rates & conditions shall be restored in whole or in part, or not at all, pending a meeting. A resolution providing for such arbitration was offered at the conference of the lines interested at New York three weeks ago. This resolution was supported by the G.T. & all the other parties interested, except the U.S. transcontinental lines, whose representatives asked for time, & subsequently recorded their votes against it. There can, therefore, be no question as to where the responsibility lies for the continuance of the disturbance.

"The decision of the Interstate Commerce Commission at Washington, on suspending the 'long & short haul' clause of the Interstate Commerce Act, has been pointed out as showing that we were in the wrong & our competitors in the right. It shows nothing of the kind. It was a decision on ex parte evidence, & clearly stated that the Commission was in possession of evidence of the cutting of rates before our tariff was published, & the decision contains the distinct statement that but for a technicality in connection with the issue of our tariff the action of the Commission on the application of our competitors would have been different. These are the words of the decision in that regard:

"'If the Canadian Pacific made these rates with the concurrence of its American connections, observing, as it apparently now does, the rule of the fourth section, an entirely different question would be presented.'

"While we are earnestly desirous of peace & willing to go as far as we can towards securing it, the present & future interests of the company must not be overlooked. I am glad to be able to assure our shareholders that up to this time the company's revenues have not suffered through the existing difficulties, & I may point to the fact that during the month of March, over the whole of which the disturbance extended, our increase in earnings was \$541,000.

"I cannot dismiss this subject without referring to the action of the G. T. Co., with which we have so long been at peace, in aiding our American competitors to carry their

Let Us Know Your Requirements. ❀ ❀ ❀

In addition to our stock of

Heavy Steel Plate Ranges

For Hotel and Steamboat use, which embrace many sizes and styles, we are prepared to make Special Ranges of any required dimension to suit any space, for use in Dining Cars, Steamboats, Yachts, etc.

The excellence of these goods is beyond question. We will be happy to show you some of the many testimonials we have received, proving their merit.

Consider our long experience and unequalled facilities at your service. We will be glad to send you catalogues of our stock lines in Ranges, Steam Cookers, Heavy Kitchen Furnishings for Hotels, etc., or will furnish estimates for any special order.

WE GUARANTEE SATISFACTION.

The GURNEY FOUNDRY COMPANY, Limited, Toronto

Mention this paper when writing.

reduced rates into our territory. We believe that the cancellation of the North Bay agreement by the G. T. two months ago was the result of an understanding with the American lines, & was intended to place us at a disadvantage in the coming contest; & in view of our past relations & the loss of revenue that must result to the G. T., their action is inexplicable.

"But now let me turn to something more agreeable. We have had a fairly prosperous year, & the financial results, after due provision for all expenses of working & ample maintenance, have enabled the directors to make a distribution of dividends at the rate of 4% for the past year, & to carry forward \$897,088 surplus to the reserve, & so far as we can see this prosperity will continue and increase.

"We have never entered upon a new year with so cheerful an outlook as at present. An analysis of the traffic of the various sections of the main line, the branch lines, & the auxiliary services on the sea, lakes, & rivers, shows that practically no mistakes have been made in the development of the system so far as we have gone. Some things have had to be done ahead of time in order to protect our future, & we have had to wait for a good many vacant spaces on our lines to become productive, but nearly all of these spaces are now yielding revenue, & practically all of our branch lines are self-supporting.

"We have been forced to make lines which we did not, at the time, wish to make, but the results have shown that we have nothing now to regret in this regard. Our heavy movement of passengers westward is not all towards the Klondike by any means. A great many settlers are going to the prairies of the Northwest, from the soil of which gold will the more surely come, & a great many more are going to take farms in British Columbia or to work the big mines of the Kootenay. Our reports tell us that the area of land prepared for seeding in the Northwest is 20% greater than ever before, & development & new industries seem to be the rule everywhere in the vicinity of your lines.

"The directors are asking your authority to expend a considerable amount of money for improvements of various kinds. These expenditures have in the past brought a very handsome return, as is evidenced in part by the reduction in our ratio of working expenses to gross receipts to 57% & the expenditures now proposed will be equally profitable. The directors are also asking your authority to provide adequate rolling stock for the further increase in traffic which they confidently expect, but the money will not be expended unless the need becomes a certainty. The use of extra heavy locomotives which has been made possible by the improvement in the permanent way has had a marked effect on the cost of transportation, & within a short time only the heavier type of locomotives will be used on your principal lines."

MR. MORRISON'S INEVITABLE CRITICISM

was about on the usual lines. He said the annual dividend had been more meagre than the financial results of the year warranted. Instead of carrying over such a large surplus, the directors should have made the last semi-annual dividend 3½ instead of 2½%. He hoped it was not the intention to give the surplus withheld from the common stockholders to the holders of preferential stock. He regarded with pleasure the decrease in the working expenses, which were 3.64% less than last year. He understood that the ratio of expenses to earnings was the lowest in the history of the company.

The President said it was.

Mr. Morrison, continuing, remarked that he thought the report highly optimistic, the position being distinctly boomed on every page. He asked for explanations regarding the item of \$667,000 increased liabilities & the item

of \$3,100,000 surplus earnings. From whom had the former amount been borrowed, & was the latter amount held for interest to be paid to the shareholders?

The President said that the Co. acted as its own banker. The first account asked about was for material for the Crow's Nest Pass Ry., the last amount in question was held for general purposes. Instead of borrowing from the banks the company borrowed from itself.

Mr. Morrison recommended to the management the construction of steamers of a size that they could take on 3,000 tons of freight at Port Arthur, & proceed without transhipment to Liverpool. Small steamers were really the only ones which trade could afford to patronize. The big new express steamers were only fit for high-flyers & railway officials with immense salaries. As things went now-a-days, it was only extravagantly-salaried railway officials who could afford to travel by the passenger steamers, & as they travelled on free passes, it was hard to see where the dividends were to come from. As to the rate war, Mr. Morrison described it as a piece of abject folly. Competing lines should be left severely alone. He hoped that in future the C. P. would pay no attention to what the G. T. or any other railways did.

The President—"I am afraid that then you would not have many dividends, Mr. Morrison."

Mr. Morrison, continuing, said his experience was that conferences of railway men were very much like bankers' associations. A lot of men got together to see who were the greatest fools among themselves.

The report was then adopted, & a number of resolutions passed authorizing the taking over of a number of railway charters in B.C. used in connection with the construction of the Crow's Nest Pass Ry.

In moving one of these resolutions, H. W. Birks, as an English shareholder, & member of the London Stock Exchange, took occasion to congratulate the management upon the fine outlook before the Co. He had just completed a journey of over 7,000 miles over the Co.'s system, & he had been most favorably impressed. He had started a firm believer in the C. P. R.; he was going home sanguine that there was a most prosperous future before the Co. In the words of Dr. Johnson, "The potentialities of wealth are beyond the dream of avarice."

Resolutions were then adopted approving of the purchase of the Columbia & Western Ry. from Rossland to Robson, the construction of the branch line from Slocan Lake to Slocan Jc., the acquisition of the 4-mile siding from St. Stephen, N.B., to milling properties, the proposed double tracking of the line between Montreal & Toronto, & the estimates for the ensuing year, as follows:—

Permanent bridges, ballasting & other improvements of permanent way.....	\$1,399,550 00
Terminal facilities, stations, wharves, grain elevators, additional sidings & fences.....	748,104 00
Rolling stock & other equipment, & for automatic freight train brakes & couplers.....	1,919,875 00
Steamships & Lake & River Steamers.....	375,000 00
Additional Telegraph Lines & Cables.....	252,696 00
	<u>\$4,695,225 00</u>

In connection with the double tracking of the Montreal-Toronto line, Sir William remarked that it is ultimately intended to double track from Port Arthur to Winnipeg, & from Montreal to Farnham, & steps had already been taken in that connection, but the Montreal-Toronto section was regarded as the most urgent.

The following Board of Directors was then

re-elected: Lord Strathcona & Mount Royal, Sir Wm. Van Horne, T. G. Shaughnessy, R. B. Angus, E. B. Osler, M. P., Toronto; Sir Sandford Fleming, Ottawa; Sir G. A. Kirkpatrick, Toronto; G. R. Harris, Boston; W. D. Matthews, Toronto; Hon. D. McInnes, Hamilton; T. Skinner, London, Eng.; J. W. MacKay, New York; Gen. S. Thomas, New York.

At a subsequent meeting of the directors Sir Wm. Van Horne was re-elected President, & T. G. Shaughnessy Vice-President.

The C. P. R. Co's. Report.

RAILROAD GAZETTE, NEW YORK.—To read the annual report of the C. P. R. is something like reading the story of one's youth. That road still has certain immense advantages, in that it lies in a country where people are yet disposed to look upon railroads as important aids to their own prosperity, & where the Populist legislator is still insignificant, & where there are immense & rich regions waiting the invasion of the railroad. Consequently the C. P. is still in the stage of active & vigorous growth. The affairs of this company are going on with great vigor & are in a very promising condition.

MONTREAL GAZETTE.—The C. P. R. Co. is only 18 years old. When its project was published people thought it would never be executed. The system to-day comprises 7,676 miles of road owned & operated, & 2 steamship lines on the Pacific. It has assets representing a value of \$245,000,000, earns \$24,000,000 a year, and is paying dividends where some thought it would not earn axle grease. Its story is one of the most wonderful in the annals of modern business enterprise.

Canadian Pacific Bookkeeping.

The New York Commercial Advertiser recently charged the C. P. R. with manipulating its bookkeeping by charging items of maintenance to capital account, & thus being able to make a better showing than it otherwise could. Sir Wm. Van Horne made the following reply when asked as to the truth of the charge:—"It is hardly worth while to answer a critic whose animus is so apparent. The chief burden of his complaint is that in dealing with our capital account we do not follow the 'enlightened' American practice; but there is no recognized American practice in this regard, & if there were, our preference for the recognized English practice should not give him any concern, our stock being chiefly held in England & Germany & Canada, & not in the U.S. At all events, the 'enlightened' American practice does not prevent occasional swarms of receivers."

Grand Trunk Earnings.

These figures include the G. T. of Canada, the Chicago & G. T., & the Detroit, Grand Haven & Milwaukee Rys.

	1897	1898	Increase.
Jan.	\$1,000,000	\$1,000,000	
Feb.	1,000,000	1,000,000	
Mar.	1,000,000	1,000,000	
	\$3,000,000	\$3,000,000	

CALGARY & EDMONTON RY.'S net earnings for Jan. were \$17,190.89 against \$4,846.90 in Jan., 1897. In Feb. they were \$18,824.71 against \$3,393.04 in Feb., 1897.

At the annual meeting of the Montford Colonization Ry. Co. in Montreal, Mar. 8, last year's directors were re-elected as follows: Jos. Brunet, E. D. Porcheron, E. Senecal, G. Chapleau, & J. W. R. Brunet. Jos. Brunet was elected president; E. D. Porcheron, vice-president; A. S. Hamelin, secretary, & D. W. Brunet, assistant secretary-treasurer.

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase.
Jan. 1 to Dec. 31, 1897	\$4,171,774.14	\$2,500,711.13	\$1,671,063.01	\$142,284.49
Jan. 1 to Dec. 31, 1898	\$4,191,578.18	\$2,522,071.07	\$1,669,507.11	\$18,442.88
	\$4,191,578.18	\$2,522,071.07	\$1,669,507.11	\$18,442.88

The traffic earnings for March, 1898, were \$2,050,000, against \$1,509,000 in Mar., 1897, an increase of \$541,000.

C.P.R. Land Sales.

	Acre.	1897.	1898	1897
Jan. 1 to Dec. 31, 1897	22,111	9,913	\$7,021.00	\$33,872.00
Jan. 1 to Dec. 31, 1898	22,111	8,403	66,399.00	27,573.00
Mar. 1 to Dec. 31, 1898	43,121	8,727	109,010.09	29,080.33

R. V. Rogers has been elected a director of the Kingston & Pembroke Ry., succeeding Sir G. A. Kirkpatrick resigned.

The report of the Wagner Palace Car Co. for the quarter ended Dec. 31 last shows: Gross earnings, \$809,174; expenses, \$609,422; net earnings, \$199,752.

QU'APPELLE, LONG LAKE & SASKATCHEWAN RY. & STEAMBOAT CO.'s net earnings for Jan. were \$3,091.39 as against a loss of \$963.14 in Jan., 1897. In Feb. they were \$89.55 as against a loss of \$31.10 in Feb., 1897.

At a meeting of shareholders of the Columbia & Western Ry., which was recently sold to the C.P.R., held in Montreal, Mar. 11, the following directors were elected: T. G. Shaughnessy, R. B. Angus, Montreal; G. McL. Brown, H. Abbott & R. Marpole, Vancouver. At a subsequent meeting of the directors, T. G. Shaughnessy was elected President & H. C. Oswald, Secretary.

Regarding the report that the European bond-holders of the C.P.R. expressed dissatisfaction over the position taken by the management in the rate war, Vice-President Shaughnessy recently said: "There is absolutely no foundation for such a report. Bondholders in England & Europe have expressed no dissatisfaction with our management of the C.P.R., & our position has received the support of such people. The report to the contrary is simply an American newspaper story."

EQUIPMENT.

Grand Trunk Locomotives.

F. W. Morse, Superintendent of Motive Power, writes THE RAILWAY & SHIPPING WORLD: "The G.T.R. system is now receiving from the Baldwin Locomotive Works 6 mogul locomotives & 4 10-wheelers, & a duplicate order from the Schenectady Locomotive Works. At present we are not building in Montreal, but may do so before the end of the year."

The 10-wheel passenger engines are illustrated on page 33. In designing these new classes of locomotives the intention has been to combine the best features of a number of recent designs; & the details have received unusual attention, both from Superintendent Morse & from the manufacturers, & such parts have been made especially substantial, while the passenger & freight locomotives are designed for particular classes of service, yet the parts which will require repairs & renewals are the same for both engines, which undoubtedly will reduce considerably the cost of maintenance. The passenger engines have a greater total weight than the freight engines of 14,500 lbs., but less weight on the drivers by 3,000 lbs.; the passenger engines also have larger driving wheels & a longer boiler, the latter resulting in a slightly greater heating surface for the 10-wheel locomotives. The diameter of the boiler & the dimensions of the fireboxes are the same for both classes.

The following is a list of the dimensions of both classes & of the special equipment of the engines built at the Baldwin Works:

	Ten-wheel Pass.	Mogul.
Builder's class & number	10-34 D, 326 to 329	8-34 D, 15 to 20
Number	992 to 995	901 to 906
Name of builder	*Baldwin Locomotive Works.	
Name of operating road	*Grand Trunk.	
Gauge	4 ft. 8½ in.	4 ft. 8½ in.
Kind of fuel to be used	*Bituminous coal.	
Weight on drivers, lb.	117,000	120,000
" truck wheels, lbs.	37,500	20,000
" total, lbs.	154,500	140,000
Wheel base, total, of engine	26 ft. 11 in.	24 ft. 1 in.
Wheel base, driving	15 ft. 8 in.	15 ft. 8 in.
" total, engine and tender	53 ft. 9 in.	50 ft. 11 in.
Length over all, engine	42 ft. 8 in.	39 ft. 10 in.
Length, total engine and tender	64 ft. 11 in.	62 ft. 1 in.
Height, center of boiler above rail	8 ft. 9½ in.	8 ft. 4½ in.
Height of stack above rail	14 ft. 7½ in.	14 ft. 2½ in.
Heating surface fire-box, sq. ft.	189	188.1

Heating surface tubes, sq. ft.	2,272	1,803
Heating surface, total sq. ft.	2,461	1,991.1
Grate area	33.43	33.43

WHEELS AND JOURNALS.

Diameter of driving wheels	72 in.	62 in.
Truck wheels, dia.	37 in.	37 in.
Journals, driving axle, size	9½ in. X 12 in.	9½ in. X 12 in.
Journals, truck, size	6½ in. X 10½ in.	6½ in. X 10½ in.
Main crank pin	6½ in. X 6 in.	6½ in. X 6 in.
Parallel rod pin	5½ in. X 4 in.	5½ in. X 4 in.
Crosshead pin	4 in. X 3½ in.	4 in. X 3½ in.

CYLINDERS.

Cylinder diameter	20 in.	20 in.
Piston stroke	26 in.	26 in.
" rod diam.	3½ in.	3½ in.
Main rod, length cen. to cen.	10 ft. 8½ in.	7 ft. 7¾ in.
Steam ports, length	20 in.	20 in.
" width	1½ in.	1½ in.
Exhaust ports, length	20 in.	20 in.
" width	3 in.	3 in.
Bridge, width	1½ in.	1½ in.
Valves, kind of	*Balanced.	
" greatest travel	5½ in.	5½ in.
" outside lap	¾ in.	¾ in.
" inside lap	0	0
" lead in full gear	¾ in.	¾ in.

BOILERS.

Boiler, type of	*Extended wagon top.	
Boiler, working steam pressure	200 lbs.	200 lbs.
Boiler, material of barrel	*Steel.	
Boiler, thickness of material in barrel	21-32	21-32
Boiler, diam. of barrel at front sheet	62 in.	62 in.
Boiler seams, kind of	Butt jointed, double covering strips, sextuple riveted.	
Boiler seams, circumferential	*Double riveted.	
Thickness of tube sheets	¾ in. front, ½ in. back.	¾ front, ½ back.
Thickness of crown sheet	¾ in.	¾ in.
Crown stayed with	*Radial stays.	
Dome, diam.	31½ in.	31½ in.
Tubes, number	291	291
Tubes, material	*Lap welded iron.	
Tubes, outside diam.	2 in.	2 in.
Tubes, length over tube sheets	15 ft.	11 ft. 11 in.
Firebox, length	120 in.	120 in.
" width	40½ in.	40½ in.
" depth	76¼ f. 65 b.	73¼ f. 65 b.
" material	*Steel.	
" thickness of sheets	Crown, ¾ in. Tube, ½ in. Sides, 5-16 in. Back, ¾ in.	Crown, ¾ in. Tube, ½ in. Sides, 5-16 in. Back, ¾ in.
Firebox, Brick arch	*Yes.	
" water space, width front	4 in.	4 in.
Firebox, water space, width sides	3½ in.	3½ in.
Firebox, water space, width back	4 in.	4 in.
Grate, kind of	*Rocking.

revision of the engineer, who, by replenishing the lamp, can maintain a continuous light for any number of hours.

Canadian Pacific Locomotives.

The C.P.R. Co. is adding about 50 compound consolidation locomotives to its equipment, 27 of which are being fully built at the Co.'s works, De Lorimer Avenue, Montreal, under the supervision of Mechanical Superintendent Atkinson. It is estimated these will carry 15 to 20% more load than the 10-wheelers.

An order has been placed with the Baldwin Locomotive Works, Philadelphia, Pa., for 10 complete & 10 partially constructed Vauclain system compound locomotives of the following general dimensions:

Gauge, 4' 8 1/2".
Type, Compound Ten-wheeled.
Cylinders, 2, 24" diam. x 44" stroke.
Valve gear, outside piston.
Boiler, 110 ft. long, 30" diam.
Thickness of sheets, 11/16" & 3/4".
Working pressure, 200 lbs.
Fuel, soft coal.
Firebox material, steel.
Firebox length, 40' 0".
" width, 42' 0".
" depth, front 62", back 52 1/2".
Thickness of sheets, sides 3/8", back 3/8", crown 1/2".
Diagrams, 1:1.
Cylinders, 2, 24" diam. x 44" stroke.
" diameter, 24".
" length, 44' 0".
Heating surface, firebox, 110.51 sq. ft.
" tubes, 1,494.99 " "
" total, 1,605.50 " "
Grate area, 28.51 sq. ft.
Driving wheels, outside diameter, 62",
" centre, 56".
" journals, 8" x 8 1/2".
Truck wheels, 28" diameter,
" journals, 5" x 8".
Weight on drivers, about 96,000 lbs.
" truck, 32,000 " "
" total engine, 128,000 " "
" & tender, 208,000 lbs.
Wheelbase, driving, 13' 5".
" total engine, 23' 11 1/4".
" & tender, 48' 3 1/2".
Tender truck wheels, diameter, 33".
" journals, 4 1/4" x 8".
Tank capacity, 32,000 Imperial gallons.
Weight, empty, about 35,000 lbs.
Service, passenger & freight.

Mr. Atkinson writes us that the partially constructed locomotives will be completed at the C.P.R.'s Montreal shops. They are being supplied without cabs, boiler mountings, boiler covering, sand boxes, bells, stacks, headlights, smokebox fronts, smokebox nettings, tubes, pilots, ash pans, grates & tenders complete, & are virtually boilers, frames, cylinders, wheels & motion.

The C.P.R. Co. recently placed an order with the Richmond Locomotive Works which calls for Richmond compound engines weighing in working order 140,000 lbs., with cylinders 20 1/4" & 32 ins. by 26 ins. The boiler will be of the extended wagon-top type, (Belpaire firebox) 62 ins. in diameter at the smallest ring, made for a working pressure of 200 lbs. The firebox will be 9 ft. 1 1/4 ins. long, 3 ft. 6 3/8 ins. wide, 5 ft. 4 1/2 ins. deep at front & 5 ft. 1/2 in. at back.

Car Lighting by Electricity.

The C.P.R. has equipped the sleeping car Winchester, which runs between Toronto & Montreal, with a system of electric light generated from the axle. The C.P.R. has been experimenting with various systems of lighting for some time, with a view of determining the one best adapted for use in the car service. The results procured from the apparatus used on the Winchester are said to be very promising. Although the current is generated from the car axle, there is no flickering or irregularity in the light. This regularity is brought about by the use of a system of storage, which maintains a regular current, no matter what the speed of the car may be, and stoppages are also provided for in this way. One great advantage in this electrical system of lighting lies in the fact that the lamps can be brought into immediate requisition. On the transcontinental line, for instance, where there are numbers of snowsheds & tunnels to be passed through, the process of lighting oil lamps is too slow to meet the desideratum of having instant illumination. With the electric system, on the other hand, an employee need only press a button when the train is about to plunge into the darkness of a tunnel, to set all the lamps aglow. The Winchester is the first car in Canada to be honored with the new electric system.

A Westinghouse Victory.

On Jan. 4 the Circuit Court of the U.S., held in Utica, N.Y., gave an important decision in the case of The Westinghouse Air Brake Co. vs. The Buffalo, Rochester & Pittsburgh Ry. Co. The Court issued a decree for an injunction against the latter Co., requiring infringing air-brake apparatus furnished by the New York Air Brake Co. to be removed from the cars of that road. During

1892 public competitive trials of the New York Air Brake Co.'s apparatus & the Westinghouse Air Brake Co.'s were made on three different railways. Each of these trials, the Westinghouse Co. states, showed the inferiority of the New York air-brake, & the Westinghouse Co. notified prospective purchasers that the New York apparatus would prove inferior & that it infringed the Westinghouse patent rights, & that a suit against the company would be pressed to a conclusion. After the question of infringement had been fully decided in the Westinghouse Co.'s favor, this Co. notified those who had purchased the New York apparatus, & made a proposition to replace it with its own. In spite of this owners of the New York brakes persisted in their use, & the suit followed, terminating in favor of the Westinghouse Co.

Equipment Notes.

The C.P.R. Co. works at Perth, Ont., are turning out 8 to 10 freight cars per day.

It is said the Pullman Co. has renewed its contract with the Union Pacific for 15 years.

Rhodes, Curry & Co., Ltd., Amherst, N.S., is building 50 box cars for the Intercolonial Ry.

The Dominion Atlantic Ry. has ordered a passenger engine from the Baldwin Locomotive Works.

The C.P.R. has given an order to the Canadian Locomotive & Engine Co., Kingston, to build 15 tanks.

The C.P.R. is improving a number of its stock cars, especially for the cattle trade. They are being made wider & longer.

Rhodes, Curry & Co., Ltd., Amherst, N.S., is building 200 coal cars for the Dominion Coal Co., & 20 flats for the Canada Eastern.

The Montreal Star of Mar. 28 says that a Montrealese went to Kingston to negotiate for the purchase of the Canadian Locomotive & Engine Works for a syndicate.

The company working the Southern Italian Railway has discarded the Hardy brake & will substitute the Westinghouse brake. The change is to be made first on 140 locomotives, 158 passenger cars & 45 baggage cars.

The Spokane Falls & Northern Ry. has ordered from the Illinois Car & Equipment Co., 25 ore cars for April delivery, to have 780 cubic ft. capacity, & to be fitted with Westinghouse brakes.

Esplanade East, Foot of Sherbourne Street, -:- TORONTO.

The C.P.R. intend to make a considerable increase of power at Field, B.C., to meet the growing traffic over the Big Hill. Three new engines will be placed at Field for this purpose & a new & commodious engine house is to be built on the flat at the mile post just west of Field.

The C.P.R. is arranging for rolling stock on the Crow's Nest Pass Ry. Eight engines are being built, also ballast cars with self-couplers & air brakes. The engines are not of the heaviest type, for the grade is only 1%. This rolling stock will be ready within a month or so.

The Canadian Locomotive & Engine Co., Kingston, Ont., is building 3 locomotives for the Intercolonial Ry. of the 10-wheel type, one a Vaucrain compound, & 2 simple; weight, in working order, about 132,000 lbs. Also a saddle tank, 6-wheel locomotive for B.C., connected weight about 60,000 lbs.

In answer to a question in the House of Commons recently, the Minister of Railways said that since Mar. 1, three dining cars had been placed on the Intercolonial Ry. They cost \$7,321, & their equipment \$2,528. From another source it is learned that at one end of each car there will be a lunch room, where lunches may be obtained at a reasonable cost.

The G.T.R. is adding largely to its equipment. In addition to the locomotives, referred to elsewhere, an order has been given to the Pullman Co., Chicago, for 20 1st-class passenger cars. The freight equipment is to be increased to the extent of 1,000 cars, half of which will be built at the Co.'s shops at Montreal & the rest at Detroit.

C.P.R. agents east of Fort William have been notified by Manager Tait that the instructions regarding sealing of cars reading "When a car has been unloaded it must be stripped of all seals," are not being observed. Agents must see these instructions are carried out, that new leads are used for sealing, & that in no case old leads are pressed over.

The first through train de luxe to be despatched direct to Tomask over the Siberian line, which in a few years will run to Port Arthur, is finished. It is composed of 4 splendid cars built at Moscow, an open saloon dining car, bathroom, library, telephones, electric lighting, refrigerators, ventilating apparatus, piano, chess and means for gymnastic exercise. Nothing like it has ever been seen on a Russian railway.

Manager Tait, of the C.P.R. Eastern Lines, has issued the following circular:—Many of our employes use the term "Trojan bars" or "Trojan couplers" for all kinds of vertical plane (M. C. B.) automatic couplers. A vertical plane automatic coupler should always be described by its recognized name; as for instance: Trojan—Gould Hien Washburn Tower—Janney, etc. Vertical plane couplers in general should be called "M. C. B. couplers."

Connecting lines have been notified by Manager Tait, of the C.P.R. Eastern Lines, that after April 1, 1898, that Co. will not accept any car to be hauled in passenger trains on lines east of Fort William unless it is equipped with M.C.B. vertical plane couplers, steel tyred wheels & Westinghouse automatic air-brake & train signal, or air-brake & train signal interchangeable therewith respectively, & during cold weather, unless it is equipped for steam heating.

The Canada Atlantic Ry. has placed an order with the Baldwin Locomotive Works for 16 freight locomotives. Ten will be 10-wheel engines of the Vaucrain compound type with 14 & 24x26 in. cylinders, 56 in. (outside diam.) driving wheels, & weigh in working order about 145,000 lbs., with about 116,000 lbs. on the driving wheels. The tender capacity will be 4,000 gals. The remaining 6 will also be

Vaucrain compounds of the consolidation type, with 15½ & 26x36 in. cylinders, & will weigh in working order about 173,000 lbs., with about 156,000 lbs. on the driving wheels. The tender capacity will be 4,500 gals.

The C.P.R. is adding about 70 sleeping & passenger cars to its equipment, most of which are being built at the Co's works at Montreal & Perth, Ont., & the others by the Crossen Co., Cobourg, Ont. These cars will all have standard platforms & wide end vestibules, which practically provides a guarantee against telescoping. Krupp wheels will be used. They will be fitted with inside Westinghouse air brakes, which were applied for the first time on the C.P.R. about 18 months ago & have given such excellent results that they have since become the standard on the Pennsylvania, Erie & other U.S. roads. Their chief advantages are stopping 10 to 15% quicker & the reduction of jolting to a minimum.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. is getting five 10-wheel compound engines from the Schenectady Locomotive Works. These engines were designed by E. A. Williams, Mechanical Superintendent, & T. A. Foque, Mechanical Engineer of the road. The engines will weigh in working order, without tender, about 130,000 lbs. The boilers are to be of the radial stay type, 55 ins. in diameter at the smallest ring & made for a working pressure of 200 lbs. The fireboxes will be 96 3-16 ins. long, 43¾ ins. wide, 70½ ins. deep in front, & 58½ ins. deep at the back. They will have 245 two-inch tubes. Total heating surface will be 1,902.2 sq. ft., of which 1,763.85 sq. ft. are in the tubes & 138.35 sq. ft. in the fireboxes. The grate surface will be 27.63 sq. ft. The tender capacity will be 4,500 gals. of water & 7 tons of coal.

Car Building at Cobourg.

The Crossen Car Mfg. Co. writes us that it is building the following cars:—For the C.P.R., 20 tourist cars with Pullman wide vestibules & standard steel platforms, automatic couplers, hollow brake beams, steam heating. Body of car, smoking room & kitchen, 14 berths, 28 seats upholstered in corduroy. Kitchen contains improved wrought iron range. The women & men's toilets are furnished with Tennessee marble washstands & overhead tanks. The berths are supplied with headboards, curtain rods, brackets, etc. Each car is lighted with 5 double-centre lamps besides the necessary side-bracket lamps. Double windows, with upper lights of bevelled plate glass, monitor lights, flowered glass. The cars are equipped with Westinghouse quick action air-brakes, & air signals & Krupp's 40-in. steel wheels. Exterior finished in cherry & varnished, & interior in birch-stained mahogany. The interior trimmings are the latest design, finished in Persian brass.

For the Esquimalt & Nanaimo Ry., 10 Lehigh Valley Railway hopper gondola coal cars with C.P.R. standard trucks, 60,000 lbs. capacity.

For the Intercolonial Ry., fifty 33 ft. box freight cars, 40,000 lbs. capacity, with Westinghouse air-brakes, automatic couplers & Intercolonial Ry. standard trucks.

For the Canadian Copper Co., Cleveland, Ohio, ten 33 ft. platform cars, 40,000 lbs. capacity, C.P.R. standard pattern, with automatic couplers. 10 ore dump cars, 8 tons capacity.

THE WESTINGHOUSE MANUFACTURING CO., Hamilton:—"We have received the first issue of THE RAILWAY & SHIPPING WORLD, & beg to say that our advertisement, & also the article on our works are entirely satisfactory; in fact, we think that as a whole the first issue does you considerable credit."

OPERATING.

Grand Trunk Time Inspection.

General Superintendent McGuigan has issued the following circular, dated April 1:—To insure improved efficiency in train service & provide an additional safeguard against accident, affording greater security to life & property, this Co. will inaugurate a system of watch inspection, effective May 1, 1898, & employes designated below are required, on & after that date, to submit their watches for quarterly examination & for weekly comparison with standard time to the various inspectors, who have been appointed for the purpose, & will be under the general supervision of Prof. C. H. McLeod, of McGill University, Montreal, who has been appointed Superintendent of Time Service & Watch Inspection, with office at Montreal. All train & engine-men must submit their watches to local inspectors as required by this rule.

The minimum standard of excellence adopted by this Co., for watches, is of a grade equal to what is known among American movements as 17 jewel, patent regulator, adjusted to temperature, the variations of which must not exceed 30 seconds a week.

Each employe designated will apply immediately, & every 3 months hereafter, to his superior officer for a blank certificate & order for examination, which he must take, together with his watch, to the local inspector, who will, if the watch is satisfactory, sign the certificate & forward the same to the officer under whom the person is employed, free of charge to such employe. If the watch is below the required standard it will be rejected, & the officer in charge promptly advised. Any watch so rejected cannot be used in service, nor passed upon by another inspector except upon order of the Superintendent of Time Service. Employes, where no inspector is located, may send their watches, together with blank certificate, to the nearest local inspector.

In addition to the quarterly examination, trainmen & enginemen must submit their watches to local inspectors weekly for comparison with standard time, as must also other employes who have the opportunity for doing so, that a record of the rating of their watches may be made. Employes in the train service who fail to submit their watches for weekly comparison & quarterly inspection, in accordance with the terms of this circular, will be considered as having violated the rules of the service, for which satisfactory reason must be given.

When watches need cleaning or repairing they may be left with the inspector if the owner so desires, or they may be taken to such watchmaker as the owner may select; but the watch carried in the meantime, & his own watch, after the same has been repaired, must be submitted to the Co's Inspector for examination & approval before such watch can be carried in service.

When watches are left with the inspectors of the Co. to be cleaned or repaired, a standard watch will be loaned to the employe until his own is returned.

Employes who so desire can obtain standard watches, guaranteed to give the required performance, from the inspectors on monthly payments, as may be agreed upon, not, however, exceeding 4 in number, or \$20, the amount of such monthly payments to be deducted from the pay-roll.

The officers having direct charge of employes, who are subject to the above provisions, will see that certificates of the quarterly examination of watches are filed with them for watches of employes under their charge, who are subject to the rules of watch inspection, & such officers in all departments will be held responsible for the collection & filing of watch certificates.

Trainmasters must require conductors & brakemen, & master mechanics must require engineers, to turn in, regularly, certificates of weekly comparison of their watches, & will enter in records to be kept for the purpose the dates when such certificates are received.

Employees whose watches do not conform to the required standard will be given until June 1, 1898, to provide themselves with standard watches, as on & after that date all employees subject to the provisions of this circular must be provided with standard watches & the quarterly certificates to that effect must be in the hands of the officers to whom they report.

The hearty co-operation of employees in making the operation of the system successful is earnestly enjoined. The desired results can only be obtained by observing carefully the rules as to inspection & comparison, & refraining from any attempt to set or regulate their watches themselves.

C.P.R. Lubricating Oil Rules.

Manager Tait, of the C.P.R. Eastern Lines, has issued a circular stating that enginemen will be expected, by carrying out the instructions which have been given as to the use of lubricating oils & by the exercise of care & good judgment, to achieve the following results:

EIGHT WHEEL ENGINES, EXCEPT MOGULS.

Road, valve per 140 miles run, 1 pint; engine per 40 miles run 1 pint.

Ballast, per 10 hours:—valve, 1 pint; engine, 3 pints.

Other work, per 10 hours:—valve, $\frac{3}{4}$ pint; engine, $2\frac{1}{2}$ pints.

Switching, per 12 hours:—valve, $\frac{3}{4}$ pint; engine, $1\frac{1}{2}$ pint.

TEN WHEEL & MOGUL ENGINES.

Road, valve per 120 miles run:—1 pint; engine per 35 miles run, 1 pint.

Ballast, per 10 hours:—valve, $1\frac{1}{4}$ pint; engine, 4 pints.

Other works, per 10 hours:—valve, 1 pint; engine, 3 pints.

Switching, per 12 hours:—valve, 1 pint; engine, 2 pints.

Many eloquent tributes have, indeed, been tendered from time to time to the vast changes in Canadian life which can be justly traced to the construction of the great trans-continental railway, the Canadian Pacific. But never, perhaps, has the truth been more aptly or more forcibly put than by C. D. G. Roberts, in his new history of Canada, in two sentences, which abundantly merit quotation: "All through the mountains, all along the prairies, are strung little settlements growing into villages, villages blossoming into towns, so filled with sanguine life that they sparkle like jewels on the thread of steel, & so the roaring trains of the great highway may be likened to gigantic shuttles darting backwards & forwards across the continent, & weaving into the warp of this northern land the bright pattern of national life."

OFFICIAL RAILWAY CIRCULARS.

Canada Atlantic & Ottawa, Arnprior & Parry Sound.

CANADA ATLANTIC RAILWAY & CANADA ATLANTIC TRANSIT CO., OTTAWA, Mar. 23. The following appointments take effect April 1: J. T. Rose, North-Western Agent, Duluth Minn., office at 609 Board of Trade; H. L. Moore, Agent, Minneapolis & St. Paul, Minn., office at Corn Exchange, Minneapolis; C. D. Howard, Agent, Milwaukee, Wis., office at Room 38, Mack Block. C. J. Smith, General Freight Agent. Approved, E. J. Chamberlin, General Manager.

CANADA ATLANTIC, & OTTAWA, ARNPRIOR & PARRY SOUND RYS., & CANADA ATLANTIC TRANSIT CO., OTTAWA, Mar. 31. M. A. Overend is appointed Foreign Freight Agent of these companies; office at 115 Board of Trade Building, Montreal. C. J. Smith, General Traffic Manager.

CANADA ATLANTIC & OTTAWA, ARNPRIOR & PARRY SOUND RYS., & CANADA ATLANTIC TRANSIT CO., OTTAWA, Mar. 31. W. P. Hinton having been appointed Assistant General Freight Agent, will have direct charge of the local freight traffic of these companies, the tracing & care of traffic in transit, freight claims, & such other duties as may be assigned to him by this office. Agents & others will report to him on matters pertaining thereto. All correspondence relative to the Canada Atlantic Fast Freight Line should be addressed to the Line Manager, as formerly. C. J. Smith, General Traffic Manager.

CANADA ATLANTIC & OTTAWA, ARNPRIOR & PARRY SOUND RYS. The following circulars were issued by E. J. Chamberlin, General Manager, dated Ottawa, Mar. 31: M. Donaldson, formerly Superintendent, is appointed General Superintendent, headquarters Ottawa, Ont.; J. Ogilvie, formerly Locomotive Foreman, is appointed Superintendent of Motive Power, & will have charge of maintenance of motive power & other matters pertaining to that department, reporting direct to the General Superintendent, headquarters, Ottawa; W. H. Smith is appointed Boat Line Auditor, headquarters Depot Harbor, Ont. He will also act as Agent & have charge of operation & accounts in connection with warehouses & elevators at Depot Harbor; C. J. Smith, formerly General Freight & Passenger Agent, is appointed General Traffic Manager, headquarters Ottawa. J. E. Walsh is appointed Assistant General Passenger Agent. Headquarters, Ottawa. W. P. Hinton is appointed Assistant General Freight Agent. Headquarters, Ottawa. On & after this date the Chief Engineer will have the direct supervision of track, bridges, trestles & docks. Roadmasters will respect his orders accordingly. Headquarters, Ottawa.

CANADA ATLANTIC & OTTAWA, ARNPRIOR & PARRY SOUND RYS., Mar. 31. J. E. Walsh having been appointed Assistant General Pas-

senger Agent, will have direct charge of the passenger business of these companies. Agents & others will report to him on matters pertaining thereto. The Baggage Department is assigned to his office. E. J. Smith, General Traffic Manager.

Canadian Government System.

As a good deal of doubt appears to exist as to the powers, &c., of the General Traffic Manager we give here a copy of the circular announcing his appointment:

MONCTON, N.B., Nov. 22, 1897. A. H. Harris is appointed General Traffic Manager of the Canadian Government System of Railways, with headquarters at Montreal, to take effect Nov. 24, 1897. The General Freight Agent & General Passenger Agent will report to & receive their instructions from him. D. Pottinger, General Manager.

In sending us the circular, the Secretary of the Department of Railways & Canals wrote: "I am to say that Mr. Harris is to report to the General Manager."

In the House of Commons, April 6, answering Sir Hibbert Tupper, Mr. Blair said Mr. Harris was not independent of the General Manager. He could not fix rates without first obtaining the sanction of the Minister of Railways.

PERSONAL MENTION.

Lady VanHorne & Miss Adeline VanHorne are sojourning at Pasadena, Cal.

Jas. McMullen, of Galt, has been appointed Secretary to Chief Solicitor Clarke, of the Canadian Pacific.

C. W. Graves, District Passenger Agent, Wisconsin Central, Toronto, has removed his office to 80 Yonge St.

E. A. Seeley has been appointed General Agent of the Oregon Railroad & Navigation Co. at Juneau, Alaska.

Chas. Newman, car inspector for the Grand Trunk at Niagara Falls, lost his son in the Maine disaster at Havana.

G. McL. Brown, Executive Agent of the C.P.R. in B.C., has decided upon making Victoria his headquarters.

Jos. De Gurse, Land Surveyor & Civil Engineer for the L. E. & D. R. Ry., died Mar. 23, at Windsor, Ont.

C. W. Mott, General Immigration Agent of the Northern Pacific, having resigned, the position has been abolished.

Bert Belch, formerly N.P. ticket agent in Winnipeg, has been given a position in the C.P.R. Vancouver ticket office.

Mrs. M. L. Flynn, wife of the Master Mechanic of the Michigan Central, died at St. Thomas, Ont., Mar. 16, of paralysis.

L. J. Seargeant, formerly General Manager of the G.T.R., presided at the dinner of the Canada Club in London, Eng., April 6.

Steel Elevator at Fort William.

Although the C.P.R. Co. has 3 grain elevators, with an aggregate capacity of 4,000,000 bushels at Fort William, the great development of Manitoba & the N.W.T. has rendered necessary still further storage, & last season the company decided on a new departure, to add still further capacity, but to construct it of steel instead of wood. The illustration on this page shows the new elevator as it will appear when completed to the full capacity of 3,000,000 bushels. It is situated on the bank of the Kaministiquia River, about $1\frac{1}{4}$ miles west of Fort William Station & of the wooden elevators. The advantage to the C.P.R. in locating this plant on the bank of the river is seen in the trifling cost of constructing the wharfage necessary for it, the piling being all in now, and the whole cost of the wharf being but a small fraction of what a wharf or dock on the lake would cost.

The high building shown in the illustration is constructed of structural steel, with $\frac{1}{4}$ in.

The boiler & engine-house is constructed of Lake Superior stone, with steel truss roof, & contains one 400-h. p. condensing engine, 3 boilers, 66 in. x 16 ft., with all the necessary pumps & fixtures. The power is transmitted from engine to steel house by a 400-h. p. manilla rope drive.

Tunnels constructed of stone under the tanks contain the belt conveyors for transferring the grain from tanks to steel building, where the grain is weighed & shipped to vessels by means of the conveyors in the steel galleries over the tanks; dock spouts being attached to end of galleries for receiving the grain from the belt conveyors.

The steel tanks as shown consist of 16 tanks 58 ft. diam. x 60 ft. high, & 32 tanks 29 ft. diameter x 60 ft. high.

It is understood that the C.P.R. Co. does not intend to carry any insurance on the buildings, tanks, or grain stored therein.

The building, tanks, &c., have been built by the Steel Storage & Elevator Construction Co., Buffalo, N.Y.,

C.P.R. Pipestone branch.....	255,000
" Southwes'n "	1,041,500
" Emerson "	179,000
" Stonewall "	48,000
" W. Selkirk "	3,000
" Pr. Albert "	65,000
" Edmonton "	360,000
" All lines	15,765,500
Man. & N. W. Railway	1,136,000
L. Man. R'y & Can. Co.	115,000
Northern Pacific R'y	1,004,000
Gt. Northwest Central	357,500

Total..... 18,378,000

The largest elevators are the C.P.R. Co.'s at Fort William, with the following capacities in bushels:—A and B, 1,250,000 each; C and D, 1,500,000 each. The others having a capacity of over 100,000 are:—Keewatin, Lake O, the Woods Milling Co., 750,000; Winnipeg, Ogilvie Milling Co., 320,000; Port Arthur-C.P.R., 315,000; Winnipeg, Northern Elevator Co., 140,000; Brandon, Alexander &

Sent to N.Y. Commercial by order of Steel Storage & Elevator Co. Co. May 1902

CANADIAN PACIFIC RAILWAY STEEL ELEVATOR, FORT WILLIAM, ONT.

steel plate floors, supported on I beams, the steel frame being covered with heavy corrugated steel. The building contains the scales, steel circular garners, steel elevator legs, power shovels, car pullers, warehouse separators, steel spouting, transmission machinery & fixture, for the weighing & transferring of grain from cars to tanks or direct to vessels. The steel building & contents being fireproof is not the only feature to be considered. Steel construction will last much longer than wood; no settlement will occur to disarrange the shafting & belting. No force of mechanics is required to replace rotten or broken timbers & repair spouts and shafting.

The two belt galleries shown over the top of tanks are constructed of steel, & contain 2 belt conveyors, each with trippers, for distributing grain to the various tanks, or direct to vessels. The shipping capacity is 40,000 bush. an hour. The unloading capacity is 400 cars a day.

Western Elevator Capacity.

The following table shows the growth of the capacity of grain elevators and warehouses on or adjacent to lines of railway, including Port Arthur, Fort William, Keewatin and points in Manitoba and the Northwest Territories:

1891.....	7,628,000 bushels.
1892.....	10,366,800 "
1893.....	11,467,100 "
1894.....	11,817,100 "
1895.....	12,000,000 "
1896.....	13,873,600 "
1897.....	14,990,300 "
1898.....	18,378,000 "

Following are details of the present capacity in bushels:

C.P.R. Main Line.....	10,499,000
" Pembina branch.....	2,195,000
" Souris "	1,120,000

Kelly & Co., 125,000; Portage la Prairie, Farmers' Elevator Co., 110,000; Edmonton, Brackman & Kerr, 104,000.

In Manitoba and the Territories, including Keewatin, there are 58 flour mills, with a daily capacity of 11,825 barrels, and 5 oatmeal mills, with a daily capacity of 425 barrels.

The C.P.R. Co., which recently bought the Trail smelter on the Columbia River & the railway from the smelter to the mines at Rossland, has contracted with the War Eagle mine for the shipment & treatment of 100 tons of ore daily for a year. The freight & treatment charges are \$7.50 a ton, a reduction of \$3.50 below the rates which have existed. The Le Roi smelter at Northport, Wash., made a lower bid in connection with the Spokane & Northern Railway, but the War Eagle preferred to pay the higher rate & have the ore treated in B.C.

CONSTRUCTION & BETTERMENT.**Ottawa & New York Railway.**

The work of completing the grading north of Cornwall is in progress, & it is expected the line will be ready for traffic by July. Owing to much of the work being done late last fall, a good deal of it will have to be gone over, especially the embankments in the swampy places, to make the roadway secure. Brennan & Foster are at work on Cornwall Island, & the operations south of the river will be begun shortly. The SooySmith Co., which has the contract for the foundations of the International bridge, has a staff at work preparing to finish the masonry. A large quantity of cut stone has been delivered on the north bank of the Cornwall Canal, & derricks to handle it are being put up. It is intended to put in the piers for the swing bridge across the canal first, taking advantage of the water being out of the canal, & the work will be finished before the opening of navigation. The completion of the piers in the south channel, & the building of those in the north channel, will then be rushed through. It is expected both bridges will be ready for traffic towards the end of July.

"The Ottawa & New York Ry.," said President Hibbard recently, "was originally chartered as the Ontario Pacific Ry., with powers to build from Cornwall to Sault Ste. Marie, by way of Ottawa. This charter lay in abeyance for 15 years. Two years ago the present management of the O. & N. Y. Ry. began making preparations for the extension of that line south to connect with the Delaware & Hudson at North Creek. Learning that a charter was in existence for a line to Ottawa & beyond, arrangements were made for the extension of the line to the Capital, bridging the St. Lawrence at Cornwall. At the 1897 session of Parliament, in order to more distinctly mark the road as an Ottawa one, the name was changed from the Ontario & Pacific to the Ottawa & New York Ry. Co. Contracts were at once let for the construction of the line, including the bridge, & a short line from the present terminus of the O. & N. Y. at Moira to the bridge. This work has progressed to an extent that leaves very little work to complete the line from Ottawa to Cornwall. Work on the bridge was stopped for the winter, but will be pushed on with vigor in the spring, & will be completed by July 1. Several piers, those in the U. S. channel, & the 2 abutments are finished, & the iron & steel work is on the ground ready for erection as soon as the weather opens.

"The construction of the south link between Tupper Lake & North Creek will be continued next summer. The line to be followed through the Adirondacks is an unusually favorable one for a mountain road, the grades, with the exception of 1 section of 10 miles, not exceeding 1%, & the curvature being light. The line follows the waters of the St. Regis & Raquette Rivers for the first 60 miles in the mountains, & then, crossing a small divide, reaches the Hudson River, following that river & contiguous streams to its southern connection. This line will form the shortest route from Ottawa to New York—415 miles—being 70 miles shorter than the present through car route.

"Spencer, Trask & Co., & Moffatt & White, of New York city, are the bankers who have formed the syndicate to build the road. G. B. Moffatt is chairman of the Directors, G. F. Peabody, a member of the firm of Spencer, Trask & Co., is Vice-President of the Co., G. W. Parker, late President of the St. Louis, Alton and Terre Haute Ry., has had entire charge of construction.

"The directors of the company are not connected in any way with any other railway in Canada, nor is there any intention of consolidating with any existing road. It is pro-

posed to operate the road as a distinctively Ottawa line, for local traffic, & also in connection with the G.T.R. from Cornwall, and with the C.P.R. at Finch & Ottawa, & the other roads running north & west from Ottawa for the usual traffic interchange. Being the shortest line to the east, it will have intimate relations with all roads competing for New York business. The O. & N. Y. intends having an entrance to Ottawa entirely independent of the C.A.R. up to the deep cut; & as the agreement with that Co. holds good only until Sept. 1 next, you can readily see that not much time can be lost in completing the line to that point."

A by-law to bonus the workshops of the Ottawa & New York Ry. Co. for \$75,000 was carried by the ratepayers of Ottawa early in January. Mr. Adgate, of New York, is the contractor for new steel bridge over the St. Lawrence at Cornwall.

C P.R. Extensions & Betterment.

As will be seen by reference to the report of the proceedings at the annual meeting, on another page of this issue, the C.P.R. will spend over \$2,000,000 in the improvement of the system, \$1,399,550 having been voted for permanent bridges, ballasting & other improvements of permanent way, & \$748,104 for terminal facilities, stations, wharves, grain elevators, sidings & fences. On the

River and Gulf of St. Lawrence

W. G. FONSECA,

705 Main St., Winnipeg.

ATLANTIC DIVISION

about \$500,000 will be spent in improving the permanent way, &c., particularly between Megantic & St. John, N.B. It is intended to lay some 53 miles of heavy steel rails & about 90 miles will be re-ballasted, all to the end of better meeting the increase of winter port business at St. John. During last season the weight of business was rather much for the railway telegraph wires, & some of the business was done over the Co.'s commercial wires. The line of improvements includes extension of the railway telegraph circuit east of Montreal. A large elevator will be built at Sand Point.

THE ONTARIO & QUEBEC DIVISION

will have about \$1,250,000 spent on it. A large amount of ballasting will be done east of Montreal, & west & north of Toronto, greatly increased siding accommodation will be provided all over the division, & particularly between Toronto & Montreal, & 80 lbs. rails will be substituted for 50 & 60 lbs. on some 30 miles between Montreal & Megantic & about 5 miles on the Owen Sound branch.

IMPORTANT NOTICE

TO THE BUSINESS PUBLIC.

REDUCTION IN COLLECTION RATES.

The Canadian Express Company have adopted a new system & a low schedule of rates for collecting notes, drafts & accounts at points on their lines in Canada, which will no doubt be taken advantage of by the general public who have such business to transact.

Amounts.	SCHEDULE.	Total Charges.
\$3 & under.....		\$0 13

THE CANADIAN PACIFIC RAILWAY COMPANY.

Dividends for the half-year ending December 31st, 1897 have been declared as follows:

On the Preference Stock, 2 per cent.

On the Common Stock, 2½ per cent.

Warrants for the common stock dividend will be mailed on or about April 1st to shareholders of record at the closing of the books in New York and London respectively.

The preference stock dividend will be paid on Friday, April 1st, to shareholders of record at the closing of the books at the Company's London Office, 1 Queen Victoria Street, London, E.C.

The common stock transfer books will close in London at 3 p.m. on Friday, February 25th, and in Montreal and New York on Tuesday, March 8th. The preference stock books will close at 3 p.m. on Tuesday, March 8th.

All books will be re-opened on Thursday, 7th April.

By order of the Board.

MONTREAL

The double tracking of the line between Montreal & Toronto will soon be undertaken. Surveys will speedily be made, with the view of entering upon this work, rendered necessary by an increase of traffic—an increase which is now found difficult to handle, & which could not, in the future, be handled successfully with the single track. The work will be a costly one, but as Sir Wm. Van Horne recently pointed out, it is one of the most urgent things at present before the executive. Mr. Shaughnessy says there is, of course, the preliminary work of surveying to be done before the work itself can be started, but indicates that there will be little delay in proceeding.

At Toronto Junction an addition of 60 x 130 ft. will be made to the car shops, costing about \$6,000. Some \$13,000 will be spent in increasing the facilities of the Toronto yards.

At Owen Sound there will be a general improvement of terminal facilities, including the erection of a large brick engine-house, & track extensions, costing about \$21,000.

The bridge over the Grand River at Galt, which now consists of 5 iron spans of 150 ft. each on stone piers, with timber approaches, will be replaced at a cost of about \$70,000. The piers will be raised about 10 ft., to carry 5 steel spans of 150 ft. each. Two iron spans of about 60 ft. will be added at the west end, & 1 at the east end to take the place of the wooden approaches, & the track will be raised so as to improve the grade from the bridge for about 2 miles west, & also west from the station.

The wooden stations at Galt & Woodstock are to be replaced by brick structures, costing about \$13,000 each, & comprising general waiting room ladies' waiting & retiring room, agent's office & baggage room. The present Woodstock station will be moved eastward a little, & converted into a freight shed. The Woodstock yard will be altered to provide greater convenience for passenger trains & additional room for freight business.

The C.P.R. short line to Ottawa will be ready for operation by July. This will be the shortest line between Montreal & the capital, & it will, from the start, be the fastest. The question whether the C.P.R. will use the Ottawa Union station, or put up a structure of its own, is, according to Mr. Shaughnessy, under the consideration of the executive. The Co. will continue its transcontinental service, by the old line via Calumet, the new line, splendidly equipped, being used chiefly for fast passenger service between the commercial & political capitals. The C.P.R. looks forward to seeing this new line one of the best paying in the system. Its construction has been rapid, but solidity has not been sacrificed to speed; the rolling stock which is to be placed on it will be among the finest used on the system.

WESTERN DIVISION.

About 100 miles of 73 lbs. steel rails will be laid on the main line between Fort William & Winnipeg, & a large amount of ballasting will be done. The wooden truss bridge over the Kaministiquia River is to be replaced by solid stone arches. A small dock is being built at Wabigoon to facilitate the transshipment of mining supplies, &c. A neat frame station has been built at Morden to replace the one burned last year. Six elevators standing in a row by the tracks at Morden handle nearly a million bushels of grain every season. A number of other stations are to be built on the division, the principal one being at Moose Jaw, which has become an important station point, owing to the traffic to & from the "Soo" connection at Port Arthur. There will also be a new dining-hall, & offices for the Superintendent & dispatchers. At Carberry a station 29x65 ft. will be built on stone foundations. Smaller stations will be built at Sintaluta, Altona, Winkler, La Riviere, Rathwell, Elva, Pipestone, Reston, Pierson, Maple

Creek & Dinorwic. The Co. has acquired the Caldwell Block, opposite the Post Office, in Winnipeg, for its city ticket and telegraph offices. The building will be remodelled & a four-storey extension will be built at the rear. The railway offices will be on the ground floor. It is expected the building will be ready for occupation in July.

The C.P.R. shops at Winnipeg have never been so busy as at present, & overtime is being put in by hundreds of employees to a greater extent than in any previous season. Owing to the great increase in traffic, all the repairs necessary for the division cannot be done at the Winnipeg shops, & it has been decided to establish another divisional point near the Rockies. A proposition has been made to the town of Calgary, & if it is accepted the Co. will build there.

On the Crow's Nest Pass branch the rails have been laid to Bull's Head Prairie, which is within 80 miles of the Columbia River. Trains are running regularly from Macleod to the end of the track. The work between Lethbridge and Macleod is being pushed, & it is expected the link will soon be completed so that trains can run through from Dunmore via Lethbridge to the end of the track.

PACIFIC DIVISION.

A large amount of work will be done, particularly in replacing wooden structures with permanent fills & steel bridges. At Mountain Creek the trestle is being filled by hydraulic.

The Co. is proceeding with the construction of a station building at Vancouver. It will be a splendid structure, of Calgary sandstone & brick, 190 ft. long, 60 wide & 126 high, with 6 storeys on the front. It will cost in the vicinity of \$200,000. The Co. will make extensions to its mountain hotels at Revelstoke, Field, North Bend & Glacier, at all of which the traffic has outgrown the accommodation. It is said brick offices will be erected in Nelson, & a sawmill, with a capacity of 100,000 ft. a day, is to be built by the Co. at Elk River.

Collingwood Schreiber, Deputy Minister of Railways, states in his recently issued annual report that he made a trip over the C.P.R. from Ottawa to Vancouver, & examined the work done & in course of erection under the arbitrator's award. On the division between Savona's Ferry & Emory's Bar the work was almost finished, giving permanency to the character of the road, the alignment having been greatly improved. The total award to the C.P.R. was \$579,255.20. Previous to the award in July, 1891, \$202,675.20 worth of work had been done. The work done from Feb., 1891, to Feb., 1892, amounted to \$11,966.79. In 1892-3-4-5-6-7, the work proceeded steadily, so that there is now only a balance of \$6,809.50.

The Deputy Minister remarks on the undertakings of the Co. for the substantial improvement of the railway in the directions of steel bridge construction, the formation of solid embankments & the adaptation of the most recent appliances to rolling stock, in order to ensure safety & comfort to passengers & employees, & states it has equipped with self-couplers 7,589 freight cars, & has fitted 5,056 freight cars with automatic brakes.

THE QUEBEC CENTRAL is about to extend its shops at Newington, near Sherbrooke, which will require an expenditure of not less than \$70,000.

THE TILSONBURG, LAKE ERIE & PACIFIC is constructing a connection at Tilsonburg, Ont., with the M.C.R. & will build a \$20,000 steel bridge across Otter Creek.

TORONTO, HAMILTON & BUFFALO.—A plan to increase the yard-room at James St. Station, Hamilton, is under consideration, the 2 tracks not affording sufficient room.

Railway Building in 1897.

Following is a record of construction during last year:

Asbestos & Danville.—From Danville, Que., to Asbestos.....	4.75
Atlantic & Lake Superior.—From Caplin to Paspebiac	20
Canada Atlantic.—From Lacolle Jct. to Vermont State line	5.5
Canadian Pacific.—Columbia & Kootenay extension from Slocan Jct. to Slocan Lake, 32 miles; Crow's Nest Pass extension from Lethbridge west to] ward Nelson, 65 miles; Montreal & Ottawa extension from Alfred toward Ottawa, 42 miles; total	139
Coast Railway of Nova Scotia.—From Belleville to East Pubnico	17.2
Columbia & Western.—From Trail to West Robson	21.5
Drummond County.—From Moose Park to Chaudiere	42
East Richelieu Valley.—From Iberville to Henryville	12
Irondale, Bancroft & Ottawa.—Extension to Bancroft	5
Lake Manitoba Railway & Canal Co.—Extension to Winnipegosis	23
L'Epiphaïne & L'Assomption.—Extension from L'Assomption	4
Montford Colonization.—From Brunet to Arundel	12
Ottawa & New York.—From Ottawa to Cornwall	52
Phillipsburg Railroad & Quarry.—From main line to wharf on Missisquoi Bay ..	7
United Counties.—From Iberville to Island Thomas	22

Total.....380.65

The total mileage of new roads built in the whole of the United States during the same period was only 2,108.82 miles.

Work on the Grand Trunk.

In addition to equipping its system with extra 60,000 lbs. freight cars the G.T.R. is making arrangements to have the roadbed, locomotives, &c., between Toronto & Portland put in condition to haul 35 cars to a train-load from the former to the latter city without having to cut the train. To do this means that all the bridges between Vaudreuil & Portland are being materially strengthened, & some of the heavy grades east of Montreal will be overcome by building a track round them, which will perhaps increase the mileage to some extent, but the amount of time saved by running over flat country will equalize the loss, if any. This departure will enable the Co. to rush through its trains much quicker than formerly, when the trains had to be cut & reduced in load at several terminals in order to overcome the grades.

Arrangements have been made to commence extensive improvements on the Southern Division, which is now being jointly used by the G. T. & Wabash. Traffic will now be much heavier than formerly, in view of the change, & it will be necessary to lay standard 80 lbs. steel rails to replace 56 to 66 lbs. ones now down, & put in additional sidings.

The masonry work on the Victoria Jubilee Bridge at Montreal has been completed, & the work of erecting the superstructure will now go on from both ends.

General Manager Hays informs us that it is the Co.'s intention, as soon as the necessary legislation can be obtained, to somewhat improve the International Bridge connecting Fort Erie, Ont., with Buffalo, N.Y., so as to better facilitate the Co.'s business over it. The plans, however, have not yet progressed far.

Construction & Betterment Notes.

CANADA ATLANTIC & O., A. & P. S. RY.—The new car shops in Ottawa East will probably be re-commenced about May 1, & about the same date work will begin on the Central depot. The O., A. & P. S. Railway Company is at present building several large warehouses at Parry Sound for the storage of goods consigned to lake points. Two of them will be 80 x 600 ft. One is to hold packages from lake points to be shipped east, & the other for goods consigned to western lake points. President Booth states that work on the new station & the car shops will likely be begun as soon as the work at Parry Sound is completed.

THE COBOURG, NORTHUMBERLAND & PACIFIC is to be built from Cobourg, Ont., to Tweed, it is said, at once, the contract having been let to C. H. Bower. Cobourg will be the headquarters & base of supplies.

COAST RY. OF NOVA SCOTIA.—L. H. Wheaton, Chief Engineer, Yarmouth, N.S., states that surveys have been commenced for the extension from Lockport toward Halifax, 2 corps of engineers being in the field working in both directions. As soon as the line is located contracts will be let & grading will begin. The road is projected to run from Yarmouth to Halifax, following the south coast of Nova Scotia. Thirty-one miles are in operation from Yarmouth to East Pubnico, & 20 miles additional are under construction, the work being well advanced. The location is completed to Lockport, 97 miles from Yarmouth. An amendment to the charter has

Coast Railway of Nova Scotia.

been secured providing for a branch from Liverpool to the northern part of Queen's county, to take the place of the proposed N. S. Southern Ry., whose charter expired December last. It is expected to have the road completed & ready for operation to Lockport by the close of this year, & to have considerable work done on the line between the latter place & Halifax. Financial arrangements for completing the entire line have been made, & free right of way has been secured for the entire distance. The contractor is the Nova Scotia Development Co., of Philadelphia, Pa. T. Robertson, Yarmouth, N.S., is President of the Railway Co.

THE DEPARTMENT OF RAILWAYS has issued a circular to railway & bridge companies stating that in view of the increasing weight of locomotives, & the conversion of branch lines into trunk lines, railway bridges, the construction or alteration of which may be projected, must be designed and proportioned, in order to satisfy the requirements of the Department, for not less than a class 2 engine loading, as indicated in the departmental specification of 1896.

GREAT NORTHWEST CENTRAL.—It is said on good authority there will be no extension of this Manitoba line this year, the Dominion Government having decided not to subsidize any roads this year. The Imperial Privy

Council has not yet given a decision in the famous G.N.W.C. case, but simply outlined in what was erroneously reported as a judgment, what their finding would be along certain lines. The latter included the payment of sub-contractors' claims. The English bondholders & Contractor Charlebois were to come together & arrange matters. This they failed to do, as the English bondholders would not meet the demands of Mr. Charlebois, regarding them as too excessive. The bondholders then settled with the sub-contractors, paying their claims, amounting to \$160,000, now control the road, & have asked for the suspended judgment of the Privy Council, which may be expected any day.

THE LOTBINIERE & MEGANTIC is building a wharf 160 ft. long at Cap la Roche, Que., to facilitate the shipping of pulp wood, bark, &c., from that section.

THE MANITOBA & NORTHWESTERN is repairing & extending the stockyards at Portage la Prairie. The company is looking forward to a great expansion in its live stock freight.

MIDLAND.—Fitzpatrick & Co., of New Glasgow and Windsor, N. S., are said to have been awarded a contract for building this line from Windsor, via South Maitland & Brookfield, to Truro, N.S., 60 miles. W. Strachan, Montreal, is president of the Co., which was incorporated by the Nova Scotia Legislature in 1896, with powers to build from Windsor via Maitland & Clifton to the Intercolonial at a point between Truro & Stewiacke, thence to Eastville, with extensions & branches to coal & iron fields & shipping ports. In 1894 a Dominion subsidy was granted of \$3,200 a mile for 90 miles, from Newport or Windsor to Truro, or to a point between Truro & Stewiacke, & from a point on the railway to a point at or near Eastville, & from Eastville, through the valley of Musquodoboit River, towards a point on the Dartmouth branch of the Intercolonial, in lieu of a subsidy authorized in 1892; also for a railway bridge over the River Shubenacadie, a subsidy of 15% on the value of the structure, the total of the subsidies not to exceed \$300,000. The Midland Ry. Co. having applied to the Department of Railways, was admitted to contract for these works on July 30, 1896; the date for completion being fixed as Aug. 1, 1898.

THE MONCTON & BUCTOUCHE will put in a draw in the big railway bridge which spans the river at Buctouche. This has been ordered by the Dominion Government on representations by people of Buctouche & vicinity that it is in the interests of shipping in Buctouche harbor. It will probably cost \$2,000 to \$3,000.

NEWFOUNDLAND, NORTHERN & WESTERN.—W. D. Reid, son of R. G. Reid, who has taken over this line, states it will be formally opened between Port au Basque & St. John's, Nfld., about June 1.

THE NORTHERN PACIFIC will fill in a large number of bridges on the Manitoba division this year.

PEMBROKE SOUTHERN.—W. Russell & Co. have a contract for building this line from Pembroke, Ont., to Golden Lake, where it will connect with the Ottawa, Arnprior & Parry Sound Ry.

THE PORT ARTHUR, DULUTH & WESTERN.—Superintendent Thompson wrote us Mar. 21: "The construction of a branch of about 3 miles from a point on our line near Stanley, 17 miles from Fort William, to Kakabeka Falls is contemplated, but no arrangements have been made, as yet, to start work on it." Kakabeka is one of the most beautiful falls on this continent, & has immense power, which there are strong hopes will be utilized ere long.

THE RESTIGOUCHE & WESTERN has completed arrangements for building the first 20 miles of the line. Malcolm & Ross are the contractors, & C. L. B. Miles is Chief Engineer. The road will be from the I.C.R., at Campbellton, N.B., to the St. John River at Grand Falls or St. Leonards, at either of which it connects with the C.P.R.; at St. Leonards also with the Bangor & Aristook Ry. By bridging the Restigouche at Campbellton, it will connect with the Atlantic & Lake Superior to Gaspé. There will be 110 miles to build, through heavy timber, spruce & cedar, in abundance, & some fine tracts of farm lands, on ridges covered now by a wealth of rock maple.

WINNIPEG TO LAKE SUPERIOR.—A Winnipeg telegram, April 12, says:—An arrangement has, it is said, been come to between Premier Greenway & Wm. Mackenzie, Toronto, who controls the Ontario & Rainy River & South Eastern Ry. charters, under which another line between Winnipeg & Lake Superior will be built, by which Manitoba, to secure competition with the C.P.R., will guarantee the bonds of that portion of the road lying within the Province—about 100 miles, & extending from Winnipeg to the Lake of the Woods—to the extent of \$8,000 a mile. This guarantee, it is expected, will enable the Co. to float its bonds at par on the London market. The South Eastern charter carries a Dominion land grant of 6,400 acres a mile. An announcement is expected in the Legislature in a few days.

GRAND TRUNK OFFICES.—Last autumn negotiations were commenced between Montreal City Council & the G. T. management, relating to the movement of the Co's general offices from Point St. Charles to the central part of the city. Mr. Hays offered that the Co., if given the upper part of Victoria Square, as a free site, with tax exemption would erect a handsome office structure there. This proposition did not meet with the approval of the Council, who offered St. Anne's Market site instead. Recently Toronto civic authorities have been urging the removal of the offices to Toronto, urging that it is more in the centre of the G. T. system than Montreal, but they have not made any offer, Mr. Hays having stated that he could not consider any proposition while negotiations with the Montreal City Council were pending. It appears settled that the Victoria Square site will not be given. Whether Mr. Hays will accept the St. Anne's Market, or some alternative site, remains to be seen. Our own impression is that matters will be arranged between Montreal & the Co., & that Toronto's chances of securing the offices are, to say the least, remote.

Personal Mention.

W. H. Miles has been appointed Live Stock Agent for the C.P.R. Western Division.

Eugene Flynn, of Montreal, once well known as the G.T.R. detective, has gone to jail for 6 months for brutally assaulting a woman.

J. M. Egan, formerly General Superintendent of the C.P.R., Western Division, is now Vice-President of the Central of Georgia, with headquarters at Savannah.

W. F. Anderson, formerly of the C.P.R. audit office in Winnipeg, has been appointed travelling passenger agent for the Co. in the Kootenay District of B.C.

E. Pennington, Superintendent of the Minneapolis, St. Paul & Sault Ste. Marie, has been appointed General Superintendent, with headquarters at Minneapolis, Minn.

W. K. Snider, a well-known conductor on the G.T.R., died at Windsor, Ont., April 5, & was buried at Fergus. He was favorably known as a revivalist & lecturer.

The Vanderbilt Changes.

On Mar. 30 the following statement was sent out from the head offices of the New York Central: To carry out the policy of a greater unity of administration in the Vanderbilt system the following adjustment of the management will be made after the annual election of the New York Central & Hudson River Ry. Co. on April 20. Chauncey M. Depew will retire from the presidency of that Co., & becomes Chairman of the boards of directors of the New York Central & Hudson River, Lake Shore, New York, Chicago & St. Louis & Michigan Central Ry.

S. R. Callaway will succeed Mr. Depew as President of the New York Central Co. Mr. Ledyard will remain President of the Michigan Central. The Presidents of the Lake Shore & of the New York, Chicago, & St. Louis have not yet been chosen. Cornelius Vanderbilt, in retiring from the Chairmanship of the New York Central & Hudson River Co. & of the Michigan Central Co., & W. K. Vanderbilt in retiring from the Chairmanship of the Lake Shore & of the New York, Chicago & St. Louis Co.'s, will remain in the directorates & continue their interest in the property with which their name has been so long identified, & in which they have such large investments.

The new President of the New York Central R. R. is a Canadian by birth, & well-known in the Dominion, having held positions in Hamilton, London & Montreal. He was born on Dec. 24, 1850, & at the age of 13 entered Mr. Hickson's office in Montreal, as office boy, at a salary of \$100 per year. Mr. Hickson, now Sir Joseph, was, in 1863, Chief Accountant of the Grand Trunk. In 1865 Mr. Callaway went as Secretary to Mr. G. Cheney, Manager of the Canadian Express Company, & left there in 1869 to enter the service of the Great Western Ry. under W. Wallace, Superintendent at London, & subsequently Private Secretary to W. K. Muir at Hamilton.

Mr. Callaway retired from the Great Western to enter the service of the Detroit & Milwaukee, of which road he was Superintendent from 1875 to 1878. Upon the absorption of the D. & M. by the Great Western Mr. Callaway was appointed General Superintendent of the Detroit & Bay City Ry., & in 1880 General Manager of the Chicago & Grand Trunk & President of the Western Indiana Railways. In 1884 he accepted the position of Vice-President & General Manager of the Union Pacific Ry. & the allied lines of nearly 6,000 miles. In 1887 he was elected President of the Toledo, St. Louis & Kansas City Ry., & left that road to accept the Presidency of the Lake Shore & Michigan Southern Ry., the position he now holds. It is said Sir Charles Rivers-Wilson offered Mr. Callaway the General Managership of the Grand Trunk in 1895.

Mr. Callaway is a protege of Sir Jos. Hickson, & in speaking of his life, Mr. Callaway once wrote a friend: "One of the most interesting features of my career has been the friendship & confidence of Sir Jos. Hickson. In 1863 I was office boy at \$100 a year. Mr. Hickson predicted a successful career for me, & promised to keep an eye on me. This promise was more than fulfilled 17 years later, when Sir Joseph offered me, then a young man of 27 years of age, the general management of the Chicago & Grand Trunk Ry., of which road he was President."

The Canadian Pacific's President.

Railway Age, Chicago: "Railway men in the U. S. are not feeling extraordinarily well-disposed towards the Canadian Pacific just now, & we therefore take pleasure in presenting herewith an admirable likeness of Sir William Van Horne, in order that our readers may stick pins into him to their hearts' content. It will not hurt Sir William, for he is not eas-

ily perturbed, & must, moreover, be feeling somewhat well satisfied at present, with an increase in net income for 1897 of a little over \$2,000,000, as compared with 1896, & the dividend on common stock increased from 2 to 4.

After giving some biographical facts, the Railway Age continues:—"It is a remarkable career—from operator & agent at small country stations in the Western States to the presidency of the Canadian Pacific & a knighthood, & Sir William is a remarkable man in other ways than as a railway manager. Had he chosen to make painting his profession he would undoubtedly have been among the great artists of this generation, for, even as it is, the work with the brush that he loves to do in the intervals of his serious labor shows extraordinary power & artistic sense. He is a lover of all things beautiful & has in his home in Montreal one of the three or four really great private collections of Japanese ceramics in the world. Stories of his ability as a mind-reader are numerous & (what is more unusual) true. Whatever the strange faculty may be that enables one mind to read what is passing in another, Sir William possesses it in a high degree, & if at any time he had cared to exploit his capacity for public uses he could undoubtedly do any of the things that made Bishop or other professional readers famous. In public affairs in the Dominion it is not necessary to say that he is a power. From time to time rumors are circulated to the effect that he is about to retire from the presidency of the Canadian Pacific. He himself makes no secret of the fact that he looks forward to the time when in his opinion his work will have been so rounded out that he can with satisfaction & confidence resign it to other hands, & himself find some of that leisure that he could use so well. He is a man of too many sides & too broad sympathies to be content always with the routine of any daily work, however large, & at the same time too earnest & too capable a worker to be willing to leave any work half done."

American Railway Management.

Under this title John Wiley & Sons, New York, have issued, in a handy volume of 368 pages, a collection of addresses delivered at the semi-annual meetings of the American Railway Association from 1890 to 1896, & of other occasional addresses by H. S. Haines, formerly Vice-President & General Manager of the Plant System. They relate to matters connected with the management of railways in the U. S., & have value, either as indicating opinions prevalent at the time that they were prepared, or as bearing upon the development of the American railway system from its inception to the present time. Though, for the most part, produced upon the spur of the moment, as opportunities offered during a busy life, some of them contain information gathered from various sources which cannot be so readily obtained elsewhere. The discussion of the Inter-State Commerce Commission Reports to 1894, contained in the address on "Rates of Transportation & Cost of Service on American Railroads," delivered in April, 1895, has been extended to include the later reports in the concluding article recently written for the purpose, entitled "Value of Railroad Property in the United States, as shown by the Report of 1896 of the Inter-State Commerce Commission."

The table of contents includes such subjects as Field of usefulness of the Association; Discipline on railroads; Committee work of the Association; Train rules, Car mileage, Safety appliances; Cost of transportation; Safety appliances; Car couplers; Standard code of train rules; Block system; Co-operation in the consideration of questions of railroad management; Labor organizations; Operat-

ing expenses of a railroad; Rates of transportation & cost of service on American railroads; Railroad organization; Review of the work of the Association for ten years; International railway congress; Introduction of American methods on foreign railways, &c., &c.

Sir Wm. Van Horne in Washington.

When Sir Wm. Van Horne was in Washington last month, he said, in answer to Senator Elkins' attack on the C.P.R. in the U. S. Senate:—"A great deal of what the Senator stated hardly agrees with the facts. He charges the Canadian Pacific with taking \$50,000,000 annually from the revenues of United States railways. As our gross earnings are only \$24,000,000, it would take a smart accountant to figure how we get the other \$26,000,000. His remarks about our subsidies are equally inaccurate. His charge that the line is Great Britain's mainstay for military purposes is somewhat comical, seeing that if there should be any trouble its proximity to the U.S. frontier would make it easy of destruction. But, of course, there will never be any trouble between England & the United States. A war between these nations would be a disgrace to civilization."

"Of late there has been a good deal of rate-cutting, & the C.P.R. has been assailed for its attitude in the war that has developed between it & some of the U.S. trans-continental lines. The rivalry for business growing out of the gold discoveries on the Yukon is at the bottom of the matter. Some of the Western lines make the claim that the C.P. was not entitled to any differential involving this Alaskan traffic; a traffic which was not of importance at the time of our agreement with the U.S. roads. But without waiting to see what we would do these lines began to cut rates secretly. Of this we have abundant evidence, in the shape of tickets bought at prices which the companies would not redeem. This left the C.P.R. no other alternative than to cut rates, but, as it ever does, by publication of an open tariff which is filed with the Interstate Commerce Commission. Every time secret cuts are made this is our recourse. This is all there is of the rate war between us and the U.S. companies, & our position is purely one of self-defence."

Loyal to Canadian Interests.

The Victoria, B.C., Times says: "The C.P.R. Co. has shown wonderful, yet characteristic, energy in dealing with the Klondike question; it has fairly flooded the United Kingdom with literature in the highest degree beneficial to the interest of Canada, yet indulging in no abuse or misrepresentation of the United States. The case for Canada has been put in such a manner that thousands who would have gone to Seattle, Tacoma, Portland & other U.S. points west come to Victoria, Vancouver & other B.C. cities. The C.P.R. can take passengers to Seattle quite as cheaply as it can land them in Victoria or Vancouver, but it is to the Co's credit that all its efforts have been to divert the travel to Canada. We do not expect railway companies to be influenced entirely by patriotism, but the C.P.R. has certainly in this matter done all within its power to give Canada the benefit of its influence without going out of the way to hurt rival lines by false statements. The Alaska Commercial Co. with all its experience in the Yukon & thorough knowledge of the rules and regulations governing the import of goods to the Klondike, purchasing its stores in Victoria, is significant testimony to the fact that the Canadian campaign has been conducted on the proper lines & that it will be completely successful."

YORK STREET BRIDGE, TORONTO.

By A. P. Walker, C.E., O.L.S.

This structure stands near the foot of York St., Toronto, & affords access from the city to the water-front for vehicles & foot-passengers, over the intervening railway tracks. It was built under the provisions of "The Esplanade agreement, 1892," the parties thereto being the C. P. & G. T. Ry. Co's. & the City of Toronto. This agreement was one of the results of the endeavors of the C.P.R. to establish a freight yard in the central part of the city, & under it that Co. was to construct the bridge, & the cost was to be borne in equal parts by that Co. & the city, unless the courts should decide that the G.T.R. was liable for a share, & the plans of the structure were prepared in Montreal under the direction of P. A. Peterson, Chief Engineer of the C.P.R., and were approved by the Toronto City Engineer. Work on the ground was commenced May 1, 1896, & the bridge was opened for traffic about the beginning of Aug., 1897. The erection took much longer than anticipated, owing to the contractors for the ironwork being unable to obtain their raw material fast enough, & to a ship-load of timber for the deck being wrecked en route, & by differences arising between the Co. & the city regarding the finishing up of the roadway.

The general design of the bridge is a steel trestle, composed of about 32 spans deck-plate girder ranging from 30 to 70 ft. span, with wooden stringers & decks. There are also in addition 2 spans of less than 20 ft. rolled steel I beams. These girders & I beams rest in iron columns, standing on stone pedestals, except at the 3 ends of the bridge, where there are stone abutments. The width of the roadway, except on the southerly ramps, is 37 ft. 6 in., with sidewalks on each side 7 ft. 6 in. wide. On the southerly ramps the width of roadway is 32 ft. 6 in., with one 7 ft. 6 in. sidewalk.

The ground-plan of the bridge is "T-shaped," with the base resting on the south side of Front St., & it extends southerly therefrom across the deviation of York St. & the railway tracks to Lake St., a distance of about 906 ft. Here the ramps of the bridge turn, one to the right & the other to the left, & descend to the level of the street, & the length of these ramps is each about 316 ft., making a total length of bridge of 1,538 ft.

From Front St. the roadway of the bridge rises with a grade of 1 ft. in 20, for about 298 ft., & at the Lake St. ends there are similar falling grades of 1 in 20, about 500 ft. in length, & heavy loads to the railway freight-sheds are taken over these grades every day & no special difficulty seems to be experienced.

There are in all 3 abutments and 68 pedestal blocks. The foundation of the two Lake St. abutments & all the pedestal blocks, except 14 north of the south line of the old Esplanade, are on piles driven to the ledge rock. This was necessary, as the land was formerly part of Toronto Harbor, & had only been filled in the year previously with miscellaneous rubbish, earth, brickbats, tin cans, as well as more objectionable refuse.

When piles were to be driven an excavation was carried down to 1 ft. below zero level of the water of Toronto Harbor, & soundings were then taken down to the rock. The piles were then cut off the correct length & driven home with a "follower," & under the specifications the piles were to be cut off 1 ft. below zero level, & the above method was found less expensive than actually cutting them under water, & it was very seldom that a pile had to be cut when once driven home. Only a very small point was made on the pile before driving, & four piles were driven for the small pedestals, 18 for the medium & 9 for the

large pedestals. Under the abutments the piles were 4 ft. centres longitudinally & 2 ft. 6 in. transversely.

The excavation was then carried down 6 inches below the top of the pile & 2 ft. in depth of concrete put in. In some cases where the underlying material was very soft, short lengths of 2 in. plank were laid flat under the concrete between the piles, in order to keep the concrete from settling in the soft material before it was set. The concrete foundation is 7 ft. square under 10 of the pedestals, carrying the longer spans; 6 ft. sq. under 9 pedestals; 5 ft. 6 in. sq. under 5 pedestals, & 4 ft. 6 in. square under the remaining 44, & is generally 2 in. deep. The concrete was composed as follows, except when laid under water: Cement 1 part; clean, sharp sand 3 parts; broken stone 5

parts; all by measure, & under water the concrete was composed, cement 1 part; sand 2 parts; broken stone 5 parts.

Below ground the stone-work is what is known as "Rubble masonry." Above ground it is "Rock-faced ashlar," & was built under the C.P.R. standard masonry specifications. The stone was brought partly from the contractors' quarries at Owen Sound & partly from the Orangeville quarry. The contractor for concrete and masonry work was D. Chalmers of Owen Sound, & the piling was done by the Ry. Co.'s own men & its track pile driver. The two top courses of the pedestals had to be drilled before being placed in position to receive the 1½ in. iron rods which secured the iron columns to the masonry, & some little difficulty was experienced in drilling completely through these stones without breaking

Prop. City of Toronto. Arch

them. This drilling was done with a steam drill, half from each side of the stone.

The iron-work was erected during the winter of 1896-7, & was paid for at so much per lb. in the finished work. The bridge was designed to carry in addition to its own weight the following live loads, either singly or in any combination.

a.—100 lbs. per sq. ft. of roadway & sidewalk.

b.—One 32,000 lb. road roller, having a wheel base of 11 ft. 2 in. in length & 7¼ in. transversely.

c.—A string of electric cars 26 ft. long, each weighing 30,000 lbs, fully loaded, on each track, and all parts of the structure were proportioned so that maximum loads should produce no greater tensile strain upon the net section, than 12,000 lbs. per sq. inch. A

wind strain of 400 lbs. for each longitudinal lineal foot, & 150 lbs. for each vertical lineal ft. if the trestle bents were allowed for. All steel had to come up to the following requirements.

Ultimate strength.....	58,000 to 65,000 lbs.
Elastic limit	33,000 lbs.
Elongation in 8" in.....	20%
Reduction of area.....	40%

& was made by the open-hearth process. Before leaving the shop it was thoroughly cleared of all loose scales & rust with steel scrapers & brushes, & was then given a good coating of red lead mixed with linseed oil, well worked into all joints & surfaces, & after erection the iron-work was given two more coats of paint.

All the timber in the deck of the bridge,

with the exception of the sidewalk planks & paving blocks, is southern yellow pine, creosoted with 10 lbs. of dead oil of coal-tar per cubic foot.

On top of the joists & 4-inch plank was laid 2 thicknesses of best tarred paper thoroughly sealed with roofing-pitch to the planking & each other. On top of this was laid the paving blocks, consisting of square cut white pine blocks 8x4x4½ in. deep, grain upwards. These blocks were held apart at the cross joints by 3 specially made nails driven into each block up to the collar having the blocks 3-16" apart. All joints & vacancies were then filled in with best paving pitch, & the roadway covered ½ in. deep with gravel. A double-track girder rail for electric cars was laid across the bridge by the St. Ry. Co. before the paving was done, for possible use in

the future. The sidewalk planks are of tamarack 7 ft. 0 in. long, 2 in. thick, laid with 1 1/2 in. fall towards the curb. The cost of the structure was approximately:

Foundation & earthwork, including piling.....	\$ 4,200
Stone & concrete work.....	15,900
Iron-work.....	43,000
Damages St. James hotel property..	4,900
Deck & roadways.....	28,000
Engineering.....	2,000
	<hr/>
	\$98,000

Official Railway Report.

The annual report of the Department of Railways & Canals for the last fiscal year states that the number of railways in operation in the Dominion was 141. As some of these lines have been amalgamated, the number of controlling companies was 81. The number of miles of completed railway was 16,687, an increase of 300, besides 2,218 miles of sidings. The number of miles laid with steel rails was 16,477. The number of miles in operation was 16,550. The paid-up capital amounted to \$921,858,232, an increase of \$22,040,332; the gross earnings amounted to \$52,353,276, an increase of \$1,807,707; the working expenses to \$35,168,665, an increase of \$120,010; the net earnings to \$17,184,611, an increase of \$1,681,697. The total number of miles run by trains was 45,780,851. The accident returns show only 7 passengers killed.

The Government expenditure on railways prior to and since Confederation in 1867 is as follows:—On capital account, \$122,944,518.33; for railway subsidies, \$16,390,887.33; making a total of \$139,335,405.66. The expenditure for working expenses of Government roads was \$69,522,382.86, making a grand total of \$208,857,788.52. The revenue from Government roads during the same period amounted to \$61,196,803.08.

Of the total amount, \$579,255.20 awarded the C.P.R. in 1891 by special arbitrators in respect of transferred works in B.C., to be expended by the Co. under Government supervision, the value of work done up to Aug., 1897, was \$572,445.70, including \$202,675.20 expended prior to the date of award, leaving to be expended \$6,809.50. On June 30, 1897, the C.P.R. Co. had under traffic in Canada 6,314 miles of railway, including leased lines.

The Government System.—The I.C.R., the Windsor Branch & the P.E.I.R. were the lines maintained by the Government, a total of 1,388 miles. On the Intercolonial 1,145 miles were in operation, earning \$2,866,028.02, with working expenses of \$2,925,968.67, entailing a loss of \$59,940.65. During the year there was an addition of \$149,112.52 to the capital account expenditure, making the total chargeable to capital on the whole road, as amalgamated, \$55,416,157.15. For increased accommodation at Halifax, there was \$22,274.97; for the branch from Windsor Junction to Dartmouth, \$37,206.44; for increased accommodation at Moncton, \$29,877.32; & for rolling stock, \$14,996.04. Passenger traffic earnings were \$979,005.57, an increase of \$7,579.31; freight traffic \$1,687,050.42, a decrease of \$101,762.76; mail & express produced \$199,972.03, an increase of \$2,571.37. The earnings per mile were \$2,503.08, a decrease of \$86.80.

The Windsor Branch, 32 miles, extending from Windsor Junction on the I.C.R. to Windsor, N.S., is operated by the Dominion Atlantic Ry. Co., which pays all charges of traffic workings, being allowed 2/3 of the gross earnings, the Government taking the remaining 1/3 & assuming all cost of maintenance. This agreement was made in Dec., 1892, & extends for a further term of 21 years. The duty of supervision is performed by I.C.R. officers. The Government earnings amounted to \$40,603.23, an increase of \$4,041.40. Maintenance expenses amounted to \$10,821.04, a decrease of \$5,653.42, leaving a balance of profit of \$29,782.19 in favor of the Government.

The Prince Edward Island Ry. is 211 miles long. The total cost of road & equipment, chargeable to capital account was \$3,750,565.38. The gross earnings for the year amounted to \$153,443.13, an increase of \$6,966.50. The working expenses were \$240,489.90; the over-expenditure being \$87,046.77. The P.E.I. Ry. carried 121,498 passengers, a decrease of 1,088. The freight carried was 52,151 tons, an increase of 5,756. Passenger receipts were \$62,695.07; freight, \$69,872.66; mails, express, etc., \$20,875.40.

The Government operated the **Baie des Chaleurs Ry.** during the winter 1896-7 in connection with the I.C. Ry. Co., the results from Dec. to May showing an expenditure of \$18,679.97; gross earnings of \$6,725.08; leaving a loss of \$11,954.89. The road was transferred back to the Co. May 31, 1897.

The growth of railways in Canada since 1836 has been as follows:

Year.	Miles in Operation.	Year.	Miles in Operation.
1835	0	1873	3,616
1836-46	16	1874	3,832
1846-49	54	1875	4,331
1850	66	1876	4,804
1851	159	1877	5,218
1852	205	1878	5,782
1853	506	1879	6,126
1854	764	1880	6,858
1855	877	1881	7,194
1856	1,414	1882	7,331
1857	1,444	1883	8,697
1858	1,863	1884	9,577
1859	1,994	1885	10,273
1860	2,065	1886	10,773
1861	2,146	1887	11,793
1862	2,189	1888	12,184
1863	2,189	1889	12,585
1864	2,189	1890	13,151
1865	2,240	1891	13,838
1866	2,278	1892	14,564
1867	2,278	1893	15,005
1868	2,278	1894	15,627
1869	2,524	1895	15,977
1870	2,617	1896	16,270
1871	2,695	1897	16,550
1872	2,899		

RHODES, CURRY & CO's. car works, foundry & machines shops at Amherst, N.S., were damaged by fire to the extent of between \$40,000 & \$50,000, Mar. 22, the loss being fully covered by insurance.

NOW READY.

SHIPPING.**Dominion Department of Marine.**

The annual report of the Department of Marine & Fisheries states that during the year ended June 30, 1897, the expenditure for maintenance of lighthouse & coast service was \$434,895.66, construction, \$10,910.30; while for the previous year the expenditure for the lighthouse & coast service, including construction, was \$466,057.55, showing a decrease of expenditure for the last year of \$20,251.59. The appropriation for this service was \$481,510, the expenditure being \$35,704.04 less. The total number of light-stations, light-ships & fog-alarm stations in the Dominion was 635, lights shown 783; steam-whistles & fog-horns, bells & guns, 83; light-keepers & engineers of fog-alarms with masters of light-ships, 652.

The extended coast line of Canada, the numerous bays, inlets, rivers, lakes, harbors, & other navigable waters require a large number of buoys, which are maintained at an average cost of \$55,000 a year. For the year the service cost \$49,624.19. The cost is increased in years when new contracts are given for steel signal & other coast buoys. The Chief Engineer, in his report relating to buoyage, points out that the Department has been substituting steel coast buoys for wooden buoys, with favorable results. The districts now buoyed, in all parts of the Dominion, number about 300 & the buoys number about 3,000. A contract has been let for the construction of 39 steel can & conical buoys to be distributed to agencies for use as spare buoys & to replace worn-out buoys. The aggregate cost of these will be \$5,192.

The total number of steamboats reported in the several districts in the Dominion is 1,354. Of these 96 are new vessels, as reported by the Chairman of the Board of Steamboat Inspection; the gross tonnage being 224,865.22.

The hydrographic survey of the Great Lakes made good progress, the steamer Bayfield being employed. Mr. Stewart completed the survey of Lake Erie in July, & resumed the survey of Lake Huron. The charts, when completed, will be forwarded to the Admiralty, & with the sheets of the U.S. survey will make a complete chart of the lakes. A chart of the eastern part of the Bay of Quinte, from Kingston to Deseronto, was completed. Hydrographic notes of B. C. waters were forwarded from the master of the steamer Quadra, & were embodied in the Department's notices to mariners.

A New Maritime Line.

The Manhattan Steamship Co. was incorporated recently, with a capital of \$1,000,000, & headquarters at 11 Broadway, New York. It will operate a service between New York, Maine & the Maritime Provinces. The tourist travel into Maine & the Maritime Provinces has increased to a gigantic figure within the past few years. Contracts have been given for the construction of 3 steel twin screw passenger & freight steamers. The dimensions of these are 260 ft. long by 45 ft. beam. Each contains 2 engines, 22x36x55x28 in. stroke; 6 boilers, 11 ft. 6 in. in diameter by 12 ft. 6 in. long, giving a speed of 17 knots an hour. These steamers are of the best modern construction, with large space devoted to cold storage. The freight accommodation of these new steamers will be ample for all requirements, & in addition a large space has been apportioned for cold storage for the successful transportation of fresh fish, lobsters, fruit & garden truck.

Each steamer will have 126 staterooms of 2 berths each. These rooms will be handsomely fitted up. Many are en suite, & there will also be found several parlor staterooms con-

taining large brass bedsteads & sofas, &, like all the staterooms, luxuriously appointed in delicate tones of ivory & gold. The lavatories & bath rooms will be of the latest sanitary design. The dining-room will be entirely separate from the grand saloon, & will be provided with a series of tables seating 150 persons. The 2 ladies' grand saloons & music halls are to be marvels of beauty & comfort. The men's smoking room will be located on the after part of the saloon deck, with buffet attached. It will be 30x20 ft.

Activity in Boat Building.

Never in the history of the Pacific Coast has there been such activity among ship-builders & marine inspectors as at present. A great shortage of expert hands is reported. The Victoria Colonist reports that a small-sized fleet is being launched every week at Turpells. During the first week of March the little stern-wheeler Monte Cristo & the schooner Casco were launched from the yards. Fulton & Crane are having a stern-wheel steamer built for the Stikine. Another boat, 124x22 ft., with light draught & powerful machinery, suitable for all kinds of river work, is being built under direction of Mr. Shray. Capt. Cairn will have a new freight steamer for the Fraser; & Spratt's Ark—a huge, barge-shaped craft—is being prepared for Klondike trade. In the same yards the tugs Hope & Chieftain are being overhauled.

In the Star yards two Yukon stern-wheelers—the Victorian & Columbian—are under way for the Canadian Development Co., to ply between the Hootalinqua & Dawson City. A freight steamer for Capt. Grant is also being constructed, & the tramp steamer Commonwealth being repaired.

The new C. P. N. steel vessel, to be fitted with water-tight compartments, is also under way.

Canadian Pacific Navigation Co.

The C. P. N. Co. is arranging for the shipment of goods direct to Dawson City without touching at a U. S. port, the object being to avoid bonding privileges or other customs arrangements. The navigation of the Stikine River, through the strip of Alaska at the mouth, is by virtue of treaty rights as free to Canadians as to United Statesers. Taking advantage of this, the C. P. N. Co. intends to run a line of small steamers from Port Simpson up the Stikine River. Connection will be made with these steamers by the Co's vessels from Vancouver & Victoria, & Wrangel will not be touched at all. The trade now being built up there will thus be partially diverted to Port Simpson.

It is recalled that several years ago a steamer, the Western Slope, ran from Port Simpson right up the Stikine to the Canadian line, & in 1878, when the U. S. Government began to show a somewhat similar spirit to what it is doing now, of trying to prevent Canadian vessels doing any of the carrying trade, the steamer ran on the Stikine for two seasons. The vessels the C. P. N. intends to utilize include the R. P. K. thet, Yosemite & some others.

Capt. Bernard King, of St. Catharines, Ont., died Mar. 28, aged 82. Following the lakes, as early as 1837 he was on a boat running from the Niagara River to the north shore of Lake Ontario, & during his early years he had under him such well-known mariners as the late Capt. Jas. Norris, the late Capt. S. Neelon, & Capt. Larkin. He sailed several vessels in his early years, & owned a few. He was the first man to take a ship from Lake Ontario to Halifax.

Port Arthur & Fort William.

The head of Lake Superior is to have better steamboat connection with the East & Duluth this year than ever before in its history.

The C. P. R. Co. will run their three steamers, Alberta, Athabaska & Manitoba, from Owen Sound, giving three sailings each week.

The Beatty Line will run the United Empire & Monarch from Sarnia to Port Arthur, Fort William & Duluth, which will make 3 sailings in two weeks each way.

The Black & White Lines are putting on two steamers, the Majestic & Collingwood, from Collingwood to Port Arthur, Fort William & Duluth, which will give the same service as the Beatty Line.

The mail steamer Hiram R. Dixon, of the Booth Line, will make tri-weekly trips between Duluth & Port Arthur.

The combined sailings will aggregate 6 trips a week each way from Port Arthur & Fort William to Owen Sound, Collingwood & Sarnia, & 6 boats each way between Fort William, Port Arthur & Duluth, or practically a daily boat on both routes.

The steamboat lines have reduced fares during the excursion season, & have largely reduced the immigrant rate for the whole year, so that it is expected steamboat business to Port Arthur & Fort William this year will assume greater proportions than ever before in the history of the Canadian lines.

Correspondence from Wrangel.

A correspondent writing from Stikine Island, mouth of Stikine River, Mar. 6, said:—"All passengers intending to go up the Stikine have to take a light draft steamer at Wrangel, so as to reach this island, where the tide keeps the lower end free from ice; about half-a-mile up the island the ice can be taken. The first parties to arrive reached here about the middle of January, & since then they have been arriving thicker & faster, until at the present I think I am not far wrong when I say there are at least 1,000 men with outfits on the river between here & the Big Bend, 25 miles up the river, while camped on the island are at least 500 more, & there are about 500 waiting in Wrangel, which number is being augmented each day by the many that are being landed by the steamers, 2 or 3 of which arrive daily. Four steamers arrived here to-day, on one of which was the vanguard of Mackenzie & Mann's party. There is also here Capt. Armstrong's party of 40 men, 70 tons of machinery & supplies. Capt. Armstrong is intending to haul his outfit up the river by steam power. He has an engine & a long steel cable. This cable he will run out ahead, take a snub on some convenient tree, & by steam power haul engine & supplies up to the snubbing point. So that no time may be lost, he intends to travel day & night, & takes an electric light plant for the purpose of illuminating the river ahead at night. He takes the necessary machinery for 3 steamboats on Lake Teslin."

The Polson Iron Works.

In addition to the marine and other work mentioned in last month's issue this Toronto firm has the following on hand;

Two Clyde type marine boilers each 11 ft. 4 in. diameter by 12 ft. long, to pass Government inspection for 170 lbs. working pressure. These are for the composite freight steamer now under construction by the Calumet Co. at its works at Garden Island, Ont.

Brown automatic engine, 150 h.p., & two 100 h.p. boilers for the Bain Wagon Co., Woodstock, Ont.

One pair Brown automatic cross compound condensing engines for Brandon Electric Light Co.

OCEAN, LAKE & RIVER.

Ontario & the Great Lakes.

The steamer Tecumseh is having a new boiler plant installed at Toronto.

The iron steamer Seguin, 200 ft. long, is being lengthened about 40 ft., in Toronto.

The S.S. Telegram has been put on the route between Collingwood & Michipicoten.

Capt. D. Milloy is getting things in shape for the opening of business at the Yonge St. wharf, Toronto.

The Straits of Mackinac opened Mar. 28, the earliest opening for the 63 years of which records have been kept.

It is said \$33,000 were paid for the Rose-dale by the Edwardsburg Starch Co., & it is estimated the repairs will cost \$24,000.

It is said to be on the cards to organize a company with a capital of \$3,000,000 to navigate the Great Lakes & St. Lawrence River.

The steamer George H. Dyer, recently purchased for the "Soo" line route between Gladstone and Owen Sound, will hereafter be known as the Hennepin.

The Minister of Public Works has assured the Winnipeg Board of Trade that he will take up the matter of improvements required in connection with navigation at Fort William.

The D. G. S. Bay field, which has been on the Owen Sound dock during the entire winter, has been taken off & her place taken by the D. G. S. Petrel & the steamer Joe Milton.

Capt. R. C. Clapp has arrived in Toronto from his home at Picton & has begun to fit out the steamer Chicora, which will go on the Niagara-Toronto run about the middle of May.

W. A. Geddes is making preparations at his Yonge street wharf, Toronto, for a big traffic this season. His apartments at the wharf have been enlarged by the addition of a private office.

The proposal to put ice-breakers in Mud Lake & Kaministiquia River will be considered by the Government. The proposition is new to the present Government & may not be entertained this year. But it is bound to come.

The Toronto Harbor Board has met & awarded the contracts for dredging for this season to McNamee & Simpson. Owing to the water being higher this year than usual there will not be so much dredging required. The contract calls for 22,000 yards, & the price is about \$3,000.

The American Line on the St. Lawrence River is making alterations & general repairs to its entire fleet at Kingston, & when the season opens the steamers will be in even better condition than last season. This Co. is spending considerable money in the way of improving its boats.

The C.P.R. Upper Lakes steamships lying at Owen Sound have been undergoing their annual painting. There is very little change in the interior decorations, the main color being pure white, with the panels rubbed down to a dead finish & cornice & capitals picked out with gold & lavender.

It is expected the steamers running in connection with the Merchants Line will be placed on the same routes as last summer. The Cuba & Melbourne will run between Montreal, Toronto & Cleveland; the Michigan between Montreal, Toronto & Duluth; & the Tilley & Arabian between Duluth & Prescott.

During the coming summer the C.P.R. does not intend to resume its service between Windsor & Port Arthur & Fort William. The Co.'s steamers, Alberta, Athabasca & Manitoba, will run all season from Owen Sound, giving a prompt & satisfactory service with a sailing every alternate day. Shippers will

appreciate the value of such a service when given by a fleet like that owned by the C.P.R.

The Kingston & Montreal Forwarding Co. has secured the contract for carrying grain from the new elevator at Coteau Landing to Montreal. The grain will be carried from the west to the elevator over the Canada Atlantic Ry. It will be carried to Parry Sound by vessel, & there transhipped into cars for Coteau. This change may necessitate the removal of the Forwarding Co.'s business from Portsmouth.

Efforts are to be made to reduce the dangers to navigation at Charity Shoal, Lake Ontario, where the Toronto steamer Rose-dale got into trouble. It is probable special attention will be given to the marking of the shoal. There are sharp rocks in great numbers on the shoal, which covers 4 or 5 acres. While there is an average of 10 ft. of water over the shoal, there is less on top of the rocks in some places.

A gang of workmen has been engaged for some time back on the Cambria at Sarnia making such repairs as would enable her to float. A steam pump will be put on board her & she will be pumped out; she will then be moved down to the waterworks wharf & a new rudder shipped, & she will then be taken down with her own steam to Lake Ontario, where her owners, Donnelly Bros., of Kingston, intend to have her rebuilt.

The Hamilton Steamboat Co.'s Clyde-built steamer Macassa commenced regular trips between Toronto & Hamilton the first week in April. Having been repainted & overhauled, she appears brighter & better than ever, & with her enlarged promenade deck & steam-heated main deck, cabin & ladies' cabin, will no doubt grow in popularity with the travelling public. The sister boat, Modjeska, will not take her place on the run till some time in May.

The water in Lake Ontario is deeper than it has been known at this time for many years back. If it keeps up as it is now there will be plenty of water in the lower canals, & steamers will be able to load to their full depth. At the head of Lake Superior, however, the water is said to be 20 ins. lower than it was in August last, & it has not been so low before in many years. At Sault Ste. Marie, too, it is 12 ins. lower than it was this time last year, which means a great deal to large carriers.

Assistant U.S. Engineer J. Ripley has been appointed General Superintendent of St. Mary's Falls ship canal at Sault Ste. Marie, Mich., to succeed E. S. Wheeler, Engineer on the Nicaragua Canal Commission. Mr. Ripley has been in the employ of the Government at the Sault since 1877, when he was appointed Inspector of Masonry on the Weitzel lock, which position he held until that work was completed in 1881. He has been in active charge of the channel improvements on St. Mary's River.

The motion to wind up the Georgian Bay Ship Canal & Aqueduct Co. was argued in Toronto Mar. 31, after many delays & postponements. R. C. Clute made the motion on behalf of the New York Journal Co., which has an advertising account of about \$2,000 against the Co. Counsel for the bondholders & Co. stated that all the assets of the Co. were pledged to the bondholders, & argued that if a winding-up order were granted the Journal could, therefore, get nothing. Judgment was reserved.

The Calvin Co., Garden Island, Ont., is building a composite freight steamer at its own works there. The dimensions are:—Length 200 ft., beam 37 ft., hold 15 ft. The engine is triple expansion, 18 x 30 x 48 ins., 30 ins. stroke, and is being built by the Calvin Co. The 2 Clyde type marine boilers, each 11 ft. 4 ins. diameter, by 2 ft. long, to pass Government inspection for 170 lbs., working

pressure, are being built by the Polson Iron Works, Toronto. The estimated cost of the steamer complete is \$70,000.

Henry Beatty has in his office, in Toronto Union Station, a frame containing exterior & interior views of the S.S. Tartar, recently purchased by the C.P.R. for the Vancouver-Wrangell route. They were given him in 1882 by Aitken & Mansel, of Glasgow, who built the Tartar for the Union Steamship Co., of London, Eng., at the same time as they were building the S.S. Athabasca & Algoma for the C.P.R.'s Upper Lakes route under Mr. Beatty's supervision. It is a strange coincidence that the Tartar has now passed into the same ownership.

It is said the fast steamer Unique, built 3 years ago for the Detroit & Port Huron route, is to be sold to Canadian parties & run between Toronto & Port Dalhousie. Mr. Slaght, of Toronto, representing the purchasers, has been in Port Hope negotiating for the boat, & it is said arrangements for the transfer are about complete. If the deal goes through the boat will be thoroughly overhauled, & as soon as she is converted into a Canadian vessel her name will be changed to the Maple Leaf. The consideration agreed on is said to be \$25,000.

The Canada Atlantic Railway is going to be a factor in the grain trade this coming season. The steamer Lynn has been chartered to take 350,000 bushels of corn from Chicago to Parry Sound at 1st open water, for export from Montreal. This makes about 500,000 bushels that have been taken at 5¼ c. a bushel on corn & 6 c. on wheat through from Chicago to Montreal. The 5 steamers which the Canada Atlantic has engaged between Chicago & Duluth to Parry Sound will, it is said, deliver 15,000 tons a week, & other steamers may also be expected to engage in the trade to Parry Sound.

McLeod Stewart delivered an address on the Georgian Bay ship canal before a Committee of the Senate at Ottawa recently. He said that what was wanted from the Dominion Government was \$300,000 a year for 20 years. Lord Lansdowne, Lord Selborne & Joseph Chamberlain were in favor of the project. A subsidy might also be obtained from the Imperial Government. Gates would be opened by electricity in 12 seconds, & everything would be up-to-date. The cost of construction would be \$20,000,000. Mr. Stewart said if money from the Government was forthcoming he would have the work started on the canal before July 1.

The Winnipeg Commercial says there are over 100 steamers on the Lake of the Woods, 45 of them go up & down the Rainy River, & some 15 or 16 ply on Rainy Lake, above the proposed locks at Fort Frances. The contemplated improvements would open up continuous navigation through a chain of lakes with 2,000 miles of coast line. The new town of Mine Centre, situated on the Seine River, about 45 miles east of Fort Frances, has a population of about 600. An appropriation was made last session to build the lock at Fort Frances, but the work has not been done yet. The construction of this work would be of great value to all the region tributary thereto.

The longest lake steamer now afloat is the Sir William Fairbairn, which measures 434 ft. over all. But a steamer now being built at West Bay City, Mich., will be 42 ft. longer, or 476 ft. in length over all. On the keel the boat will be 456 ft. in length, & the breadth of beam will be 50 ft., while the depth of hold will be 29 ft. The capacity of this boat, on a draught of 17 ft. of water, is estimated at 6,100 tons of iron ore. The machinery will consist of a quadruple expansion engine with cylinders, 26½, 37, 54½ & 80 ins. in diameter, by 42 ins. stroke. Steam will be supplied by

4 steel boilers, allowed 200 lbs. pressure. These will each be 13 ft. 4 ins. in diameter, by 11 ft. 6 ins. in length. - Seaboard.

Davis & Son, Kingston, Ont., report that they are building the following:—A steam pleasure yacht, 36 ft. long, 7 ft. beam, 36 ins. deep, tonnage, 3 tons, water-tube boiler, compound engine. A steam launch, 48 ft. long, 8 ft. beam, 4½ ft. deep, tonnage, 12 tons, water-tube boiler, compound engine. Passenger & freight steamer for Homer & Co., Gravenhurst, Ont., 65 ft. long, 14 ft. beam, 6 ft. deep. Rebuilding the private yacht Charlie M., for C. Mickle, Gravenhurst, Ont.; she is now 60 ft. long, 10 ft. wide, 6 ft. deep. They are adding 13 ft. to her length. Rebuilding the steamer Kanonha for the Muskoka Navigation Co., she is 108 ft. long, & they are adding 18 ft., rebuilding the hull, adding new cabins & making other improvements.

With the development of mining prospects in the Seine River country, traffic calls for further steamboat facilities. Last season 3 small steamers connected Mine Centre with Fort Frances & Kettle Falls, & a boat is to be built shortly to ply between Mine Centre & Sturgeon Falls, some 40 miles up the Seine River, towards the Saw Bill country. A. Glassford has the scheme in hand, & the boat will be built at Bell City, & will be ready for use shortly after navigation opens. It will be 45 ft. long, & run 12 miles an hour. Within the past year considerable prospecting work has been done on very promising properties in the neighborhood of Sturgeon Falls, & Mr. Glassford thinks the placing of this boat on the Seine River will prove a profitable enterprise.

On Mar. 19, Capt. Quinn of Toronto, Capt. Raines & Diver White began to raise a derelict in Toronto Harbor. This wreck is supposed to be the str. Lady of the Lake, sunk off the northern wharf & raised by Capt. Moody, Capt. P. McSherry & Capt. Saulter about 43 years ago, the vessels assisting in raising the wreck being the old schr. Royal Tar, now lying sunk east of the R.C.Y.C., & the schr. Echo, owned by Capt. P. McSherry. The obstruction has long been a danger to ferry boats backing out from the Island wharf. About 17 years ago, at the opening of the Wiman Baths, the str. Geneva ran over the wreck & broke her wheel, & 4 years ago the Ada Alice met with a similar accident, the cause in each case being attributed to a sunken crib.

Traffic Manager Smith of the Canada Atlantic Ry. reports favorable arrangements with the ocean lines out of Montreal for large quantities of export traffic from Manitoba & the Northwestern States in connection with the new lake line to Parry Sound. Its fleet of five 3,000-ton steel boats will probably leave the head of the lakes for Parry Sound about April 20. These are the Saxon, Briton, Roman, German & Grecian. In addition to its own fleet the Co. has chartered several of the largest lake carriers for grain, among which is the new steel steamer built at Chicago during the past winter, the Linn, whose 1st cargo to Parry Sound will either be 220,000 bus. of corn or 350,000 bus. of oats. The Canada Atlantic may be depended on to handle a large portion of through freight hereafter.

A deputation from Sault Ste. Marie went to Ottawa recently. The request, put forward as most urgent, was for a new dock. The

present dock is not large enough for the steamers of the C.P.R. & Beatty lines, which would otherwise call & do a good deal of business. Another thing much needed is the privilege of storing steamboat coal in bond. This privilege, it is said, is accorded to Canadian ports on the Detroit River. The result is, that vessels going through, which would go over to the U.S. side to coal if they had to pay the duty on the Canadian side, coal in Canada & purchase their supplies in this country. The bulk of the vessels passing through now coal & replenish stores on the U.S. side to avoid the duty on coal. The business is important & Canadian merchants would like to get a share of it.

B. W. Folger, Jr., General Traffic Manager of the American line of steamers on the St. Lawrence river, says:—"We are going to put 3 first-class boats, the New York, the Empire State & America, on the line on July 4, & they will run until the excursion business is over. They will make daily trips between Clayton and Montreal. Everything that can be done for the comfort of passengers will be accomplished, & we intend to show the people what beautiful places the St. Lawrence

Indications point to a good trade on Lake Ontario, & the steamers running between Toronto & Montreal are likely to have plenty of freight offering. Last year, while they had pretty nearly all they could carry, rates were low, although with the low rates the boats made money. Conditions are rather more favorable this year. The railways are being offered actually more than they can handle comfortably, & when the boats commence to run they are bound to get a large business, while, with the amount of stuff offering, rates are likely to be well maintained. Prospects are hardly so good for the upper lake grain carriers, for while there is a good deal of grain to be moved rates are opening low, although they may improve as the season advances. It is understood that ocean space at Montreal has already been engaged for fully a million bushels, & this means business for the lake craft. Still, even with this, at the same time last year much more than a million of bushels had been secured.

The Northwest Territories.

The Edmonton Board of Trade recently despatched expert blasters to clear the boulders from the Grand Rapids, Athabasca River.

The Secretary of the Steamshipmen's Protective Association at Vancouver states that negotiations with the Union S. S. Co. have resulted in Manager Darling promising that union men will receive preferences when vacancies occur on the Co's. vessels.

The Alaska Mining & Trading Co., Chicago, has put out a lot of printed matter about the Athabasca route to the Yukon. In its last circular it says:—"Our first steamers will leave Athabasca Landing just as soon as navigation is open through, which will be early in May." We have been unable to get any satisfactory information about this Co., & cannot even find out if it has built any steamers.

A correspondent writes from Edmonton: "Extensive preparations have been made for the opening of navigation on the northern rivers. A

large number of boats have been built here & freighted to Athabasca Landing & a lively business is being done in the same line there, & it is safe to predict that several thousand people will take the water route by way of the Mackenzie River when navigation opens. In addition to the boats several small steam tugs drawing about 2 ft. of water have been built, which are intended to tow fleets of small boats, & which it is expected will run the rapids & can be taken right through to the head waters of the Peel or the Pelly. The Hudson's Bay Co. has placed the lots of its new townsite at Athabasca Landing on the market. As Athabasca Landing is at the head of navigation on the Athabasca River, & the proposed immediate terminus of the Edmonton District Ry., there will probably be quite a lively little town there before next fall."

Brockway Bros., Douglas, Wyoming, have issued a folder in which they say:—"Alex. Brockway is now at Edmonton, Alberta, superintending the construction of boats, securing practical Mackenzie River boatmen, etc., for an expedition of 100 men to the gold fields via the Mackenzie River route. The start will be made, under his guidance, as soon as

HUDSON'S BAY STEAMER & TRADERS' BOATS AT ATHABASCA LANDING, ALBERTA.

river & the resorts along it are. The New York will have a speed of 20 miles an hour, & she will probably be the fastest steamer on the St. Lawrence. The boat will be ready for business the latter part of June. W. Murphy is building the steamer in Buffalo. The interior of the boat is finished in Empire State style, & no expense will be spared."

Superintendent Piers, of the C.P.R. Steamship Lines, reports that the Upper Lakes steamers will be ready much earlier than usual, on account of the early opening of navigation. "It is too bad," he says, "that we have to send the Manitoba to a U.S. port to be docked again this spring. It is deplorable that Owen Sound has not a dry dock fit to take its own vessels. With such facilities as the Kennedys have there, a dry dock should be a very good paying investment. It is certainly humiliating that Canadian vessels have to go to Detroit or Port Huron to be docked." Mr. Piers thinks Owen Sound should have no difficulty in securing Government aid towards the construction of much needed docking facilities on the northern lakes. The size of the vessels must continue to increase, & there is now almost an absolute demand that the matter be taken up.

the river is clear of ice in the spring, which will be about the middle of April. We are also constructing a small river steamer for the Yukon River. This is to be of light draft, powerful & speedy. It will start up the Yukon with its load of passengers & freight as early in the spring as the river is free from ice—about June 15. It will be in charge of a first-class river man, & will meet the Mackenzie River party at La Pierre's House, near the head of the Porcupine, on or about July 1. Assistance will then be given to those of the Mackenzie River party who desire to cross over to the Yukon River. These men, with their outfits, will then be taken with the least possible delay, by our Yukon boat, to Dawson City or any intermediate point at which they may choose to land."

In British Columbia Waters.

The Barge Transfer no. 1, built in C. McAlpine's shipyards, Vancouver, for R. Duns-muir & Sons, Victoria, was launched Mar. 11. Her dimensions are, length 190 ft., breadth 40 ft., depth 12 ft. She is of larger tonnage than any sea-going craft yet built at Vancouver.

One of the largest scows on the inland waters has been launched at Nelson. It is 200 ft. long & 38 wide, with a capacity of 1,000 tons, & was built by the C.P.R. as a car ferry, to run between the Kootenay Lake terminus of the Crow's Nest Branch & Nelson, accommodation being provided for a train of 15 loaded cars.

The Dominion Government has been advised that the British survey ship *Egeria*, Capt. M. H. Smythe, now at Esquimalt, B.C., will at once begin a survey of the west coast of Vancouver Island, and the B.C. coast north as far as Wrangel. She was commissioned last year for this work, which is to be done by order of the Imperial naval authorities.

The addition of one boat to the line of steamers on the Kootenay River ensures excellent transportation facilities. The *J. D. Farrell*, recently built by Capt. McCormack, is modern in its appointments, & will be supplied with an electric searchlight, so that it can run at night as well as during the day-time. The *North Star* & *Gwendoline* have been repaired & refitted.

The Department of Marine has called for tenders for the erection of a wooden lighthouse & fog-bell tower on Prospect Point, at the entrance to the Narrows, Burrard Inlet, B.C. Notice has been given the Marine Department that the California Rock buoy, Favorite Reef buoy, Poundstone Reef buoy, & Vanderbilt Reef buoy, as also several buoys in Peril Straits, B.C., are missing.

J. H. Moir, New Westminster, B.C., writes us that he is building the following steam boats: For the Hudson's Bay Co., 2 stern wheelers, dimensions of each, length 140 ft., beam 30 ft., depth of hold 4½ ft. For the Rothsay Steamship Co., 1 stern wheeler, length 143 ft., beam 30 ft., depth of hold 4½ ft. For Klondike Mining Co., 2 stern wheelers, length 145 ft., beam 30 ft., depth of hold 4½ ft. For London Steamship Co., 1 stern wheeler, length 140 ft., beam 30 ft., depth of hold 4½ ft. These dimensions are over all on the hull only, & do not include stern wheel timber length outside. For Fraser River Steam Tug Co., Capt. French, 1 tug, length 85 ft., beam 16 ft., midship depth 7 ft. For Capt. Myers, 1 steam tug, length 70 ft., beam 14 ft., midship depth 6½ ft. All these boats are intended to be in the water in May.

W. Galt, a well-known Toronto newspaper man, has been appointed Manager of the Toronto Ferry Co. in place of W. A. Esson, resigned.

The Yukon Trade.

On the Yukon, at a distance of from 700 to 800 miles from the sea, there are many points where the river is 20 miles wide.

Six or 7 steamships, averaging about 3,500 tons each, are now on their way to Vancouver from various points, to engage in the Yukon trade.

F. C. Davidge & Co., Victoria, have bought the Columbia River stern-wheel steamer *Ramona*, & will run her between Wrangel & Telegraph Creek.

The arrival of the C.P.R. Co.'s *S.S. Tartar* at Vancouver April 1 caused quite a stir in that city, & no little surprise that the Co. had been able to secure so fine a ship for its Yukon service. She was followed on April 12 by her sister ship the *Athenian*.

So numerous are the steamers now engaged in the northern service of the Pacific Coast that it is frequently said that in making the trip one never loses sight of vessels going or coming from the time he starts his trip until he ends it, though the voyage extends over a stretch of upwards of 1,000 miles.

The C.P.R. will make Wrangel Island a live place. C. E. Perry, C.E., who had charge of the Slocan branch of the C.P.R., has located at Wrangel, where the C.P.R. has acquired Sylvester's interest in the water front, paying for it \$11,000, in addition to which the residents paid \$3,000.

The Kootenay-Cariboo Mining & Investment Co., with headquarters at Toronto, advertises 250,000 shares of its treasury stock at 25c. a share, stating that the net proceeds are to be devoted to the construction & equipment of 3 steamers to run from the head of Teslin Lake to Fort Selkirk & Dawson City.

The importations of eastern goods into Victoria have become so heavy in consequence of the Yukon outfitting trade that the daily mail steamer *Charmer* is unable to carry all the merchandise brought for that city over the C.P.R. In consequence the C.P.N. Co. has decided to make extra trips with the *Yosemite* & *Willapa* until the rush of freight is over.

Evans, Coleman & Evans, of Vancouver, have raised their wharfage rates to \$1 a ton, owing to the extra hands necessary in connection with Klondike business. The extension of their wharf will be completed within a month. The addition is 275 ft. into the inlet, forming with the present wharf an L. A warehouse will be erected the whole length of the extension, 60 ft. in width.

Orders have been received by the inspectors of steamboats at B.C. ports, that all steamers sailing from there, British or foreign, are to be rigidly inspected & not cleared by the Collector of Customs until they can show certificates that they have passed a favorable inspection. This action on the part of the Canadian authorities was taken to assure the safety & comfort of travellers, & to guard against catastrophes.

Mr. McInnes, of Vancouver, has been to New York in connection with a steamboat service he is organizing. His company has secured the *S.S. Garonne*, 4,000 tons, formerly of the P. & O. line, which left England April 2 with a full cargo of freight and passengers. The *Garonne* will run from Vancouver to St. Michaels, starting June 10, & making regular trips all season. At St. Michaels the steamer will connect with 4 river boats that will ply between there & Dawson City—the *Paul Walters*, *Lulu Stewart*, *City of Chicago* & *Mascot*. This route & the one via Wrangel & up the Stikine River are, in Mr. McInnes' opinion, the only practicable routes from the Pacific Coast to the Yukon. All others are attended

with great hardship and expense, & at certain seasons, which are never known, it is impossible to travel over Skaguay & Dyea routes.

The Government steamer *Quadra* left Vancouver on Mar. 29th, having on board L. Coste, Chief Engineer of the Department of Public Works, who proceeds to the Stikine River to make an examination with a view to improvements. He was accompanied by a staff of engineers, surveyor & assistant. The party will survey the Stikine River for 100 miles to ascertain what improvements are necessary to overcome the obstructions to navigation. The *Quadra*, after landing the party, will return to New Westminster to tow north the snagboat *Sampson*, which will be employed in removing snags, rocks or other obstructions which render the navigation of the Stikine dangerous. Mr. Coste will also go down the Hootalinquia & on to Dawson, & a survey will be made of the Yukon from Dawson to the Alaska boundary. Chief Engineer Anderson of the Marine Department has also gone to the Pacific coast for the purpose of determining at what points aids to navigation are necessary, and to make other observations in the interests of the public service bearing upon communication with the Yukon territory.

Sir Hibbert Tupper, in recently introducing his bill in the House of Commons to amend the act respecting the coasting trade, explained it was designed to save to Canadian vessels a portion of the carrying trade of the Yukon. They were prevented by the U.S. coasting laws from participating in the carrying trade to Alaskan ports, & he thought it right that the trade to the Stikine should be preserved to them. The United Statesers were, he said, taking the extreme course of preventing goods from one U.S. port, inland or otherwise, being carried by a foreign vessel for any portion of the voyage. For instance, it had been ruled to be a violation of the U.S. coasting laws for goods from Seattle to be transhipped into Canadian vessels at Victoria & carried on to Dyea & Skaguay. On our side we are going on in the good-natured way, without regard to new & harsh enforcement of the U.S. laws. For instance, as in the case of the Alaska, a U.S. vessel has taken goods from Fort Wrangel to Glenora, the goods having previously been taken to the U.S. port of Wrangel from Victoria in another U.S. vessel. His bill would prevent this being done.

The Yukon rush still continues unabated at B.C. ports. There are daily sailings carrying large numbers of fortune-seekers & immense quantities of supplies. So great was the northward movement in the early part of the season that every available vessel was pressed into service, some of them being battered old hulks which, having become unseaworthy, were hurriedly patched up to meet the emergency of the occasion. The lack of experienced pilots in the intricate waters of the northern coast, which in the inner channels through the islands fringing the mainland are difficult to navigate, added to the dangers of the trip, which was taken by some Yukonites with grave misgivings that were not groundless, as evidenced by several disasters. This does not apply, of course, to all the steamers in the Yukon trade, but to enough of them at all events to make the addition of such staunch sea-going vessels as the *Tartar* & *Athenian* of the C.P.R. Co.'s line to the fleet one of more than ordinary importance. It is understood they will take the outside course on the route to Wrangel & entirely avoid the dangers of the inner waters of the Pacific. Their capacity is 500 passengers a trip, or 1,000 a week. With this acquisition to the carrying facilities, the great rush which is anticipated to reach its height very shortly will be amply taken care of from Vancouver & Victoria northward.

NOTICES TO MARINERS.

By the Dominion Department of Marine.

All bearings, unless otherwise noted, are magnetic & are given from seaward, miles are nautical miles, heights are above high water, & all depths are at mean low water.

No. 12, Mar. 2.—1. Hand Fog Horns at Lightstations.—Hand fog horns are supplied to the undernamed lightstations in Nova Scotia, in addition to those already noted in the Canadian List of Lights & Fog Signals, 1897. The fact should be entered in the fog signal column of the list. The horns are used only in answer to signals heard by the keepers in thick weather. 130, Candlebox Island; 140, Stoddart Island; 221, Wedge Island; 240, Eddy Point.

2.—No Cage on Thrumcap, Cape Breaker & Fourche Bell Buoys.—The cages have been permanently removed from the bell buoys on Thrumcap shoal, in Halifax harbor, on the Cape breaker in the approach to Canso harbor, & off Fourché head, Cape Breton. This notice affects Canadian List of Lights & Fog Signals, 1897, nos. 198, 230 & 260.

3.—Color of Eddy Point Lighthouse.—There is a black diamond or lozenge-shaped day mark painted on the white seaward face of the lighthouse tower at Eddy Point, south entrance of the Gut of Canso. This notice affects Canadian List of Lights, 1897, no. 240.

No. 13, Mar. 8.—Fog Alarm Re-established at Lepreau.—Referring to Part 1 of Notice to Mariners, no. 7 of 1898, further notice is given that a new fog alarm building has been erected on the site of the burnt building, on the extremity of point Lepreau, on the Bay of Fundy coast of New Brunswick, & that the operation of the steam fog horn will be resumed to-morrow. The horn will give blasts of 5 seconds' duration, with intervals of 25 seconds between the blasts, as formerly. Duplicate machinery will later be placed in the building. This notice affects Canadian List of Lights & Fog Signals, 1897, no. 31.

No. 14, March 22.—Rock in Johnstone Strait, B.C.—The master of the ship Richard III. reports that while passing through Johnstone Strait, at low water of a long run out, he struck on a sunken rock which he considers must be situated where the 7-fathom sounding of Ripple Shoal is marked on Admiralty chart 581. The Richard III. was drawing 19 ft. 6 in. at the time she struck. Lat. N. 50° 24' 00"; Long. W. 125° 51' 20". An examination of Ripple Shoal will be made by the Canadian Government at the first opportunity. This notice affects Admiralty charts 581 and 1917 and B.C. Pilot, 1888, pg. 207.

By the U.S. Hydrographic Office.

Lake Huron—Sand Beach approach.

The schooner Presto stranded at Sand Beach, Mich., Oct. 16, 1897. The Presto struck in about 7 ft. of water close to & outside of North breakwater of Sand Beach harbor of refuge, Lake Huron. G. W. Plough, Keeper of Sand Beach life-saving station, reports that the wreck soon went to pieces, & a part, or most of the hull, came ashore. The remaining portion of the wreck is not an obstruction to navigation.

Lake Huron—Wreck of steamer Egyptian.—The steamer Egyptian caught afire & burned to the water's edge on Lake Huron on Dec. 2, 1897, & sank; she is no obstruction to navigation, & it is unlikely any attempt will be made to raise her. The wreck lies 13 (15) miles SE. ½ E. (S. 46° 30' E.) from Thunder Bay Island lighthouse, in 37½ fathoms of water.

St. Clair River—Wrecked schooner Home.—The Kendall Marine Reporting Co. has furnished the following information: "Concerning the wrecked schooner Home, she has not been removed. It is possible that the vessel has been shifted a short distance by the river ice. She is a very dangerous obstruction, & ought to be removed."

Lake Erie—Canada—Off Talbot point.—M. Payne, Sub-collector of Customs, Port Stanley, Ont., reports that the spars of the wrecked schooner Groton disappeared early in Jan., 1898, & were supposed to have been cut off by the ice. The hull of the vessel is no doubt in the same spot she sank, as both anchors are down, & she lies in water so deep that ice can not disturb the hull. The Groton sank Nov. 11, 1897.

Lake Erie—Canada.—The owners of the sunken steamer Louis Shickluna, Sylvester Bros., Toronto, Ont., report it is not at all likely they will attempt to raise the wreck, owing to the great depth of water. The steamer was sunk in Lake Erie by collision May 29, 1897, about 4½ (5) miles NE. by E. (N. 50° E.) from Long Point (or North Foreland) light tower, in 25 fathoms of water.

Lake Erie—Lorain.—The shipyard is situated on the right (east) bank of the Black River, in the town of Lorain. It lies west of Fifth street, is above Erie avenue viaduct, and below the N.Y.C. & St. L.R.R. bridge. There is 1 dry dock & 2 slips at the yard. The entrance to the dry dock is about 1,250 ft. above Erie avenue viaduct. Slip no. 1 is just above the dry dock, & slip no. 2 is adjacent to no. 1. The dry dock is 559 ft. 6 in. long over all & 500 ft. on the keel blocks. Width at bottom of dock 56 ft., at top 102 ft. Depth over sill at zero of gauge 17 ft. Slip no. 1 is 531 ft. 7 in. long, 125 ft. wide, & 14 ft. deep. Slip no. 2 is 476 ft. 10 in. long, 125 ft. wide, & 14 ft. deep.

Lake Ontario—New shoal spot southwesterly from Charity shoal.—A. R. Hinkley, Cape Vincent, N.Y., reports there is a rocky spot with only 15 ft. of water over it lying 1½ (1¼) miles SW. ¾ W. (S. 53° 30' W.) from Charity Shoal gas buoy, in the eastern end of Lake Ontario.

Lake Ontario.—The steamer Rosedale grounded on East Charity shoal, eastern end of Lake Ontario, just before the close of navigation for 1897. The steamer first struck on the southern end of upper East Charity shoal; she backed off, but grounded again. The vessel was released Dec. 15, 1897, & carried into port. The Rosedale was drawing 15 ft. when she struck, & soundings on the spot gave 2 fathoms, or a little more. The shoal is reported as a group of boulders, covering a gravelly & rocky area of about three acres, with 18 feet of water all around. Bearings from the spot are as follows: Tibbetts Point lighthouse NE. ½ E. (N. 50° 30' E.). Pigeon Island lighthouse NW. ¾ W. (N. 54° 30' W.). East Charity shoal is a rocky ridge, shallow on upper & lower ends, with 3 to 4 fathoms between the two spots. Locally, this shoal is known also as South Bar; the bar, trending NW.-SE., is about 1½ (1) mile long. Some of the local mariners call the upper shallow spot South Bar, & the lower shallow spot East Charity Shoal. The upper spot, where the Rosedale grounded, lies SW. ½ W. (S. 50° 30' W.) from Tibbetts Point lighthouse; it bears ESE. ¾ E. (S. 77° 30' E.) from Charity shoal gas buoy, & is distant from main Charity shoal 1½ (¾) mile with good channel between them. The lower spot of South Bar, or East Charity shoal proper, lies SW. ¼ S. (S. 42° 30' W.) from Tibbetts Point lighthouse. East Charity shoal is plainly indicated on H.O. chart no. 1477, & is mentioned on page 193 of Sailing Directions for the Great Lakes (H.O. Publication no. 108, published in 1896).

Vessel Officers for 1898.

CALVIN & CO., Garden Island, Ont.: Steamers—D. D. Calvin, Master, A. Malone; Engineer, T. C. Smith. Bothnia, Master, G. Brian; Engineer, R. Veech. Armenia, Master, C. Coons; Engineer, G. Hazlett. Chieftain, Master, J. Sullivan; Engineer, T. Gray. Parthia, Master, D. Lefavre; Engineer, G. Sauve. Johnston, Master, D. Lefavre, Jr.; Engineer, E. Phelix. Bluebell, Master, J. Dix; Engineer, F. Lefavre. Reginald, Master, J. Doyle; Engineer, J. Kennedy. Schooners—Ceylon, Master, H. Smith. Augustus, Master, J. Achee. Valencia, Master, J. Ferguson. Norway, Master, J. Harris.

CANADIAN PACIFIC RV.; Upper Lakes Steamships—Manitoba, Master, E. B. Anderson; Mate, T. Martin; Second Engineer, R. Chalmers; Purser, W. Bethune; Steward, M. Cooney. Alberta, Master, J. McAllister; Mate, L. Pyette; Second Mate, A. Brown; Chief Engineer, A. Cameron; Second Engineer, Findlay; Purser, J. Lane; Steward, J. Brown. Athabasca, Master, G. McDougall; Mate, M. McPhee; Second Mate, A. McNab; Chief Engineer, W. Lockerbie; Second Engineer, J. Davey; Purser, J. McEdwards; Steward, J. Gardhouse.

MATTHEWS LINE, Toronto: Steamers—Niagara, Master, J. Morgan; Engineer, T. Mills. Clinton, Master, J. Joyce; Engineer, J. Gray. Barges—Lisgar, Master, J. Fahey. Grimsby, Master, S. Atkinson. Schooner—Clara Youell; Master, N. J. Colwill.

Thistle, Master, A. Martin; Engineer, M. Murphy. Kathleen, Master, J. Fertile. Island Queen, Master, J. Tymon; Engineer, T. Good. Luella, Master, M. Corcoran; Engineer, J. Smiley.

Fort William Grain Shipments.

At the recent annual meeting of the Winnipeg Grain Exchange, President Bawlf, in the course of his retiring address, said: "During 1897 there was a very large increase in the capacity of elevators for handling grain from farmers, & there is no grain producing country in the world to-day that is better equipped for the receiving, cleaning & shipping of grain than Manitoba."

Owing to the very high prices that were paid for wheat the marketing of the crop of 1897 was pushed vigorously, farmers being anxious to sell & deliver wheat in order to take advantage of the high prices. This marketing taxed the transportation companies to their utmost. The movement of wheat east from Manitoba during October & November was the largest in the history of the country. The bulk of it found its way out of the country by the C.P.R. to Fort William, a small percentage only going by Duluth.

I do not think many members of the Exchange or the public generally have any idea of the importance of Fort William as a shipping port, & in order to convey some idea of the quantities of grain shipped, I give the following figures showing the number of bushels of wheat shipped during the past three years:

Season of 1895	10,587,866 bushels.
" 1896	12,689,000 "
" 1897	17,600,000 "

Of the quantity in the latter year, 12,928,000 bus. was shipped for export, 11,000,000 went by way of Buffalo, the bulk of it in American bottoms; while 2,000,000 found its way to the seaboard by way of Montreal. In 1897 there was shipped from Montreal about 10,000,000 bus. of wheat against 17,000,000 bus. from Fort William. The total shipment of grain of all kinds from Montreal for 1897 (wheat, corn, peas, oats, barley & rye) was 27,000,000 bus. It will be observed that Fort William shipped nearly double the quantity of wheat, in 1897, that was shipped from Montreal.

In connection with the port of Fort William, the Exchange has been endeavoring during the past year to have better appliances used for keeping navigation open a greater length of time than hitherto. In 1895 the last vessel left Fort William on December 6. In 1896 navigation closed about November 30, but the Algonquin sailed from Port Arthur a few days later. In 1897 the last vessel loaded at Fort William on December 9, & vessels could have loaded at Fort William as late as December 15 without any difficulty. In order, however, to maintain navigation to so late a date as this, it is necessary that there should be more powerful boats employed on the river than are now there, & I think it is clearly the duty of the Government to take this matter up with vigor & see that a port of the importance of

Fort William has not to be closed prematurely. There is no reason why Fort William should not be kept open longer than the neighboring port of Duluth.

C.P.R. Stikine River Boats.

Capt. Troup, Superintendent of the C.P.R. Co.'s B.C. Inland Steamers, wrote us from Vancouver, March 19:—"We have now under construction 12 steamers for the Stikine River trade, as follows:—Three steel boats, each 140 ft. long, 30 ft. wide, 5 ft. deep, building at Toronto. These will have 16 in. cylinders 6 ft. stroke, with locomotive boilers to carry 175 lbs. steam pressure. These boats will be shipped to Vancouver in sections, & set up here, where the house work will be put on them, & then they will be sent to Fort Wrangel."

"We are building in Vancouver 5 wooden boats as follows:—One boat 150 ft. long, 30 ft. beam, 5 ft. deep, with engines 17 in. cylinders, 6 ft. stroke, 175 lbs. steam pressure. Three boats 145 ft. long, 30 ft. wide, 5 ft. deep, all with cylinders 16 in. bore, 6 ft. stroke. One boat 120 ft. long, 22 ft. wide, 4 ft. deep, with engines 12 in. by 4½ ft. The 3 steel boats & 3 of the wooden boats will be given 1st class passenger accommodation; 2 of the wooden boats will be fitted up as freight steamers only."

"We are building in Seattle 4 steamers for the same trade, 2 of them to be 150 ft. long, 32 ft. beam, & 2 to be 145 ft. long, 30 ft. beam. One of these is to be fitted as a passenger boat, and the other 3 as freight steamers."

"The passenger accommodation on these steamers will consist of 18 and 20 staterooms to the boat, besides accommodation for the crew. Each stateroom will have 1st class spring & hair mattresses, & be as comfortable as the steamers in the Kootenay district. Modern plumbing and electric lights will be used, in fact these boats will be as good of their class as are built in any part of the world. The names decided upon so far are Geo. M. Dawson, Ogilvie, McConnell, Dalton, Walsh, Constantine. The boats have all been designed by me, & we expect to have 3 of them completed by April 5, & about four of the others completed by April 20, & the last of the 12 should be at Fort Wrangel early in May."

A special train, conveying sections of one of the steel river steamers built at the Polson Engine Works, Toronto, arrived in Vancouver the last week of March. Before shipment from Toronto, the steamer was set up, inspected & then taken apart, 100 men being employed for this purpose. Thirty men from the Polson yard preceded the boat to put it together on arrival. W. E. Redway, Superintendent of the Polson Iron Works, who is in Vancouver, reports the steamer well under way, the riveting being almost finished. Three wooden vessels of the same type are under construction in the same yard, but the steel steamer arouses the greatest interest.

Lake Carriers' Association.

A meeting was held at Cleveland, Ohio, Mar. 22, to fix the salaries of the officials of the Association, including the shipping masters, & adopt a schedule of wages for the men employed on boats. The officers' salaries will be the same as last year. The new schedule of wages adopted, which went into effect April 1, is the same as the opening card for season of 1897. The outlook in the freight situation is about the same as it was then, & the members decided to make no change. The steamers are divided into 3 classes, & the consorts & sail vessels into 2 classes. Steamers of the 1st class have water bottoms & triple expansion engines. The 2nd class includes all metal steamers not included in class 1, & all wooden steamers with triple expansion & with compound engines, & the 3rd class takes in all the small steamers with high

pressure or low pressure engines, covering all boats not included in the two former classes. The schedule follows:

ON STEAMERS.

	1st class per month	2nd class per month	3rd class per month
Chief engineer	\$105	\$90	\$60 to \$75
Second engineer	70	65	50
First mate	75	65	50 to 60
Second mate	50	40	
Cooks	50	45	40
Helpers to cooks	15	12	
Firemen	30	30	25 to 30
Wheelmen	30	30	25 to 30
Lookouts	30	30	25 to 30
Deckhands	15	15	15
Oilers	30		

ON CONSORTS AND SAIL.

First mates	45	\$30 to \$40
Second mates	35	
Cooks	30	25
Seamen	30	20 to 25

Firemen fitting out & laying up, \$1.25 a day.

A. R. Rumsey was re-appointed chief shipping master. The other shipping masters are: J. W. Hanson & Capt. W. Anderson, Chicago; Capt. Frank Brown, South Chicago, vice M. Fish; Capt. Lemon, Milwaukee; Capt. Fletcher, Buffalo; Capt. P. Mitchell, Toledo; Capt. D. Harrington, Ashtabula, & W. Wall, assistant, Cleveland.—Marine Record.

Richelieu & Ontario Appointments.

At a meeting of directors Mar. 23, H. Bouchard, who has been with the company for 17 years as steward of different boats, was appointed Inspector of Stewards, a new office. His headquarters will be in Montreal, but his duties will call him all over the route wherever complaints of passengers or other matters may demand his attention. The resignation of Capt. Tranchemontagne, of the Chambly, who has been 17 years with the Co., was accepted.

The appointments of stewards & engineers were made as follows:—Canada, Steward, G. Lefebvre; Engineer, E. Lacroix. Carolina, Steward, T. Payne; Engineer, L. Latulippe. Quebec, Steward, J. B. Barbeau; Engineer, J. B. Gendron. Montreal, Steward, E. Guerin; Engineer, F. X. Hamelin. Three Rivers, Steward, E. Boivin; Engineer, F. Gendron. Berthier, Steward, L. S. Masse; Engineer, D. Laviolette. Terrebonne, Steward, J. E. Masse; Engineer, M. Sheridan. Chambly, Steward, M. Ayott. Mouche-a-Feu, Engineer, P. Bouchet. Hochelaga, Engineer, A. Chapullon. Longueuil, Engineer, Boncage. Hossana, Engineer, H. Gendron. Laprairie, Engineer, not appointed; P. McLean appointed Captain. Hamilton, Steward, E. Marcl; Engineer, G. Marshall. Corsican, Steward, L. Jolly; Engineer, J. Parker. Algerian, Steward, W. J. Clark; Engineer, T. Wadsworth. Bohemian, Steward, F. M. Hepburn; Engineer, not appointed. Passport, Steward, D. Cambridge; Engineer, W. Taylor. Columbian, not appointed. The balance of the appointments are arranged as follows: Each pilot appoints his 2nd pilot & wheelman; the 1st mate employs his own deck hands; the steward his own waiters & cooks, & the engineers their own stokers & other assistants, which make up the full complement of each crew.

The Co. is making energetic efforts to secure a large share of the tourist travel for Canada & to this end has already agents on the road working it up; W. A. Claney, formerly passenger agent of the Co. in the Eastern States; H. F. Chaffee, in the Southern States, & W. A. Fletcher, in the Western States.

ELECTRIC RAILWAYS.

A Halifax Sunday Case.

In November last an information was laid before the Stipendiary Magistrate of Halifax, N.S., by J. Grierson, charging the Halifax Electric Tramway Co. with having procured T. Burgess, a motorman, to perform servile labor on Sunday, Nov. 21, by driving, managing, guiding, controlling & operating a tram car propelled by electricity & owned by the Co. for the conveyance of passengers. The Co. applied to the Supreme Court for an order to prohibit the Magistrate from hearing the case, on the grounds that chapters 57, 22 & 32 of the acts of the Legislature of Nova Scotia for 1889 are ultra vires, & not within the powers conferred upon the Legislature by the B.N.A. Act; & that the Magistrate had no jurisdiction, either at common law or by statute, to hear or determine the charge. Justices Ritchie, Graham & Townshend agreed in favor of the defendant's contention; Chief Justice McDonald dissenting. A writ was granted to prohibit the Stipendiary Magistrate from hearing the case. Borden & Chisholm for the Informant; Pearson & Covert for the Tramway Co.

Judge Ritchie, in the course of his judgment, said: "Chapter 159, Revised Statutes of N.S., 3rd series, being part of the criminal law, the Local Legislature of Nova Scotia had, in my opinion, no power to alter or amend any of its sections, & any legislation purporting to have that effect is ultra vires the Local Legislature. I wish to be distinctly understood as giving no opinion as to whether the Local Legislature could or could not, by any legislation, prevent the performance of servile or other labor on Sunday; but I think it cannot be done in the way attempted—that is, by trying to amend the criminal law. The Stipendiary Magistrate for the city of Halifax should be prohibited from convicting the Halifax Electric Tramway Co. from any breach of the acts of the Local Legislature of N.S., purporting to amend chapter 159 of the Revised Statutes of N.S., 3rd series, or any act in amendment thereof."

Judge Graham, in the course of his judgment, said: "Coming to the amendments I suppose the Province might pass legislation in regard to this matter, & perhaps secure the same end under the head 'property & civil rights' or some other head. But it appears to me that the Act, 1891, cap. 32, is not an attempt to do this. It is a bona-fide attempt to amend by adding sections to an act which I have just endeavored to show is a part of the criminal law. The 1st section expressly says so. Moreover, the person who offends by employing, hiring or procuring his employee to perform servile labor is declared 'guilty of performing servile labor on Sunday within the meaning of the second section of this act,' i.e., the principal act. It is an attempt to deal with the criminal law—to make an offence equal to a crime that the Parliament of Canada alone could create. In my opinion the prohibition ought to issue to prevent the prosecution from proceeding under these supposed amendments."

Chief Justice McDonald, in his dissenting judgment, said: "I have endeavored to show that the Stipendiary Magistrate of Halifax has jurisdiction to inquire into & adjudicate upon a charge of an alleged violation of the principal act, & that the amendments mentioned do not affect that jurisdiction. The charge is that this defendant corporation procured & hired persons to do servile work for them & in their interests on the Lord's Day. I think the Stipendiary Magistrate of Halifax has jurisdiction to adjudicate upon that charge, & that consequently this application should be refused with costs. I am not sorry that I feel obliged to come to this conclusion. The Parliament of Canada has made no provision with a view

to enforce abstinence from ordinary labor & occupation on the Sabbath, leaving the subject in the case of N.S. to be dealt with by the Local Legislature; & I should be sorry to see the sanction which our statute gives to the sacredness of the Sabbath withdrawn."

In response to an enquiry, Pearson & Covert, who represented the Tramway Co., write THE RAILWAY & SHIPPING WORLD: "We have an old Act in existence in this Province which was a Nova Scotia Act before Confederation. This states that any person performing servile labor on the Lord's Day shall be fined. It was quite clear that 'person' mentioned in this Act did not mean a corporation. So certain persons here, who constitute the Sunday Observance Society, had our Legislature pass certain laws since Confederation. These are chap. 57 of 1889, chap. 22 of 1890, & chap. 32 of 1891. These chapters are stated to be amendments of the old law. Our argument was that the Sunday Observance Law, in force before Confederation, was part of the criminal law of the Province, & had been regarded as the criminal law since the days of Charles II., when the 1st act on the subject was passed, & that our Legislature had no authority to amend this old Act, because it formed part of the Criminal Law of Canada by reason of section 129 of the B.N.A. Act. The decision went on the point that this was an amendment of the Criminal Law."

A Hamilton Power House.

The Hamilton Radial Electric Ry. Co.'s power station, a view of which is given on this page, is erected on the Hamilton Beach near Burlington, & is the most substantial building of its kind erected anywhere in the locality of Hamilton. The building was designed & erected under the supervision of Charles Mills, architect, of Hamilton, & stands as a monument of first-class construction in every way. The soil on which it stands was not of the best for a structure of this nature, it being a very heavy building for the purposes for which it was required. The size is 53 ft. 9 in. x 99 ft., & all of press bricks made at Beamsville. The foundation walls are also of press brick, & the footings are in 2 courses of 10 in. thick, each of concrete.

The roof is slated with Rockland slate & is carried by 7 large trusses. The lantern sashes on top are operated by a special device from below, & are so arranged to work that the wind cannot penetrate. The winds that sweep this building are at times terrific, the location being between Hamilton Bay and Lake Ontario. The chimney is 108 ft. 3 in. high, & is also of press brick. The base is 16 ft. square & the top on the inside 4 ft. There is one thing that speaks well for the construction of the whole building, & that is, not a single crack of any description has appeared at all in the work.

The station supplies current for 9 miles of

road, & in it are two 15x28x34 L. H. Tandem Wheelock engines & 2 Canadian General M.P. 4-200-450 dynamos & 3 steel boilers, with room for 1 more engine & 2 more boilers if necessary. The fly-wheels are 16 ft. 6 in. in diameter, & 26 in. face. The total cost of the building was \$10,000.

Electric Railways in Canada.

Electricity was first used as a motive power in Canada in 1883. A short piece of track was laid on the grounds of the Toronto Industrial Exhibition. The motor did not "mote" to any extent, owing to the dynamo used on the car, a double armature one, with only one pole piece to each armature. The following year, 1884, produced the first practicable road. In comparison with the modern electric car it would be thought a crude affair, but it "got there," though with the expenditure of a considerable amount of fuel & supplies. The current was taken from copper slips laid in a wooden box between the rails. In 1885, the track was lengthened & the overhead wire & trolley-arm used. In 1891, the possibility of combating the real old-fashioned winter in the deep snow area which includes Quebec, Montreal & Ottawa, was successfully demonstrated by the Ottawa Electric Ry. Co. Montreal followed in 1892 & Quebec in 1897.

In 1896 there were 30 railways in Canada, the motive power of which was electricity, with 569 miles of railway & an equipment of 947 motor cars, 360 trailers, 62 sweepers & 1,315 motors. The number of miles run during the year was 22,772,631, & the number of passengers carried was 73,972,414, giving 3¼ passengers carried to each mile run.

The first city in Canada & in the world to have established in it a special electric heating service from a central station was Ottawa. Electric mail cars were first used in Ottawa on Nov. 9, 1893, to convey Her Majesty's mails from the central post office to the railway stations. In July, 1886, the streets of Montreal were first lighted by electricity. In 1888, the first incandescent lights were supplied. Electric light was first used in Montreal in 1877, by the Harbor Commissioners. Electric power was first supplied for canals in the Dominion at Sault Ste. Marie (Canadian side) in 1895.—From Alphabet of First Things in Canada, by Geo. Johnson, F.S.S.

A Railway Advertising Suit.

An action was recently tried before County Judge Morgan, in Toronto, in which the rights of advertisers were discussed. The Toronto Ry. Co. sued the King-Jones Co., of Toronto, for \$200, balance due on an advertising contract. The defence set up that the Ry. Co. had not performed its contract, & that the contract had been cancelled, & the defendant demanded a jury. Judge Morgan decided against its right to a jury. It was shown in evidence that all the cards received from the defendant had been placed in the cars, & careful & systematic records were put in evidence, proving conclusively the case of the Ry. Co. The members of the defendant Company, although they had previously made affidavits that the cards were not placed in the cars, & that the contract had been cancelled, declined the issue & re-used to give any testimony in their defence, & judgment was immediately given for the Ry. Co. for the full amount claimed & costs. The Judge intimated that the evidence of the Ry. Co. was very conclusive. It was suggested for the defendant in cross-examination that some of the cards for coal shovels had been placed in the cars, but the Judge intimated that unless such a course of conduct could be shown to have been approved of by the Ry.

Co., it could not be held responsible therefor. W. H. Jones, President of the King-Jones Co., claims to have been a pioneer in street car advertising.

NOTES FROM THE LINES.

British Columbia.

B.C. ELECTRIC RY. CO.—The case of *Rae vs. this Co.*, at New Westminster, was recently decided by Mr. Justice Bole in favor of the defendant, each party to pay his own costs. The action arose out of an accident to a horse through the falling of a telephone wire, which came in contact with the defendants' wire.

Manitoba.

THE WINNIPEG ELECTRIC STREET RY. CO.'S annual meeting fixed for March 8 was postponed for some weeks. The Co.'s offices have been removed from the corner of Main St. & Assiniboine Avenue to the Queen's Hotel Block, where quarters are occupied jointly with the Manitoba Gas Co. & the Lake Manitoba Ry. & Canal Co., the three Co.'s being controlled by W. Mackenzie, of Toronto.

WINNIPEG & ST. ANDREWS.—E. F. Hutchings, of Winnipeg, & others ask for power from the Legislature to construct an electric or steam railway from Winnipeg along the east side of Red River to below St. Andrew's rapids, there to connect with steamers plying on Lake Winnipeg & Red River. The petition recites that the petitioners desire to establish a manufacturing enterprise at a point known as Lorne Hill.

Northwest Territories.

THE DAWSON CITY ELECTRIC CO. is applying to the Dominion Parliament for incorporation. The Co. asks to supply electric light, heat or power throughout the city, & within a radius of 200 miles, as well as to operate an electric tramway. The British American Light & Power Co. asks authority to construct & operate by electricity or other motive power tramways in Dawson City, Fort Selkirk & other points in the Yukon district.

Nova Scotia.

THE HALIFAX & BEDFORD ELECTRIC CO. is composed of Dr. Chisholm, ex-Mayor Keefe, E. F. Freman & others of Halifax, N.S. The Co. will build an electric railway from Halifax to Bedford, with such extensions as may be approved by the municipalities. The capital stock is placed at \$250,000.

THE HALIFAX TRAMWAY CO.'S business during the past year shows a steady increase both in electric lighting and street railway departments. The statement shows a surplus of \$27,308.77, after paying all fixed charges & 4 quarterly dividends of 1¼%. The directors have placed \$20,000 to the reserve fund account.

Ontario.

BRANTFORD STREET RY. is, Manager Barron states, to have considerable new equipment this season.

CHATHAM.—Angus Sinclair, of Toronto, has made a proposition to Chatham City Council in connection with the building of the Chatham City & Suburban Electric Ry., in which, it is said, English capital is interested.

THE CORNWALL ELECTRIC RY. CO. has submitted to the Town Council of Peterboro a scheme for the construction of an electric railway from that town to Chemong & Lakefield. The Co. proposes to lease the Chemong & Lakefield lines from the G.T.R., convert them into electric roads & take over the freight business. The cost is roughly estimated at \$350,000.

THE HAMILTON & DUNDAS RY. is now operated by the trolley system.

THE HAMILTON, CHEDOKE & ANCASTER ELECTRIC RY. CO. will ask the Finance Committee of Hamilton to recommend the City Council to purchase the Beckett drive for \$12,000, in which case the Co. will build its line to Brantford.

HAMILTON, GRIMSBY & BEAMSVILLE ELECTRIC RY.—The Lester party has left the H., G. & B., President C. J. Myles & the other directors having bought their stock, amounting to between \$17,000 & \$18,000. The party that has withdrawn is composed of Ald. T. W. Lester, J. Lester, A. T. Freed, J. Hoodless & A. Rutherford.

An idea of the extent of the Grimsby, Ont., fruit shipping business may be got by the knowledge that the H., G. & B. alone carried 170,729 packages of fruit last season, making a total of 2,850,000 lbs. Besides this, large quantities were shipped over the G.T.R.

The H.G. & B.R. recently discovered that some one had cut & stolen 100 pieces of heavy copper wire between Hamilton & the reservoir.

The H. G. & B. has a new palace car which Ahearn & Soper, of Ottawa, built for it at a cost of about \$4,500.

THE HAMILTON RADIAL CO.'S line is not likely to be extended beyond Burlington this year, but it is probable a connection will be made with the T. H. & B. Ry. for the purpose of handling the Hamilton Blast Co.'s business. The H. R. Co. will shortly change its line from Sherman avenue to Birch avenue in Hamilton.

The annual meeting of the H. R. Ry. Co. was held April 4. A successful year was reported, though no dividend was declared. Arrangements are being made for crossing under the G.T.R. tracks east of the Westinghouse Manufacturing Co.'s works, thus doing away with a dangerous level crossing. The directors & officers were elected as follows: A. Turner, President; W. A. Wood, Vice-President; J. Moodie, Treasurer; S. Malloch, Secretary; J. Dickson, Adam Zimmerman. Another director will be elected later on, there being a vacancy on the board.

In the dispute between the Radial Co. & St. Luke's Church, Burlington, over compensation for the possession of the avenue approaching the church, S. Barker, sole arbitrator, has awarded the church \$350 in addition to the costs of the arbitration.

HAMILTON STREET RY.—A special meeting of the City Finance Committee was held April 4th to consider the Street Ry. Co.'s application for better terms & for the extension of its franchise, there being a great many citizens present. The Co. was represented by E. Martin, Q. C., J. A. Bruce, B. E. Charlton & Manager Griffith. President Wm. Gibson, M.P., was unable to be present owing to illness. Solicitor Martin said the street railway business had for several reasons greatly fallen off since the introduction of electricity. The road represented an investment of \$204,000 by its stockholders, who were nearly all residents of Hamilton, & a further outlay of the proceeds of bonds, amounting to \$500,000, or \$704,000 in all in hard cash. The Co. had been disappointed in its earnings, & no dividends were paid in 1896 or 1897. The Co.'s receipts in 1897, amounting to \$115,019, had been disposed of as follows: For mileage, \$6,627.62 had been paid; for percentage, \$6,888.51; for taxes, \$2,517.13; & for wages, \$51,503.92. The balance of the total expenditure of \$113,977.19 presumably went for interest on bonds. The employees numbered 120. The Co. was willing to accept the terms of the 1896 by-law (which was previously rejected), regarding the removal of snow & ice, to sell 9 limited tickets for 25 cents, to extend the time for their use, & to lay down & operate a line on Wentworth Street to the east end incline railway & return, for which the city was

to throw off mileage, to readjust the percentage & to extend the franchise to 1928. Mr. Martin also submitted a proposition to abolish all mileage & percentage, & providing that, after the payment of all wages, expenses of management, interest & taxes, the net surplus should be divided equally between the Co. & the city until the share of each shall reach \$10,000 a year, when there shall be a return to the existing rate of percentage. President Myles, of the H.G. & B. Ry., asked that his Co. be allowed to put its line in the middle of Sherman Avenue, south of Main Street. Several citizens asked for street railway connection with the east end incline railway. Rev. S. E. Marshall spoke in favor of compelling the S.R. Co. & the Radial Co. to use the same line on Sanford Avenue instead of the Radial using Birch Avenue. After considerable discussion, the meeting adjourned until April 7.

Hamilton city's share of the earnings of the H. St. R. for the last quarter of 1897 was \$4,163.49, making a total of \$14,315.06 received from the Co. in 1897, against \$13,704 for 1896.

The H. S. Ry. mileage payments will be increased hereafter by the 5 years exemption having expired for Locke Street, from King to Herkimer, & King Street East from Sherman to Wentworth.

The movement for municipal ownership of the Street Railway is reported to be favored by a majority of Hamilton aldermen.

At the recent annual meeting of the H. S. Ry. Co. the directors were re-elected as follows:—W. Gibson, M.P., President; E. Martin, Q.C., Vice-President; F. W. Fearman, W. J. Harris, B. E. Charlton, I. Beer, J. A. Bruce, J. R. Griffith was re-appointed Manager.

HAMILTON TO ST. CATHARINES.—A syndicate, composed of the directors of the Hamilton, Grimsby & Beamsville Electric Ry. directors, & some other parties, is prepared to build an electric road from Beamsville to St. Catharines, so as to give through communication between Hamilton & St. Catharines, as soon as arrangements can be made for power, & a satisfactory bonus is granted by the town of St. Catharines. Negotiations are going on with the Cataract Power Co. in regard to power, & if these are successful, steps will probably be taken towards securing a bonus from St. Catharines.

THE INTERNATIONAL RADIAL CO. will, it is said, apply to Parliament for an extension of time for the building of the line from Hamilton to Guelph. Mayor Hower, of Guelph, in a conference with Mayor Colquhoun, of Hamilton, recently expressed himself decidedly in favor of the project. In Guelph, he says, opinion is divided. Some think an electric road would divert the Morristown & Aberfoyle trade, which is considerable, to Hamilton. Mr. Hower thinks not, as the run to Hamilton from either place would take an hour, while to Guelph would be only 20 minutes or so. Then the road would be a great benefit to Guelph in ensuring the prompt delivery daily of fresh fruit, whereas at present the city has to depend upon what comes in by waggons. Where Hamilton would reap its greatest benefit, he thinks, would be in catching a great slice of the Guelph trade which now goes to Toronto. The question of a bonus from Guelph has not been discussed there.

KINGSTON, PORTSMOUTH & CATARAQUI ELECTRIC RY. CO.—In Toronto recently, Judges Osler, MacLennan & Moss heard the appeal in the case of the City of Kingston vs. this Co. Robinson, Q.C., & D. M. McIntyre, Kingston, for plaintiffs, appealed from judgment of Street, J. (28 O.R., 399), in favor of defendant. The action is brought to compel the defendant to keep its cars running over the whole of its line of railway during the whole of each year, pursuant

to agreement. The court below held inter alia that the agreement was one of which the court would not decree specific performance. Aylesworth, Q.C., & W. B. Nickle, for defendants, opposed the appeal. Judgment reserved.

LONDON STREET RY.—The annual statement for 1897 made the following showing:

	1897.	1896.
Gross earnings.....	\$ 101,365	\$94,194
Operating expenses....	58,451	54,171
Net earnings.....	42,914	40,023
Passengers carried....	2,585,480	2,432,416

The total assets included:—Road and equipment, \$97,500; stores in hand \$4,000; suspense account, \$3,400. And the liabilities included these items:—Capital stock, \$300,000; bond account, \$350,000; accounts payable, \$30,800; unredeemed tickets, \$2,800; bank overdraft, \$4,500; & profit & loss, \$17,700.

The gross earnings for Jan., 1898, were \$7,705.18, against \$6,600.56 in Jan., 1897. The operating expenses were 66.6, against 75.6 for the corresponding period. The gross earnings for Feb., 1898, were \$6,657.85, against \$6,158.99 in Feb., 1897.

The L. S. Ry. Co. has paid Mrs. K. Pitt \$1,500 and costs in settlement of her claim resulting from the death of her brother, W. Spice, in a trolley accident.

The L. S. R. Co., will pay its taxes on an assessment of \$80,000, on poles, wires, rails &c., but will appeal against \$50,000 assessment on cars.

LONDON TO GRAND BEND.—Application is being made to Parliament for incorporation for an electric railway from London to Grand Bend, on Lake Huron. M. C. Cameron, Goderich, is solicitor for the applicants.

METROPOLITAN & MIMICO ELECTRIC RYS.—When the cases of the Metropolitan St. Ry. & the Mimico Electric Ry. came up in Toronto recently, an adjournment was secured until May 2. The companies contended that the Provincial Government has no power to make the running of street cars on the Sabbath an indictable criminal offence. This contention is based upon the case *Regina v. Halifax Tramway Co.*, reported elsewhere in this issue. In the present cases the defence hold that only the Federal Government has the right to make the offence a criminal one, & the Solicitor-General must be given an opportunity to become a party to the action.

NIAGARA FALLS PARK & RIVER RY.—The bill giving the International Bridge Co. of Buffalo additional rights to enlarge the bridge has passed the N.Y. Assembly. It is the intention of the Bridge Co., which is owned & controlled by the G.T.R. system, to enlarge the bridge so as to permit of the passage of pedestrians & carriages, as well as trolley cars. It is known that for a long time the Niagara Falls Park & River Ry. on the Canadian side of the river has had its eye on getting into Buffalo to secure a direct feeder to its system from that city. Heretofore it has taken the people by boat from Buffalo, which has proved very unsatisfactory. A good deal of its traffic has been by a ferry at Lewiston & the upper suspension bridge. The changes in bridge construction & the desire to secure a belt line down one side of the river and up the other will very shortly revolutionize trolley travel about the Falls. There is little doubt that the Niagara Falls Park & River Ry., which owns the franchise along the river bank from Fort Erie to Queenston, will extend its line to the International Bridge when the proper time comes & make connections into Buffalo.

OTTAWA CITY RY. CO.—At the recent annual meeting it was shown that 4,762,082 passengers were carried during the year & 1,538,836 miles run. Quarterly dividends of 2 per cent. were paid. A satisfactory in-

crease in receipts was reported, especially since September last. The following were re-elected directors: J. W. McRae, T. Ahearn, G. P. Brophy, W. Y. Soper, T. Workman, P. Whelen & W. Scott.

OTTAWA & METCALF.—An electric railway is being advocated between Ottawa & Metcalf, Ont. The distance is about 20 miles.

ST. CATHARINES & PORT DALHOUSIE.—Plans are said to have been completed for the building of an electric railway between these points.

ST. CLAIR TUNNEL CO.—It is said this Co. contemplates converting the motive power for the tunnel from steam to electricity. The matter is understood to be under consideration by Chief Engineer Hobson, of Montreal.

THE ST. THOMAS STREET RAILWAY CO. has awarded the Ottawa Car Co. a contract for cars, & to the Robt. Armstrong Engineering Co., Amherst, N.S., the contract for an engine.

THE SMITH'S FALLS, RIDEAU & SOUTHERN ELECTRIC RY. recently applied to the Smith's Falls Council for permission to lay rails & erect poles.

TORONTO ELEVATED RAILWAY.—An incorporated company recently submitted through its solicitors a proposition to Toronto City Council for a system of double-track elevated railways, the contract to expire 1921, fare, 10 tickets for 25c., and at least 5 miles to be in operation within 2 years.

TORONTO RAILWAY CO.—The hard-fought suit over the assessment of the poles, wires & tracks of the Toronto Ry. Co. was settled for the nonce by the Court of Appeal on March 15, giving judgment in favor of the city, Sir George Burton, C.J., dissenting. When the city made the assessment on Ward 1 last year, the Co. appealed to the Court of Revision, which sustained the assessment. Then the Co. appealed & brought the matter before three judges, County Judge McDougall of York, & the senior judges of the adjoining counties, Darnell of Ontario & McGibbon of Peel, who decided in favor of the Co., Judge McDougall dissenting. In the meantime the Assessment Department assessed the poles, wires, etc., of the Co. in the other wards of the city, & in each case the Co. appealed to the Court of Revision against the assessment, the Court of Revision, in view of the judgment of the three judges in the case of Ward 1, sustaining the appeal of the Co. This placed the city in the position of being the appellant against the decision of the Court of Revision, & an appeal was taken to Judge McDougall, it being deemed unnecessary to call in the other two judges in this instance. Judge McDougall, after hearing argument, reversed the decision of the Court of Revision & held that the Co. was liable for assessment. Then the Co. appealed from this decision to the Court of Appeal, with the above result. By the decision the assessment of \$452,277 against the Co. in Wards 2 to 6 is confirmed for 1898, which will probably yield between \$7,000 & \$8,000 in taxes. Next year a further addition to this assessment of about \$85,000 for Ward 1 will be made, making a total assessment of about \$540,000.

There is a likelihood of the Toronto Railway Co. buying out the City & Suburban Electric Line, & operating it as a separate concern, as it now does the Mimico branch. The City & Suburban Co. has 12 miles of rail laid between Toronto Jct., Weston & Lambton, & it is understood that for some time past it has been awaiting a good offer with a view to selling out. The deal between the two companies is as yet in its first stage. The Toronto Co. has not bound itself to any terms, but negotiations are pending & there is every prospect of the deal going through. At present the Toronto Railway has not running rights into Toronto Jct., & cannot take a pas-

senger within the town limits. It is also stated, on good authority, that the Toronto Railway Co. is willing to consider terms with the Metropolitan Co.

A Toronto evening paper recently started an agitation against the payment of fares on the street railway when the cars were too crowded to permit of a passenger being seated. The "no seat, no fare" agitation ended rather ingloriously when 2 passengers, who refused to pay their fare because there were no seats for them, were brought before the magistrate & assessed a maximum fine with costs.

There is every probability of an extension of the Toronto Ry. Co.'s system to Oakville. The line on Queen St. West is to be continued along Queen to Balsam Avenue, thence into Munro Park, where tracks are laid. The Kingston Road line is to be extended east at least 3 miles beyond the Country & Hunt Club. The Avenue Road line is to go as far as Heath Avenue, & a line will be built to connect with Yonge St. The Co. intends building a second line to Station St. to pass over York St. bridge & run east along Lake St. to Yonge St.

The gross earnings of the Toronto Railway Co. for the first 3 months of 1897 & 1898 are given as follows:

	1897	1898	Increase.
Jan'y.....	\$74,545.55	\$86,562.36	\$12,016.81
Feb'y.....	69,744.61	82,402.19	12,657.58
March....	78,891.45	92,818.12	13,426.67

The average operating expenses for 1897 were 48.8% of the gross earnings.

E. A. Macdonald threatens to enter suit against the Toronto Ry. Co., alleging that the franchise was obtained by fraud, bribery & corrupt means.

York Township Council & the Manager of the Toronto Railway Co. had a conference on Mar. 24 regarding the extension of the system to Mount Pleasant. The Council will have another meeting to push the project.

TORONTO TO RICHMOND HILL.—A. H. St. Germain, who proposes to establish an auto-car service between Richmond Hill & Toronto, has closed a contract with the Canadian Motor Syndicate for the 1st car. The motors are the invention of W. J. Still. The new car will be a passenger & parcel van capable of seating 25 people. It will be fitted with electric light & buttons & strong brakes.

Quebec.

HULL.—The Ottawa Car Co. recently received an order from the Hull Electric Ry. Co. for 5 open cars, one to be used as a motor. It will be of the latest design & finest finish. The other 4 are trailers. It will also remodel the parlor car of the Hull Electric Co., putting in longitudinal seats in place of the others. The 4 trailer cars & motor car will have curved seat panels, that will enable passengers to enter the car more quickly & with greater ease than with the old ones.

ISLAND OF ORLEANS.—There is a movement on foot to get an electric railway service for the Island of Orleans, near Quebec. It is reported that a charter will be asked to construct an electric railway around the Island. The power is to be obtained from Montmorency Falls.

THE MONTREAL BELT LINE RY. has established the first electric railway freight office at Moreau Street, Hochelaga, for transportation purposes. This will accommodate farmers & others shipping produce to Montreal markets. The Co. is asking the Dominion Government for an act to change the name of the Company, to extend the term for completion of branches & for enlarged powers of operation.

THE MONTREAL PARK & ISLAND RY. CO. was recently given two months by Judge Charland to comply with the condi-

tions of its contract with the town of St. Louis. This suits the residents of St. Louis are entitled to all the advantages in respect of street car transportation that citizens of Montreal enjoy, namely, under agreement with the Park & Island R. Co., passed in April, 1894, that the company provide a 5 minute service to the corner of the city of Montreal, supplying tickets at the same rates & on the same terms as those in force on the Montreal Street Ry., & give transfers.

E. M. Fulton has entered suit against the M. P. & I. Co. for \$4,000 doctors' bills, hospital attendance, etc., necessitated by an accident sustained on the line.

MONTREAL STREET RY. CO.—There was a rumor in Montreal recently that the M. S. Ry. Co. & the Park & I. Ry. would unite. The presidents of both companies denied the report. President Holt, of the P. & I. Ry. Co., said: "There has been a by-law prepared & accepted by the St. Louis du Mile End corporation, which provides for the taking over of the franchise by the Montreal Street Ry. Co. This is contingent on our acceptance, and we, of course, shall not accept unless there is an amicable agreement between ourselves and the M. S. R. for the running of our cars through the municipality, just as they now do through the city. The only difference would be that the cars would be taken in charge by the M. S. R. at about the C.P.R. crossing, instead of nearer the city limits. As to any amalgamation of the companies, such as has been talked about, that is out of the question." President Forget, of the M. St. Ry. Co., said that the rumor had been made out of whole cloth.

The M. S. R. Co.'s passenger equipment now consists of 221 closed motor cars; 149 open motors; 45 closed trailers and 30 open trailers; 60 more open cars are being built for next summer's traffic. The average daily number of full-day cars run (18 hours each per day) is 148; summer (May-October), 156; winter (November-April), 140. The average daily number of cars run during busiest hours of the day is, summer, 200; winter, 190. During the year ended Sept. 30, 1897, 32,047,367 passengers were carried; during the 4 months ended Jan. 31, 1898, there were carried 10,928,793, as against 9,935,989 in the corresponding period of 1897.

The M. S. R. Co. recently invited tenders to be sent in by April 1 for the privilege of advertising in the cars, the same to be confined to racks in the head linings of the cars. The tenders have to state a sum per year, payable in advance, the contract to run to Dec. 31, 1899, when the contractor may renew for a further 2 years, at 25% advance on the original contract.

The M. S. R. Co. has received an order from its relative the Kingston, Jamaica, Street Ry. Co. to build 20 electric motor cars for use in Kingston.

The increase in earnings of the M. S. R. Co. for Feb., 1898, over Feb., 1897, is \$12,673.81. The total receipts for Feb. amounted to \$102,625.49. The average daily earnings were \$3,663.14, an average daily increase of \$334.45. The comparative statement is as follows:

	1897	1898
October	\$116,293.09	\$109,110.38
November	110,929.60	100,818.57
December	113,128.91	103,115.02
January	110,156.46	99,636.18
February	102,625.49	89,951.68
March	114,677.91	99,441.91
	\$667,811.46	\$602,074.74

The M. S. R. Co. recently gave orders that all motormen & conductors should buy new uniforms once a year. In order to preserve some measure of uniformity, all clothing is to be issued on the same day, overcoats Nov. 15,

& uniforms May 24, an overcoat to be worn only one season. One-third the cost of the uniform is borne by the Co.

The Court of Review has confirmed the decision of the Superior Court, dismissing Dame Elizabeth Kerr's action against the M. S. R. Co. Dame Kerr sought to recover \$4,115 for injuries received while getting off a car. The accident was alleged to have taken place Dec. 16, 1894; action was not taken till Jan. 28, 1896, & the first notice the company got was Dec. 24, 1895. The courts held that the evidence was too vague to satisfactorily establish fault on the part of the Co.

On Feb. 18 the monthly drawing of the conductors & motormen of the M. S. R. Co. took place, Supt. McDonald presiding. Every year the Co. apportions \$500 for employees who have no marks against them for each month. Special prizes are also awarded men who distinguish themselves in moments of peril.

It is said the deal between the Chambly Power Co. & the M. S. R. Co. is as good as accomplished, that the street railway will lease its present power house to the Royal Electric Co., & it will be kept in reserve in case of an emergency. The M. S. R. Co. now generate its own power, using about 9,000 horse power a day. The cost of producing this is estimated at \$42 per horse power, an annual expenditure of over \$360,000, while, according to reports, the Chambly Co. has offered to furnish the necessary power at \$32 per horse power. This would mean an annual saving of \$90,000.

The M. S. R. Co. has just had 15,000,000 car tickets printed costing \$1,100. The Co. got \$3,000 for the advertising on them.

QUEBEC CITY.—It is stated by H. J. Beemer that probably in 1899 or 1900 the consolidated Quebec St. Ry. & the Quebec, Montmorency & Charlevoix Ry. will extend as far as Murray Bay. The present system will be operated as far as Cape Tournement. When Mr. Beemer transferred the franchise to the present Co. he retained a 2 years' option of the property, which he now insists on availing himself of. It is said the Co. offered \$300,000 to buy out his right, but that he demanded \$350,000, which it would not pay, & now he is about to redeem the property, paying the Co. 10% premium on the cost of construction, & 6% interest on the money invested, as agreed at the time of the transfer. It is understood that the returns of the road have been so large that Mr. Beemer has found no difficulty in selling to another company, which will also take over the Quebec & Montmorency Ry., consolidating the two lines, & running them both by electricity.

Ten years ago, on Feb. 3 last, an electric street railway service was first demonstrated to be feasible by the Union Passenger Ry. of Richmond, Va.

Many railway companies handling heavy suburban business are seriously considering the advisability of adopting electricity as the motive power for such service.

The Maisonneuve Council has obtained permission from the Belt Line Ry. to allow the tracks of the Montreal Street Ry. to cross its tracks at Lasalle street, with the view of extending the service of the latter company to Letourneux street. To complete the scheme the council has to get the sanction of the Railway Committee of the Privy Council to the right of way across the Belt Line tracks.

A considerable amount of money will be spent this summer by the Manitoba Electric Light & Gas Co. & the Street Ry. Co. on their system at Winnipeg. J. Kynoch, of the Canadian General Electric Company, when in Winnipeg recently, said it was the intention to re-organize completely the lines of the street railway & the Gas Co. New generators, new transformers, plants, etc., will be put in & the whole system gone over & improved.

The Canadian Electrical Association will meet at Montreal for its annual convention on June 28, 29 & 30. The programme, while not yet complete in all details, includes besides the business session a trip to Chambly to view the works of the electrical company, a trip on the Park & Island Ry., an evening excursion up the mountain, in order that the members may see the city illuminated, a trip to the works of the Lachine Hydraulic & Land Co., to McGill University, the Street Ry. power-house, etc. It is expected a large number will attend.

A. W. Lee, Route Agent, Seattle, Wash.

G. C. Thompson, solicitor for the Ontario Express & Transportation Co., which became defunct in 1892, says the affairs of the Co. will be wound up at once, & that the employees will be paid their wages in full. The creditors of the Co. will get 8 or 10% of their claims. The shareholders will get nothing; in fact, they will be assessed to pay the claims. It is now 6 years since the winding-up order was granted.

The Canadian Express Co.

The business of this company dates back to more than 50 years ago, when the British-American Express Co. & Cheney, Fiske & Co., established a line of express connections, using the old stage lines, & then these companies consolidated & formed the present corporation. Benj. P. Cheney became the first President, retiring Feb. 1, 1880, & was succeeded by Gilman Cheney, who is now Vice-President. Chas. M. Hays, General Manager of the G.T.R., is President, & Jas. Bryce, Manager. The company's headquarters are at Montreal. The company employs about 2,800 persons. It operates on the Grand Trunk, Canada Atlantic, Lake Erie & Detroit River, Bay of Quinte, Cumberland, New Brunswick, Central, Intercolonial, Quebec & Lake St. John railways, on the Allan & Dominion Steamships, Prince Edward Island, as well as other water lines. Jas. Bryce, the Manager & Chief Executive, has long been identified with express interests, & gives an able attention to his important duties.

Collections by Express.

On April 4 the Canadian & Dominion Express Cos. put into effect an important change respecting collection of notes, drafts, accounts or bills for \$100 or under, not requiring protest, by adopting a low uniform prepaid charge of 10c. on each item for collection, thus greatly benefitting manufacturers, publishers & others having a large number of collections yearly. This amendment applies to all offices of the two companies named, likewise to all American Express Co.'s offices in Canada, as well as their offices in the U.S. common with the Canadian Express Co., but only on such collections as originate in, or are destined to, points in Canada, or such offices in the U.S. as are reached by the Canadian & Dominion Express Co.'s.

When collection has been paid, agent at destination will issue an express money order for the amount of each item collected, making same payable to order of shipper and giving name of person from whom collected as remitter. Unless instructed on wrapper to collect the money order fee of person paying collection, agent will issue money order for amount collected, less the fee for money order.

When collections are carried over the lines of more than one company, the outward prepaid charge will be 10c. for each company carrying, the collecting company also retaining the money order fee. Collections must not be held exceeding 15 days, unless specially authorized on wrapper by shipper. If agent is unable to collect, full explanation of the reasons must be given.

AMOUNT.	Outward Prepaid Charge On Each Item.	Cost of M.O. if Collected.	Total Cost if Collected.
\$4 & under	10c.	3c.	13c.
Over 3 up to \$5	10c.	4c.	14c.
" 5 " 10	10c.	6c.	16c.
" 10 " 20	10c.	10c.	20c.
" 20 " 30	10c.	12c.	22c.
" 30 " 40	10c.	15c.	25c.
" 40 " 50	10c.	18c.	28c.
" 50 " 60	10c.	20c.	30c.
" 60 " 75	10c.	25c.	35c.
" 75 " 100	10c.	30c.	40c.

The Dominion Express Co. announces the opening of a route on the C.P.R. between Slocan Junction & Slocan City, B.C. This is over the Slocan branch of the Columbia & Kootenay railway, which has been recently completed for traffic. Offices are established at Lemon Creek & Park Siding.

The Dominion Express Co. recently received at Victoria, B.C., a box weighing 8,786 lbs.,

from Bethlehem, Pa., containing a steel shaft for the S. S. Commonwealth. Agent Oliver says this is the heaviest single package that ever came to Victoria by express, although he has handled several single consignments that were in a lot of boxes that were greater weight than this. For instance, the Dominion Express Co. brought a shipment of silver coin from London, Eng., to Victoria, which weighed 5 tons. The Albion Iron Works got this shaft for the Commonwealth, & considers it paid to get it by express, as every day the ship had to lie over cost \$300.

Dominion Express Office Signs.

The Dominion Express Co. is equipping its offices with handsome enamelled iron signs, with white letters on blue ground. Some of them are lettered on one side only to place flat on a wall, the others are lettered on both sides, with a flange, so they can be put up projecting from buildings. They are very attractive & much more effective than any painted sign, in addition to which they are more economical, as they are practically indestructible, & are not affected by the weather. The Co. is also using a similar kind of sign, but smaller, for its money order business. All of them were manufactured in Wolverhampton, Eng., & supplied by The Acton Burrows Co., Toronto, who are the sole agents in Canada for the manufacturers.

TELEGRAPHS & CABLES.

The West Indian Cable.

The lack of facilities which has hitherto existed for sending cablegrams direct from England to the British West Indies, without their having to pass through foreign territory, has been removed by the extension of the Halifax-Bermuda cable to Kingston, Jamaica. This extension has recently been completed, & the first messages dispatched across the Atlantic. The West Indian & Panama Cable Co. has up to this enjoyed the undisputed privilege of conveying these cablegrams. The islanders disapproved of their cablegrams to the mother country being forwarded through the United States & Cuba & feared the position in which they would find themselves in the event of England being at war with either of these two countries. They also were dissatisfied at the reluctance of this Co. to facilitate the business of the islands by the reduction of rates, etc., & they decided some 3 years ago to approach the Halifax-Bermuda Cable Co. with a request to extend its cable, via Turk's Island, to Jamaica, the bounty hitherto paid to the West Indian & Panama Cable Co. being offered as an incentive to its doing so. This request, after some consideration & a great deal of correspondence with the Imperial Government, the Co. agreed to, & the Telegraph Construction Co. was commissioned to lay the cable, on the understanding that the work should be completed by the end of January of this year. Despite the fact that the Caribbean Sea is visited by severe storms during the winter months, the agreement was carried through fully a fortnight before the time stipulated in the agreement, & another link between England & her colonial offspring in the West Indies has become an accomplished fact. The Construction Co. reports that the work of laying the cable was carried out without the slightest hitch, & that they were favored by exceptionally fine weather for the season of the year. To facilitate the laying of the cable within the time allowed by the Imperial Government, H.M.S. Britannia, of the Surveying Department, was commissioned to perform the surveying trip, & an extensive survey of the route was made by her early in the winter. The desire of the Co. was to spare no pains nor expense in finding

the best bed in which to lay the cable, thus lessening the fear so common in similar undertakings of being called upon in the future to make repairs to it. The Co.'s steamer The Scotia was employed in the work, Capt. Cato commanding, with Mr. Lucas as Chief Electrician in charge of the laying.

The following table shows the very great reduction in the rates from Eastern Canada by the opening of this route. The first column gives the lowest rates prevailing for many years; the second the rates via the U.S. and Hayti Cable, which was laid in 1897; and the third the rates by the new route via Halifax.

Place.	Lowest rates, 1896.	Completion of U.S. & Hayti Cable, 1897.	Completion of Jamaica ex- tension, Hal- fax-Bermuda Cable.
Antigua...	\$2.19	\$1.59	90 .86

British Guiana.....	2.71	2.22	1.49

Commercial Cable Company.

The annual meeting of the Commercial Cable Co. was held in New York Mar. 7. The revenue for the year from the operations of the cables, after deducting all expenses and reserving \$11,750 to meet depreciation of spare cable, amounted to \$1,200,155.53, as compared with \$1,123,653 for the previous year. The revenue from the land lines, after deducting all operating expenses & setting aside \$60,000 to a land lines depreciation reserve account, amounted to \$645,185.59. The net revenue of the combined systems was \$1,845,341.12, out of which have been met interest on 1st mortgage bonds & debenture stock, \$640,000, & dividends of 7% & bonus of 1% on the capital stock, amounting to \$800,000—a total of \$1,440,000—leaving the balance of net revenue for the year \$405,341.12.

The balance to the credit of revenue at the end of 1896, after adding to the reserve fund \$250,000 invested in U. S. Government bonds, amounted to \$596,678, and it is the intention of the directors to set aside out of the total amount now standing to the credit of revenue (\$1,002,019.36) \$250,000 to be invested in high-class securities as an addition to the reserve fund, which will then stand at \$2,608,329. It is also the intention to set aside \$275,000 as a reserve for the insurance of stations, apparatus and repairing steamer and for special expenditure necessary for the maintenance of the Co.'s property. After providing these reserves the balance of net revenue to be carried forward to the next year will be \$477,019.

Notwithstanding that business on the land lines was very dull during Jan. and Feb., the net revenue of that system for the year fulfilled the expectations of the directors and was more than sufficient to meet the interest on the 1st mortgage bonds and debenture stock, and these fixed charges absorbed only 34% of the total net revenue of the combined systems.

There have been added to the land line system during the year 933 miles of new pole line & 300 miles of wire.

The directors elected for the current year are: J. W. Mackay, J. G. Bennett, G. G. Howland, Col. W. Jay, G. G. Ward, Sir W. C. Van Horne, E. C. Platt, Lord Strathcona &

Mount Royal, C. R. Hosmer, T. Skinner, C. H. Mackay, A. B. Chandler & D. Clarke. The officers are: J. W. Mackay, president; G. G. Ward, Vice-President & General Manager; C. R. Hosmer, A. B. Chandler & C. H. Mackay, Vice-Presidents; E. C. Platt, Treasurer; Albert Beck, Secretary, & J. O. Stevens, Assistant Secretary.

Canada's Telegraph History.

The semaphore telegraphic system was early in use in Canada. A semaphore was established in 1809 between Isle Vert & Quebec City for the purpose of signalling vessels.

The first telegraph wire strung in the Dominion was put up by the Toronto, Hamilton, Niagara & St. Catharines Telegraph Co. in 1847. It was a simple insulated wire. In the same year a line connected Montreal and Quebec. In 1848 Nova Scotia & New Brunswick were supplied with their first telegraphic communication. The first electric telegraph office in St. John, N.B., was opened in Jan., 1849. The first month's receipts were \$56.

The first proposal to the Government to build a telegraphic line across the continent from Montreal to the Pacific Ocean was made by the Atlantic & Pacific Transit Telegraph Co. The proposal was made to the Imperial Government & was recommended by the Governor-General in his speech on the opening of Parliament in 1863. It was not entertained by the Canadian Legislature because that body thought that a post-road ought to be built simultaneously with the telegraph line.

The Montreal Telegraph Co. paid its first dividend on Jan. 14, 1848. On Aug. 17, 1881, it agreed to an arrangement with the Western Union, by virtue of which the latter company guaranteed for 97 years 8% annual dividends. The Western Union in 1867 leased the New Brunswick & Nova Scotia lines.

The charter of the C.P.R. Co., granted in 1881, conferred upon that Co. the franchise of a telegraphic system for general business.

When the Dominion began in 1867, there were within its borders 497 offices, 7,227 miles of line and 9,040 miles of wire. During the year 600,770 messages were sent.—From Alphabet of First Things in Canada, by Geo. Johnson, F.S.S.

Government Telegraph Lines.

The estimates recently submitted to the Dominion Parliament for the fiscal year 1898-9, provide for \$20,600 for telegraph lines as follows:

Land line on north shore of St. Lawrence, Que., to improve roadway, repair line & increase operating facilities generally, between Godbout & Pointe aux Esquimaux \$1,000.00.

Land line on the north shore of St. Lawrence—Extension from Pointe aux Esquimaux eastward, \$15,000.00.

Alternative line connecting Cape Beale & Carmenah with Victoria, B.C., by extending the French Creek, Alberni Line, southwardly to the south-west coast of Vancouver Island, \$4,600.00.

The 1st item is a decrease of \$2,000 as compared with 1897-8, the 2nd item is a decrease of \$4,000, & the 3rd item is a revote. The total appropriation is \$11,600 less than for 1897-8.

VANCOUVER-NANAIMO CABLE.—The C.P.R. Co's S.S. Tartar arrived at Vancouver, April 1, from Southampton, having on board the C.P.R. Co's cable to be laid between Vancouver City & Vancouver Island. The cable was successfully laid on April 6, under the supervision of F. B. Gerrard, of the Commercial Cable Co.'s staff.

Telegraph Office Changes.

GREAT NORTHWESTERN.

Opened: St. Brigide, Que.

Closed: Massawippi, Que.; Notre Dame des Anges, Que.; St. Placide, Que.

CANADIAN PACIFIC.

OPENED:—Bathurst, Ont.; Blairton, Ont.; Hammond, Ont.; St. Polycarpe, Que.

The Western Union Telegraph Co. has declared a dividend of 1¼% payable April 15.

The Train Dispatchers' Association of America will hold its convention in Montreal June 14.

It is said the increases to telegraphers on the C.P.R. under the recent arrangement will amount in the aggregate to \$73,000 a year.

The Dominion Telegraph Co's. guaranteed dividend at the rate of 6% per annum, for the quarter ended March 31, will be payable April 15.

The Manitoba District Telegraph & Delivery Co., particulars of which were published last month on page 20, has been granted incorporation by the Manitoba Government.

The Compagnie Francaise des Cables Télégraphiques has agreed to lay a new cable immediately from Brest to New York, in consideration of an annual subsidy of about \$150,000.

At the recent conference of Colonial premiers in Melbourne, Australia, it was resolved that if Great Britain and Canada contributed ⅓ of the cost of the proposed Pacific cable, Australia should contribute the remainder.

Superintendent Jaynes says the Western Union Telegraph Co. has not abandoned its proposed extension to Victoria, B.C., but that the cable is being manufactured, & will be laid by the time that the land line from Seattle, now under construction, is completed.

The Spanish Government is arranging for communication with Cuba over neutral cables in the event of a rupture of relations with the U.S. This is feasible by way of Halifax, Bermuda & Jamaica, using the new British cable, but the French Co., possessing an unladen cable, offers to connect Spain direct with Cuba within a few weeks. Negotiations with this company are proceeding.

VANCOUVER ISLAND CABLE.—The Western Union Telegraph Co. expects to have its line to Victoria, B.C., in operation by May 1. The line will be constructed via Port Gamble & Port Ludlow. Seven cable connections, ranging from ½ a mile to 17½ miles, or a total of 30½ miles of cable, will be necessary. The longest stretch of cable will be from Port Angeles to Victoria, 17½ miles.

At the last annual meeting of the Montreal Telegraph Co., the assets were stated to be \$2,263,030, the excess over shareholders' capital being \$151,823.85. The contingent fund is \$70,869.11. It was decided that when the contingent fund reaches such a figure as will yield a yearly revenue of \$5,000, that amount shall be divided among the shareholders, which will give 3 additional dividends of about ¼ of 1%. A. Allan, H. Mackenzie, J. Joseph, W. Wainwright, H. Archibald, W. J. Withall & H. A. Allan were elected directors.

A. C. HENRY, Purchasing Agent C.P.R.:—"I am glad to hear you intend bringing out a publication devoted to the railway & shipping interests of Canada. It seems to me there should be a good field for it, & I should consider it a good medium for advertisers wishing to reach those classes."

TELEPHONES.

The Bell Telephone Co.'s Annual.

The report presented at the recent 18th annual meeting in Montreal gives these facts:—983 subscribers have been added during the year, the total number of sets of instruments now earning rental being 30,445. The Co. now owns & operates 349 exchanges & 261 agencies. 35 miles of poles & 703 miles of wire were added to the long distance system in 1897; of these 5 pole miles & 209 wire miles are in the Ontario department, & 30 pole miles & 494 wire miles are in the Eastern department. The long distance lines, now owned & operated by the Co., comprise 16,567 miles of wire on 6,095 miles of poles. Under authority of the shareholders, \$66,500 bonds were sold during the year, the premium thereon being 10%. Continuing the policy adopted in past years, the directors have charged to contingent fund \$150,000, that amount having been expended during the year on construction rendered necessary by the introduction of trolley & other strong current wires, but which has not increased the earning power of the plant.

VOL. I. No. 3.

TORONTO, CANADA, MAY, 1898.

51 A YEAR.

A CHARACTER SKETCH.

The President of the C. P. R.

Sir William Van Horne, President of the C. P. R. Co., is one of those men who make history. It had been the custom of historians (until Knight & then Greenbroke away from it) to tell the story of kings & queens, countries & statesmen, to chronicle wars & battles, treaties & treacherous evasions of them, & then in a supplementary way, as if it were a matter of secondary importance, a chapter that might be skipped, to relate the much more important progress of science, commerce & art.

Sir Wm. Van Horne is not yet known in the politics of Canada: that is to say officially known. The railway of which he is President has at times evoked the eloquence, either in denunciation or commendation, of reasoners & of talkers, & is credited with having at times conduced to the victory of one parliamentary candidate over another, but Sir William has never stepped upon the quarter deck of any ship of state as an accredited pilot. He has not made history in that way. There is always a sufficiency of great minds for this purpose. Van Horne has confined himself to the more practical work of developing the machinery of travel, & as in the nineteenth century the prosperity of a country depends upon its facility of transport, & as its stagnation is usually the result of bad roads & high prices, his services to the Dominion of Canada & indirectly to the British Empire have now passed beyond question.

When the famous Syndicate of 1881 had undertaken to build the C. P. R. through the wilderness on the shore of Lake Superior & through the Rocky Mountains to the Pacific shore, the gigantic nature of their

undertaking may well have appalled them. Railway Frankensteins were they, with the monster their signatures had created before them, & the certainty that unless handled with exceptional skill it would prove as baneful as the creature of Mrs. Shelley's im-

to the roll of Knights Commanders of St. Michael & St. George is a big jump when the gulf has been bridged by personal ability, & the achievement of success in the face of enormous difficulties. Of the smiling incredulity with which mention of the through

route of the C. P. R. from ocean to ocean in 10 years was received, it is not necessary to speak at length. Aladdin's lamp was out of reach, so that the time mentioned was regarded as a pleasant-ry; when the road was opened through to the Pacific in half the stipulated time people elsewhere than in Canada began to ask, who is this Van Horne? Those who knew him in 1881, when he went to Winnipeg to tackle his work, were already satisfied on this point.

But the construction of this via Canadensis is not the feature of its existence that most astonishes reflecting persons. A happy understanding and perfect confidence between bankers & engineers can make light of startling physical difficulties; even the Panama Canal may be built if the bankers hold out; it is the business success of the C. P. R. that supplies the food for wonder to live on. To build a railway is one thing; to create the traffic for it is another. On this point the world requires to be told very little. The annual reports of the C. P. R. speak for themselves, & for the work that has been done. It all looks easy when done, but the number of railways in financial difficulties are silent witnesses to the existence of something more than ordinary capacity in the management of the C. P. R.

"Canada is doing business on a back street," said Van Horne, "she ought to be on a thoroughfare," and he set to work to make one. The "Great Highway to the Orient" is the result. The majority of European & American travellers had a very identical opinion was "out there, somewhere," that China was

SIR WILLIAM C. VAN HORNE, K. C. M. G.

agination. They sought a guiding hand & found Van Horne, of whom even the railway world then knew comparatively little, but who can now felicitate himself on the fact that he is sworn at in many vernaculars. From the pay roll of a Western States railway office

was away off in the East, either 500 or 5,000 miles from India, & that while regular steamers sailed for the latter the former was reached by a ship when she went there. A line of fast steamships of the Atlantic greyhound order from Vancouver to Yokohama (which is now known to be the chief trading port of Japan) gave form to the nebulous ideas that had existed on the geographical position of Japan, & this route continued to Shanghai & Hong Kong, established a commercial highway that, figuratively speaking, bends beneath its weight of business. It has been a refutation of the axiom *ex nihilo nihil fit*, & has driven the pessimist into other fields for mournful incredulity. Japan with its strange incongruities is now familiar in our mouths as household words, & we have realized by observation that China is more Chinese than ever; & by its example the great highway has awakened the ambition of Australia. Enterprise & energy are contagious virtues. If Japan, said Mr. Huddart, why not Australasia, & the regular line from Vancouver to Honolulu & Sydney was the answer, a line which has added to the nautical disturbance of a Canadian harbor which, until the coming of Van Horne, was ploughed only by the keel of the Indian canoe; a figure of speech which must be taken as meant, by reason of the absence of keels on Indian canoes. Thus the back street has been brought into a more business-like condition, but still is short of that condition of a perfect thoroughfare which the untiring ambition of the President of the C.P.R. is working to secure. It is not yet the Regent Street of Eastern traffic, still less the Strand or Oxford Street, but it now actively competes for the best class of business. To further increase its attractiveness & usefulness Van Horne—for the name, thus used now signifies something more than an individual—has urged the establishment of a fast line of steamers across the Atlantic. The St. Lawrence route, he holds to be vastly superior to that by New York; more beautiful, more expeditious, & with a large proportion of smooth-water navigation. Gilbert, in one of his charming operettas, says that "to lay aloft in a howling breeze may tickle a landsman's taste," but ladies are not partial to howling breezes, very seldom lay aloft except in an upper berth, & even the accustomed traveller usually prefers to promenade the deck of a vessel on an even keel. Therefore, says the exploiter of new paths, establish a fast route which will attract American as well as European voyageurs. On the pros & cons of this question it is not our purpose to argue; it is mentioned merely as a branch of the main idea which it has been Sir Wm. Van Horne's desire to impress upon Canada.

This is Van Horne as the world of strangers, seeking a concrete personality of a great enterprise, knows the President of the C.P.R. But there yet remains Sir William as known by his friends & business associates. In the purview of their experience there is Sir William in his office, at his home in Montreal, at his summer house at St. Andrews, N.B., & in the "Saskatchewan"—that is the name of the private car from the rear window of which he has made himself familiar with each section of the many that are comprised in the road from St. John, N.B., to Vancouver, & in which many distinguished persons have travelled "from ocean to ocean;" & concerning his idiosyncrasies when found at headquarters, we may borrow what has already been said elsewhere with reasonable accuracy.

On the second floor of that great, grey, Norman castle-like building, at the corner of Windsor Street, Montreal—a stone's throw, if you can throw a stone that far, below the Windsor Hotel—are the offices of the C.P.R.'s executive. Time was when one door only stood between the visitor & the man whom so many wanted to reach, & when the bolder pushed it open & got ahead of the

more diffident. Now it is another matter. The man who desires to sell a patent corkscrew for opening ginger ale in the dining-car, or has a scheme for crossing to Vancouver Island under the straits, must pass more than one official Cerberus. But assuming him to be one whose business requires the here & now personal consideration of the C.P.R.'s President, he is shown into Sir Wm. Van Horne's room. His first view of that gentleman is a back view. Seated—no, not seated, but astride a peculiar chair, such as no man ever before sat in—before a cylindrical desk, he will see a man of middle height, stout, dark-haired, slightly bald, smoking a cigar & dictating to a secretary at an adjoining table. The sentence finished, this gentleman, using his foot on the ground as a lever, spins his chair round and faces his visitor. If his eye rests on a friend, the usually calm, unreadable countenance lightens up with a smile of welcome, & a cheerful word of recognition having been uttered, an acrobatic movement empties the chair, & Van Horne, settling the cigar more comfortably in his mouth by a rapid movement of his lips, extends his hand to greet his acquaintance. Having seated his friend he seats himself—no, he re-straddles. How he manages that chair no one knows. The unwary who attempt to sit in it are thrown, as surely as if they tried to sit on one of Buffalo Bill's bronchos, but it is as gentle as a lamb beneath Van Horne. Now the visitor is either a friend of the C.P.R. or he is not. Van Horne recognizes no intermediary sentiment. If he be one unsound in faith, then he has to deal with a polite but inscrutable being, who will pleasantly guide the inquirer into mazes of irreconcilable conclusions, from which he can find no outlet. He will obtain the facts, possibly, of which he is in search, but at such angles, so to speak, that he will never be able to put them into shape, & the last stage of that man's understanding will be worse than the first. If he is a friend he will find a mentor to whom all things appertaining to railways, & many other subjects, are familiar, & that which he desires to know will be made clear & easy of comprehension.

Van Horne is thorough. He goes to the root of the matter, & by word & diagram he explains it up to the flower. He is great at the use of the diagram. He is an artist & likes to illustrate. Settling the cigar which has gone out, in his mouth, taking a pencil in his hand & balancing that most peculiar chair, he illustrates his information as he proceeds, occasionally making a dash into figures on a supplementary sheet of paper, until his story & his picture is complete, & the information sought is so plain that he who runs may read. He never thinks it too much trouble to explain. He does not wonder why the question is asked, or why he is asked to answer it. He may decline to give information for reasons which are sufficient to himself, but the "I can't be bothered" plea is never urged; & the lucidity of his explanations is equalled by the extent of his knowledge. Tackle him on what you will & you will find that from personal investigation or from the resources of his library he knows it, probably more about it than his questioner. To nonplus him you must ask him about something that has gone wrong, some false report about the railway; some stupidity of the employees having serious consequences, or some scheme which is intended to "get ahead" of the C.P.R. Then the chair spins round, the acrobatic movement takes place & Van Horne, rubbing the top of his head, drawing heavily at his cigar, paces his room, troubled in his mind & uncertain whether to let fly in western vernacular or to comment on the circumstance with deceptive moderation. Sometimes moderation carries the day; sometimes his opinion is given in language of startling originality. Except when thus put out he is good temper personified. The clerks in the next room hear sud-

den bursts of laughter or continued chuckling as the business is transacted in the President's room. Van Horne is keenly alive to humor, & likes to tell or hear of a good joke. In the once celebrated correspondence regarding a timber limit in the Cypress Hills, a certain member of Parliament informed his correspondent that he could carry out a plan that he had in view were it not that "that old brute Van Horne would not agree to it." Some time after the same member wrote to the C.P.R. office for a pass or some other favor, & Van Horne dictated the reply. The member was informed that the secretary would be happy to comply with his request, but "that that old brute Van Horne would not agree to it."

In his home on Sherbrook Street, Montreal, Sir William is one of the most genial & hospitable of hosts. He is a lover of comforts & of art. In his business he is anxious for the comfort of his passengers, in his house for that of his friends. He is not a bookworm, or a collector of many volumes, but a lover of books, & fanciful as to their make-up. Their contents are the first consideration with him, but their ease of handling & neatness of appearance follow hard upon it. In the low & convenient cases that surround his cosy working room are copies of every procurable work on the Northwest from the time of Charles II. to the present day. He is a connoisseur of Japanese art, of which he has an almost priceless collection, including personal presents from the Emperor, & his pictures hanging here, there & all over the house, are not only to the uninitiated beautiful examples of well-known painters, but also, I understand, meet the approbation of the judges. Several rooms now supply the accommodation that in his former house on Dorchester Street was found ex-necessitate in the one he called his "den." The library already alluded to has solid modern British comfort somewhat etherealized by suggestions of Japan, & here & there of mediæval Europe. A casual glance round shows a pair of rare old Italian daggers, something from Tokio, the latest art publications from London or Paris, a bundle of type-written letters to be signed, or an architect's tracing waiting the experimental corrections of that inevitable blue pencil which so many connected with the President of the C.P.R. regard as the gift of Satan for their persecution. There is enough of each to make the room pleasing to the eye & artistic intelligence, while grateful to the ease of the Philistine. Recent years have added largely to Sir William's stock of paintings, in which are included some of Monticelli, Rembrandt, Labrador & not a few from the newest school of impressionists. Sir William is himself a painter; a self-taught one, & produces not only clever caricatures of his friends, but charming little landscapes of fancy or familiar spots. Some of these you may first meet in the raw, so to say, in the painting room, looking like mad escapades of unruly paint, & afterwards find framed & in their right mind in some corner down stairs, looking as pretty as a picture. There is one landscape which hangs in a corner of his drawing-room easy of access, & which is one of his most successful works. He is fond of showing these paintings of master hands which he possesses, & ready in answering questions about them. When he has taken a visitor around the walls he generally manages to halt him opposite his own landscape & then leave him for a minute, & on his return he usually hears, "This is a very pretty picture," or as one picture collector put it, "This is one of the best pictures in the room; who is it by?" "That," says Van Horne, "is a landscape by a Dutch painter. It is not signed, but it is by a well-known man in some circles, some Dutch name." Sometimes he does & sometimes he does not inform his visitor that the Dutch name is W. C. Van Horne.

Failing to find Sir William in his study you

will, if your business or intimacy warrants, find yourself shown or directed upstairs to his painting room, or to the billiard room. If, however, you are not a brother of the brush you will not be much interested in the former, unless perchance the occupant has some pictorial joke on hand, such as the painting of a picture that may be looked at any way you like with equal satisfaction, or a political allusion conveyed in a picture of eminent politicians in a poker duel. But in the billiard room the interest is more general, for your host will be equally ready there to play with you at billiards, chess, or anything else you may suggest in which skill is the principal factor. To chess Sir William is very partial; the nature of it, that of devising more ingenious plots than one's opponent, has peculiar charms for him, & when his schemes like those of Burns' mice gang aft a'glee, the resulting expletives are always directed against himself. In playing chess or billiards he is in serious earnest, reserving the jokes & stories for between times & afterwards; only does he relapse when some stroke at billiards is too obviously unexpected to permit even his countenance to play hypocrite over the accidental success; & sometimes he does fluke like the —. Smoking, laughing & playing are eminent manufacturers of thirst, & in the billiard room the strict observer of seasons may remain thirsty in Lent—if he insists upon doing so.

It is not only in Sherbrook Street that Sir Wm. Van Horne's qualities as a host are known; perhaps not so well known as in his car. Not infrequently when the President makes his periodical tours of inspection the commodious "Saskatchewan" is filled with friends & officials; of the road; those of the one class happy in anticipation of viewing the prairies & the mountains, the others heavy with thought of the business that brings them from their homes. Straddled across a chair at the rear window of the car, the eye of the master surveys the work of the combination of employees, while muttered conferences with the engineer or superintendent of the division are heard as bridges are crossed or tunnels passed. Suddenly a cry of "Whoa, Jim!" bursts over the hum of conversation, & is answered by the important functionary of that name, who enters bearing a well-filled tray of glasses & other vessels & a box of cigars. When all is plain sailing on the road, & easy & familiar sections are being traversed, the relaxation of mind is accompanied by such athletic or mental freaks as may be uppermost in the President's mind. Speculations as to what may be the condition of some particular matter at that moment in Montreal, New York, or elsewhere, opinion to be supported by wager, & correctness to be settled by telegraph from the next station, alternate with trials of agility about the seats of the car, or competitions for pre-eminence in feats which no one has tried since boyhood. When the stations are reached & the tourists are wandering about inspecting novelties; it may be Red Indians, otherwise colored by dirt & paint, piles of collected buffalo bones, relics of the hunters age of the country, or what not; the officials are talking, frowning or smiling, questioning or answering until the "all aboard" is called & the car life is resumed. When the shades of night have fallen upon the twin streaks of steel, & when at a central point friends drop in during the evening to call upon the party, the business of the day is for the moment forgotten & pleasing recreation takes its place.

G. A. Harris, Vice-President of the Ottawa Forwarding Company, died April 5, aged 47. For many years he was Manager of the Company. He was also a director of the Ottawa Transportation Co., & conducted an extensive wood & coal business.

RAILWAY APPOINTMENTS, &C.

CANADIAN PACIFIC.—H. B. Spencer is appointed Superintendent of the Chalk River Section, of the Brockville, Prescott & Eganville branches, & of Ottawa Terminals, with office at Ottawa. Until about two years ago, when he resigned to take the management of the Hull & Aylmer Electric Ry., he was Superintendent of all lines east of Chalk River on the Eastern Division.

J. E. A. Robillard is appointed Superintendent of the Ottawa Section, & of the St. Lin, St. Eustache and Labelle branches, with office at Montreal. When H. B. Spencer left the C.P.R., as above mentioned, Mr. Robillard, who was Chief Dispatcher at Ottawa, succeeded him as Superintendent of all lines east of Chalk River on the Eastern Division.

Montreal Terminal District is extended to include the line from Outremont to Windsor St. Station, including St. Luc Jct., Montreal Jct. & Windsor St. stations & yards, & W. J. Singleton, Superintendent of Montreal Terminals, having been granted leave of absence, D. R. Bell, heretofore Trainmaster at Toronto, is appointed Acting Superintendent of Montreal Terminals, reporting to the General Superintendent of the Eastern Division.

F. G. Martyn, heretofore Trainmaster at Smith's Falls, is appointed Trainmaster west & north of Toronto, including Toronto terminals; office, Toronto Junction.

W. Hassard, heretofore Conductor between Toronto & Hamilton, is appointed Trainmaster, Smith's Falls, Havelock & Toronto Sections, & M. & O. Branch; office, Smith's Falls Junction. Trainmen and yardmen will report to trainmasters.

J. W. Harkom is appointed Assistant to the Mechanical Superintendent, with office at Montreal. Up to the time of this appointment he was Master Mechanic of the G.T.R. at Montreal.

GRAND TRUNK.—T. McHattie, Locomotive Foreman at London, has been appointed Acting Master Mechanic of the Eastern Division, with headquarters at Montreal, in place of J. W. Harkom, Master Mechanic, who has gone to the C.P.R. A. A. Maver is appointed Locomotive Foreman at London, vice McHattie promoted, & W. Turnbull is appointed Repair Shop Foreman at Toronto, vice J. McGrath, who is appointed Erecting Shop Foreman at Stratford, Ont., vice Maver transferred.

J. A. Sheedy, formerly connected with the Illinois Bridge Co., Chicago, is appointed Master of Bridges & Buildings for the Middle Division, vice W. Crawford resigned; office at Toronto.

The headquarters of H. Ferguson, General Roadmaster, have been transferred from London to Toronto.

GRAND TRUNK & WABASH.—J. C. Sander-son is appointed Inspector of Bridges & Buildings, including turn-tables, water service, &c. Headquarters St. Thomas, Ont.

LAKE ERIE & DETROIT RIVER.—Owen McKay has been appointed Engineer, with office at Windsor, Ont., succeeding the late Jos. de Gurse.

TILSONBURG, LAKE ERIE & PACIFIC.—A. L. Baker is appointed General Freight & Passenger Agent. Headquarters, Tilsonburg, Ont.

Commencing May 16, L. E. Tillson will resume his duties as travelling freight & passenger agent for the L. E. & D. R. R., & between Port Stanley & Cleveland. He will have charge of all territory in Canada west of Toronto, & also the excursion business on all points on the G.T.R., C.P.R. & Wabash to Port Stanley.

I.C.R. Mechanical Superintendency.

F. R. F. Brown has retired from the mechanical superintendency of the Intercolonial, & it is stated he will open an office at Montreal as consulting engineer. He has been with the Intercolonial since Nov., 1892, & was formerly for 6 years Mechanical Superintendent of the C.P.R. G. R. Joughins has been appointed to succeed Mr. Brown. Until recently he has been Superintendent of Motive Power of the Norfolk & Southern Ry. at Berkley, Va. Some 8 or 10 years ago he was in the employ of the G.T.R.

The Railroad Car Journal, New York, says: While the Intercolonial is to be congratulated on having secured the services of Mr. Joughins, it is with regret we record the departure from the U.S. of one of our most able & progressive railroad mechanical officials. He has an admirable record in railroad service, & has done some excellent work as a member of our railroad clubs, & of the Master Car Builders' & Master Mechanics' Associations. To his investigations & experiments is due, in no small degree, the evolution of car work which is materializing in the extensive & growing use of steel cars of large capacity. This development dates from January, 1894, when he read before the New York Railroad Club his now historic paper on 'Metal Underframes for Freight Cars,' in which he recited the results of a test of metal underframes, & drew the attention of the mechanical world to the possibilities of steel in this respect."

Personal Mention.

G. H. Ward has been appointed Road Foreman for the Lake Manitoba Railway & Canal Co's line.

A. A. Strout, of Portland, Me., Solicitor for the G.T.R. for Maine, New Hampshire & Vermont, died at the end of April.

Mrs. D. B. Lindsay, wife of the General Passenger Agent of the Temiscouata Ry., died at River du Loup, Que., April 30.

H. Varnes, of the Grand Trunk shops at Lindsay, Ont., has gone to Revelstoke, B.C., as foreman in the C.P.R. car department.

C. B. Smith, Assistant Professor in civil engineering, has resigned his position in McGill University, Montreal, and has been given a position in the engineering department of the C.P.R.

The historic silk rug formerly the property of the Shah of Persia, which was secured by the celebrated rug collector, Levien Babayan, of Constantinople, has been sold to Sir William Van Horne for \$2,000.

Superintendent Murray, of the C.P.R., Western Division, who has been on sick leave, recently returned to Winnipeg from a visit to his brother, the celebrated Dr. John Murray, of Edinburgh University.

"Kit" Carson, who was formerly Traveling Passenger Agent of the C.P.R. in San Francisco & the Kootenay, was recently, it is said, elected Mayor of Wrangel. He is running an hotel under canvas there.

J. B. McKay, formerly in charge of the construction of the Niagara Falls Park River Ry., is now engaged in the construction of the Sticken & Lake Teslin Ry., with headquarters at Telegraph Creek, B.C.

Sumner Hopkins, Commercial Agent of the G.T.R. at Detroit, Mich., has been appointed Manager of the G. T. Despatch, with office at Detroit. W. K. Evans has been appointed Accountant of the G. T. Despatch at Detroit.

A. Branin, who has been Assistant Superintendent of the Bellingham Bay & British Columbia Ry. since 1891, has resigned, & is succeeded by W. H. Lawson, heretofore Cashier of the Bellingham Bay Improvement Co.

H. G. M. Mcken, the widely known & popular railway agent, latterly of Toronto & formerly of Winnipeg, in his new position as first European Traffic Agent of the Great Northern Ry., has opened offices at 122 Pall Mall, London.

Owing to the amalgamation of the stores & mechanical departments of the Intercolonial, J. H. McMackin's services will be dispensed with after May 6, his work as an issuer of stores being added to that of J. M. Cameron, clerk in the Mechanical Dept.

S. S. Russell, Secretary to Superintendent Fitzhugh of the G.T.R., Middle Division, at Toronto, having been appointed Chief Clerk to Superintendent Jones, of the Southern Division, is succeeded by E. Walton, who has been stenographer to Chief Clerk Mullins in Mr. Fitzhugh's office.

C. W. Graves, Canadian Agent of the Wisconsin Central, has been appointed Travelling Freight & Passenger Agent of the Great Northern, with headquarters at Toronto, a position formerly held by H. G. McMacken, now in charge of the London, Eng., office of the Great Northern.

W. J. Gilkerson, formerly Travelling Passenger Agent for the G.T.R., has been appointed Soliciting City Passenger Agent in the Toronto office on the staff of City Passenger & Ticket Agent Keating, of the road. S. O. Perry, City Ticket Agent of the G.T. at St. Thomas, has resigned, & A. S. Overend has been appointed in his place.

It is rumored J. E. Price is to be made Superintendent of all the I.C.R'y. in Nova Scotia, east of Springhill, with headquarters at Truro. He is now Superintendent from St. John to Halifax. The change would take from him the charge of the road from Springhill to St. John & give him the Oxford & New Glasgow line, & the Eastern Division, now superintended by Mr. Campbell.

Edward Pennington, heretofore Superintendent of the Minneapolis, St. Paul & Sault Ste. Marie, recently appointed General Superintendent, has made the following appointments: D. Willard, Superintendent of Wisconsin & Peninsular divisions, including Minneapolis Terminals, with office at Minneapolis; F. C. Batchelder, Superintendent of Minnesota Division at Enderlin, N.D.; the offices of assistant superintendent of the Wisconsin, Peninsular & Minnesota Divisions have been abolished.

Cornelius Sheehy died at his residence, Detroit, Mich., April 27 after a few days' attack of pneumonia. Mr. Sheehy came to Canada from Ireland when young & entered the service of the Northern Ry., of Canada as a brakeman. He gradually worked his way up, & 8 years ago became district passenger agent of the Canadian Pacific at Detroit, resigning about a year ago. He was a stockholder in the Kingston & Pembroke Ry., & was also largely interested in Eastern Canadian iron manufactories.

The investigating governors of the Royal Canadian Humane Association have decided to award the Association's parchment to John Meyer, the colored G.T.R. porter, who worked very hard to get the late Engineer Hutchinson & Fireman Clark out of their engine cab at the time of the fatal accident at Burlington, Ont., on March 1 last. Mr. Meyers has been presented by the Brotherhood of Trainmen & Locomotive Engineers with a gold locket & chain, suitably inscribed, as a mark of appreciation of his heroic conduct.

C. Shields, General Superintendent of the Chicago Great Western, has resigned. Mr. Shields was one of the first C.P.R. dispatchers at Winnipeg, & was afterwards superintendent at Moose Jaw. He followed J. M. Egan from the C.P.R. to the Great Northern as Superintendent of Construction, again following Mr. Egan to the Chicago Great Western, of which he became Asst. Gen. Supt. in 1888, resigning in 1891 to take the general superintendency of the Great Northern in 1891 & returning to the Chicago Great Western in 1893.

W. T. Jennings, C.E., whose report on the Stikine-Teslin route appeared in our March issue, is a native of Toronto. His father was a well-known clergyman of the Presbyterian Church here. He was born May 19, 1846, & educated at the Model Grammar School & at Upper Canada College. He began his studies of engineering under Mr. Molesworth, C.E. In 1870 he entered the engineering service of the Great Western Ry., subsequently becoming connected with the Dominion Government railway service, & still later joining the staff of the C.P.R. In 1890 he was appointed City Engineer of Toronto, but, much to the regret of those who have the true interests of the city at heart, he threw it up after serving two years. Brief as the time was, he dealt with some of the largest administrative problems that have ever come before the citizens.

EQUIPMENT.

Equipping With Safety Appliances.

There probably is nothing more important in railway enterprise at the present time than the efforts which are being made by the various railway companies to apply the most modern safety appliances to their rolling stock, the most important of which are probably air brakes & automatic couplers, & the importance of both can hardly be overestimated. The loss of life & property which has resulted from the absence of apparatus of this character in the former experience of railroad men, & the general public, can only be considered as abnormally large; & it would be difficult to make an estimate of the many thousands of brave men who have come to an untimely end by being crushed to death in coupling & uncoupling cars equipped with the old-time link & pin coupler, which should long ago have been abandoned & buried as one of the antiquities of railway practice.

The air brake as a safety appliance is very thoroughly recognized, & the Governments of several countries are enforcing its application to all rolling stock; & while it may for the present mean for the various railways an outlay of considerable funds, there is little doubt that it will prove to be an investment of great profit & appreciable gain; as in addition to enhancing the safety of their property it practically increases the capacity of the roads by making it possible to increase the schedule, or time, in which trains can be safely handled & properly controlled. Freight trains are now being conveyed over many of the principal roads at a speed only known as passenger schedule in days gone by, simply from the fact that they can be controlled & handled with absolute safety.

It is just possible that comparatively few of the many thousands of the travelling public fully appreciate the advantages of the various appliances for their safety & comfort which have been worked out & successfully applied to the modern railway vehicle. The sleeping car, with its conveniently arranged compartments and dressing rooms, & the vestibule connection between cars, making the transit from one car to another perfectly safe by connecting the cars in such a manner that the several cars become practically one. The old-time pump in the washroom has been supplanted by a water service, under air pressure, which is practically equivalent to ordin-

RANGES

Made to order—of any dimension—to suit any space—for use in dining cars, steamboats, yachts, etc.

Our Heavy Steel Plate Ranges are noted for their superior excellence in every detail—they give unfailing satisfaction.

Send for our catalogue, and if it shows nothing to suit your special need make use of our long experience and unequalled facilities and let us give you an estimate on a special order.

Ranges, Steam Cookers, Heavy Kitchen Furnishings for Hotels, &c.,—let us provide them all.

WE GUARANTEE SATISFACTION.

The GURNEY FOUNDRY COMPANY, Limited, Toronto

closed a contract with the Pontiac & Pacific Jet. Manager, who has been running his trains since January last lighted with acetylene to light the Gattineau Valley trains. The Canada Atlantic has asked us to make an offer to light the cars on its two lines.

Twelve hundred freight cars will be equipped at the C.P.R. shops in Winnipeg this year with Westinghouse air brakes. This will reduce the running time of a freight train of these cars between Winnipeg & Fort William by fully one-third, as there is little time lost in slowing up a freight with an air brake attachment as compared to when stopped by the trainman. The freedom from accidents is also a great consideration.

The Canadian Pacific will build at its Perth, Ont., shops 300 flat & 500 box cars for delivery between now & August. They will be of 60,000 lbs. capacity & 35 ft. long; the flat cars will be 8 ft. 6 in. wide over frames & 4 ft. 2 in. high, & the box cars 8 ft. 11 in. wide over frames & 7 ft. 2 in. high inside. All cars will have M.C.B. 4 1/4 in. x 8 in. steel axles, C.P. standard bolsters, Westinghouse air brakes, M.C.B. cast-iron journal boxes & journal box lids, C.P. standard five-coil springs & 30-ton trucks & cast-iron wheels to weigh 600 lbs. each. The cars are now being turned out at the rate of 8 flat & 6 box cars a day.

FINANCE, REPORTS, ETC.

Canadian Pacific Fixed Charges.

Following is a statement of the fixed charges as presented with the last annual report :

FIXED CHARGES 1897.	
£7,101,500	1st Mortgage Bonds 5% ..\$1,749,931.66
\$7,000,000	Province of Quebec, 4 1/2% .. 283,500.00
£1,100	North Shore 1st Mortgage 5% .. 267.66
£200,000	Canada Central and Mortgage 6% .. 58,400.00
	Canada Central 1st Mortgage Sinking Fund.... 51,100.00

Financial Notes, &c.

CALGARY & EDMONTON RY. net earnings for Mar. were \$21,310.33, as against \$6,740.86 for Mar., 1897.

DOMINION ATLANTIC receipts for the 3 mos. to the end of March were \$98,699, against \$93,002 for corresponding period of 1897.

DULUTH, SOUTH SHORE & ATLANTIC, net earnings for the 2 mos. to the end of Feb. were \$61,373, as against \$30,653 for corresponding period of 1897.

HAMILTON & NORTHWESTERN.—It was recently announced in England that the directors of the G.T.R. had decided to give to the holders of the Hamilton & Northwestern 6% 1st mortgage bonds maturing on June 1 next the option, until May 10, of accepting £98 of perpetual 4% consolidated debenture stock for each £100 bond, in addition to the ½ interest of 3% payable on June 1. The debenture stock offered will be entitled to the 1st quarter's interest, payable on July 14. The Co.

enable it to make some necessary repairs on the roadbed which the receiver is not authorized to pay out of earnings. Considerable improvements are necessary to the road this year & if some such arrangement as this is not made, it is regarded as improbable that these can go on.

MICHIGAN CENTRAL.—At the annual meeting of the stockholders at Detroit, Mich., May 5, the report of the directors showed that, while the receipts of 1897 fell somewhat below those of 1896, the net earnings were increased by the reduction of operating expenses. After paying the Canada Southern its proportion of net income, \$282,402, & a 4% dividend, the balance to the good is \$45,402. The annual report of the Lake Shore & Michigan Southern for 1897 showed net earnings of \$6,755,231, an increase of \$287,428; 6% dividends paid, \$2,967,990; surplus earnings, credited to income account, \$777,269.

MINNEAPOLIS, ST. PAUL & SAULT STE MARIE, gross earnings for the 2 mos. to the

Confederation in 1873, \$3,144,000 spent by the province in railway construction was charged against it, & that that debt had been paid. Ontario had expended only \$8 a head towards railway construction since Confederation, but had received from the Dominion for that purpose \$14 a head. On the other hand, P.E.I. had spent \$28 a head in building railways, but had only been aided to the extent of \$5 a head by the Dominion. Sir Richard Cartwright asked if P.E.I. would take back the Island railway as a free gift. Mr. Martin replied that if Ontario would take the canals P.E.I. would take the railways. It was often said that Government railways should be self-sustaining, but the revenues from the canals yielded far less than the railways in comparison with the expenditure upon them.

QU'APPELLE, LONG LAKE & SASKATCHEWAN Ry. & Steamboat Co.'s net earnings for Mar. were \$494.47, as against a loss of \$1,529.76 for Mar., 1897.

N. S. Ry. Co. N.E.C. 420

STONE ARCH ACROSS VERMILLION RIVER, CANADIAN PACIFIC RAILWAY.

will allot, at the price of £102 10s. per £100 of debenture stock, any extra amounts of that stock required by bondholders to enable them to register even amounts.

THE KINGSTON & PEMBROKE RY. has secured legislation to reduce its capital stock, & to authorize issue of 3% bonds in place of the 6% bonds now in the possession of bondholders. It is intended by means of preference stock to create a fund for wiping out liabilities to the amount of \$150,000, and for paying the arrears of interest on the 6% stock.

THE MANITOBA & NORTHWESTERN RY. owes Manitoba \$1,185,000 for which the government holds as security a lien upon 700,000 acres of the Co.'s lands, which cannot be sold by the government at a less price than \$2.50 an acre. Of this debt \$124,000 is for compound interest. The Co. wants the government to take over 590,000 acres at \$2 an acre and extinguish the debt, leaving the Co. 110,000 acres to sell. This arrangement would assist the Co. in re-organizing & would

end of Feb. were \$516,590, against \$417,272 for corresponding period of 1897.

ONTARIO & QUEBEC RY.—Interest due on June 1 on the 5% debenture stock of this Co. will be paid by Morton, Chaplin & Co., 6 Princes Street, London, Eng., on & after that date. The ½ interest on the shares at the rate of 6% per annum will be paid on June 1 at the Bank of Montreal, in Montreal, or by Morton, Chaplin & Co. in London, at the option of the holder. The debenture stock transfer books closed in London & Montreal on May 3, & the share transfer books closed in Montreal on the same date, all books re-opening on June 26. This line is leased in perpetuity to the C.P.R. for a rental sufficient to pay interest on the debenture stock & 6% dividend on the share capital.

PRINCE EDWARD ISLAND RAILWAY. In the House of Commons recently Mr. Martin repudiated a charge that P.E.I. had paid nothing towards railway construction. He claimed that at the time the Island joined

THE QU'APPELLE, LONG LAKE & SASKATCHEWAN Ry. & Steamboat Co. has issued its accounts for the year ended Nov. 30 last. The gross earnings were \$63,785; working expenses, \$60,715; net earnings of \$3,070, these figures comparing with \$40,869, \$41,856, & \$8,013, respectively, in the previous year. The increase in expenses "is attributable mostly to expenditure under the heading of maintenance of way & structures, which includes renewal of ties, repairs of track & roadbed, & snow expenses, which latter were very heavy during the winter of 1896-7. The road may now be considered to be in fairly good condition, although it has been found necessary to contract for a considerable number of ties to be put in during the coming summer."

QUEBEC CENTRAL net earnings for 1897 were \$139,993, against \$128,311 for 1896, & for the 2 mos. to Feb., 1898, \$2,858, as against \$13,262 for corresponding period of 1897.

CONSTRUCTION & BETTERMENT.**Montreal & Ottawa Railway.**

This line, which is leased to the C.P.R., leaves the Montreal & Toronto line at Vaudreuil 23.7 miles west of Montreal. The first portion, from Vaudreuil to Rigaud, 17 miles, was built about 4 years ago, with an extension to Point Fortine 7 miles. In 1896 the line was extended from Rigaud to Alfred 29 miles, & during last year this work has been going on on the extension to Ottawa. It is now nearly completed, & is expected to be opened for passenger traffic early in July, when express trains are expected to make the time between Montreal & Ottawa in 2½ hours with the greatest security and comfort. The distance from Windsor Street Station, Montreal, to the Central Station, Ottawa, is 111 miles, being 5 miles shorter than any other route. We are indebted to the Manager of Construction, R. W. Leonard, for the following particulars:

The line passes along the south shore of the Ottawa River & Lake of Two Mountains from Vaudreuil to Hudson, passing the summer resorts at Como & Hudson, thence somewhat inland through a beautiful agricultural country past Rigaud & Vankleek Hill to the celebrated mineral springs and summer resorts at Caledonia and Plantagenet, from which latter point the Nation River is navigable for small steamers up to Casselman on the C.A.Ry., a distance of about 20 miles. To the south of Navan & Blackburn is the enormous peat swamp known as the Mere Bleu, extending southward to Eastman Springs on the C.A.Ry.

The stations on the line, with distances from Montreal, are as follows:

Vaudreuil	23.8 Miles.
Little River	26 "
Isle Cadieux	28 "
Como	31 "
Hudson	33 "
Hudson Heights	33 "
Lavigne	37 "
Rigaud	41 "
St. Eugene	49 "
Stardale	54 "
Vankleek Hill	58 " Crosses Hawkes-
bury Branch C.A.Ry.	
McAlpins	61 "
Caledonia Springs	66 "
Alfred	70 "
Plantagenet	75 "
Pendleton	80 "
The Brook	86 "

Hammond	89 Miles. Crosses Rock-
land Branch C.A.Ry.	
Leonard	95 "
Navan	99 "
Blackburn	105 "
Ottawa	111 " Central Station.

The maximum grades are 0.80 per 100 or 42 feet per mile, & the curves are, with very few exceptions, not sharper than 1 degree. It is laid throughout with 73 lb. rails with flat head (section similar to that adopted by Am. Soc. C. E.). Many of the sidings at flag stations are fitted with patent switches & frogs, leaving the main line absolutely unbroken at these points, & making it particularly safe for fast running.

The principal structures are, Nation River Bridge at Plantagenet Springs, 4 steel spans of 100 feet on masonry substructure, Green's Creek, 30 ft. masonry arch culvert, about 4 miles from Ottawa; Rideau River Bridge at Ottawa, 8 spans half-deck plate girders of 65 feet on masonry substructure. There are many other smaller steel or masonry structures, timber being used only in smaller culverts & temporary work.

The line is fenced throughout with Page wire fence, posts set 25 feet apart.

Grand Trunk Improvements.

Chief Engineer Hobson informs us that the erection of the superstructure of the Victoria Jubilee bridge is progressing very well. Five spans at the west end are practically completed, excepting the back stringers, & the 1st span at the east end is in progress. As previously mentioned, the pier masonry has been finished.

General Manager Hays writes us:—"In addition to the reconstruction of the Victoria bridge, we have in progress & about completed the work on the Richelieu River bridge at Belœil, P. Q., a structure of 7 spans. We are also renewing the bridge over the River Rouge, near Coteau Junction, as well as preparing foundations for replacing the bridge across the Grand River (4 spans) east of Paris, Ont. All of these bridges are new & modern structures.

"Preparations are being made for putting in the foundation for an elevator at Midland, which will be erected under the auspices of this Co. Similar arrangements are being made at Goderich for the erection of an elevator there by the people of Goderich in connection with this Co.'s facilities.

"We propose to lay, during the course of

the next 2 or 3 months, some 80 miles of new 80-lbs. steel rail, on the southern division of the line, between St. Thomas, Niagara Falls & Fort Erie.

"Bids have been taken & contract made for the construction of an office building for our Point St. Charles shops, Montreal, to be located on the present shop grounds at the Congregation Street entrance. This will be a commodious structure, & will provide office rooms for the Superintendent of Motive Power, the master mechanics, & their respective staffs.

"There is also under construction at Niagara Falls, on property leased from this Co., a Railway Y.M.C.A. building, to the cost of which this Co. has contributed, & which will be utilized primarily by G. T. employees. A similar building is also under construction at Elsdon Station, Chicago, Ill."

Superintendent Jones, St. Thomas, Ont., writes us:—"We are now engaged in laying the first of the 80 miles of new steel it is the intention to put down this summer. Men are working westward from Niagara Falls toward Welland Jct. & St. Thomas. A ballast train has been employed & will continue throughout the season."

Chief Engineer Hobson informs us that the Belœil & Rouge River structures are ordinary deck truss bridges. The Belœil one consists of 6 fixed spans of 155 ft. each, with a draw span of 149 ft. the total length in all of the bridge being 1,107 ft. It is a single track structure. The River Rouge bridge, near Port Union, is a double track structure, consisting of one 135 ft. span.

Stone Arches on the C.P.R.

The view on page 63 shows the stone arch across the Vermillion River on the C.P.R. Sault Ste. Marie Branch. This structure has 1 span of 50 ft. & 4 of 20 ft., having a height of 36 ft. Chief Engineer Peterson, to whom we are indebted for the photograph, writes: "We have adopted stone structures at a good many of our crossings, instead of iron, as we find that by building these structures under a rubble masonry specification they can be built as cheaply as iron, besides being much more substantial, & while being as cheap, & in some cases cheaper, are much more economical, as they do not require painting, special floors or any repairs. A structure on the same general lines, but very much larger, is being built this year across the Kaministiquia River, west of Fort William."

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

Railway Construction in Manitoba.

From a railway point of view, the recent session of the Manitoba Legislature was the most important for many years, provision having been made for the extension of the Dauphin line to the great Saskatchewan River, for a line from Winnipeg to the Lake of the Woods, or Rainy River, to meet the Ontario & Rainy River Ry., thus providing an alternative line to Lake Superior; & for a 50-mile extension of the Northern Pacific system. Opposite the first page of this issue is a recent map of Manitoba, which will be found convenient to refer to in reading what follows here:

The Lake Manitoba Ry. & Canal Co.'s road, popularly known as the Dauphin line, runs from Gladstone on the Manitoba & Northwestern Ry., 35 miles northwest of Portage la Prairie, though the latter town is really its starting point as it has running powers over the M. & N.W., and runs to Sifton, 101 miles from Gladstone, near the west side of Lake Dauphin. From Sifton, connection is made with Lake Winnipegosis by a line of 23 miles, as shown by a dotted line on the map. The Dauphin line has done remarkably well, the Manitoba Government not having been called on to pay any of the interest on the bonds it guaranteed. The Legislature has authorized the Government to aid the Co. to extend its line from a point north of Sifton, northerly or northeasterly to the Great Saskatchewan River, which will probably be reached in the vicinity of the Pas, an approximate distance of about 140 miles from Sifton, by guaranteeing the principal & interest of the Co.'s 1st mortgage bonds for \$8,000 a mile, the bonds bearing 4% interest & maturing in 30 years, & by exempting the Co. from taxation for the same period, the bonds & interest to be a 1st mortgage on all the Co.'s property on the line. As security for payment of interest the Co. gives the Government a lien on 2,133 acres of its land grant inside the Province, for every mile built outside of Manitoba. Out of the land grant to be earned by the railway, the Co. is to convey to the Province 256,000 acres, for which the Province is to release its claims against the Hudson's Bay Ry. Co. & the Winnipeg & Great Northern Ry. Co., for bonds of the Province issued in 1886, to build some 40 miles of the Hudson's Bay Ry. from Winnipeg. In discussing the matter in the Legislature, Premier Greenway referred to the steps being taken in the Dominion Parliament to amalgamate the Lake Manitoba Ry. & Canal Co. with the Hudson's Bay Ry. Co., now known as the Winnipeg & Great Northern, & pointed out that the extension of the Dauphin line to the Saskatchewan will really be an important section of a direct line to Hudson's Bay, & will open up a very rich agricultural district, the Swan River Valley, in which every acre of homestead land will be taken up by July 1. It will also traverse the Carrot River and Red Deer districts.

J. H. Ross, Commissioner of Public Works in the Northwest Territorial Government, in addressing his constituents at Moose Jaw early this month, said W. Mackenzie had assured him that Prince Albert would be reached within two years & Hudson's Bay within four.

WINNIPEG TO LAKE SUPERIOR.

The much talked of proposal for the Manitoba Government to aid in the construction of an air line to Duluth has been abandoned in favor of another line to Thunder Bay. Premier Greenway says that from a commercial standpoint he was in favor of the Duluth route, but that as a considerable portion of the line would be in U.S. territory, it had been found impossible to secure absolute control, so that the maximum rates of freight provided for should be maintained. The Legislature has authorized the Government to aid

the Manitoba & Southeastern Ry. Co. to build, as the first link, a line southeasterly from Winnipeg 80 miles, to near Whitemouth Lake in township 4, range 14, east of the principal meridian & thence to the Lake of the Woods, or to near the mouth of Rainy River. The same bonus & exemption are given as to the Dauphin line above mentioned. Whitemouth Lake has been selected as a common point from which the line can run either across the narrows of the Lake of the Woods, entirely within Canadian territory, or go round the southwest corner of the Lake of the Woods, passing for some 35 or 40 miles through Minnesota. From Whitemouth Lake to Lake of the Woods is about 25 miles, & to the mouth of Rainy River about 60 miles, making the distance from Winnipeg to the Lake of the Woods by the Canadian line 103 miles, & by way of Minnesota 140 miles. It is not likely the line will go by way of Fort Frances, which is near Rainy Lake, as the most direct route is to keep north of Rainy Lake. The intention, of course, is to connect with the Ontario & Rainy River Ry. which is projected from Lake Superior westerly. In the event of the Government requiring the Co. to construct the line to a point on Rainy River, it may similarly bonus the portion of the line in the U.S., taking as security a mortgage on the line within Manitoba.

Some 50 or 60 miles from Winnipeg the line will traverse a district which will furnish a large supply of cordwood, & the Co. is to bind itself that, during the term of the guarantee, the rates on cordwood in car lots of a minimum of 30,000 lbs. to points on its line shall not exceed as follows per 100 lbs:

25 miles or less.....	2½ cents
50 " "	3 " "
75 " "	3½ " "
100 " "	4 " "
150 " "	4½ " "
200 " "	5 " "

On pine & spruce sawlogs for 150 miles, or from the point where the railway touches Rainy River, to Winnipeg, the rate is not to exceed \$2.50 per 1,000 feet, board measure. Mr. Greenway contends this will transfer the manufacture of lumber from Keewatin & Rat Portage to Winnipeg, as the logs used at the former points come down Rainy River, & it costs 75c. a thousand feet to raft them across Lake of the Woods. He also claims that in Winnipeg the offal will pay for the cost of manufacturing, & points out that lumber can be distributed from Winnipeg to prairie points at a less rate than from Keewatin.

In connection with this guarantee of rates Mr. Greenway says he has not been entirely successful, & that he has not been able to make a bargain which includes all that would be necessary to secure the through line to Lake Superior. This refers to the proposal for a wheat rate of 10c. per 100 lbs. from Winnipeg to Lake Superior.

When this was written (May 14) Mr. Mackenzie was in Winnipeg arranging for the work to be gone on with. T. Turnbull, C.E., who has been in charge of one of the survey parties for the Toronto-Sudbury line under H. Lumsden, C.E., has gone west with another engineer, Mr. Bruce, & they will have charge of the surveys, etc., for both the Dauphin extension & the line from Winnipeg southeasterly, which will be built under the charter of the Winnipeg & Southeastern Ry. Co., which has a land grant from the Dominion Government. Mr. Mackenzie's son, R. J., will have charge of construction. It is expected that the 80 miles from Winnipeg to Whitemouth Lake will be built first & then some 70 or 80 miles of the Dauphin extension. Both the Lake Manitoba Ry. & Canal Co. & the Winnipeg & Southeastern are controlled by Mackenzie & Mann; of the former line the officers are: President, F. Nichols, Toronto; Secretary, C. E. L. Porteous, Toronto; Superintendent,

D. B. Hanna, Winnipeg. It is probable Mr. Hanna will also operate the Winnipeg & Southeastern.

NORTHERN PACIFIC EXTENSION.

This Co. now has 268 miles of lines in Manitoba, its connection from its Dakota system at Pembina, along the west side of the Red River to Winnipeg, 68 miles; the Brandon branch, 145 miles, & the Portage la Prairie branch, from Winnipeg along the south side of the Assiniboine River to Portage la Prairie 55 miles. The province gave \$532,250 towards the construction of these lines. The Brandon branch starts from the Pembina-Winnipeg line at Morris, 25 miles north of the International Boundary, & runs almost due west for 102 miles to Belmont, whence it goes northwest to Brandon, crossing the C.P.R. Southwestern branch near Methven. The N.P.'s Brandon branch, as far as Belmont, is about midway between the C.P.R. Southwestern & Pembina Mountain branches. The Manitoba Legislature has now granted the N.P. a cash bonus of \$1,750 a mile to aid in building a branch from near Belmont, westerly, to a point at or near Hartney, on the C.P.R. Souris branch, a distance of some 50 miles, with an additional \$20,000 for the heavy work of crossing Lang's Valley. The Ry. Co. & its property & franchises are to be exempt from taxation for 20 years. The N. P. Ry. is represented in Manitoba by G. W. Vanderslice, Superintendent at Winnipeg.

G. A. Simpson, Engineer of the N.P. at Winnipeg, is already running a line for the branch. After Lang's Valley is crossed the work does not present any particular difficulties, but the crossing of the valley will be difficult & expensive. The valley is deep on both sides & is cut into by steep ravines. The work of finding a good roadway into & out of the valley is not an easy one. It is expected everything will be ready so that construction can be started early in June.

E. H. McHenry, Chief Engineer of the N. P.R., writes us in reference to this work as follows: The survey is now in progress, & the contracts for construction will be let very soon. The character of the work is the ordinary prairie construction, with the exception of a short section of heavy cutting in embankments across Lang's Valley. No bridges or other special structures of importance are required. Rails and rolling stock will be furnished by the N.P.R. Co.

It is said that a committee is asking farmers in the territory to be served by the branch to give \$8 for each 160 acres they occupy towards buying right of way for the line.

Mr. Greenway estimates that Manitoba may have to guarantee another \$1,000,000 to complete the link between the Winnipeg & Southeastern & the Ontario & Rainy River Rys., & that some branches will be necessary in Southern Manitoba & other parts of the province, to the extent of about 200 miles, for which \$350,000 would be required.

THE RAILWAY COMMITTEE of the Privy Council has granted the application of Massey Harris Co. to extend its tracks up Strachan Avenue, Toronto.

CANADIAN GOVERNMENT SYSTEM. The Dominion estimates for the fiscal year beginning June 1 next contain the following principal items: Intercolonial Ry., increased accommodation at Halifax, \$135,000; to increase strength of iron bridges, \$50,000; extension to deep water at North Sydney, for the Newfoundland Steamship Service, \$30,100; increased accommodation at Moncton, \$30,000; increased station & other accommodation at various points, \$6,000; new fences on Oxford & New Glasgow & Cape Breton divisions, \$6,000 each; for the P. E. Island Ry. \$15,000 is provided to shorten the main line by removing all curves.

Coast Railway of Nova Scotia.

The statements about this line made in our last issue on the authority of the Chief Engineer & Superintendent, L. H. Wheaton, were questioned, it being alleged that location had not been completed to Lockeport, but on the contrary no location had been made over, or around, the Birchtown Hills, west of Shelburne, where the engineering difficulties were said to be very serious; that the statement that the charter of the N. S. Southern Ry. having expired should be modified by a further statement that a bill extending the charter had been passed by the Legislature & assented to on March 11; that no progress had been made on the line between Lockeport & Halifax, not a sod having been turned; that the statement that "free right of way had been secured for the entire distance" was untrue, application to the County Councils of Queen's & Lunenburg, at the January sessions, to have the right of way made a charge on those counties having been refused, at least for the time being.

We referred the matter to Mr. Wheaton, who has sent us the following information in reply: Location has been substantially completed from Yarmouth to Lockeport. Regarding the Birchtown Hills, location was not fully completed, so far as the instrumental work was concerned, on 7 miles of this district, owing to the fact that work was closed down in the latter part of November on account of bad weather, before this portion had been completed; but a preliminary line had been run, which was entirely satisfactory to this Co., & sufficient cross sections were taken to project a location, which was so satisfactory that we have not since considered the matter, but will complete this location as soon as surveys are completed from Lockeport to Halifax. The profile & plan of this 7 miles are on file in the Provincial Government Engineer's office, as well as my own, & I would be happy to refer the correspondent to a view of either.

With regard to the fact that the N.S. Southern Railway charter had expired, this was correct at the time of my statement. They applied for a renewal of their charter at the February session of the Legislature, but it was not granted. The charter which they did secure after my statement of Mar. 5 was over an entirely different portion of the country, & the reasons for granting which I am

not free to discuss at this time, nor do I believe are they.

I did not state that considerable progress had been made on the line between Lockeport & Halifax. (Mr. Wheaton is correct as to this. It was a mistake in editing his copy.—Editor.) Ninety-seven miles of the proposed line between Yarmouth & Halifax is under contract with the Nova Scotia Development Co., which has completed 31 miles between Yarmouth & East Pubnico, which has been accepted by this Co., & has been in successful operation since Aug. last. Twenty miles of work beyond East Pubnico have been sub-let to H. J. Townsend & Co., of New Glasgow, N.S., who have up to May 4 (counting the work done since April 1, when construction

was resumed) completed 5 miles of grading, & masonry on over 12 miles. The location had been completed to Lockeport, 97 miles from Yarmouth, in 1895 & 1896, & 2 parties are now in the field pushing forward the surveys between Lockeport & Halifax, one party being at each end working towards each other. As intimated above, construction work was commenced on April 1, but we have had considerable bad weather during the month & have not made as satisfactory progress as we would desire, but the forces are being daily increased & work will be actively pushed.

Right of way has been granted us as follows: Town of Yarmouth, municipalities of Yarmouth, Argyle, Barrington, Shelburne, Queens, Chester & Halifax. In the municipality of Lunenburg, the vote was left open over a distance of 21 miles, until the route is decided upon, as we have in contemplation 2 different lines. In the event of the adoption of 1 of the 2 lines, 9 miles of this distance would be trackage rights over the N. S. Central Railway, for which no right of way has been required from the municipality.

At the last session of the Legislature the time for the completion of the line from Yarmouth to Lockeport was extended from Oct. 1 of this year, to Oct., 1899.

The total distance of the line between Yarmouth & Halifax will be slightly less than 215 miles, & will serve a population of 440 per mile, or a total of about 88,000. This line will open up one of the best tourists' resorts on the continent, & I think the climate here in summer cannot be equalled, in fact, it is an equable climate the entire year; & with the railway facilities which we propose to offer, I have no doubt that the business interests of the south coast of N.S. will be very materially advanced, & new industries established as fast as the line progresses.

Ambrose Kent & Sons

Manufacturing Jewellers,
156 Yonge St., Toronto.

We have been appointed official watch inspectors to the Grand Trunk Railway for Toronto and York.

CANADA SOUTHERN RAILWAY CO'Y.

The Annual General Meeting of the Canada Southern Railway Company, for the election of Directors, and other general purposes, will be held on Wednesday, the 1st day of June, 1898, at the hour of eleven o'clock in the forenoon, at the Company's Head Office in the City of St. Thomas.

NICOL KINGSMILL,

May 2nd, 1898.

Secretary C. S. Ry. Co.

LEAMINGTON & ST. CLAIR RAILWAY COMPANY.

The Annual General Meeting of the Leamington and St. Clair Railway Company, for the election of Directors and other general purposes, will be held on Wednesday, the 1st day of June, 1898, at the hour of eleven o'clock in the forenoon, at the offices of the Canada Southern Railway Company, in the City of St. Thomas.

NICOL KINGSMILL,

May 2nd, 1898.

Secretary L. & St. C. Ry. Co.

SARNIA, CHATHAM & ERIE RAILWAY COMPANY.

The Annual General Meeting of the Sarnia, Chatham and Erie Railway Company, for the election of Directors, and other general purposes, will be held on Wednesday, the 1st day of June, 1898, at the hour of eleven o'clock in the forenoon, at the Company's Head Office, in the City of St. Thomas.

NICOL KINGSMILL,

May 2nd, 1898.

Secretary S. C. & E. Ry. Co.

MONTREAL AND OTTAWA RAILWAY. ENTIRE LINE ENCLOSED WITH THE PAGE FENCING.

Almost every one of the leading railroads of Canada & the United States are using this fencing exclusively. It is the best, & still it costs much less than any other good fence. It is manufactured by the Page Wire Fence Co., Limited, Walkerville, Ont.

Mr. Wheaton's statements certainly appear conclusive, & we cannot help thinking that the questions raised, as indicated at the commencement of this article, were for the purpose of injuring the Co. by some one who had an interest to serve thereby.

The Stikine-Teslin Railway.

Since the defeat by the Senate of the bill

ON THE TRAIL NEAR TELEGRAPH CREEK, B.C.

confirming the agreement between the Dominion Government & Mackenzie & Mann for the construction of a railway from Glenora or Telegraph Creek to Teslin Lake & up to the time of writing (May 14) no further action has been taken by the Government in connection with the matter. In an interview on May 3, Mr. Mackenzie said there was still a large force of their men at work which had not yet been recalled, for the reason that it was impossible to reach them at the present time owing to the conditions of travel in that part of the country. They had received their instructions when they went north, & as they had not been countermanded, he supposed they were still at work, & would remain there until such time as it was possible to get word of the condition of affairs to them. Communication would soon be opened again, & they hoped to be able to recall the force at an early date. This recall is not, however, likely to take place as the British Columbia Government has acted with considerable promptitude. Early in April this Government determined to go on with the construction of a wagon road between Glenora & Teslin Lake, & this was followed by a decision to secure the construction of a through line of railway from an ocean port in B.C. to Teslin Lake.

The B.C. Government at the end of April entered into an agreement with Mackenzie, Mann & Co., represented by Lewis Lukes, for the construction of a through narrow-gauge line from Teslin Lake to an ocean port in B.C., to be selected jointly by the Dominion & B.C. Governments. Following are the principal provisions of the contract:—The railway to be divided into 2 sections. The northern section from the Stikine River to Teslin Lake. The southern section from the Stikine to the ocean port. Work to be commenced simultaneously on both sections at the Stikine before June 1, next. Northern section to be finished by Aug. 31, 1899. Southern section to be finished within 2½ years after selection of ocean port. Government to grant cash subsidy of \$4,000 a mile for both sections, the whole of such subsidy not to exceed \$1,600,000. The subsidy to be pay-

able upon completion of each section. The railway to be assessed at \$2,000 a mile when completed. The Government to receive 4% of the gross receipts of the railway. The Railway Company to have the option of repaying at any time the total subsidy. Mackenzie, Mann & Co. to immediately construct, for the purposes of the railway, a wagon road over the northern section along the located line of railway. The wagon road to be free to the public for transportation purposes during the construction of the railway. Mackenzie, Mann & Co. to take over & assume all expenditure in respect of any such wagon road under construction by the Government at date of contract with them. Security for the due performance of the whole work to be given to the satisfaction of the Government in the sum of \$75,000 for each section forthwith upon the execution of the contract. The Government to have supervision of the construction of the wagon road, also of the railway rates.

The impression prevails that the Dominion Parliament will also be asked to aid the work, & a pretty well informed Ottawa correspondent says there is likely to be a postal subsidy of \$80,000 a year for 20 years, & a land grant in the Yukon of 10,000 acres a mile, or about 5,000,000 acres.

Work on the Canadian Pacific.

The spur from Outremont to Montreal Junction, a distance of 6 miles, is being double-tracked. When this is completed the entire line between Viger Square & Windsor Street Stations will be double-tracked. This has been rendered necessary on account of the demand for more convenient connection between the two stations.

The great increase in passenger traffic has made it necessary for the C.P.R. to increase the accommodation at nearly all its hotels. The principal addition is at Quebec, where over 100 bedrooms have been added to the Chateau Frontenac. A number of improvements are being made in the Hotel Vancouver. The chalet hotels at Field, Glacier & North Bend are having their dining-room accommodation increased. At Glacier the annex is having an additional story put on to provide more bedrooms, & a billiard room is being built. At Revelstoke the hotel built last year has already proved too small & is being enlarged. At Moose Jaw a station & dining-hall is being built. The Moose Jaw, Revelstoke, Field, Glacier & North Bend places will be heated with hot water & lit with acetylene gas.

The Co. has recently built a small dock at Wabigoon, as several boats will be plying there this year for mining traffic.

The Co. has leased the Caldwell Block, opposite the post-office, Winnipeg, for a term of years, & it is having it fitted up as an uptown ticket office, & for the commercial telegraph office.

The Dominion Estimates of 1899 provide

\$8,600 to pay the C.P.R. balance for work in B.C. under award.

Estimates have been prepared for changing the line from Trail to Rossland, recently bought from the Columbia & Western Ry. Co. to standard gauge. It has not yet been decided whether the switch backs will be retained or done away with, but probably they will be kept.

Surveys are proceeding under Mr. Tye, C.E., for the line from Robson to the Boundary Creek district. The work will be very heavy, largely rock.

The first stone of the Vancouver station was laid April 19, & work is proceeding satisfactorily under Contractor Tompkins. It is expected this splendid building will be completed next year. The Co. is also building several hundred feet of docks.

CROW'S NEST PASS BRANCH.

Owing to the large number of structures on this line between Lethbridge & Macleod, a list of which was given in our March issue, it was impossible to complete that section of the work first; so track-laying was started from Macleod westward, & material & supplies were taken in by the Macleod branch from Calgary on the main line. The track-laying between Lethbridge & Macleod was completed at the end of April, & the passenger train from Dunmore Jct. on the main line now runs through to Macleod via Lethbridge. All construction material from the east is now going in this way. Up to May 5 track had been laid on the branch to a point 107 miles west of Lethbridge.

In the House of Commons, April 14, the Minister of Railways stated that \$453,730 has been paid to the C.P.R. on account of the construction of 43¾ miles on the Crow's Nest Pass Ry.

An agitation was started by the Rossland & Trail Boards of Trade to induce the C.P.R. to change the proposed route of the Crow's Nest Pass Ry. so as to cross the Columbia River at or near Trail, place Rossland on the main line & sidetrack Nelson. Vice-President Shaughnessy, in writing the Rossland Board of Trade on the subject, said: "I do not think we would be inclined to consider

ON THE STIKINE RIVER.

any departure from our original plans, nor are we of the opinion that any practical route for a railway can be found between the south end of Kootenay Lake & the Columbia River via the Salmon River without going south into U. S. territory. Meantime, I have requested our engineers to make an examination, so that we may have the necessary data at hand if at any time in the future we decide to build a branch line through there."

Construction & Betterment Notes.

THE GRAND TRUNK is putting in 10 additional sidings, with a capacity of 60 cars each, at Belleville, for freight traffic.

INTERCOLONIAL.—E. Crossman has a contract for erecting between 3,000 & 4,000 rods of fencing between Moncton, N.B., & Campbellton. A. J. Tingley has the contract for the division between Moncton & Newcastle. The new station at Moncton, N.B., is about finished.

THE MICHIGAN CENTRAL expects to build a bridge over Big Creek, near Tilbury, this year. Bridge Engineer Douglas informs us it will consist either of a single span, 60 ft. in the clear, with steel-plate girders resting on masonry abutments; or it will be made in 2 spans each 30 ft. in the clear. The contract has not been let.

OTTAWA & NEW YORK RY.—The contractors have about 50 men employed on the bridge across the Racket River. The stone for both piers is on the south side ready for use. The excavations on the south side are also made & ready for the concrete & the crushed stone & cement are on the ground. The iron for the Helena & Racket bridges has arrived at Moira on the O. & L.C. Ry. & will soon be put in place.

Chief Engineer F. D. Anthony has furnished us the following particulars: The first shovelfull of earth was moved August 23, 1897. When snow & frost shut the work down for the winter we had accomplished the grading & bridging of the 53 miles between Cornwall & the Junction of the Canada Atlantic Ry. near Ottawa, & laid the track on it. From Cornwall south to Moira, N.Y., including Cornwall Island, something over 50% of the grading was accomplished, including the abutments & pier for the bridge crossing St. Regis River. All this work is now being pushed to completion as rapidly as possible, ballasting of the track laid last fall included, over half of which is done. The St. Lawrence bridge work was started last fall with the rest of the work, & the abutments & 2 of the piers in the south channel bridge were completed last fall, & the other 2 piers were carried up above water. These 2 piers will be completed this week. The false work at this point is now going up, & the metal erection will begin this week. The abutments, foundations for viaduct approaches, & the piers for the drawbridge over the Cornwall

Canal, are completed, & preparations for the remaining 4 piers, which will support the cantilever span over the north channel of the St. Lawrence, are well under way. Balch & Peppard are the contractors for the road complete, outside of the big bridges which are being built by U.S. firms. The construction company is called the New York & Ottawa Co.

PEMBROKE SOUTHERN.—It is said that a contract for 5 miles of the Golden Lake end of this line has been let to J. G. Sherwood, of Emsdale, Muskoka.

QUEBEC CENTRAL.—In reference to an item we published last month about a proposed extension of the shops at Newington, near Sherbrooke, General Manager Grundy informs us "it is the intention of the Co. to extend the shops, but at present the work is not going forward."

TILSONBURG, LAKE ERIE & PACIFIC.—General Manager Teall informs us, under date of May 7, that about half the steel is laid on the connection between this line & the M.C.R., & work is progressing on the substructure of the Otter Creek bridge, which will be a steel structure 756 ft. long, made by the Dominion Bridge Co. It will rest on 30 cylinders of 4 ft. in diameter, which are sunk in the bottom of the pond until they strike clay bottom, then they are filled with concrete. The picnic grounds at Pt. Burwell are being cleaned & buildings repainted, & everything put in readiness for the summer season. The interlocking plant at the junction of the T. L. E. & P. Ry. & the G.T.R. air line will be completed in the course of a week.

In consequence of the dividing of the C.P. R. Eastern Division lines east of Chalk River between two Superintendents, the east-end dispatchers, J. West, W. Rose & E. Dion, have been moved from Ottawa to Viger Square Station, Montreal.

A persistent rumor has been going round to the effect that the divisional offices of the C.P.R. were to be moved from Vancouver. Manager Whyte assures us there is nothing in it. What probably gave rise to it is the fact that the Co. is making a change in the system of paying Pacific Division employes from payments in cash through the pay car to payment by wages cheque, & it is probable the cheques will be issued by the Paymaster at Winnipeg, who will act for both the Western and Pacific divisions.

OPERATING.**G.T.R. Graphic Car Record.**

The G.T.R. has instituted a unique & important change in its car record office. M. C. Sturtevant, the newly-appointed Car Service Agent, has adapted to the System the graphic method of car-tracing, which has been applied to the G.T.R.'s fast freight system, & will be of great advantage to shippers because of the immediate detection of the position of any given car which obtains under such a system.

There are only certain classes of freight to which the new system will apply, these being perishable goods, such as dressed beef, fruit, fresh fish, glucose, poultry, eggs, canned goods, butter, liquors, ale, beer, live stock, high explosives, vegetables, & all other such "rush" goods. Under the old system the position of any given car could be ascertained only by tracing it from point to point. This took much time, & caused considerable annoyance & delay. Under the graphic plan the entire G.T. System is divided into 11 divisions, each being the run of one engine. Every train of freight is known by a cipher, & all cars numbered in sequence. All stations at which freight originates, or comes on or goes off, are known as manifesting stations, & are assigned certain letters for telegraphing & also a certain number of manifesting numbers.

As each train passes from one division of the system to another, a report is wired to Mr. Sturtevant, at Montreal. The progress of each car & each train, accordingly, is registered on a board, 24 feet long, which represents the G.T.R. System in miniature, with the names of all important stations. Each fast freight car is represented by a peg, colored according to originating point, Chicago, for instance, being white, & New Orleans yellow, etc. In this way the Car Service Agent in Montreal can tell at a moment's notice the precise position of all goods in transit. A record is kept of the time occupied in each divisional run, each stop & change of engine, & each delay of any kind. Every engineer & conductor, therefore, is under immediate supervision, & all unsatisfactory performances are at once detected & corrected.—Montreal Herald.

General Superintendent McGuigan informs us that the standard code of the American Railway Association will go into effect on the G.T.R. system at noon, July 1.

Tonnage Basis on the C.P.R.

Formerly the C.P.R. handled its freight trains on a loaded car basis, each train consisting of so many loaded cars. The slightest consideration will show that this is not a correct system, as a train might include flats, coal cars, small box cars, 40 ton cars, light & heavy refrigerators, & so on. Owing to the great variation of train loads under the old system the management decided to adopt the tonnage basis, which went into effect on the main transcontinental line, from Chalk River to Cartier, & on the Sault Ste. Marie branch, on Dec. 1 last, & on Jan. 1 was put into effect over the entire system. The statistics as now compiled show carrying capacity of all cars in the train, the actual loads carried & the percentage of actual weight to capacity, average rating of engines, average tonnage hauled & percentage of haulage to rating, the train performance, number of trains run, percentage on time & average detention, the tons of freight hauled per ton of coal used by engine, besides loaded & empty car mileage & engine mileage.

All these statistics are shown for each section of the line & for trains moving in each direction. The new form of conductor's train report also indicates the detentions, if any, to freight trains, for switching & for all other causes at each point, & embraces a very complete system of handling way freight. Coupled with this report is a form of fuel ticket which shows the locomotive foreman, on the return of the engine to the roundhouse, its actual performance per ton of coal used. The management informs us that the new system is working very satisfactorily.

Detention for Trainmen's Meals.

F. W. Jones, Assistant to the Manager of the C.P.R. Western Lines, has issued the following circular: "A number of cases have recently occurred where important freight trains have been delayed for engine or trainmen (in most cases the former) to get meals. Owing to strong competition the Co. is obliged to guarantee schedule time on through freight shipments, & every delay of this kind, no matter how small, interferes with the record. All concerned are notified that rule 180 will be strictly adhered to; that anyone going to meals without express permission from the train dispatcher will be severely dealt with, & that train dispatchers have been instructed not to give this permission except in cases where meals can be obtained without increasing delays which are unavoidable on account of crossing trains or other similar cause. Train & enginemen will have to arrange their meals at terminal points without delaying trains & start out on every trip with sufficient food to carry them to destination.

Grand Trunk Operating Statistics.

The Superintendent of Motive Power gives the following particulars for the last half of 1897 & 1896:

	6 months to Dec., '97.	6 months to Dec., '96.
Total expenditure.....	\$2,137,524	\$2,223,423
Train mileage.....	9,048,134	9,699,516
Expenses per mile, train.....	23.84c.	22.92c.
" " engine.....	19.87c.	18.77c.
" " car.....	1.40c.	1.41c.
Cars moved per train, passenger.....	4.7	4.9
" " freight.....	25.4	22.8
" " mixed.....	11.3	12.1

The Superintendent of the Car Department gives the following figures for the same periods:

	6 months to Dec., '97.	6 months to Dec., '96.
Cost of renewals & repairs.....	\$50,000	\$50,000
Miles run by cars, passngr. 15,252,123		18,218,225
" " freight, 139,323,470		134,080,535
Cost per mile, car.....	382c.	390c.
" " train.....	6.53c.	6.12c.

It has been decided to remove the whole of the plant for dealing with the C.P.R. heavy engines from Donald, B.C., to Revelstoke shops, where the whole of the mountain power will undergo repair & maintenance. The divisional point will be moved to Laggan, where arrangements will be made for stationing the light engines used east of the divide, the heavy power remaining at Field, as now.

NEWS OF THE ROADS.

COAST RY. CO. OF NOVA SCOTIA.—At the annual meeting, at Yarmouth, April 4, the old directors were re-elected. The reports of the officers were read, & we are officially informed they made a very creditable showing & were most satisfactory to all concerned. At a subsequent meeting of directors the following officers were re-elected: T. Robertson, President; C. Cooper, Secretary; L. H. Wheaton, Chief Engineer & Superintendent.

GRAND TRUNK MILEAGE.—The G. T. System, including lines east of St. Clair & Detroit River, and the Detroit & Michigan Air Line, comprises the following mileage: length of roadway, 3,506 miles; 2nd track, 405¾; sidings, 751½; total, 4,663¾. Of this, 4,576¾ miles have steel rails & 87 iron, 61 of the latter being in sidings & 26 in track.

GRAND TRUNK-WABASH.—Speaking of this contract, Bradstreets says: The arrangement is an exceedingly important one for both companies concerned. The G.T. obtains an increase of income, & the Wabash a terminal practically in Buffalo, bringing it into direct connection with a number of lines centering at that city. It is also to be considered that while the alliance between the Wabash & the G.T. has been more or less close ever since Mr. Hays left the former road to assume the management of the latter, the present deal indicates that these relations are to be closer, & that the Canadian road will thus obtain facilities for reaching many important sections & cities in the Western & Southwestern States.

GREAT NORTHWEST CENTRAL.—A despatch from Winnipeg, April 26, gave a report that the C.P.R. had acquired the Great Northwest Central Ry. & would extend the line this year. When shown the despatch Sir Wm. Van Horne said he had nothing to say on the matter. It would not surprise us at all to learn that the C.P.R. had secured control of this line; it would prove a valuable feeder to that system. At present it runs from Chater, 5 miles east of Brandon, on the C.P.R.'s main transcontinental line, to Hamiota, 51 miles, passing through the splendid agricultural districts of the Little Saskatchewan & Oak River. Its extension through the Beulah & Oak River districts is eagerly desired by a large number of settlers, who went in in anticipation of construction which has been off deferred.

The following paragraph appeared simultaneously in several Toronto papers May 7, evidently having been supplied. Having been unable to verify any of the statements we give it for what it is worth. "The results of the relief afforded to the Great Northwest Central Ry. Company by the recent judgment of the Privy Council in Delap et al v. Charlebois et al are already apparent. Life has returned to the company. Some time must yet elapse before the formal steps necessary to get rid of the receiver & have control of its own affairs can be taken. Notwithstanding this, however, Mr. Delap has engineers & surveyors already upon the ground picking up the authorized location for the extension, & getting everything in shape, preliminary to beginning the work of further construction. A. F. Macallum, C.E., & party left Ottawa last Monday evening, en route to Brandon, for this purpose. A bill is now before the

House of Commons, which has passed the Senate, authorizing a new issue of bonds by the company to enable it to finance for the expenditure necessary, & extending the time for the further construction one year, which the company will require to finance & carry through the work."

NIAGARA FALLS & SUSPENSION BRIDGE RY. CO.—The report for the quarter ended Mar. 31, filed with the N.Y. State Railway Commission: Gross earnings, \$13,602.38; operating expenses, \$8,603.41; net earnings, \$4,998.97; other income, \$3,256.43; gross income, \$8,255.40; fixed charges, \$9,370; deficit, \$1,114.60.

THE NORTHERN PACIFIC'S General Manager has notified heads of departments that so far as possible all positions will be kept open for employes on the line who enlist in the U.S. army for the present war.

ST. CATHARINES & NIAGARA CENTRAL.—Pursuant to the judgment in the case of Rolls vs. this Ry., tenders will be received up to June 25 by the Master in Ordinary, Toronto, for the purchase of the line, which is about 12 miles long, extending from St. Catharines to the junction with the Canada Southern. The purchase to include all the Co's property, franchises, &c., subject to vendors' liens.

ST. CLAIR TUNNEL CO.—At the Sarnia, Ont., assizes, May 2, the case of Mrs. Dunn against the Tunnel Co. was heard. Plaintiff's husband was a conductor in the employ of defendant, & was asphyxiated in the tunnel. After part of the evidence had been given, defendant consented to a verdict for \$2,500. It had previously paid \$1,900 into court. The amount is to be divided in the proportion of \$1,500 to the infant child, & \$1,000 to the widow.

Index to Railway Legislation.

Under this title, J. E. W. Currier, Private Secretary to the Minister of Railways, has issued a most valuable index to all public & private legislation by the Dominion Parliament respecting steam & electric railways, railway bridges & tunnels, to which the Railway Act, 1888, & amendments, is applicable in whole or in part, from 1867 to 1897, inclusive.

The number of the chapter & the year in which each separate act was passed are contained in the Index. Numbers also appear in brackets opposite to acts referring to subsidies, to indicate the description of each subsidy under a corresponding number in the report of the Minister of Railways for the year ended June 30, 1897, & similar references are made to land subsidies.

Subsidies have been granted to a number of railway companies which are incorporated under acts of the different provincial legislatures; & the titles of all such railways which have earned the whole or any portion of the subsidies granted by the Dominion, or to which subsidies have been voted, or which have entered into contract, are included in the Index.

A supplementary index of telegraph, telephone & cable companies which have been incorporated from 1867 to 1897, & a synopsis of Orders in Council having force of law, which have been published in the Canada Gazette, affecting railways, are also given.

The work has already proved of great value in our office, & we have every confidence in recommending it to everyone in any way interested in railway legislation. The price is \$1.50.

RAILWAY PROJECTS.

Toronto to Sudbury & James' Bay.

Sir Wm. Van Horne's statement that the C.P.R. would build a line from Toronto to Sudbury, has been followed up by an actual survey which is progressing rapidly under the management of Hugh Lumsden, Chief Engineer of the Crow's Nest Pass Branch, who came east some two months ago to take up this important work. The line as surveyed starts from Kleinburg, 21 miles northwest of Toronto on the Co.'s Owen Sound Branch, going by Nobleton, Schomberg, Bondhead & Cookstown to Barrie, thence by Midhurst, Craighurst, Coldwater, Bala the outlet of Muskoka Lake, Foot's Bay on Lake Joseph, & Parry Sound, crossing French River at Cantin's Island, & then by as direct a route as possible to Sudbury. Mr. Lumsden has 4 survey parties in the field under the following assistants: C. B. Smith, Kleinburg to Severn River; A. E. Morris, Parry Sound to Severn River; C. A. Mitchell, Parry Sound to French River; A. Brunel, French River to Sudbury. It is expected the survey will be completed early in June. We are in a position to say that a very good line with easy grades is being secured. The distance from Toronto to Sudbury will be about 250 miles, as against 306 by the present North Bay route.

As to what the intentions of the C.P.R. are in regard to this line, it is impossible to speak with any degree of certainty. For years the Co. has shown such a line on its maps as projected & it may be that it will go on with construction. Of course the quarrel with the Grand Trunk is an incentive to construction, but that may soon be patched up, & if friendly relations are again restored it is more than likely that the resumption of the C.P.R.'s traffic from Toronto over the G.T. to North Bay would be part of the deal. There is no doubt that the diversion of this business via Smith's Falls & Carleton Jct. has been a heavy loss to the G.T.R., which may be expected to do everything possible to secure it again. It is hardly likely that the C.P.R. would go in again under the old arrangement & a deal in the way of running powers is more likely. It must also be borne in mind that the U.S.-Spanish war has done much to

disturb financial conditions & that this is not a good time to finance railway projects.

The C.P.R. has no charter for a line from Toronto to Sudbury, but it would appear that it could be built under the powers conferred by the Co.'s original Act of 1881, which gave the Co. the right, from time to time, to lay out, equip, maintain & operate branch lines of railway from any point or points along its main line to any point or points within the Dominion. In 1895 W. Mackenzie, H. D. Lumsden, C.E., G. A. Cox, F. Nichols & D. D. Mann obtained a Dominion charter for the James' Bay Ry. Co., with power to build a line from Parry Sound to Doke's Indian reserve, thence to the easterly line of Lake Wahnapitae, & thence to the mouth of Moose River, James' Bay. In 1897 another Act was passed, empowering the Co. to extend its line from Parry Sound to Toronto, it being provided that the railway from Parry Sound to James' Bay, and the extension from Parry Sound to Toronto, should be commenced within 2 years therefrom, and 15% of the capital stock of \$1,000,000 expended thereon. This charter is controlled by Mackenzie & Mann, & might, no doubt, be utilised should the C.P.R. wish to build under it.

For the country north of the C.P.R. main line there is power to build under a charter granted in 1884 to W. Hendrie, W. Thomson, Jas. Walton, J. Macnabb, W. B. McMurrich, J. C. Bailey, P. A. Scott, A. Kirkwood & A. Nairn, who were incorporated as the Lake Nipissing & James' Bay Ry. Co., with power to build a line from, at or near the junction of the Callender branch with the C.P.R., or from near Callender to Moose Factory, or some other point on James' Bay. In 1889 the name was changed to the Nipissing & James' Bay Ry. Co. In 1896 the acts relating to this Co. were consolidated, the proposed railway was declared to be a work for the general advantage of Canada, & it was provided that the line should be completed to Lake Temiskaming within 3 years, to Lake Temiscaminge within 5 years, and the balance within 7 years from the passing of the Act. It is said this charter is also controlled by Mackenzie & Mann, or at all events it is in hands that are friendly to their interests.

At the last session of the Ontario Legislature the James' Bay Ry. was granted, to aid in the construction of 90 miles of its line from Parry Sound to, at or near Sudbury, \$3,000 a mile for a distance not exceeding 40 miles, & the unearned subsidy of \$3,000 a mile for a distance not exceeding 50 miles which was granted to the Nipissing & James' Bay Ry. in 1889, the unearned subsidy being transferred to the James' Bay Ry. This makes a total cash subsidy of \$270,000 for the 90 miles.

A short time ago the City Council of Toronto appointed G. Gooderham, J. H. Mason, R. Davis, W. R. Brock, L. M. Jones & Mayor Shaw as the Toronto & Hudson's Bay Railway Commission, W. T. Jennings, M. Inst. C.E., being appointed Secretary & Consulting Engineer to the Commission. At the present session of the Dominion Parliament the Com-

missioners secured incorporation as the Toronto & Hudson's Bay Ry. Co., with power to construct & operate a standard gauge line from Toronto to, at or near the mouth of Moose River, Albany River or Churchill River, on the west side of Hudson's Bay & James' Bay, with a branch to the Northern Pacific Jct. Ry. at or near Gravenhurst, a branch southward from the main line adjoining the watershed near Timagami Lake, thence to the Northern & Pacific Jct. Ry. at or near North Bay or Nipissing Jct. & a branch from near Parry Sound to or near Sudbury, thence to Wahnapitae Lake. In consequence of the opposition of the holders of the two charters above mentioned, it was provided that the operation of the Toronto & Hudson's Bay Ry. Act should be suspended for 2 years as far as power to lay out & construct a line is concerned, & if at the end of that time the James' Bay Ry. Co. has commenced & substantially proceeded with the construction of its line from Toronto to Sudbury via Parry Sound, & if at the end of such time either the James' Bay Ry. Co. or the Nipissing & James' Bay Ry. Co. has commenced & substantially proceeded with the construction of a line northward from the present main line of the C.P.R., the Act shall be similarly suspended during such time as the substantial proceeding with the construction of the lines above mentioned continues, & upon the completion of those lines the Act shall cease.

British Columbia Railway Aid.

The B. C. Legislature has adopted a bold & progressive policy for extending the railway facilities of the Province. Last year it authorized the raising of a loan of \$2,500,000, out of which the proposed railways from English Bluff to Boundary Creek via Penticton, & from Bute Inlet to Quesnelle, were to be subsidized. At its recent session the Legislature authorized a further loan of \$2,500,000, making a total of \$5,000,000, continued the above mentioned subsidies & added subsidies for a line from Boundary Creek to Robson, & from an ocean port in B. C. to Teslin Lake. The subsidies now offered are as follows:—

1. Standard gauge railway from Penticton, at the foot of Okanagan Lake, to the Boundary Creek, approximately 100 miles.
2. Standard gauge railway from Robson to Boundary Creek district, to connect with the 1st mentioned line, approximately 80 miles.
3. Standard gauge railway from the coast in the neighborhood of English Bluff, near Point Roberts, via Chilliwack to Penticton, approximately 230 miles.
4. Standard gauge railway from Bute Inlet to Quesnelle, approximately 230 miles.
5. Narrow gauge railway from a seaport in B.C. to Teslin Lake, approximately 400 miles.

This is a total of 1,040 miles. Work on the Penticton-Boundary Creek & Robson-Boundary Creek roads is to be commenced by Aug 8, 1899; on the English Bluff-Penticton & Bute Inlet-Quesnelle roads by May 1900. In

the case of the Robson-Boundary Creek line being built by a company entitled to a land grant for the construction of such line, the subsidy shall only be paid to the company on its giving up its claim to the land grant to such portions of its line. The terms for the Stikine line are dealt with fully in another article in this issue.

The lines mentioned above as nos. 1, 2 & 3, will provide a through route from the coast to the Columbia River, from which point connection will be made by the Columbia & Kootenay branch of the C.P.R., with the Crow's Nest branch at Robson, thus affording 2 lines from the coast to the prairies of the Northwest.

Notes of Projected Lines.

THE CANADA ATLANTIC is securing legislation from the Dominion Parliament to enable it to extend its line from a point near the River Richelieu, in Missisquoi East to the U.S. boundary in Missisquoi or Brome, so as to connect with the railway systems of the U.S., also to extend its line to Montreal, through Soulanges & Vaudreuil, crossing the Ottawa River near St. Ann village, & to construct a branch or extension of the railway on the island of Montreal to the St. Lawrence River in or below Montreal.

A CASSIAR TRAMWAY.—B. Williams & A. A. Hughes give notice that they propose to build a tramway under the provisions of the B.C. Tramway Incorporation Act, 1895, from the head of steamboat navigation on Big Windy or Taku Arm of Tagish Lake, Cassiar district, southwesterly by the most feasible route, about 15 miles through Warm Pass, near the head of a branch of the Skaguay River. Thence westerly to the westerly limits of B.C.

C.P.R. ALGOMA TRAMWAYS.—Last year the C.P.R. had surveys made for a series of steam or electric tramways to connect the south end of little Wabigoon Lake with upper Manitou Lake, to overcome several portages, & from near the south end of Cedar Lake, which connects with the Manitou Lakes, to a point below the cascades on the Manitou River, from which point there is regular navigation into Rainy Lake. Nothing has been done about construction & there appears to be some doubt as to whether the work will be gone on with, in view of the possible early construction of the Ontario & Rainy River Ry.

C.P.R. STONEWALL BRANCH.—A Winnipeg paper says: There is every indication that the C.P.R. will extend its line north from Stonewall, if not this season, at all events early next. Two motives are said to dictate this policy, a desire on the part of the Co. to occupy the field, & the belief that such a line will prove a valuable feeder to its main line. The country is well settled for a considerable distance north, & nearer Lake Winnipeg there are valuable forests of spruce & tamarac. Just where the line will go is not the subject of definite report, but those living at Gimli hope it will bend off to the east & strike the lake at some point in their settlement.

THE DETROIT RIVER BRIDGE.—Promoters are at work, but it is not likely that any headway will be made in this Congress. In any case, the U.S. Chief of Engineers is now too busy to take the matter up, & his report would have to be presented before anything in the way of building could be done. The Windsor & Detroit Union Bridge Co.'s bill has passed the Railway Committee at Ottawa.

GUYSBORO, N.S.—A paragraph is going the rounds of the press to the effect that a contract has been entered into by the Dominion Government & signed in Ottawa by Mr. Baker of Philadelphia, for the construction of a railway from Sunny Brae to Country Harbor, Guysboro Co., & from Country Harbor cross roads to Guysboro, a total distance of

80 miles. It is further stated that Mr. Baker will visit Halifax to conclude a contract with the Provincial Government, for the usual subsidies, & that work will be commenced at an early date.

INTERNATIONAL BRIDGE, FORT ERIE.—There is no probability of an early decision by the G.T.R. management as to improving this bridge, the legislation recently obtained at Albany, N.Y., which was previously referred to in these columns, having been sought simply to anticipate future needs.

KETTLE VALLEY RY.—It is said that D. C. Corbin, President of the Spokane & Northern, who was refused a charter by the Dominion Parliament for this line, will build wholly within the U.S., with branches to the Canadian frontier. It is said he will start from a point further south, on the Spokane Falls & Northern, westward to Eureka, Wash., on Curlew Creek, & thence to Okanagan River, with branches to the Canadian frontier, near Cascade City, Carson & Midway, in B.C.

LAKE ERIE & DETROIT RIVER.—On May 11 the ratepayers of Dutton defeated a by-law to grant \$5,000 towards the proposed extension from Ridgeway to St. Thomas, by a vote of 78 to 19. Gen. Supt. Woollatt informs us that it is impossible to say anything definite as to the extension at present, but he expects to be in a position by the middle of June to say definitely if work will be gone on with this year.

ONTARIO & RAINY RIVER RY.—The impression prevails that some 80 miles of this line will be built this year, from the point of departure on the Port Arthur, Duluth & Western Ry., near Whitefish Lake, toward Moss Township & the Shebandowan gold belt. Thence the road would run through the Atikokan iron country & the Seine River gold district. The charter of this Co. is controlled by Mackenzie & Mann, who bought it from the Port Arthur owners last year. The Ontario Legislature has voted cash subsidies for this line on four different occasions. In 1894 it voted a subsidy for 35 miles; in 1895 for 45 miles; in 1897 for 85 miles; & in 1898 for 40 miles, a total of 205 miles at \$3,000 a mile, amounting in all to \$615,000. Last year the Dominion Parliament voted a cash subsidy of \$3,200 a mile from the first 80 miles of the line, & an effort is now being made to obtain further aid from the Dominion. The fact that the Manitoba Legislature has granted Mackenzie & Mann a guarantee of bonds for 80 miles of line to be built under the Winnipeg & Southeastern charter from Winnipeg to Whitemouth Lake, will be a powerful incentive to them to push on the Ontario & Rainy River to meet it at the Lake of the Woods, thus providing a second through line from Winnipeg to Lake Superior.

SKEENA RIVER TO YELLOWHEAD PASS.—Hon. T. M. Daly, with associates, including Sir Chas. Ross & J. B. McArthur, is applying to the B.C. Legislature for authority to build a railway from the head of steamboat navigation on the Skeena River, to the Yellowhead Pass. The line would traverse a portion of the route which the Federal Government proposes to open from a port in B.C.

WINNIPEG & FORT ALEXANDER RY.—The Manitoba Legislature has incorporated W. A. Ducker, of Winnipeg, & others, as a company to build a railway from Beausejour, Tyndall, or some near point on the C.P.R., to the navigable waters of the Winnipeg River, which runs into Lake Winnipeg at Fort Alexander. The distance is something like 40 miles.

WINNIPEG & ST. ANDREW'S RY.—The application to the Manitoba Legislature referred to in our last issue, for the incorporation of a company to build a steam or electric railway between Winnipeg & St. Andrew's Rapids, has been granted. The incorporators are E. F. Hutchings, of Winnipeg, & others.

FREIGHT MATTERS.

Canadian Freight Association Meeting.

The 15th annual general meeting was held at Montreal April 7, 40 members being present. C. J. Smith, 1st Vice-President, took the chair, in the absence of President J. J. Wallace.

The following were elected active members: W. P. Hinton, A.G.F.A., Canada Atlantic Ry., Ottawa; J. J. Mossman, D.F.A., Wabash Ry., Buffalo; A. C. Stonegrave, Com. Agt., Central Vermont Ry., Montreal; M. C. Sturtevant, Car Service Agt., G.T.R., Montreal.

The Secretary reported having received a letter from J. Porteous, 1st President of the Association, conveying his best wishes to his Canadian railway friends, & indicating his desire to retire from active membership. This was reluctantly acceded to, and Mr. Porteous, by virtue of the Constitution, becomes an honorary member.

Reports from various committees were adopted. The report of the Inspection Committee showed that from Mar., '97 to Feb., '98, the number of cars reported was 145,467, and amount collected \$6,783, a proof that this department is growing in importance, & gradually bringing about good results.

Notice was renewed of a motion by G. M. Bosworth & J. W. Loud, that the minimum C. L. for 5th class freight be 24,000 lbs., the Chairman of Classification Committee to submit a list of exceptions to the rule at next meeting.

Officers and Standing Committees for the year were elected as follows:—

PRESIDENT, C. J. Smith, Montreal; 1st VICE-PRES., J. W. Loud, Montreal; 2nd VICE-PRES., W. B. Bulling, Jr., Montreal; SEC.-TREAS., J. Earls, Toronto.

CLASSIFICATION COMMITTEE—E. Tiffin, J. Pullen, W. MacMillan, G. A. Browne, W. B. Bulling, Jr., F. J. Watson, J. Hardwell, W. P. Hinton, W. Woollatt; J. Earls, Chairman.

INSPECTION COMMITTEE—J. H. Hanna, G. Collins, G. Cassidy, F. Conway, J. N. Sutherland, F. F. Backus, M. Burton; J. Earls, Chairman.

CAR SERVICE COMMITTEE—J. B. Morford, A. White, J. H. Walsh, E. H. Edwards, M. C. Sturtevant, G. S. Cantlie, W. P. Hinton; J. Earls, Manager.

EXECUTIVE COMMITTEE—G. M. Bosworth, J. W. Loud, C. J. Smith.

The summer meeting will be held at Montreal, July 7.

Cutting Rates from Chicago.

Montreal railway officials are complaining bitterly of the incisions being made in the lake & rail rates, at the very opening of the season by the Canada Atlantic Ry. East-bound freight rates are as badly demoralized as they were before the recent meeting of the board of control of the Joint Traffic Association. This meeting made east-bound rates a subject of consideration, & was followed by an edict, issued by the different eastern line presidents, for the re-establishment of tariff rates. Rate irregularities, however, have grown worse & worse, & to-day all east-bound tariffs out of Chicago are absolutely demoralized. In fact, the freight rate situation to-day is quite as bad as the passenger rate irregularities, although interest in the former department is confined to railway officials & shippers alone.

The Canada Atlantic, which is the baby line in eastern business, is accused of doing much to bring about this deplorable rate condition. With their new fast freighters from Chicago to Parry Sound, & their direct connection with Montreal, they have secured a large proportion of Chicago grain for export from Montreal. This business, the other roads claim, was secured by secret cutting. No open reductions have as yet been announced by any of the Eastern lines, although the presidents of the roads have ordered that whenever any secret cuts are discovered, open rates meeting the cut should at once be put into effect. Although it is an open secret that shippers can obtain grain rates at 10 c. per 100 lbs., & less, none of the roads dare openly accuse the other, since all have been engaged in secret cutting.

The Canada Atlantic, on the other hand, declares it has simply met the rates made secretly by its rival lines, & that it could not permit itself to be underbid by its big competitor the Grand Trunk. Railway officials state that there is every likelihood of the freight rate demoralization existing for some considerable length of time.—Montreal Herald.

Vice-President Slaughter of the C.P.R. will go to the Pacific Coast this month on his annual tour of inspection, accompanied by Chief Engineer Peterson. He will return over the route & completed portion of the Crow's Nest Pass Branch.

The Yukon Military Supplies.

In the House of Commons May 2, N. F. Davin said: "I would like to know whether it is true that the G.T.R. has received the contract for sending militia supplies to the Yukon?"

"No," was Dr. Borden's reply, "the G.T.R. has not received any contract, but is sending a portion of the supplies over its line. A much larger portion is going over the C.P.R."

"Therefore," queried Mr. Davin, "the G.T.'s portion will go over the Northern Pacific?"

"I suppose so," was the rejoinder of the Minister of Militia.

"And therefore," continued Mr. Davin, "it will go from U.S. ports & be shipped in U.S. bottoms."

Freight Carried by the C.P.R.

DESCRIPTION.	1896.	1897.
Flour..... Barrels.	3,291,299	2,911,072
Grain..... Bushels.	32,528,256	37,756,201
Live Stock..... Head.	566,219	663,773
Lumber..... Feet.	636,128,418	831,895,383
Firewood..... Cords.	166,831	185,208

	1896.	1897.
Tons carried.....	44,420,555	5,174,484
Tons carried 1 mile.....	1,769,958,865	1,955,911,006
Earnings per ton per mile....	0.75 cents.	0.78 cents.

Freight Notes.

T. F. Savage, of Guelph, formerly station agent at Walkerton, has been appointed travelling freight agent for the C.P.R.

The Secretary of the Dominion Live Stock Association has issued a circular stating that all the railways in Ontario have agreed to carry pure-bred live stock at half rates.

More freight was received at North Sydney, N.S., last month than in any other month since the I.C.R. has been running there. Large quantities of flour from Ontario points are being shipped to Newfoundland via North Sydney & S.S. Bruce.

The Lake Erie & Detroit River Ry. has made arrangements with the Wabash Co. which practically constitutes it the Wabash freight agent in London, Ont., thus giving merchants another competing line. It will

take freight to & from Buffalo east & Detroit west.

The following joint circular has been issued by the general traffic managers of the Grand Trunk & West Shore Rys.:—The Grand Trunk Despatch has been organized to operate over the G.T.R. System, West Shore R.R. & connections. Sumner Hopkins is appointed Manager, with office in Brush St. Station, Detroit, Mich.

It is calculated that over 100% more acreage will be under crop in the Dauphin district of Manitoba this year. That this is believed to be the case is shown by the number of applications which have been received by the Dauphin Ry. for permission to erect elevators & grain warehouses at station points. There will be quite a number of these built during the summer so as to be ready for the wheat crop next fall.

The Quebec & Lake St. John Railway, according to the report presented at the recent annual meeting, is furnishing more than half of the lumber exported from Quebec. Last year the quantity aggregated over 60 million feet. The number of passengers carried during the year on the whole system was 153,669 as compared with 130,009, in the previous year, & the number of tons of freight 199,441, as against 150,346 tons. Several new mills were built during 1897, & are giving the Co. an increased traffic in sawn lumber. The pulp mill at Chicoutimi is completed, & is shipping its product daily. Another pulp mill is about to be erected near Roberval, & a chemical pulp mill at Lake Buchette & the extensive water power at the Jacques Cartier River is also likely to be utilized.

The General Freight Agent of the C.P.R. at Toronto has issued a circular to agents stating that in past years great difficulty has been experienced in making prompt & correct delivery of package freight shipped by the lake & rail route, owing to the insufficiency of marks placed on it by shippers, or owing to the total absence of any marks that would enable the goods to be associated with the waybills. Agents must take up at once with shippers & impress upon them the necessity of addressing their shipments, or marking them in such a way as will enable ready identification of the goods at transfer points, otherwise it will scarcely be possible at all times to deliver goods with despatch or to the proper consignees. Waybills are to show in full the marks on packages, so that on arrival of freight at Owen Sound or Fort William it may be readily checked with the waybills.

Pillow & Hersey Mfg. Co., MONTREAL, QUE.

MANUFACTURERS OF

Merchant Bar Iron (Rounds, Flats and Squares,) Link and Pin Iron, Hot Pressed Square and Hexagon Nuts (both Manufacturers and Whitworth Standard), Railway Spikes, Ordinary and "Goldie" Points, Pressed Spikes, Coach and Lag Screws, Machine Bolts, Cut and Wire Nails, Washers, Boiler and other Rivets. ❧ ❧

OFFICE: Rooms 518, 519 and 520 Board of Trade Building.

NOTICES TO MARINERS.

By the Dominion Department of Marine.

All bearings, unless otherwise noted, are magnetic & are given from seaward, miles are nautical miles, heights are above high water, & all depths are at mean low water.

No. 15, APRIL 7.—IMPROVEMENTS IN AIDS TO NAVIGATION IN THE ENTRANCE TO PARRY SOUND, ONT.—1. Buoy on Seguin Bank.—On the opening of navigation this year a platform buoy, surmounted by a pyramidal slatwork painted black, the pyramid surmounted by a white flag, will be moored in 5 fathoms water immediately south of the shoalest part of Seguin Bank, Georgian Bay, in the approach to Parry Sound. It is proposed, later in the season, to replace this buoy by a steel gas buoy. Due notice will be given of the change.

2. Buoyage of the Main Channel.—The main channel between Seguin Bank & Cameron Island will be marked on the opening of navigation by 17 spar buoys placed close to the channel side of every shoal. The positions, color & number of the buoys are as follows:—

1. Extra heavy black buoy on Red Rock Shoal (McGowan Shoal).
2. Extra heavy red buoy on Knight's Shoal.
3. Black buoy W.N.W. of Three Star Shoal.
4. Red buoy on Three Star Shoal.
5. Black buoy on Vankoughnet Ground.
6. Red buoy on Ariel Rock.
7. Black buoy off Twin Rock.
8. Red buoy on Hall Reef.
9. Black buoy off Ardent Rock.
10. Red buoy on Telegram Rock.
11. Black buoy N. of Lyon Rock.
12. Red buoy N. of Hooper Island Shoal. This may later be replaced by a gas buoy.
13. Black buoy on Nias Island Shoal.
14. Red buoy on Hooper Island Shoal.
15. Black buoy on west extremity of Carling Rock Shoal.
16. Red buoy W. of Hugh Rock.
17. Black buoy on east extremity of Carling Rock Shoal.

The buoy shown on Admiralty chart no. 1731, on the north-east extremity of Nias Island Shoal, will not be replaced, & the buoys on the south edge of Carling Rock Shoal will be moved in position.

3. Light on Depot Island.—A lighthouse is in course of erection at the western extremity of Depot Island, at the entrance to Depot Harbor. Until the lighthouse is completed a fixed white light will be shown from a lantern hoisted on a pole or exhibited from the unfinished lighthouse tower, from a height of 30 ft. above the water.

Sailing directions, which will appear in the forthcoming edition of the Georgian Bay & North Channel Pilot, replacing "Directions to Cameron Island by main channel," are given in the notice, but are omitted here owing to their length.

No. 16, APRIL 14.—RAILWAY BRIDGE AT LACOLLE, QUE.—The railway bridge described in Notice to Mariners no. 34 of 1897 over the Richelieu River, at Lacolle, has been completed, & the passage on either side of the pivot pier may now be used. At night the centre of the swing is marked by a light on top of the iron work which shows white when the draw is open & red when closed. In addition each of the four guide piers is marked by a white light. This notice affects Admiralty Chart 797.

No. 17, APRIL 18.—LAKE ST. CLAIR, TWENTY-FOOT DREDGED CHANNEL.—Notice is given by the U.S. Lighthouse Board that, on or about April 15, 1898, lights, as follows, will be established to mark the lower reach of the Lake St. Clair 20-foot dredged channel:

Isle aux Pêches range beacon lights.—Front light.—Two fixed white lens-lantern lights, 10 ft. apart horizontally, in line across the axis of the channel, & 18 ft. above lake level, on a cluster of piles on the prolongation of the axis of the dredged channel, in about 19 ft. of water, about 2,000 ft. south-westerly from its lower end. The north-westerly of the 2 lights will illuminate 180° of the horizon to the northward of N. E. by E. $\frac{1}{2}$ E. & S. W. by W. $\frac{1}{2}$ W., so that, in coming up the Detroit River on the Windmill point range line, this light may be run for as soon as it becomes visible. The structure carries a white day mark. In passing vessels must keep to the westward of this light. Bearings of prominent objects from the light are: Outer end Grossepoint club house dock, N. by E. $\frac{1}{4}$ E.; Lower entrance (E. side) beacon light, N. E. $\frac{1}{4}$ E., about 4,100 ft.; Windmill point lighthouse, W. $\frac{3}{8}$ S.

Rear Light.—Two fixed white lens-lantern lights, 10 feet apart horizontally, in line across the axis of the channel, & 38 feet above lake level, on a cluster of piles in about 8 ft. of water, on the prolongation of the axis of the dredged channel, about 4,650 ft. S. W. $\frac{1}{4}$ W. in rear of the front light. The 4 lights of this range mark 2 range lines parallel with & 5 ft. on either side of the axis of the dredged channel. When at the upper end of the channel, about abreast of Grossepoint light vessel, with the lights open so that the rear light of one range is in range diagonally across the axis of the channel with the front light of the other range, the observer would be about 40 ft. from the axis of the channel & could safely increase the apparent horizontal distance between the lights about 8 times without approaching too close to the line of buoys marking the edge of the channel. About midway between the light vessel & the lower end of the channel the apparent horizontal distance

between the lights may be safely increased to 16 times, & still further increased as the lights are approached.

Lower entrance (W. side) beacon light.—A fixed white lens-lantern light, 14 ft. above lake level, on a pile cluster in about 17 ft. of water on the westerly side of the lower entrance to the dredged channel. Bearings of prominent objects from the lights are: Outer end Grossepoint club house dock, N. by E. $\frac{1}{2}$ E. Lower entrance (E. side) beacon light, E. N. E. $\frac{3}{8}$ E. Windmill Point lighthouse, W. S. W. $\frac{3}{8}$ W.

Lower entrance gas buoy.—On the same date this black buoy, showing a fixed white light during periods of 10 seconds, separated by eclipses of 10 seconds, marking the westerly side of the lower entrance to the dredged channel, will be discontinued.

Lower entrance beacon light.—On the same date the color of this light will be changed from white to red, & it will hereafter be called "Lower entrance (E. side) beacon light." This notice affects Admiralty Charts 330, 332 & 678.

No. 18, APRIL 22.—TORONTO EAST PIER LIGHTS.—The small column fixed red light hitherto maintained on the outer edge of the East Pier, Toronto, has been moved N.W. by N. 2,400 ft. & now stands on the inner end of the pier, forming with the new front tower which has been erected on its former position a range showing the line of the pier. The light is, as heretofore, fixed red, elevated 18 ft. above the lake level & can be seen from all points of approach from the bay. The new skeleton tower stands on the position formerly occupied by the column light. Lat. N. 43° 37' 48". Long. W. 79° 20' 20". The light is occulting red, bright 6 seconds with intervals of darkness of 6 seconds. It is elevated 43 ft. above lake level, & should be seen in clear weather at a distance of 8 miles, over an arc of 180° from N.N.E. around to S.S.W. The apparatus is dioptric of the 6th order. The building consists of a steel skeleton framework surmounted by an enclosed top & lantern. The framework is painted red, the enclosure & lantern white & the roof red. The height of the building from base to vane is 40 ft. This notice affects Admiralty Charts 678, 797 & 1152.

No. 19, APRIL 26.—MINES IN U.S. HARBORS.—Information has been received by this Department that mines have been laid in Boston Harbor. The entrance to Nantasket Roads by Fort Warren & the Broad Sound Entrance to President Roads are dangerous to all vessels. Steamers must only enter or leave the harbor at high tide & through the

NO. 20, APRIL 20. CHART OF BAY OF QUINTE, ONT.—A chart of the Eastern portion of the Bay of Quinte, from Kingston to Deseronto, prepared from a survey of the Chief Engineer of this Department, has lately been published by the British Admiralty. Copies of the same may be obtained from the agent for Admiralty charts in Canada, C. Potter, Toronto. The number of the chart is 2961.

Toronto Harbor Notices.

Harbor Master Postlethwaite has issued the following notice to mariners:

LIGHTHOUSE POINT.—Placed buoys off the point of the Island to mark the Bank to the S. & S.W. of the Lighthouse Point. One iron can buoy no. 2, painted red, with black ring on the end, the Point Lighthouse bears from it N.W. by N. Another can buoy (red), no. 6, the Lighthouse bears from it N. $\frac{3}{4}$ W. Another can buoy (red), no. 8, the Lighthouse bears from it N. by E. $\frac{1}{4}$ E. Another can buoy (red, with white ring round it & white ball on end), no. 10, the Lighthouse bears from it N.E. by N. A can buoy painted red, no. 12, stands on the N.W. point of the Bank, & bears from the Lighthouse E.N.E. in 5 fathoms water. The can buoys to the west are in 8 fathoms water, except no. 12, which is in 30 ft. water. It is not safe for vessels to go inside them, as the Bank rises very abruptly. An additional spar buoy (red) is placed on the N.W. point of the Island in 14 ft. water.

WEST CHANNEL.—The red spar buoy on the starboard side of the Channel stands in 14 ft. of water, distant 620 ft. from west end of Queen's Wharf. One black buoy stands on the north side of the Channel in 14 ft. water, distant 620 ft. There are 11 ft. of water in mid-channel. The best water is on the south side of the Channel near the breakwater. On entering Harbor the course is from east end Breakwater to Fisherman's Island, nearly due east.

EASTERN CHANNEL.—The buoys in this Channel are placed thus: Two black spar buoys on the west or port side coming into the Bay, & two red spar buoys on the east or starboard side. One red spar buoy at south end of east pier, to mark the stone protecting the pier. This channel is 105 ft. wide, & has a depth of 15 ft. at this date. Between the piers the water is 16 ft. deep for full width of channel 400 ft. Landmarks for entering are the cupola of St. Lawrence Hall in line with a point midway between the tower of the Metropolitan Church & St. Michael's Cathedral spire. The course by compass, coming in, is N.W. by N. The water to-day, 9 in. above zero. A new lighthouse, with red light occulting every 5 seconds, & 33 ft. from deck of pier to centre of lamp, has been erected on the south end of the eastern pier. The old lighthouse with red light has been moved to the north end of eastern pier.

Via Edmonton to the Yukon.

Isaac Cowie, of Edmonton, writes:—I have pleasure in furnishing you with the following brief account of the Athabasca & Mackenzie Route to the Yukon. Having been for many years the Chief Officer in Charge of the Northern Transportation Service of the Hudson's Bay Co., I have had full opportunity of knowing it in a practical manner.

From Edmonton you cross the watershed, between the waters flowing into Hudson's Bay & those which empty into the Arctic Ocean, by an ordinary waggon road some 90 miles in length. On this a company has been formed to run a weekly stage service, connecting with the train arriving here on Monday even-

ing. "The Edmonton & Athabasca Stage Co." will also contract for freight as well as passengers with their light hand baggage.

Embarking on the broad Athabasca at Athabasca Landing, the traveller is swept down amidst beautiful scenery for 125 miles to the mouth of the Pelican River, where in low stages of water there is a small rapid; the sweeping current of the spring or early summer hurries him on without pausing to examine the Dominion Government's boring plant, which has here tapped the enormous petroleum deposits which he will further on see exuding from the banks of the valley for 200 miles further down stream. Forty miles further on we arrive at Grand Rapids, where easy navigation ends for a time. Here an island which cleaves these mighty rapids in twain, forming a natural bridge, not across, but parallel with the course of the stream, is utilized for carrying overland the cargoes of the boats from the head of dangerous navigation to the foot thereof. The boats thus lightened of their loads safely shoot the rapids, guided by their skilful crews. Stretches of easy & exciting navigation succeed each other in frequent intervals on from Grand Rapids to Fort MacMurray. Of these the Burnt, the Boiler, & the Long, like the Grand, are caused by the river flowing over a bed of immense boulders. Then follow the limestone ledges, cutting through which the river passes over the falls of the Crooked, the Stony, the Cascade, & the Mountain Rapids. One mile above the Hudson's Bay Co.'s post at MacMurray, a small boulder rapid shows in low water. Then after a run of pleasurable excitement, arrested at the Cascade alone to lighten the boats & make a portage of the cargoes should circumstances render it necessary, there is clear sailing down the Athabasca for 170 miles to Lake Athabasca, across which at a distance of 70 miles from the mouth of the river stands the important Hudson's Bay Fort Chippewa, from which waterways radiate to the west up the Peace River, to the east along the Athabasca Lake to the highly mineralized districts of rocks north & east thereof, & to the north by the Riviere du Roche to the Slave River, down which we proceed 95 miles to Smith Landing. Here we have the alternative of proceeding by a waggon road of 16 miles to Fort Smith at the foot of the Slave River rapids, or else of shooting & portaging over them by the old Hudson's Bay boat route. These rapids & portages are the Cassette, the Mountain, & the Pelican, over which both boats & cargoes must go overland a quarter of a mile at each. Then comes the Rapid of the Drowned, where half the load is taken by boat & half by land.

Then comes a clear run of 1,200 miles on which an ocean going vessel could run, down to Peel's River. From Fort Smith to Great Slave Lake, down the Slave River, we pass in a run of 196 miles the mouth of Salt River, on which an immense mine of beautiful crystallized salt, of a capacity to supply the world, exists. Reaching Fort Resolution at the mouth of the Slave River, the Great Slave Lake has to be crossed to its outlet—the magnificent Mackenzie River. At the north & east of this inland sea, with its myriads of rocky islands, galena in enormous quantities is everywhere to be found. Gold-bearing quartz has also been discovered by prospectors, & accessible from these waters on the east lie vast deposits of virgin copper on the Coppermine River.

Leaving this potential sea of treasures behind we hie on down the Mackenzie. Passing Fort Providence, 168 miles from Resolution, the swift current of the mighty river sweeps us on amidst grand scenery to Fort Simpson at the mouth of the Liard. Pausing here at this, the headquarters of the vast Mackenzie River District, to hear of the success of the miners who have proceeded up the gold-bearing Liard to mine thereon, or proceed by it to the Francis River & Lake & the head waters

of the Pelly-Yukon, or to hear of the new finds which have been made on other hitherto untried rivers flowing east from the Rockies into the Mackenzie, we again push off on the broad bosom of the river for our final run of 778 miles of uninterrupted navigation to the mouth of Peel's River. On this stretch Forts Wrigley, Norman & Good Hope are passed, & intelligence gained. Then up stream for the first time on the entire run, to Fort McPherson, 13 miles.

At this point 3 alternative routes present themselves. Those who like can proceed up the Peel, the gravels of which are known to yield gold & at the head waters of which gold-bearing quartz has been found, & there establish a mining camp. If the wish be to go on to the Klondike there are 2 ways of getting over to the Porcupine. The old summer route to the Porcupine is across the watershed on foot, men carrying pack loads of 40 lbs. each, besides rations, &c., for a trip of 6 days, or else by the water route for small boats, which necessitates only a portage of a quarter of a mile at the height of land. From thence the Porcupine is reached by running down small creeks & rivers, & from then on there is free navigation to Fort Yukon for good sized steamboats (275 miles).

Stikine Transportation Rates.

The transportation companies directly interested in the Stikine River business have taken a positive & apparently firm stand for the maintenance of uniform rates. The adoption of a scale of charges was the chief business of a meeting held in Vancouver at the end of April, & from the fact that 30 river steamers were represented, it is evident that the combination will have the absolute dictation of terms with regard to the river business. The meeting was held under the chairmanship of H. M. Kersey, & those present—representing the entire fleet to be operated this season on the Stikine—were:

A. Cameron, E. J. Coyle & G. L. Courtney, representing the C.P.R.'s 12 boats.

J. S. Harvey, representing F. C. Davidge & Co.

F. Peters, representing The Klondike Mining, Trading & Transport Co.

H. M. Kersey, representing the Canadian Development Co.

G. T. Legg, representing the Union S. S. Co.

F. W. Vincent, representing the C.P.N. & H. B. Co's.

P. Hickey, E. D. Self, & H. H. Cohen, representing the Cassiar Central Ry. Co.

S. G. Yerkes, representing the Tacoma Port Orchard Co.

E. Dewdney & J. T. Bethune, representing the Canadian & Oriental Co.

J. A. Mara and W. F. Bullen (by proxy).

It was decided that rates should be fixed with Wrangel as a starting point, there being so many vessels competing for business between Tacoma, Seattle, Victoria, Vancouver & Wrangel, that rates could not be controlled for the ocean trade. It was decided to adopt an especially low rate on horses & cattle with a view to assisting the transportation of outfits & men beyond Glenora, & the following scale of freight charges was agreed to—the approximation in the second column being, of course, beyond the scope of this meeting, although mentioned so that the public may thoroughly understand the scale:

	Wrangel to Glenora.	Victoria to Glenora.
Cargo of all sorts (except lumber) per ton measurement or weight at ship's option.....	\$40 00	\$50 00
Lumber per 1,000 feet B.M.	60 00	75 00
Horses, mules & cattle, per head.....	25 00	43 00
Dogs, sheep & goats.....	5 00	12 50

As to the passenger rates, \$20 was agreed upon as the price of first-class transportation

from Wrangel to Glenora, exclusive of meals or berth. This will make the first-class rate from Victoria to Glenora approximately \$50, & the second-class \$35. South-bound passage rate was also discussed, \$10 being favored by many; nothing definite, however, was done on this rate, it being laid over until a later meeting. Through freight quotations from the Coast were also laid before the meeting, \$50 a ton being favored by many, but this also was laid over.

The rates mentioned are to be considered minimum rates, & apply on the up-river trip only, & no cut, either by way of commission or otherwise, shall be made. An agreement has been signed by those at the meeting, binding all to maintain these rates until the agreement of the lines to an alteration shall have been obtained.—Victoria Colonist.

Richelieu & Ontario Navigation Co.

The Co. has met the railway cut rates by a \$4.50 rate from Toronto to Montreal, including meals & berths, by the steamer Hamilton. From Toronto to Kingston the rate is \$2. The Hamilton commenced running the last week in April.

At a meeting of the directors, April 12, a half-yearly dividend of 3% was declared. It was decided to begin the Montreal-Quebec service with the steamers Montreal & Canada, the Montreal to remain on the route the whole season, the Canada to be transferred later on to the Saguenay route, her place on the Montreal-Quebec route to be taken by the Quebec.

The Co. will begin the operation of its Toronto-Montreal service May 30 with the Spartan, Corsican, Algerian & the Bohemian. Later in the season, if the Toronto is completed in time, she will take the place of the Algerian, & the Bohemian will meet her at Prescott, continuing the trip to Montreal.

The hull of the Co.'s steamer Toronto, now building in Toronto, a description of which appeared in our March issue, will probably be ready for launching about the middle of June. The staterooms & woodwork generally are being prepared, & can be placed in position at any time after the hull is launched; but the engines have to be erected in the shop, then taken down & placed in position on the boat, all of which will take time, so that it is not probable she will do much if any business this season, as the tourist rush will be virtually over before she can be put on the route. A statement which appeared in a Toronto paper recently to the effect that a second boat for the R. & O. Co. is under construction in Toronto is incorrect. The Co.'s last annual report stated that a sister boat would be built to be ready in 1899, but nothing in the way of construction has been done yet, & it is not believed the contract has been let.

Capt. Batten will be pilot for the Co.'s boats from Coteau Landing to Montreal this season.

In Montreal recently in the case of Mrs. A. H. Allan vs. the Richelieu & Ontario Navigation Co., the plaintiff, who is from New York, claimed \$10,000 damages on account of injuries received on board the S.S. Bohemian in July last. She was a passenger from Kingston to Montreal, & was in the dining room waiting for some sandwiches which she had ordered. Near the end of the room was a curtain from behind which the waiters were bringing dishes in preparation for the dinner. One of the waiters having somewhat burned his fingers on one of the dishes hurriedly deposited it on a table & disappeared behind the curtain. Mrs. Allan went to see behind the curtain, but instead of going around rushed right through it, & fell through an open hatchway that was behind & received serious injuries, which necessitated considerable medical attendance & nursing. The court held

the Co. could not be made responsible for the accident, which was due entirely to the imprudence of the plaintiff, & consequently the action must be dismissed.

May Weather on the Lakes.

On an average 6 storms pass over the lake region in May, the majority of which, however, can be safely weathered by the larger craft. The number of storms in May during the last 20 years has neither increased nor diminished. There were more storms in 1892 than in any other year, yet the loss to marine interests was not so great as in 1894 & 1895. During the 10 years, 1877 to 1887, the money value of vessels lost or damaged in May amounted to about half a million dollars; from 1887 to 1896, both inclusive, the loss amounted to a little over a million & a half, although fewer vessels were lost or damaged during the last-named period. By far the greater number of storms that pass over the lake region during this month come from the northwest. The storms of May, & also of the summer months, are not so severe as those of late fall & winter. Neither are the outward signs of their approach precisely the same. The dangerous winds of summer are the squall winds which accompany thunderstorms. They last but a short time, & their coming can almost always be foretold by the appearance of the western sky. The barometer is unsteady, rising & falling quite abruptly. The day is generally close & oppressive & the clouds present a broken & heaped-up appearance.

Probably the most disastrous May storm that has occurred in the lake region during the last twenty-five years crossed the southern end of Lake Michigan May 18, 1894. The day previous had been warm & sultry & numerous thunderstorms occurred throughout Wisconsin, Illinois, Michigan, Ohio & Indiana. On the morning of the 18th the winds were north-easterly & exceedingly gusty, the velocity varying from 30 miles per hour one minute to 60 the next. The sea likewise was unusually heavy, the waves being short & choppy, measuring from 10 to 15 feet from hollow to crest. To add to the danger of wind & sea, rain mixed with snow fell during the afternoon hours. As a result of the storm 26 lives were lost, 14 vessels were totally & 12 others partially wrecked, involving a money loss of over \$80,000.—United States Weather Bureau Chart.

The Yukon Fleet.

With steamship agencies & managements preparations for the opening of navigation on the Stikine & Yukon Rivers are rapidly taking form. The C. P. R. Co., which, owing to its wide connections, can be taken somewhat as a leader in its estimate as to traffic likely to develop when the second rush sets in, has been in no way retarded in its preparations through the present temporary lull. On April 28 the Victoria Colonist said:—Work on the very formidable fleet of river boats they are building for the Stikine is being forwarded with all haste. The first of these, the Hamlin, sailed April 25, & will be followed by others in the very near future. It is expected the Hamlin will sail on her first trip up stream on May 1. In conjunction with this move the Co. will give the magnificent steamer Tartar dispatch for northern ports to-day. Her agents state that they have a good list of freight & passengers booked for her. At Wrangel connections with river boats will be made & freight & passengers sent on to Glenora, from which port there is but a short portage before the chain of waters leading to the upper Yukon is reached. The Canadian Development Co. steamers Victorian, Columbian, Canadian & Monte Cristo will also be placed on the river as soon as possible, & a particu-

larly good opportunity of reaching Glenora without transfer or other interruption will be afforded passengers leaving on these vessels.

Next week will see the first two sail, the Victorian being now about ready for the long voyage on sea & river. After inaugurating their services these steamers will be operated exclusively on the river, & at Wrangel will make connections with ocean-going steamers of different lines. The C. P. N. Co.'s steel steamer now in course of construction & probably the Transfer, if business warrants, will likewise be placed on the Stikine during May.

B. C. Freight & Shipping Report.

R. P. Rithet & Co., Victoria, B. C., say in their shipping report dated April 30:—During the past month the situation has undergone somewhat of a change, & the close marks a great improvement. This is almost entirely in the north, however, as owing to the drought in California, any demand for export from there has been stopped for the present. The improved grain market has had some influence indirectly on lumber & freights, for iron & steel vessels that would otherwise have gone in for such business are now doing better from the Columbia River. Consequently the rates for lumber remain moderately firm, though there are more vessels coming into the market than has been the case for some time.

The City of Delhi has been taken up at 30s. for salmon, the balance of last year's pack, & will begin to load almost at once. For the coming season a number of fixtures have been made, mostly at 35s. 9d., but the cargoes for these will of course not be ready until September next or later.

We quote freights as follows:—Grain. San Francisco to Cork f. o., nominal, no demand. Portland to Cork f. o., 35s. Tacoma to Cork f. o., 32s. 6d. to 35s. Lumber. British Columbia or Puget Sound to Sydney, 47s. 6d.; Melbourne or Adelaide, 50s.; Port Pirie, 45s. to 47s. 6d.; Fremantle, 57s. 6d.; Yokohama, 42s. 6d.; Shanghai, nominal; Tientsin, nominal; Valparaiso, f. o., 42s. 6d. to 45s.; U. K. or Continent, 60s. to 62s. 6d. Rates for lumber are more or less nominal owing to the absence of tonnage.

The Pacific Steamships.

C. Denby, Secretary of the U.S. Legation in China, writing in the North American Review on "America's Opportunity in Asia," complains that U.S. commerce with China has to be conducted under foreign flags. Among other things he says: "The steamer lines between the Pacific coast & the Orient should receive such financial support as to be able to maintain frequent communication by United States built ships of the highest class. Canadian competition should be surpassed in particulars. The profits on the carrying & insuring of U.S. goods should be diverted to U.S. companies. Our people should no longer endure the humiliating necessity of sending our merchandise, our mails, & our telegrams under the protection of a foreign flag."

This is a candid admission, from an official source, of the vast superiority of the C.P.R. Empress line of Royal mail steamships over any of the lines between U.S. Pacific Coast ports & the Orient. The magnificent Empress fleet, so superior in speed, safety & comfort to any U.S. Pacific line, has secured so firm a hold on the passenger travel that, even were the U.S. lines to improve their equipment, they would find it hard, if not impossible, to regain their lost ground. But the C.P.R. is not content to rest on its laurels & it is well understood that the replacing of the Empresses by larger, faster & more luxurious steamships is a matter the things that have been decided on.

Dominion Atlantic Ry. Co.'s Steamers.

The steamers being built by the Earle Co., at the River Humber, Eng., for the Dominion Atlantic Ry. Co.'s service between Yarmouth, N.S., & Boston, Mass., will be called Prince George & Prince Arthur. They will be identically the same, measuring 300 ft. long, 38 ft. beam & 15 ft. draft. The nominal horse-power will be 6,500, nearly double that of the Prince Edward, now in the service. The speed of the new boats will be 21½ knots on a measured course, with a guaranteed speed of 19½ knots at sea in any weather. This will greatly reduce the time now occupied in making the run between the two ports. They will be lighted & heated by electricity. The machinery is of the very latest pattern, the Schleck-Yarrow, Tweedie system. It is understood this is the first time this system has ever been in use on this side of the Atlantic. When these boats are completed a daily service will be inaugurated during the summer months. At the close of the season the Prince Edward will be hauled off the route, & used as a spare boat, relieving the Prince Rupert, now in the Co.'s service between Digby & St. John, N.B., or the two new boats. The Prince George, the first of the steamers, will be out June 15, & will be commanded by Capt. McGray, of the Prince Edward. The other steamer will be in commission a month later.

The Lake Fleet.

A report of much interest on commerce on the Great Lakes has been prepared by G. G. Tuñell, under the direction of the Bureau of Statistics of the U.S. Treasury Department. The fact is brought out that in the earlier years the commerce passing through the Detroit River was nearly equal to the total movement on the lakes. This is no longer the case, & the commerce passing through the river is not as good an index of the whole movement on the lakes as formerly, owing to the increase in recent years of business between Lake Superior & Lake Michigan ports. In 1873 the freight tonnage, as registered by the movement through the Detroit River, was reported to be 9,000,000 tons, while in 1896 it had increased to 27,900,520 tons. The growth of the U.S. lake fleet is regarded naturally as furnishing the most satisfactory evidence of the growth of traffic upon the Great Lakes. It is pointed out that from 1868 to 1872 the lake fleet did not quite maintain its own, but it then made rapid gains until 1875, when the total tonnage stood at 587,234 tons. After this there was a decline until 1879, when it stood at 552,602 tons. In 1880 there was an increase to 557,942 tons, & in 1886 the tonnage amounted to 690,359 tons. A new era in lake transportation began about that time, & the development has since been so marked that the total tonnage now is 3,326,592 tons.

The Yukon Trade.

Writing from Victoria on April 18 to the Toronto Globe, S. T. Wood said: "The policy of the U.S. Government, directed, as it has been, by the influence of men personally interested, has been of late a continuous source of irritation. Senator Perkins, whose name has become so prominent in the course which has tended to injure the trade of Canada's western ports, is known on the coast as the head of a steamship company. For years his company has had a monopoly of the coast trade northward, & that comfortable state of affairs has continued so long that he regards the Canadian business springing up last year as an encroachment on his preserve. There are efforts to prevent Canadian transshipment in bond to shallow-draught vessels at Wrangel, to protract the obstructions at Skagway & to

cripple in other ways the Canadian trade. The ostentatious rejoicing at Seattle & Tacoma over the defeat of the Stikine railway bill has made merchants here suspicious as to the action of the U.S. Government regarding the transshipment of goods at Wrangel when the shallow-draught boats begin to run on the Stikine. It is feared that the ingenuity of obstruction now directed toward the passes at the head of Lynn Canal will be brought to bear on Wrangel to the detriment of Canadian trade. This may seem like borrowing trouble, but it is a feeling which has tended to keep stocks low in some out-fitting establishments.

Canadian Pacific Navigation Co.

General Passenger Agent Baxter informs us the Co. has the following boats engaged in the Alaska, Yukon & Stikine trade:

OCEAN STEAMERS.	Tonnage.	Length.	Pass.	Capacity
Islander.....	1495	242 ft.	600	
Danube.....	887	220 "	250	
Tees.....	600	165 "	150	
Princess Louise..	922	180 "	250	
Willapa.....	500	136 "	150	
Queen City.....	450	117 "	100	
RIVER STEAMERS.				
R. P. Rithet.....	817	177 ft.	400	
Transfer.....	264	110 "	100	
Yukoner.....	500	176 "	400	
New steel steamer for Stikine...		146 "	400	

The steamers *Islander*, *Danube*, *Tees*, & *Princess Louise* run regularly to Wrangel, Juneau & Skagway. The *Princess Louise* & *Tees* call at all B.C. ports in addition. The *R. P. Rithet*, *Transfer* & the new steel steamer will run regularly on the Stikine River as soon as navigation opens, making connection with ocean boats at Wrangel. The *Yukoner* will run from St. Michael's to Dawson City & Yukon ports during navigation season on the Yukon, making connections at St. Michael's with the steamer *Danube* which will leave Victoria on or about June 10.

Car Transport in Canadian Vessels.

Assistant Secretary Spaulding, of the U.S. Treasury, addressed the following letter to the Collector of Customs at Detroit, Mich., April 22: "This Department is in receipt of your letter, inclosing a request made by the Agent of the Grand Trunk Railway at your port that he be permitted to send to Windsor, Ont., cars which, with their contents, are to be put into a boat in Windsor & brought back to Detroit at the Wabash slip, stated to be down the river from the starting point, the object being to avoid the delay & expense of transferring the cars to the Wabash depot by a belt line which runs around the city. The Co. desires to use the privilege both ways. The Department has to state that, regardless of the question whether the proceeding would unduly endanger the revenue, it is of opinion that the privilege can not be allowed without further legislation, especially in view of the provision of the Act of Feb. 17, 1898, relating to transportation in analogous cases."

The "Soo" & the Suez Traffic.

Following is a comparative statement of the traffic of the Sault Ste. Marie & the Suez canals for the past three years:

SAULT STE. MARIE CANALS.			
	1897.	1896.	1895.
Number of vessel passages.....	17,171	18,615	17,036
Tonnage, net registered.....	17,010,933	17,240,418	16,806,781
Days of navigation.....	234	232	231
SUEZ CANAL.			
	1897.	1896.	1895.
Number of vessel passages.....	2,986	3,409	3,434
Tonnage, net registered.....	7,899,374	8,560,284	8,448,383
Days of Navigation.....	305	305	305

To Enforce Coasting Laws.

The Dominion Government proposes to strictly enforce the coasting laws, & instructions have been sent to all customs officials to carry out the regulation which says: "Foreign vessels shall not take freight or passengers at one Canadian port & land the same at another Canadian port, & the master or owner of any vessel found to have violated this rule shall be subject to a penalty of \$400 for each offence, & the vessel may be detained until the same is paid." It is thought some of the steamers on the Pacific Coast running to Alaska points have broken the coasting rules, & that is the reason for calling the attention of customs officials to the clause.

OCEAN, LAKE & RIVER.

British Columbia & Yukon.

News reached Vancouver, May 2, that the Stikine River was open for navigation.

The Upper Columbia Navigation Co. is running boats from Golden, Tuesdays & Fridays.

The C. P. R. is arranging for the construction of a \$6,000 steamer dock at Kaslo, similar to the one at Nelson.

The steamer *Cape Otway* arrived in the middle of April at Vancouver with about 240 passengers from Australia & New Zealand for the Yukon.

Chief Engineer Sproat, of the C. P. R. lake steamer *Kokanee*, has been appointed to a similar position on one of the Co's Stikine River steamers.

The C.P.R. has purchased the Troop wharf & warehouses at Fort Wrangel, Alaska, for \$12,000. They will be used in connection with the C.P.R. Stikine River boats.

Hale, Elliot & Campbell's tug, the *Hercules*, has been launched near Nelson. She is 200 ft. long, with 200-h.p. engines, & is said to be the most powerful tug on the inland waters.

A. W. Shields, late Purser of the Kootenay Lake steamer *Kootenay*, has received a similar appointment on the Stikine River steamer, recently built for J. A. Mara's Co. at Vancouver.

Hector Sproat, Chief Engineer of the *Kokanee*, has been transferred to one of the new C.P.R. Stikine River boats. F. Moore, Purser of the S.S. *Nelson*, has also been transferred to one of these boats.

The Klondike Trading & Transportation Co. had intended putting up extensive buildings, wharves, etc., at Wrangel, but owing to the falling off in the rush to the Yukon, & a complete change of management, the whole programme of the Co. has been changed.

The C.P.R. steamer *Tartar* occupied just 51 days, 1 hour & 10 minutes in her voyage of 14,800 miles from Southampton to Victoria. The *Athenian*, which sailed 1 week later, occupied 51 days, 5 hours & 56 minutes. In travelling nearly 15,000 miles the 2 steamers varied only 4 hours in the time in which it was calculated they would complete their trip.

Captain James Nesbitt, formerly of the C. P. R. Columbia River steamer *Kootenay*, has resigned to accept the captaincy of one of the Stikine boats. He will be succeeded by Capt. Short, formerly Captain on the *Lytton*. The new steamer *Rosslund*, is now receiving her furnishings preparatory to being put on the passenger service as soon as the water rises in the Columbia.

The new C. P. R. steamer *Rosslund* made her first passenger trip May 2 between Arrowhead & Robson in quick time. This steamer is the fastest on the inland waters of B. C. & it is expected will cut down the time between *Rosslund* & Arrowhead at least 2 hours. She

will take the place of the Kootenay, which will go to Nakusp & be overhauled thoroughly, afterwards taking the place of the Lytton on the Arrowhead-Kootenay route. Then the Lytton will be used in the Big Bend of the Columbia River, running up as far as Death Rapids.

The C. P. R. Co. has made a new departure which ought to have the approval of the traveling public. Beginning with the Empress of Japan, east & west-bound, the steamships of this Co. will meet at Kobe, thereby giving the opportunity for a trip to Hong Kong & return, with a stay of something like 20 hours there. The steamers will lie alongside one another, travelers can readily be transferred, & hotel expenses can thus be avoided. This will cheapen a trip to Kobe considerably, as the charge of the Co., all meals & berths included, there & back, is only 18 yen.

The Hudson's Bay Co.'s new stern-wheel steamer Caledonia left New Westminster April 29 for the north under Capt. J. H. Bouser, who commanded the old Caledonia for 6 years. She will run on the Skeena until about the end of May, when the water usually becomes very high & remains that way until about the end of July. Between the two dates mentioned she will ply on the Stikine. The hulk of the old Caledonia is being transferred into a freight barge & will be used for this purpose in the river trade of the north. The second H.B. steamer, the Strathcona, followed her sister vessel a week later in command of Capt. F. Oden.

The C.P.R. Co.'s S.S. Islander was very unfortunate on a recent Alaska trip, meeting with 2 accidents. The first was on the up trip, when, on rounding Mary Island, she struck a rock, & lost all the blades of one of her propellers, & had to go on the beach at Douglas Island for repairs. The other accident was at Skaguay Harbor, where the steamer Willamette collided with her, & badly damaged the Islander. The Willamette is also stove in under the water line, but not seriously injured. The Islander was lying at anchor off the wharf when the Willamette, in endeavoring to make the dock, collided, smashing considerable of the wood-work of the Islander.

Navigation on the Upper Kootenay was expected to open April 16. The steamer J. D. Farrell, owned by the Kootenay River Transportation Co., was to start that day to make the first trip up the river from Jennings, Mont., to Fort Steele, B.C. The two steamers of the

International Transportation Co., the North Star and Gwendolin, will at once begin making regular trips between these two points, thus giving almost a daily boat service to Fort Steele. The service on the Upper Kootenay will be much better than in former years, the boats comparing favorably with those of Kootenay Lake. The remarkable growth of trade on this river may be judged by the fact that 3 years ago there was but 1 boat between Jennings & Fort Steele—the little steamer Annerlee, of 25 tons burden. Now there are 3 steamers, with a total capacity of nearly 400 tons.

The tramp steamers & "wind-jammers" which come to Victoria, Vancouver & Puget Sound need not remain long unchartered, for if they do not secure charters to carry lumber from the British Columbia & Puget Sound mills, or grain from Tacoma, they can go into service carrying rails to Japan. The Japanese are at present importing a great quantity of rails. They have decided to build many railways & orders have been placed with various steel works for a supply of 50,000 tons. A large amount of these rails have been forwarded to Vancouver over the C.P.R., & from Vancouver they will be shipped to Kobe. The British ship Cressington, which arrived in April, took a full cargo. The steamers Devonshire & Ard are loading at Tacoma on account of the Northern Pacific S. S. Co., & the steamer Alton, another large tramp, is expected to arrive there shortly from the Orient to load a similar cargo. A great pile of these rails are awaiting shipment at Tacoma ever since January. According to the computations of the railway officials, more than 100 solid trainloads have been shipped from the Illinois Steel Works alone. Other big shipments have been made from other Atlantic, Gulf & Pacific coast points.—Victoria Times.

The Maritime Provinces.

The N.S. coasting steamers came out of winter quarters unusually early this spring.

P.E. Island is calling for more satisfactory winter service with the mainland than the Stanley gives.

The new fast boat, Express, of the Yarmouth S. S. Co. is being fitted in Liverpool, Eng., & will leave to come out about May 20.

The Minister of Public Works has given permission for the dredge Cape Breton to finish the uncompleted dredging at St. John, N.B., wharves.

The Vega, lately purchased in New York by the Sydney Ferry Co., will be in command of Capt. Micheau & perform the Mulgrave & St. Peter's service.

G. F. Baird has purchased the side-wheel steamer Martello, which formerly ran between St. John & Annapolis, & will run her between Dalhousie, Campbellton & Gaspe.

The Maritime Transportation & Salvage Co. has purchased the steamship Hiawatha, & put her on a semi-weekly route between Halifax, Port Medway & Liverpool, leaving Halifax on Mondays & Thursdays.

The Canadian fishery protection fleet for the fishing grounds on the Nova Scotia coast & in the Gulf of St. Lawrence now carries machine guns as part of its equipment. The sailing cruisers Kingfisher & Osprey have each received two Gatlings.

The new ferry steamer Chebucto for the Halifax & Dartmouth service is still at the Azores, on her way from Europe, no captain appearing anxious to bring her across the Atlantic, so that the Ferry Co. is at the mercy of the contractors, no date for delivery being in the contract.

The Lunenburg Marine Ry. commenced operations last March & has been doing a good business, averaging nearly 2 vessels a day. The test required by the contract was satisfactory, being made with a 200-ton schooner, the T. W. Holden, with part cargo, making about 450 tons dead weight.

Two vessels owned by the Shubael Dimock & Sons' estate at Windsor, N.S., were recently sold. The schooner Newburg was sold to the Gypsum Packet Co., & the vessel will be used for carrying plaster from Windsor to New York. The schooner Clifton was sold to R. H. Cann, of Louisburg, C.B., to be used in the coal trade between Louisburg & Boston.

The City Council of St. John, N.R., has ratified the winter port agreement with the C.P.R., & pledged itself to provide the Manhattan Steamship Co. with the needed piers for steamers to be run this summer from New York to St. John. The intended arrangement may be disturbed, however, for the U.S. Government has taken over 2 steamers under lease to the Manhattan Co.

The S. S. Boston, of the Yarmouth S. S. Co., is undergoing repairs & getting fitted up for the summer's work, & the S. S. Yarmouth is running in her stead. The Boston made a splendid record during the winter, having

TORONTO.

missed only one connection. In June the Co. will begin to run 4 trips a week to Boston. The Co. expects its new flyer Express to leave England about June 20 & upon arrival she will be placed on the South Shore route.

The Bras D'Or Steam Navigation Co. will not put a steamer on the St. Peter's Mulgrave route this summer. In fact the Co. has practically gone out of existence. The Blue Hill has been sold to Baddeck parties, & will be used by them. The May Queen is laid up, & the Marion is owned by Capt. J. J. Moffat & others. She will run as usual between Sydney & Mulgrave, calling at St. Peters. A good chance is opened for some enterprising company to put a boat on the St. Peter's route.

Ontario & the Great Lakes.

The Cornwall Canal opened for navigation April 25.

The Massena is doing a thriving business between Brockville & Ogdensburg.

The Canadian cruiser Petrel recently seized 100 U.S. gill-nets & a ton of fish near Port Stanley.

Capt. W. P. Johnston, of Wabigoon, is building some small steamboats on Manitou & Rainy Lakes.

The Minister of Public Works states that a Government dredge will be put at work in Kingston Harbor without delay.

The Maid of the Mist will commence running at Niagara Falls the 1st week in May, Capt. Carter being again in command.

The first boat through the Rideau canal this year was the steamer Quebec, of Kingston, which locked through Ottawa April 30.

The steamer Princess Louise, of Kingston, purchased by Ottawa parties, will be taken to the Capital via the St. Lawrence route.

W. B. Kelly, of Bridgenorth, is putting on a new steamer, the Lady of the Lake, for excursions from Peterboro' to Chemong Park.

Capt. Craig has chartered the steamer John Haggart, & will run her three times a week between Picton & Cape Vincent via Kingston.

The steamer Nellie Cuthbert has been sold to Capt. Carss, Smith's Falls, & she will be placed on the route between Smith's Falls & Perth.

The steamboat people are looking for a big season among the Thousand Islands this year, as the war will prevent people from going to U.S. seaside resorts.

H. Corby, M.P., Belleville, has purchased the steam yacht Skylark, formerly owned by Dodge & Co. She was recently taken from Waubeshene to Belleville.

The steamer Chicora of the Niagara Navigation Co.'s fleet made her first trip this year from Toronto to Lewiston on May 16, & will run regularly throughout the season.

The dock strike among the C.P.R. men at Fort William was settled a few days ago. The men agreed to return to work on a basis of 17½c. an hour. This is ½c. lower than their last demand.

The Rainy River Navigation Co. has issued an illustrated folder, describing its line & the trip between Rat Portage & Mine Centre. The Lake of the Woods is described as a wonderful archipelago.

A deputation from Rat Portage which recently went to Ottawa expresses confidence that the improvement of Ash Rapids, Rainy River Rapids & Fort Frances Lock will soon all be things of reality.

The first steamboat on the St. Clair River was known as the Gratiot. She was a high pressure craft, whose exhaust could be heard

many miles inland. It took her 18 hours to go from Sarnia to Detroit.

Toronto Board of Trade wants Toronto harbor & its approaches made deep enough to accommodate the largest vessels passing through the Welland & St. Lawrence canals, when they are deepened to 14 ft.

The U.S. revenue cutter Gresham, when passing through the Welland Canal, April 24, struck the swing bridge, moving it from its centre & delaying the passage of vessels through the canal for some time.

The steamers United Empire & St. Andrews arrived at Ft. William April 24. Thunder Bay was then pretty full of ice, but they got through an opening. This is the earliest opening of navigation for several years.

The steamer Coaster is undergoing extensive repairs at Davis' shipyard, Kingston. She is being rebuilt & deepened by 2 feet, hull & decks, & will be practically a new steamer when ready for navigation.

The Pioneer Steamship Co., of Wabigoon, is building a 60-ft. steamer to ply on Lake Wabigoon, to connect with other steamers & stage lines, so a regular through line can be had from Wabigoon to Fort Frances.

It is reported that the steamer Cambria, recently purchased by the Donnelly Salvage & Wrecking Co., of Kingston, will ply between Hamilton & Montreal via Bay of Quinte ports in opposition to the Hamilton of the R. & O.N. Co.

The Carmona is likely to be the only boat plying on the east shore route of Lake Huron this year. The efforts made by Goderich & Kincardine to secure a line of good boats for the Windsor-Sault Ste. Marie route have had no success. The Carmona has been very much improved during the winter.

Mr. Stewart, Chief of the Hydrographic Survey corps, with the Government cruiser Bayfield, has been at work in the ship channel leading into Parry Sound. It has been found that a better, deeper & straighter channel can be laid out either to the south or north of the Pancake islands.

The Canada Atlantic & Ottawa, Arnprior & Parry Sound Ry. Co. have secured authority from the Dominion Parliament to construct & operate grain elevators & lines of steamboats necessary to the handling of their western grain carriage business from Duluth to the terminus of their line at Parry Sound.

The Brockville Navigation Co. has been incorporated with a capital stock of \$16,000, headquarters at Brockville; to acquire steam & other vessels for the conveying of passengers, mails, freight & other cargo, & to acquire public parks, athletic grounds & summer hotels.

The 2nd & 3rd of the steel hulls built in Toronto for the C.P.R. Stikine River stern-wheel steamers were shipped April 30 in sections for Vancouver, where they are now being put together under the supervision of Superintendent Troup of the Co.'s inland steamers.

The Montreal Transportation Co.'s new barge, Kingston, was launched from the company's shipyards at Kingston, April 16. Her dimensions are 180 ft. long, 36 ft. beam, & 12 ft. deep, with a capacity of 50,000 bus. of grain on the lake & 32,000 at River St. Lawrence draught.

It is said the U.S. revenue cutter Fessenden will have to spend practically all her time this summer enforcing the regulations relative to navigation in St. Mary's River. As she is the only cutter left on the lakes above Niagara Falls, there will be none of the customary patrolling of the lakes by cutters until the war is over. The Gresham was used in St. Mary's River last year.

A recent announcement in Toronto daily papers that Matthews, Crangle & Haggerty had given a contract to a Toronto shipbuilding firm for a grain carrier, 255 ft. long & 34 ft. wide, to ply between Fort William & Prescott is denied by Mr. Haggerty, who says, however, that they are figuring on building a steel steamer, but that nothing definite has yet been decided.

The owners of the fish tug Hazard at Port Dover recently received instructions from the underwriters of Buffalo to proceed to the point where the Western Co.'s steamer Idaho foundered last Nov., for the purpose of locating the wreck. An effort will be made to secure a portion of her cargo, which consisted of green coffee, hardware & sugar. It is authoritatively stated that water will not penetrate sugar in barrels to the depth of 2 inches. She lies in 60 ft. of water.

The 2nd stern-wheel steamer which has been built at Mott's branch shipyard, on Lulu Island, New Westminster, was launched April 19. She is a sister ship to the one launched a few weeks ago, from the same ways. Both are light draught & will be furnished with powerful engines. They have been built for the Klondike Trading & Transportation Co., & in all respects, will be thoroughly well equipped for service on the swift rivers up the coast in connection with the Yukon trade.

The old Government dry-dock rates at Kingston have been re-instituted. The Rosedale was given the benefit of the winter tariff up to April 15, after which her owners were charged \$105 a day. The regulations regarding payment have also been changed. Previously an entrance fee was exacted & the owners of the boat had 10 days after presentation of the dock master's account to settle. In those 10 days the boat would have left the dock & could very easily be outside the jurisdiction. The Department will no longer take these risks & has ordered that all fees must be paid before the vessel leaves the dock.

The Toronto Harbor Master suggests that the wharves along the bay front be designated by numbers instead of names, as the naming from streets or from lessees is very confusing. Lessees are frequently changing, & streets have more than one wharf. Besides the two wharves at the foot of Yonge street, it is proposed to build 3 more to the west, which will still more add to the confusion often arising from the present system of naming. It is proposed to have each wharf numbered according to its position, commencing at Queen's wharf as wharf no. 1, then wharf no. 2, etc.

Capt. Massey, of the steamer Linn, wrote the General Western Agent of the Canada Atlantic Transit Co., April 25:—"I arrived in Parry Sound April 3, at 7 p.m., all O.K. I found no difficulty coming into this harbor drawing 18 ft. of water. We came nearly all the way full speed, & it is the finest harbor I ever saw. It is land locked all round & there is lots of water. They are going to put a gas buoy on the Seguin banks, just outside Red Rock light, & another one about half way in, on a 14-ft. spot that is in nearly mid-channel, & then this will be a good place to come to. It is far better than Midland."

Vessel and marine interests are becoming much alarmed over the continued lowering of the waters of Lake Superior. At Duluth the water is down 30 ins. from last year's level, & is of the same effect as though thousands of dollars' worth of dredging had not been accomplished. The low water is a direct loss to the vessel interests, as it prevents them loading their boats to their normal carrying capacity. The reason for this low water is not clear, & the old talk among vessel men of the subterranean passage to Lake Huron is revived. This is furthered by the fact that

the water in Lake Huron is correspondingly high, & it is not going down the St. Mary's River.—Marine Record.

The first effect of war on the lake trade is being felt in Chicago. Instead of sending wheat to New York points for European shipment, the Chicago operators are shipping to Canadian ports where the plan is to sell the grain to Canadian commission merchants, who will in turn sell to European buyers, making commissions both ways. This is done because the property of U.S. citizens, whether in U.S. vessels or not, is coming to be regarded as unsafe. Some eastern vessel owners have begun to put their vessels under the British flag. At present the law makes it impossible for these boats to change their flag again, but efforts are being made in the U.S. Congress to have this law altered.—Marine Record.

On May 1 the Ogilvie, one of the C.P.R. stern-wheel steamers built at Vancouver for the Stikine River, made a trial trip on Burrard Inlet with a party of guests on board. Speaking of her the Vancouver News-Advertiser says:—"The Ogilvie, as a pattern of the river steamers the C.P.R. intends running in connection with the steamships Tartar & Athenian on the Klondike route, is unrivalled. She is beautifully appointed & replete in every detail. One hundred & forty-six ft. long by 30 ft., with 5 ft. depth, & drawing but 2 ft. of water, the Ogilvie & her sister ships should alone prove an inducement to travel on the northern rivers. The vessels are intended for 200 passengers. The saloon passengers are provided with comfortable cabins, replete with every comfort for the journey, & the smoking room, saloon & ladies' saloon are handsomely appointed, especially the latter."

The Province of Quebec.

An attractive Sailors' Institute has been opened in Montreal, at the corner of Commissioners Street & Place Royale.

The contract for laying the buoys between Quebec & Montreal has been awarded to J. C. Kaine, tug owner, Quebec, for 5 years. It had been previously awarded to a Sorel party, but it is said he withdrew.

The Montreal Chamber of Commerce is of opinion that a successor to Capt. Howard as Harbor Master is not necessary, & that the salary attached to the office could be spent more usefully in improving the harbor.

The Campana will leave Montreal May 23, June 6, & fortnightly thereafter, for the different ports on the River & Gulf of St. Lawrence, ending at Pictou, & including Georgetown & Souris, in addition to the other ports in P.E.I.

The Canada Atlantic Ry. asks the Dominion Government for dredging at Coteau Landing to enable large barges & other vessels to load at the C. A. grain elevator there. Over half-a-million bushels of grain are en route from the west for the elevator.

The people of Gaspe ask that Mount Louis, on the north coast of Gaspe, be made the terminus of the proposed fast Atlantic steamship line. They say a railway of 120 miles would connect Mount Louis with the Intercolonial at Metis & give a direct route from the terminus to the interior. Mount Louis is claimed to be a 1st rate harbor, open all the year round.

The St. Lawrence pilots ask to have one of their number represent them upon the Montreal Harbor Commission in matters concerning pilotage, & to have the control & administration of 2% of the receipts of the Harbor Commission from pilotage, also that a member of their corporation should assist in spring in placing the buoys, in order to make

suggestions, & that Parliament should render obligatory the by-laws made by the committee of pilots & the Harbor Commission, after they have been approved by the Governor-in-Council.

Items of Personal Interest.

H. Johnston, last year purser on the S.S. Lakeside, has been appointed paymaster of the Welland Canal works.

W. A. Fletcher has been appointed General Tourist Agent of the Richelieu & Ontario Navigation Co. Headquarters, Chicago.

W. F. Cloney, of St. Catharines, Ont., has been appointed Travelling Passenger Agent of the Richelieu & Ontario Navigation Co.

W. Robert, cashier of the R. & O. N. Co., received a handsome present & address from the other employes on leaving the Co.'s service recently to enter the Bank of Hochelaga.

The Peterboro', Ont., Navigation Co. has appointed Capt. Lorne to the command of the steamer City of Peterboro'.

Capt. W. R. Taylor, who was for many years inspector for Canadian lake underwriters, & whose son, T. R. Taylor, now holds the same position, is living in Kingston & is hale & hearty at 87 years. He is among the oldest of Canadian lake vessel masters now living. He began sailing out of Prescott, Ont., in 1832, in the steamer Queenstown, & later in the steamer William IV. Between 1834 & 1869 he commanded, among other lake vessels, the steamer Coburg, steamer Sir Francis Bond Head, schooner Thistle, schooner Shamrock, propeller St. Thomas, schooner William Caley, schooner Governor, barge Superior, steamer Comet, schooner Annie Falconer & schooner Annie Minnes.

H. M. Bolger, Secretary of the R. & O. N. Co., was recently presented with an address & purse in Montreal on the occasion of his approaching marriage.

THE RAILWAY AGENT, CLEVELAND, OHIO.—Our Canadian friends are making THE RAILWAY & SHIPPING WORLD quite a factor in Canadian railroad literature.

MONTREAL HERALD.—"The Herald is in receipt of a new Canadian railway journal entitled THE RAILWAY & SHIPPING WORLD. The initial number of this new monthly publication is a bright & interesting one, & contains much valuable information relating to transportation interests. Besides this, it contains an excellent photogravure of the Hon. A. G. Blair, as a frontispiece, & several Klondike engravings. Hitherto the officials of Canadian transportation companies have been forced to depend on foreign publications for their 'trade' reading, so a journal of this character devoted to purely Canadian interests will fill a long-felt want."

VANCOUVER NEWS ADVERTISER.—THE RAILWAY & SHIPPING WORLD has just been issued from Toronto. It is devoted to steam & electric railways, shipping, express, telegraph & telephone interests—a comprehensive devotion certainly. The publishers' announcement says: "THE RAILWAY & SHIPPING WORLD will endeavor to give a full & accurate record of everything transpiring in Canada relating to the interests enumerated above, supplemented by technical & other articles of interest & value to the class of readers to which it addresses itself. Its publishers believe in performances rather than promises, & will content themselves with saying that no effort will be spared to make the publication a thoroughly up-to-date one, editorially, typographically, & in every other respect. Illustrations will be freely used whenever they can be made to serve a practical purpose." Mr. D. Todd Lees is the agent for the new publication in Vancouver. The price is \$1 per year.

ELECTRIC RAILWAY NEWS.

British Columbia Lines.

THE B. C. ELECTRIC RY. CO. has reduced the running time between Vancouver & New Westminster to $\frac{3}{4}$ of an hour, as formerly. The cheap Sunday rates are much appreciated & Vancouver City's proposed new agreement with the B. C. E. R. Co. provides, amongst other things, that the Co. shall place fenders on the cars & also enables the city, if at any time it shall be found necessary to call upon the Co. to substitute underground for overhead wires & connections of motor power.

This Co. is having installed a complete plant for developing the water power at Goldstream, 12 miles from Victoria, for operating the street railway & electric light plant. The plant is expected to be in operation by midsummer. Contracts for the electrical & hydraulic machinery have been closed, & construction is being pushed with rapidity. The electrical apparatus will be of the 3 phase type, using rotary converters & transformers to distribute over the line as the 2 phase, with a voltage capacity of 11,000. Two Pelton water wheels will be used, with a capacity of 600 h.p. each, delivering 1,000 horse power in Victoria. Provision is also being made for 600 additional horse power if required. The power delivered in Victoria will be sufficient to operate the street railway, electric lighting system, commercial & municipal, & also to furnish considerable power for the operation of stationary motors for manufacturing purposes, elevators, etc.

Manitoba Lines.

WINNIPEG ELECTRIC STREET RY.—Superintendent Somerset has been looking over the St. Paul, Minn., street railway system, with a view to introducing improvements in working the Winnipeg one.

WINNIPEG & ST. ANDREW'S.—See item under head of Railway Projects on an earlier page of this issue. The proposed line may use either electric or steam power.

WINNIPEG & SELKIRK ELECTRIC RY. charter would have expired this year if construction was not begun, but the Legislature at its recent session extended the time for another year.

Maritime Province Lines.

CHARLOTTETOWN.—The local gas company has made a proposition to the city to build a street car system in Charlottetown.

HALIFAX & BEDFORD ELECTRIC CO.—The Halifax Chronicle says the electric tramway scheme from Halifax to Bedford has been killed, so far as the H. & B. Co. is concerned. Its charter has been amended so as to enable it to build a tramway only from Three Mile House to Bedford, & to supply electric lighting between the same points.

HALIFAX ELECTRIC TRAMWAY CO. will spend about \$50,000 in improving its plant. It has just installed 2 large generators.

Northwest Territories.

THE LEWES RIVER TRAMWAY CO. has applied to the Dominion Parliament for a charter to build an electric or horse railway around the obstructions to navigation at Miles Canyon & White Horse Rapids on the Lewes River. This Co. proposes to operate on the eastern side of the river. Another company, to be known as the Miles Canyon & White Horse Tramway Co., has applied for a similar charter of incorporation to operate on the west side.

Ontario Lines.

BELLEVILLE TRACTION CO.—Toronto brokers recently offered \$70,000 5-20 year bonds of this Co. secured by a 1st mortgage on the entire plant franchise, property & extensions to be made. The Co. has a franchise for 20 years, with the right of renewal for 20 years longer; it has exclusive right on all the roads & bridges, is exempt from taxation, does not require to pay any percentage of receipts to the city, & can cease operating from December to March inclusive, if traffic does not pay. Two miles of track were built in 1895, & it is proposed by the sale of bonds to provide for 3 miles of extensions, to purchase additional cars, to relay the present line with steel, to dam the Moira River, pay off floating debt & either purchase or lease 30 acres for a park. The extension would be from Front St. West to the Cemetery, passing the Deaf & Dumb Institute, mineral baths & agricultural grounds. The termini of the present 2 miles of track being at the railway station & steamboat dock, the residential portion of the city is not reached. The receipts for the two years the Co. has been in operation have averaged \$5,569.21 a year, & the running expenses, \$4,036. We understand the brokers expect to place the bonds in Boston.

BERLIN & WATERLOO ST. RY.—H. H. Halburn has been appointed Manager.

FLOWER TO HAMILTON SMELTING CO.'S WORKS.—A survey is being made for a short line from Flower Station, on the K. & P. railway, to the mines of the Hamilton Smelting Co., A. Bell, C.E., of Almonte, having charge of the work. It may be either a steam or an electric line.

GALT, PRESTON & HESPELER ELECTRIC RY.—The manufacturers of Galt recently petitioned the Council, asking that this railway be allowed to carry freight down town, & also to put switches into several of the factories & foundries along the line of the transit. The G., P. & H. has connection with the C.P.R., & the G.T.R. protested against the granting of the petition, claiming that to do so would be to discriminate against the G.T.R., the latter not having running privileges over the G., P. & H. The Board of Works recommended to the Council that no action be taken, & the report was adopted. For the present, at least, the manufacturers will have to be content with existing transportation facilities. A great deal of interest has been taken in the question, not only by the railway companies, but the town at large.

At a meeting of Berlin & Waterloo business men, held at Berlin, April 20, to discuss the proposed trolley connection between Berlin & Preston, where connection would be made with the electric railway from Galt owned by the C.P.R., several business men reported that they had made thorough investigations & concluded that a trolley road was preferable to a steam road. The charter for the Preston-Berlin road expires this year. It was decided that the bonus of \$40,000 asked for would be apportioned between Berlin & Waterloo according to the respective assessments. The general opinion is that Berlin & Waterloo will have C.P.R. connection this year.

THE HAMILTON, CHODOKE & ANCASTER ELECTRIC RY. shareholders met May 3 & considered the city of Hamilton's offer to purchase the Beckett Mountain drive at \$12,000, payable in yearly instalments of \$1,000, but although the majority were in favor of accepting, the decision of the Co. was left over for two weeks, when another meeting will be held. It is stated that in connection with the construction of the railway there are financial difficulties which the directors hope soon to overcome, & with the money from the Beckett drive & the Ancaster bonus, they

expect to arrange matters so as to begin construction early this summer.

HAMILTON, GRIMSBY & BEAMSVILLE RY. Co.'s shareholders held their quarterly meeting recently. The quarterly financial statement showed an increase of 10% in gross earnings over those of the corresponding period of last year. The directors were empowered to issue debentures to pay off the floating debt of \$20,000. The present debenture debt of the road is \$85,000, payable in 30 years.

HAMILTON RADIAL ELECTRIC RY.—There is likely to be trouble between this line & Hamilton Street Ry. The latter has given the Radial Ry. notice to cease doing local business. The St. Ry. Co. will object to the passage of the by-law granting the Radial Ry. permission to change its line from Sherman to Birch Avenue unless some new agreement is made in regard to local fares.

HAMILTON ST. RY. CO. recently made application to the City Council for an amendment of the present agreement with the City under which the Co. has to pay over \$13,000 a year for percentage & mileage. At a meeting of the Finance Committee, the Co.'s solicitor, Mr. Martin, presented figures which showed that there had been a falling off in receipts last year, & that no dividends had been paid since 1895. He attributed the falling off in receipts to the building of the radial railways, which cut into the local business, & stated that at present the Co. could not operate under the conditions. He proposed that the by-law should be amended to provide for the removal of snow from the track; the Co. to sell 9 instead of 8 limited tickets for 25c., & to extend the time from 6.30 a.m. to 8 a.m., 11.50 a.m. to 1.30 p.m., & 5 to 6.30 p.m.; to carry children between 5 & 12 years for 3c., or sell 10 children's tickets for 25c., also to allow its tracks to be used by radial railways entering the City on terms to be agreed upon. In lieu of these conditions the Co. asked that the franchise be extended to 1928, the mileage abolished, & the percentage be rearranged as follows: Receipts up to \$200,000, 5%; receipts over \$200,000, 8%. An alternative proposition was to abolish mileages & percentages, & after paying expenses, etc., to equally divide the surplus between the city & the Co. until each receive \$10,000 a year, then the City to receive the percentages under the by-law, the franchise to be extended to 1928, & radial railways to be allowed to use the Co.'s tracks on terms to be agreed to. The Finance Committee submitted several questions to the Co., which were answered in the following words: "The actual cost of the H. St. Ry. is represented by the capital paid up in cash, \$204,704.40, & the bonds issued in 1894, \$500,000; total, \$704,704.40. The Co.'s charter does not permit it to sell the railway, nor can the Co. control the shares of the shareholders, or bind the bondholders to agree to a sale, neither has the city power to purchase the railway. Very special legislation would, therefore, be required to enable such a purchase to be made, & it would take almost 2 years to obtain such legislation & pass the necessary by-laws. If the City decides to purchase the railway, & will now make a definite offer which the Co. can recommend to its shareholders, with a view to obtaining their assent to applying for the necessary legislation, the Co. will take that step, provided the interests of the Co. are properly safeguarded in the meantime by the franchise being extended till 1928 substantially upon the terms of the draft by-law now submitted (or the alternative offer), it being further provided that the City shall have the option to purchase out the company at the agreed price within, say, 2 years, should the requisite legislation & authority have been obtained in the meantime." Some of the members of Council are in favor of the City acquiring

the railway, but there is a great difference of opinion as to the wisdom of municipal ownership, & the matter has been laid over for further consideration.—Electrical News.

THE KINGSTON ELECTRIC RY.'s extension from Princess Street to the lower G.T.R. station is expected to be completed in June.

In the appeal in the case of the City of Kingston vs. The Kingston, Portsmouth & Cataraqui Electric Ry. Co., of which particulars were given in our last issue, in which the city sought to compel the Co. to keep its cars running over the whole of its line of railway during the whole of each year, decision has been given against the city.

LANARK COUNTY ELECTRIC RY. breaking ground, a formality necessary to save the Co.'s charter, was accomplished by Jas. Doyle, of Perth, by turning over the sod for some distance on his farm.

NIAGARA FALLS BRIDGE.—The steel arch to take the place of the upper suspension bridge was closed April 18. It is a highway bridge, carrying trolley tracks & sidewalks. The new arch is 840 ft. long, being the longest arch in the world. It is built by the Penoyd Iron Works, contractors for the Niagara Falls & Clifton Suspension Bridge Co. L. L. Buck is chief engineer, & R. S. Buck resident engineer.

THE NIAGARA FALLS PARK & RIVER RY. is now using both tracks between Chippewa & Table Rock, & is also running early & late cars.

The N. F. P. & R. Ry. is making improvements in its power house at the Falls, & expect to have 1,200 h.p. of 2,000 voltage for sale to power users.

PETERBORO' TO CHEMONG & LAKEFIELD.—It was stated in our last issue that the Cornwall Electric Ry. had submitted to the Town Council of Peterboro' a scheme for the construction of an electric railway from that town to Chemong & Lakefield, & that the Co. proposed to lease the Chemong & Lakefield lines from the G.T.R., convert them into electric roads & take over the freight business, the cost being roughly estimated at \$350,000. Enquiry of the Cornwall Co. fails to elicit any information, but General Manager Hays, of the G.T.R., informs us that a proposition has been received from D. A. Starr, who is connected with the Cornwall Electric St. Ry., for leasing the Lakefield Branch to a company which he proposes to form, but that nothing has been determined in regard to the matter.

PORT ARTHUR STREET RY. is negotiating for a car 34 ft. long.

ST. CATHARINES, MERRITTON & THOROLD ELECTRIC RY.—This road, originally owned by E. Smyth & others, & sold under foreclosure by the Bank of Toronto, to Dawson & Symes, of Chignecto Marine Ry. fame, is likely to be extended to Pt. Dalhousie, as contemplated by the original charter, but never carried out, owing to the conditions imposed by the Department of Railways, for the crossing of the Welland Canals. The St. Catharines City Council has given a by-law its 1st reading for right of way from the line's present terminal to the northern city limits.

THE ST. THOMAS ELECTRIC RY. recently made application to the Railway Committee of the Privy Council for the right to cross the tracks of the London & Port Stanley Ry. It was decided to send up an officer to inspect & report.

Four cars for use on the new line have reached St. Thomas. It is expected the line on Talbot St. will be in operation on May 24 & that the whole road will be going by July 1. The Co. has purchased the Yarwood farm, adjoining Pinafore Lake, for a park.

SANDWICH, WINDSOR & AMHERSTBURG ELECTRIC RY. The statement of receipts presented at the recent annual meeting shows

ed a marked increase over those of the previous year.

SMITH'S FALLS, RIDEAU & SOUTHERN RY.—The Kingston News says a contract has been let to a U.S. Co. to build this line as a 3rd rail single track electric road for \$8,000 a mile. The charter granted by the Ontario Legislature fixed the capital stock at \$300,000. Power is given to issue bonds to \$14,000 per mile of road. The Co. is empowered to construct a single or double track in the town of Smith's Falls & thence through the townships of S. Emsley, S. Burgess, Bastard, S. Crosby & Kitley, to the villages of Portland, Jones' Falls & Toledo, county of Leeds; also through the townships of Montague, county of Lanark; Wolford, Oxford & Augusta, county of Grenville, & the villages of Merrickville, Oxford Mills & North Augusta, county of Grenville. The road to be worked by steam or electricity, as they may elect. The line will run over all the paying ground of the Kingston, Smith's Falls & Ottawa Ry.

Up to the time of going to press we have been unable to verify the statement as to the letting of a contract for construction. A Smith's Falls correspondent says nothing has been done further than to obtain the charter, & that he does not think a board of directors has been appointed.

TORONTO RAILWAY CO.—The gross earnings for the first four months of 1897 & 1898 are as follows:

	1897	1898	Increase.
Jan'y.....	\$74,545.55	\$86,562.36	\$12,016.81
Feb'y.....	69,744.61	82,402.19	12,657.58
March....	78,891.45	92,818.12	13,426.67
April.....	73,756.38	86,898.83	13,142.45

TORONTO, METROPOLITAN & MIMICO COS.—The charge of infringing the Lord's Day Act, laid against the Metropolitan St. Ry. Co., running from North Toronto to Richmond Hill, came up in Toronto recently. It was stated on behalf of the Crown that the railway had promised to run no more cars on Sunday, & the charge was withdrawn. A similar charge against the Mimico St. Ry. Co. will, however, be gone on with.

WALKERTON TO FLESHERTON.—Mr. McNamara, of Goderich, has received a letter regarding the Hurontario Electric Ry., which states there is still hopes of securing the construction of a railway from Walkerton to Flesherton.

Quebec Lines.

HULL ELECTRIC RY.—A bill to incorporate the Ontario & Quebec Bridge Co. recently was defeated in the Railway Committee of the House of Commons by 35 to 61. The proposed company asked power to bridge the Ottawa River from the foot of Bank St., Ottawa, to Ottawa St., in Hull. The promoter was the Hull Electric Ry., whose line extends to Aylmer, Que., where it connects with the Pontiac & Pacific Ry. These lines have no entrance into Ottawa, & were trying to secure such by means of the bridge, for which they did not ask any subsidy.

ST. ALPHONSE.—It is reported that A. Tremblay & Bro., of Herbertville, have purchased property at St. Alphonse with a view of constructing an electric railway there.

THE MONTREAL PARK & ISLAND RY. will make a number of improvements to its service during the summer in response to the marked appreciation of its efforts to meet the requirements of the suburban section of the population as well as the large number of people who use the cars in summer to secure an outing at a reasonable cost. A 15 minute service will be given on Saturdays & Sundays to the cemeteries. Fifteen open cars are under construction & will be put into service almost at once. Twenty motor cars are being equipped with strong, high speed motors, so that

the cars can be run at a speed of 25 miles an hour, including stops. The road bed will be improved so that the cars can be run at that speed with the greatest safety. Family book tickets containing 50 tickets for \$3.50, good on all the lines, will be issued.

MONTREAL STREET RY. CO.—The earnings for April amounted to \$110,819.37, & for the past 7 months to \$778,615.20. The returns are far ahead of the earnings a year ago, in fact, the increase for the 7 months being \$73,510.20. The average daily earnings during that period amounted to \$3,672.72, & the average daily increase is \$346.85. The figures in detail are as follows:

Month.	1897.	1896.	Inc.
Oct....	\$110,293.09	\$109,110.38	\$ 7,182.71
Nov....	110,929.60	100,818.57	10,111.03
Dec....	113,128.91	103,116.02	10,012.89
	1898.	1897.	
Jan....	110,140.83	99,620.55	10,520.28
Feb....	102,625.49	89,951.08	12,673.81
March...	114,677.91	99,441.87	15,236.04
April...	110,819.37	103,045.93	7,773.44
	\$778,615.20	\$705,105.00	\$73,510.20

The appeals of the M. St. Ry. Co. from the judgment of the Superior Court, awarding Mr. Jacquemin \$300 for injuries resulting from being struck by a street car while crossing Craig St., in 1895, & Miss Chartier damages for injuries resulting from a similar accident on Notre Dame St., have been dismissed by the Court of Appeal, the decision in each case being based upon the violation by the Co.'s employes of the city by-law ordering that the speed of the cars must never exceed 8 miles an hour, & that at all street crossings cars must be slowed up to the pace of a horse walking. The court held that as long as this by-law remained in force it would have to be observed, & the Co. will have to be held responsible for all damages & accidents resulting from its violation.

The M. St. Ry. Co. recently sued the Montreal Park & Island Ry. Co. to recover \$5,756, the amount of the loss sustained by the burning of the former Co.'s cars at the Exhibition grounds. These cars had been leased & the question to decide was whether the contract covered the loss by fire. The court held it did not. The Park & Island Co., by the contract, was only responsible for ordinary wear & tear & not for damages caused by fire when it had been shown, especially, that the fire had not originated in the premises occupied by it.

In October last the city of Montreal, through its engineer, Mr. St. George, made a complaint against G. H. Wood, a foreman in the employ of the St. Ry. Co., for tearing up the streets without authority. The Co. was laying some tracks on St. Lawrence St., & Mr. St. George claimed that it was tearing up the streets more than 6 inches from the rails, & was consequently damaging the city's property. The Recorder recently dismissed the action, on the ground that the city had failed to prove that the Co. had damaged the asphalt on that part of the street which was under the care of the city.

Judge Mathieu recently awarded Dr. Leprohon \$150, the full amount of his action against the M. St. Ry. Co. In Feb. last Dr. Leprohon got on a Notre Dame St. car. The car was crowded & there was not even a strap left by which he could support himself. Accordingly he caught hold of the side of the car door. Suddenly, without warning, the conductor shut the sliding door violently, catching the hand of the doctor, whose thumb got such a bad bruising that it has been useless since. Dr. Leprohon has since been unable to write or to dress himself unaided, & he instituted the action for compensation for the expense to which he had been put & the suffering which he had been caused. The Co.

did not appear, & the court rendered judgment as above.

The M. St. Ry. Co. has determined to construct the much talked of Cote des Neiges line, & the management is only waiting the return of Jas. Ross from England to commence operations. It is expected that Mr. Ross will be in Montreal by May 15. The new line will not go up the main road, but will pass by the gorge in the rear of the Seminary wall, which the Co. claims is the natural outlet of the road. The work of extending the Wellington St. line to Verdun will also be begun, & will be pushed forward rapidly. The ties & iron are already on the ground, & the grading & construction of the electric system is all that is required. An official stated that the fare would be 5c., as in all routes controlled by the Co.

The management is considering the remodeling of the street signs on the cars, so as to make them shorter & more easily to be understood by the public. Thus it is proposed to cut down the St. Denis St. car sign to "St. Denis to St. Henri," & so all along the line.

In our last issue it was stated that the M. St. Ry. Co. had invited tenders for the advertising privileges in its cars. The contract has been given to the Dominion Ry. Advertising Co., Montreal.

It is understood the M. St. Ry. Co. has closed with the Intercolonial Coal Co. for its year's requirements of slack coal, about 30,000 tons.

Over 100 more men are employed this year by the M. St. Ry., as it has 250 open cars & trailers as against 200 last year.

The M. St. Ry. is preparing for the construction of its tracks upon Common Street. The rails have been strung along the sides of the streets & the feed wires are being placed on the telegraph poles. The route will be extremely short at present, embracing McGill, Common east to St. Peter, up St. Peter to Youville, & along this street to McGill again.

The by-law authorizing the agreement with the M. St. Ry. Co. was voted on at Verdun May 9, when 83 proprietors, representing \$193,033.98, voted in approval of an immediate street railway service, & only 6, representing \$36,350, voted contrary. The by-law was therefore affirmed. The rails & other material for the extension through Verdun & up Frontenac street to the eastern abattoir are on the ground, & the work of construction is to be begun at once.

The Birmingham Tramway.

At the 1st annual meeting of the City of Birmingham Tramway, recently held in Birmingham, Jas. Ross, of Montreal, presiding, a dividend of 5% on the ordinary shares of the Co. was declared. This is the system which Messrs. Ross & McKenzie acquired an interest in a couple of years ago under an agreement with the City Corporation for the conversion of the road to electricity. The agreement between Ross & McKenzie & the city authorities was for an underground conduit system for about 10 miles in length in the central business portion of the city & an overhead system for the other districts. Acting under this agreement Ross & McKenzie organized a company, but it developed during the discussion which took place at this meeting that the City Corporation, after a deputation had made a tour of the continental cities, reported against allowing any overhead wires to be erected, & the Council adopted the report. The Co. claims the right under the agreement to construct a partial overhead system, & the question remains in abeyance.

TELEGRAPHS & CABLES.

The C.P.R.'s Trans-continental Line.

The construction of the C.P.R. new trans-continental telegraph line between Montreal & Vancouver was commenced at Montreal April 14. The line will pass via Vaudreuil & the Short line to Ottawa, thence by the main line to the coast. It will be strung under the general superintendence of W. J. Camp, C.P.R. electrician, in 3 divisions. The 1st will reach from Montreal to Fort William, & will be constructed by J. Townsley, Supt. of Construction, with about 100 men working simultaneously in 4 gangs. The next division will reach from Fort William to Donald, B.C., & will be under B. S. Jenkins, Superintendent of Telegraph, Winnipeg, with 3 gangs, Inspector Edwards being in charge of the field work. Work on this section commenced April 25. It will be necessary to rebuild some section of the pole line between Winnipeg & Donald, which will require 2 pole gangs. The final division will reach from Donald to the coast, & will be under the charge of J. Wilson, Superintendent of Telegraph, Vancouver, who, with 2 gangs of men, will commence operations almost immediately.

A great deal of trouble has been experienced by telegraph companies through the breaking of the glass insulators by which the wires are attached to the poles. Particularly is this so in the vicinity of schoolhouses & gravel trains, & a large number have been found broken through sportsmen having taken shots at them in default of better game. A test was therefore made at McGill University, Montreal, with a view to ascertain the comparative resistency of glass & porcelain insulators, with the result that it was found that porcelain resisted much heavier & a greater number of blows than the glass. Tests were also made with a 32-calibre revolver from a distance of 8 ft. The glass flew to pieces at nearly every shot, while the porcelain frequently showed no mark, save the lead from the bullet, & when they did break it was in such a way that, had they been attached to the pole, the wires would not have been affected. Seventy-five tons of these insulators are now on their way from Europe for purposes of C.P.R. construction.

The testing of the copper wire is also going on at the Applied Science Department of McGill, under the care of Graham Drinkwater. Every day he selects at random a sample of wire from each lot of ten bundles being turned out by the manufacturers, & subjects them to tests in order to insure that they come up to the requirements of the contract. The wire must be .137 of an inch in diameter; one one-thousandth of an inch only of a variation being allowed above or below this gauge. It must be perfectly cylindrical & weigh 300 lbs. to the mile, 4 lbs. of a variation being allowed in this distance. Frequent electrical tests are made upon pieces one one-hundredth of a mile in length, to determine the purity of copper used, which must be 99%. Each bundle weighs 170 lbs., & the wire must be in one continuous length, without joint or break. Each 6 inches of wire must be capable of being twisted 30 times at a uniform speed of 1 twist a second. The tests show that it will stand 40 to 50 twists before breaking. It must stand 6 close turns around another wire of equal diameter & be unwound without breaking. It must also stand an average breaking strain of 975 lbs., & before breaking it must have stretched at least 1%.

When completed there will be a length of about 2,900 miles of wire, constituting probably the longest direct land-line circuit, for daily work, in the world. To pass across this immense distance, signals will only occupy about $\frac{1}{4}$ of a second.

The C.P.R. Vancouver Island Cables.

As was briefly mentioned in our last issue, the C. P. R. Co.'s new cable from Vancouver City to Vancouver Island, a detailed description of which appeared in our March issue, was laid April 6, under the direction of F. B. Gerrard, Asst. Supt. of the Commercial Cable Co. at Canso, N.S.; & J. Wilson, Superintendent of the Pacific Division of the C.P.R. Telegraphs. The laying was done by the Co.'s S.S. Tartar, which brought the cable out from England in a steel tank about 35 ft. in diameter & 12 ft. in height, situated in the second hatch from the fore-castle. In the centre of the tank was a huge circular wooden frame, not unlike a mammoth spool, around which the cable was coiled. This tank was the centre of attraction all day. Fifteen perspiring, & at times, very frightened men, stood in it all day long & guided, or tried to guide, the course of the cable. The coil first passed through holes cut in 2 wooden beams on to a large iron pulley situated at the mouth of the well, & then through a pulley block in the mast almost on a level with the second deck. When the bow deck was reached it passed over 2 large guide pulleys, then on to a series of grooved wheels, which clamped together & prevented the cable paying out too rapidly. The pressure on the wheel was applied by a screw right over the stem of the vessel. So great was the friction caused by the rapid passage of the cable over these wheels, that a man was constantly employed playing water on them with a hose. Before the cable plunged into the water it fell over a final large pulley suspended from timbers projected over the bow, which made it trail down on the starboard side. The laying took about 10 hours, the actual distance being 32 miles, though 40 miles of cable were used.

The new cable starts at Little Beach on the Mainland about $1\frac{1}{4}$ miles north of Point Grey & 3 miles south of Bowen Island. Half-way across the Gulf it is resting 6 $\frac{3}{4}$ miles north of the old cable & at Departure Bay it is about $11\frac{1}{2}$ miles northwest. The landing place on Vancouver Island is between Jesse Island & Hornewell Bluff, about 2 miles northwest of Entrance Island, Departure Bay. With its open & easily accessible situation on both shores, the C.P.R. expects to meet with none of the old troubles. From Departure Bay, the telegraph poles will be strung along the Coal road until the E. & N. Ry. is reached, when the latter will be followed into Victoria.

The C.P.R. has chartered the tug Mystery to pick up the cable connecting Vancouver Island with the Mainland, which has recently been replaced by the new line from Vancouver City to Departure Bay, Vancouver Island. The old cable will be laid between Beecher Bay, Vancouver Island, & Port Angeles, Washington.

Rocky Mountain Telegraph Co.

This Co.'s system, comprising about 300 miles of line in Alberta & Montana, has been sold to the Postal Telegraph Co., & on May 1 the new owners took possession, the Rocky Mountain becoming a part of the Postal system. Many extensions of the plant are contemplated. The Rocky Mountain system connects with the C.P.R. telegraph system, & this deal gives the Postal new connections to the Atlantic & the Pacific coast.

The Rocky Mountain system extends from Butte, Montana, to Anaconda & Missoula, & from Anaconda to Deer Lodge, & thence across the mountains to Helena, then to Great Falls by way of Wolf Creek & Sun River. From Great Falls it extends along the Great Falls & Canada Ry. to Lethbridge, where it connects with the C.P.R. Connections are then made to Winnipeg & Montreal, & from there over the Postal lines to New York. A

new line will be built from Leadville, Colo., to Butte, Mont., thus providing another alternate route, not only for Montana business, but for points in the Northwest Territories.

Under the new order of things the Montana division will be in charge of W. P. S. Hawk, who has been manager of the now extinct Co. for some years, & it is understood that but few changes will be made in the employees.

Prompt Delivery of Messages.

C.P.R. agents & conductors have been notified by Manager Tait of the Eastern lines that too many cases of delay in delivery of commercial telegrams are occurring. Evidently some agents & operators do not understand that after train orders & similar duties in connection with the prompt movement of trains at their stations, the handling of commercial telegraph business is next in importance, & to satisfy the patrons of the Co., & by good service increase the telegraph business, the greatest possible dispatch is required. All commercial telegrams, when the duties above mentioned do not prevent, should be immediately delivered & receipt taken, which must show time. No excuse will be accepted for failure to produce such receipts when required.

There is too much uncertainty at present about the delivery of messages addressed to parties on trains. Hereafter such messages will be delivered to conductors, who will receipt to operators for all commercial messages. Due effort must be made to find parties addressed, if necessary "crying" the message in each coach of the train. If party cannot be found, message must be left at next telegraph office at which train stops, with a note on it to that effect, signed by conductor, on receipt of which operator will at once notify the sending office.

An Operator's Proxy.

R. M. Cameron, of Vancouver, B.C., tells a good story on himself as follows: "I was working as extra operator on a railroad in Georgia 'A' at 'B' and I did not 'pull' together amicably, & one day after we had had quite a 'chewing match' he declared he would thrash me the first opportunity he had. Having heard that he was a strapping big fellow, & that he had quite a reputation as a 'scrapper,' I was somewhat afraid to venture near 'B' office. Several weeks after this, a drummer visited our town who had 'written me up' for failing to deliver a message promptly to him from his firm, & who was going to 'B' that day on train No. 2. I thought now was my chance to get even. I called up 'A,' told him I was coming down on No. 2, & that we would have it out personally. I then described the drummer as accurately as possible, & told him to watch out for me. I was told afterwards that 'A' made for the drummer mumbling something about 'operator at C,' & that the poor drummer had only time to yell 'maniac.'—Telegraph Age.

The severing of the cable between Cuba & the main land forces the Spanish to fall back on Great Britain in order to secure cable communication with Cuba. No message can go to Havana except through British territory. Cable communication exists between Cuba & the British Island of Jamaica. Within the past few months, after long agitation, a line was finally completed connecting Jamaica with Bermuda, another British possession, which in turn connects with Halifax. Previously Great Britain used to communicate with Jamaica through the U. S. & Cuba, & but for the new line would have suffered severely by the latest move. This incident will probably have the effect of hastening the construction of the all-British Pacific cable. Imperialists are urging.

C. P. R. Telegraph Signs.

After a thorough trial, Manager Hosmer, of the C. P. R. Telegraphs, has decided to abandon the use of painted wooden signs for his offices, and to substitute enamelled iron, which is now being adopted everywhere as the most serviceable & up-to-date outdoor sign. As new offices are opened they will be supplied with the new standard signs & the old offices will be equipped with the new signs as fast as the old ones need replacing. The new standard sign is very effectively designed, having a miniature map of the territory covered by the Co.'s. lines in the centre. The single ones go flat against a building; the double ones with flange project at right angles to a building, & either will attract attention where an ordinary painted sign would be hardly noticed. They were supplied by the Acton Burrows Co., Toronto, who are the sole agents for Canada for the largest English manufacturers. As is well-known, the only satisfactory enamelled iron signs are all made in England, the experiments made in various places in America having so far failed to produce an article at all approaching them in quality.

Telegraph Office Changes.**GREAT NORTH-WESTERN,**

OPENED.—Ahmic Harbor, Muskoka Wharf, Tobermory, Port Ryerse, all in Ontario.

CLOSED.—St. Placide, Que.

Telegraph Ticks.

A cable steamer is being built in England capable of carrying 6,000 tons of cable. This is twice the capacity of the present largest cable steamer.

Wm. Christie, Victoria, B.C., Manager of the C. P. R. Telegraph, was married recently to Annie Sinclair, daughter of D. Holmes, of Springville, Pictou County, N. S.

Application is to be made, under the Quebec Joint Stock Co.'s Act, for the incorporation of the Soulanges Electric Co., with headquarters at Coteau Landing, & a capital of \$10,000, to produce electricity, & construct & operate telegraph & telephone lines in the County of Soulanges.

The C. P. R. has constructed a telegraph line between Niagara on-the-Lake & Niagara Falls by way of Queenston, from which place to Niagara Falls the wire is strung on the poles of the Niagara Falls Park & River Ry. The Co.'s. other new work on the Ontario division this year includes an additional railway wire between Smith's Falls & Toronto, & another wire from Toronto to Hamilton via Schaw.

The Postal Telegraph Co., operating the wires along the lines of the Chicago Great Western, is putting in 7 dynamos at Oelwein, Ia., to furnish electric current for all its telegraph lines centering at that point. About 600 cells of battery will be displaced. A 220-volt dynamo will be run by a direct-connected engine, & there will be 6 other dynamos. It is expected the cost of maintenance will be only about $\frac{1}{4}$ that of the batteries hitherto used.

A Vancouver telegram of May 8 says: "Mark Eschwege, of Vancouver, representing a syndicate of French millionaires, the Anglo-French Telegraph Co., with a capitalization of \$500,000, received a cable to-day to commence the survey at once for a cable from Vancouver to Dyea, Skagway & Wrangel. Eschwege left for Dawson to-day. Offices will be at Vancouver, Victoria, Dyea, Skagway, Wrangel & Dawson. The cable is now being manufactured in Europe." The Co. referred to has given notice of application to

Parliament for the necessary powers to construct a line by means of cable & land line from Vancouver to Dawson City, with extensions.

A bill has been introduced in the Hawaiian Legislature, authorizing the construction by the Pacific Cable Co. of a cable between the U.S. & the Islands. This Co., better known as the Scrymser Co., has obtained a favorable report from a congressional committee at Washington on a bill to enable it to lay the cable. The Hawaiian bill gives the Co. exclusive cable rights for 20 years. The cable must be laid within 18 months after the passage of the act by the U.S. Congress, & extended to Japan within 3 years. It must be capable of transmitting 15 words a minute, & the toll rate between Honolulu & San Francisco is not to exceed 35 c. a word, & to Japan it is not to exceed 90 c. a word.

TELEPHONES.**Long Distance Telephony in Canada.**

Rapid as has been the development in the application of electricity to the requirements of social & commercial life, in no direction has it been more surprising than in the science of telephony, & more especially in the extension of its capabilities for long distance communication. It is doubtful if the achievements of the long distance telephone are as yet fully appreciated by many who are well versed in the triumphs of other branches of electrical science, much less to the general public. Comparatively few people in Canada realize that to-day it is perfectly feasible to converse satisfactorily by long distance telephone, say, from Toronto to Portland; Montreal to Pittsburgh or Chicago; Hamilton to Baltimore; or Ottawa to Washington. Yet it can be, and is being done. Leaving aside altogether the enormous & constant application of inventive skill & capital which have been required to bring the local telephone service to its present efficiency, it is certain that the changes & the development of the long distance branch of the service have been equally radical & proportionately expensive.

The first attempt of the Bell Telephone Co. of Canada to establish a long distance service was made in 1881, by the construction of a single iron wire line between Toronto & Hamilton, then considered quite an achievement, & the line was well patronized. Within 3 years, 855 miles of poles & 1,500 miles of wire were constructed by the Co., but so rapidly did conditions change, that even in this short time this type of line was found inadequate to the requirements of a growing business.

In 1885 copper wire was substituted for iron wire, affording better results. The introduction of the electric light & trolley, however, soon forced upon the Co. another & a more radical change, & metallic circuits had to be adopted upon all principal lines. This change, begun in 1885, was carried on as fast as circumstances would allow until all the principal lines of the Co. were made metallic, or, in other words, 2 wires were necessary to transmit a satisfactory conversation where 1 would suffice before the introduction of electric cars.

The extension of the system, in the meantime, went on apace, until, at the end of 10 years, the Co. had in operation 4,484 miles of pole line & 13,148 miles of wire in its long distance service, & at the present time they have in Ontario & Quebec 6,095 miles of poles, bearing 16,567 miles of wire.

Connections have been established with the extensive long distance system of the American Telegraph & Telephone Co. & affiliated companies in the U.S., at Newport, Vermont, St. Albans, Ogdensburg, Buffalo & Detroit, affording a system of direct telephonic com-

munication as far south as Virginia & Tennessee, & from the cities & towns of the Atlantic seaboard westward to Nebraska.

The difference in the cost of the first long distance line of 1881 & the long distance line of to-day affords one of the serious problems in finance which the Co. has to meet. It is not a mere matter of change; it is a revolution requiring absolutely new & far more expensive construction. In 1881 a No. 9 iron wire (288 lbs. to the mile) was the best in use. To-day most of the construction is of 2 copper wires (which together weigh 532 lbs. to the mile). Formerly 32 poles to the mile were sufficient, but with the introduction of copper, in order to reduce the strain upon the wire, 40 poles to the mile are used; the poles have to be set deeper in the ground & more carefully stayed, all of which greatly increases the cost.

The long distance central office equipment of to-day is much more expensive than it was 10 years ago, improvements having been made to facilitate the work of operating & to secure the best results in communications. The astonishing results which the long distance telephone service of to-day affords is due as much to the improvement in instruments, switches & other apparatus, & to the system upon which these are employed, as it is to the improvement in the lines.

Many people suppose the long distance telephone is a competitor of the telegraph, & are unable to understand the cause of the difference in rates. The competition is largely, if not entirely, mythical, & the reason for difference in rates is easily explained. The telegraph employs a single iron wire conductor, & by means of a quadruplex instrument, this single wire is made to serve the purpose of four wires. The long distance telephone service requires 2 copper wires for each circuit, which together weigh nearly double what the single iron wire does, & costs over 5 times as much per pound. The general construction & office equipment of the long distance telephone service is also far more expensive than that of the telegraph. Nor does the comparison end here. An ordinary 10-word telegram may be transmitted in a minute, & it is practicable to transmit 4 messages simultaneously over 1 wire. Each completed conversation over the long distance telephone occupies 2 wires for an average of 10 minutes; the comparison, therefore, being 2 copper wires for 10 minutes, as against $\frac{1}{4}$ of a single wire 1 minute.

Another important difference arises from the essential difference in the 2 systems of communication. The sender of a telegram writes out his message & goes about his business, & the operator forwards it as other demands on the line will best admit, with slight reference to time, thus keeping the telegraph lines fully employed at all hours.

The correspondent by telephone must have the line when he requires it, or not at all, & practically the entire earnings of the long distance telephone line must be within such hours as business men generally are in their offices, the hours during which these lines are productive being thus limited; & as has already been pointed out, the capacity of the long distance line being confined to an average of 6 conversations an hour, it is clear that the rate must be sufficient to yield during that time an adequate return upon the investment & expenses.

Telephone rates are based on mileage and the time the line is occupied. The parties to a conversation absolutely control the line for the whole distance between them, on the average, 10 minutes (5 minutes for the conversation & 5 minutes to arrange the connection & to disconnect the line). It follows that in equity they must pay for the investment they control for the time it is at their disposal. Therefore, distance & time must be the ruling factors in fixing the rates.

The telegraph & long distance telephone have distinct functions & serve a different purpose to the commercial world. The telephone has, in reality, created a business for itself. Time is, to-day, the prime consideration in the transaction of much business, & the long distance telephone obliterates both time & space. Retail merchants no longer carry the heavy stock of former years, but promptly supply the requirements of their customers through the connection the long distance telephone affords with the wholesaler. So, through every branch of business the telephone has become a distinct & indispensable factor, the usefulness of which will be extended as its possibilities become more generally known & recognized.—Electrical News.

A Big Thing.

Winebiddle—Wilkins has invented a telephone appliance which cannot fail to make his fortune.

Gildersleeve—What is it?

Winebiddle—It is a device to enable two ladies to talk over the same wire at the same time.

The Merchants Telephone Co., of Montreal, has obtained authority to increase its capital to \$1,000,000.

Extensive alterations and improvements will be made in the Bell Telephone Exchange at Goderich, Ont., at once.

Claremont, Ont., wants telephone connection with the outside world. A 4 mile line will probably be run to connect with the Stouffville-Uxbridge line.

The St. Philemon Telephone Co., St. Philemon, Bellechasse, Que., is now a reality. The wires & other appliances have been bought, & men are about to commence work on them. The line will take in the parishes of St. Valier, St. Raphael & St. Philemon.

Stealing telephone service is a new form of misdemeanor in England, classed by the Croydon Police Magistrate as petty larceny, & punished by him with a fine of five shillings. An ingenious young man had made a false key admitting him to the public telephones of the National Co., which he used without paying.

The Bell Telephone Co. has commenced work on its new exchange in Quebec, which will be 30 x 88 ft., & will be built of granite, surmounted by a cornice of red copper, & will cost over \$17,000. The switchboard, now being made in Montreal, will accommodate 3,000 subscribers. It is expected the new building will be ready for occupation by July.

The first telephone in Canada was from the residence of Prof. Graham Bell's father in Brantford, Ont., to the house of the Rev. T. Henderson, in the same city. The first line of any length was from Paris, Ont., to Brantford. The battery was in Toronto, some 60 or 70 miles away from Paris. The first commercial telephone was established in Hamilton in 1877.—From the Alphabet of First Things in Canada, by Geo. Johnson, F.S.S.

In Spain the phonograph is used as a receiver for telephonic messages. One advantage of this arrangement is the facility it offers for repeating messages, since the operator at the transmitting station can hear the message spoken by the phonograph at the same time the operator at the receiving station takes it down. Also messages may be transmitted as fast as desired, & the operator at the receiving station can reproduce them at any time & at lower speed, so that the message can be readily taken down.

EXPRESS.

The Pacific Express in Canada.

In answer to an enquiry from this office, Superintendent Bresie, of the Pacific Express Co., wrote from Decatur, Ill., April 18: "This Co. opened offices at Buffalo & Niagara Falls, N.Y., Mar. 21. These are the only offices we have east of Detroit. We have no local service on the Grand Trunk—Wabash trains at present; but my understanding is when the Wabash trains run via St. Thomas to Ft. Erie on what is called the Southern division of the G.T. it is expected the Pacific will do local business, although I cannot state positively as to that, as I have not been advised by this Co. I will hold your letter as a memorandum, & notify you should there be any changes. You understand the Pacific occupy all lines of the Wabash Road, the Missouri Pacific & leased lines, the Union Pacific, also the Toledo, Peoria & Western, & the Keokuk & Western Ry., & several other roads in the west & southwest."

Arrangements have been made between the Canadian & Dominion Express Companies by which each Co. pays the money orders issued by the other Co. In this way the money orders of either Co. are good at all points in Canada.

The Dominion Express Co. has opened an office at Edmonton, Alberta. Hitherto the business has been done from the office at the terminus of the Calgary & Edmonton Ry., at South Edmonton, on the south side of the North Saskatchewan River, Edmonton being on the north side.

According to the last annual reports the G.T.R. owns \$1,500,000 of Canadian Express Co.'s shares & \$33,400 of Intercolonial Express Co.'s shares. The C.P.R. owns all the Dominion Express Co.'s stock, amounting to \$113,700, which represents the cost of original equipment & organization.

The Dominion Express Co. announces the opening of a route on the C.P.R. between Slocan Junction & Slocan City, B.C. This is over the Slocan branch of the Columbia & Kootenay railway, which has been recently completed for traffic. Offices are established at Lemon Creek & Park Siding.

Kind Words of Welcome.

CHAS. M. HAYS, General Manager G.T.R.:—"I have received vol. 1, issue no. 1, of THE RAILWAY & SHIPPING WORLD, and think you have succeeded very well in your first issue, & from all appearances will make a very creditable publication. The information you give in your first issue is very interesting, & I trust that future issues will show a continual improvement."

W. WHYTE, Manager Western Lines C.P.R., Winnipeg:—"I have long felt that our Canadian railways and steamships should have a paper devoted to their interests, & I am very pleased to know that you have decided to start one. For some years to come the great bulk of railway construction will be carried on west of Lake Superior, & your long & intimate knowledge of that territory should stand you in good stead in dealing with this feature of the work."

THOS. TAIT, Manager Eastern Lines C.P.R., Montreal:—"I am glad to hear that you purpose publishing a monthly railway & shipping journal in Canada, & wish you every success in the enterprise. I think there is an opening for a magazine of the kind."

A. C. HENRY, Purchasing Agent C.P.R.:—"I am glad to hear you intend bringing out a publication devoted to the railway & shipping interests of Canada. It seems to me there should be a good field for it, & I

should consider it a good medium for advertisers wishing to reach those classes."

W. J. CAMP, Electrician C.P.R. Telegraphs, Montreal:—"The matter published in your March issue was very good."

THE WESTINGHOUSE MANUFACTURING CO., Hamilton:—"We have received the first issue of THE RAILWAY & SHIPPING WORLD, & beg to say that our advertisement, & also the article on our works are entirely satisfactory; in fact, we think that as a whole the first issue does you considerable credit."

MYRA STAFFORD THOMPSON, Toronto, in Profitable Advertising, Boston: A new monthly publication, whose name is the index to its character, has just made its first bow to us. THE RAILWAY & SHIPPING WORLD, published in Toronto, will satisfy a long-felt need in Canada's business world, & its initial number gives promise that its future shall be highly successful. It gives a desired chance to many large manufacturers to appeal directly & exclusively to those interested in their goods. As a medium for such announcements, in addition to its railway & shipping news, it will be equally appreciated by the advertiser & all others interested in these industries.

STRATFORD, ONT., HERALD:—"An enterprising Toronto firm has found a field for a new monthly publication entitled THE RAILWAY & SHIPPING WORLD, vol. 1, no. 1, of which has just reached The Herald office. It is a well-gotten up & very interesting periodical devoted to steam & electric railways, shipping, express, telegraph & telephone interests. As might be expected, it starts out with an article on the Canadian Yukon Ry., a synopsis of the contract with Mackenzie & Mann & other matters of equal importance in the railway world & to the various interests it claims to represent. It does not enter into competition with any existing publication & promises to be independent of any corporation or political party."

MARINE RECORD, CLEVELAND, OHIO:—"THE RAILWAY & SHIPPING WORLD is the title of a highly creditable monthly journal which made its first bow to the public in Toronto in March. In its salutary the publishers announce that it takes its place in the field of periodicals for the purpose of representing the transportation interests of Canada—steam & electric railways & shipping, & the allied express, telegraph & telephone interests. The March issue contains 28 pages & the April number 56 pages, which is a very promising indication of the prosperity of the new journal. The Record wishes the new competitor for trade favors much success, & we believe that there is an excellent field for its steady growth & development under the apparent able management of its publishers."

NEW GLASGOW, N.S., WESTERN CHRONICLE:—"We have received the first number of THE RAILWAY & SHIPPING WORLD, a monthly issued in the interests of transportation, steam & electric railways & shipping in Canada, & the allied express, telegraph & telephone interests. It is a neatly gotten-up magazine of 28 pages, with suitable cover. The number before us contains articles on the Canadian Yukon Ry., the contract with McKenzie & Mann, the construction of the line, & the Act to confirm the contract, the Victoria Bridge—the Grand Trunk's new structure at Montreal, the Crow's Nest Pass, & the progress of the C.P.R. line to the Kootenay, the Westinghouse Air Brake, the Wabash in Canada, traffic & finance, telegraphs & cables, to the great Yukon gold fields by ocean & river, & a splendid map of the Yukon country. The number contains many fine illustrations, among which is a beautiful photograph of the Hon. A. G. Blair, Minister of Railways, on the 1st page. The first number is a credit to Canadian journalism & contains much valuable information."

VOL. I. NO. 4.

TORONTO, CANADA, JUNE, 1898.

\$1 A YEAR.

The G.T.R.'s. General Manager.

Chas. M. Hays was born at Rock Island, Ill., in 1856, & on Nov. 10, 1873, entered the Passenger Department of the Atlantic & Pacific Ry. at St. Louis, Mo.; from Jan. 2, 1874, to Mar. 9, 1874, he was employed in the auditor's office, & from Mar. 9, 1874, to Jan. 1, 1877, as clerk in the General Superintendent's office of the same road; from Jan. 1, 1877 to April 1, 1884, he was Secretary to the General Manager of the Missouri Pacific Ry.; & from April 1, 1884 to Oct. 1, 1886, Secretary to the General Manager of the Wabash, St. Louis & Pacific Ry.; from Oct. 1, 1886, to July 1, 1887, he was Assistant General Manager of the same road; from July 1, 1887 to July 1, 1889, he was General Manager of the Wabash Western Ry.; on July 1, 1889, he was appointed General Manager of the Wabash Railroad Co. (successor to the Wabash Western & Wabash R'ys.); & in Feb., 1894 was appointed Vice-President & General Manager of the Wabash Railroad. On Dec., 31, 1895, he severed his connection with the Wabash Co. to accept the position of General Manager of the G. T. R. System, under a 5 years' contract, at a salary of \$25,000 a year.

Mr. Hays married Clara J., daughter of Wm. H. Gregg, St. Louis, Mo., & is a Presbyterian. His residence is 320 Drummond St., Montreal.

A contemporary, in speaking of Mr. Hays recently, said:—"There is no doubt at all about the fact that he is a great railway manager. He took charge of the G. T. when it was losing money right & left, & has already brought it to a point where revenue & expenditures meet. This is a great feather in the cap of the Manager, for no one had ever succeeded in doing it before.

"One of the great troubles with the G. T. used to be that it was managed from England. The Manager in Canada had to write or cable home whenever there was anything to be done that was at all out of the ordinary, & the consequence was that important moves were delayed so long that opportunities were always being lost.

"When Mr. Hays took charge of the road he stipulated on having autocratic authority to follow out his own ideas in his own way. There was some demur at this, but the power he sought for was finally conceded to him, & the result is seen."

Manitoba's Hudson's Bay Line.

In explaining to the Legislature recently the Government's proposal to aid in the extension of the Dauphin railway to the Great Saskatchewan, Premier Greenway said:—"I do not care what the reports will estimate as the length of navigation in Hudson's Bay, certain facts have been established which cannot be gainsaid. Ever since I was a member of a committee of the House of Com-

one of the new steamers that have been built to cut through the ice on the great lakes. It is perfectly marvellous to find what these steamers are able to do in this way, cutting through ice three feet thick. With these improvements it is impossible to say the advances that a few years may make.

"Thus we are not going to the Saskatchewan only to develop the country on both sides of the line; & here let me say that the line will pass through a portion of the Carrot River valley, a large, fertile district containing over a million acres of land. This is bound to be rapidly settled up, giving business to the line & extending the trade of Winnipeg & the whole Province. It is to our advantage to open up these lands & get the benefit of the trade, even though they may lie beyond the bounds of our own Province. Now that we are getting the Dominion authorities to treat us a little more reasonably in regard to our lands & what the Province ought to have in this respect, it is to be hoped they will take a reasonable view of this part of the question also & extend the boundaries of our Province to Hudson's Bay.

"No matter what view may be taken of the suitability of this land for grain growing there must be in the north large areas of land suitable for grazing cattle. If these areas do not extend down to the Bay they will extend to within say 200 miles of it, which will leave 400 miles or more from the boundary of the Province to the Bay suitable for raising cattle. These can be shipped out by the direct route from the Bay instead of going by the longer, more southern route. Besides this there are the possibilities for dairy produce. We do not know as yet what these wide areas are capable of, but we know that when the road reaches the Saskatchewan, settlers will go into that country & its capabilities will soon be made known & developed.

CHARLES M. HAYS.

mons in 1876, which received evidence on this matter, in view of the fact that the supplies for this country came in by the Bay for 200 years, I have been convinced that the route was to a great extent practicable; & I believe that we will find that navigation is possible for a considerable period each year. Mr. Hind, who appeared before the committee, showed that the straits were navigable for 4 months in the year.

"The other day I received a photograph which I will be pleased to show members, of

W. E. DAVIS, General Passenger & Ticket Agent G.T.R., Montreal, writes:—"I have just had an opportunity of examining the May copy of THE RAILWAY & SHIPPING WORLD, & find much information therein of interest. I enclose subscription for a year. In sending the paper to my address will you kindly have the wrapper marked 'Personal,' as so many papers come to my office that I do not see."

TORONTO, CANADA, JUNE, 1898.

FINANCE, MEETINGS, &c.

Quebec & Lake St. John Railway.

At the annual meeting of shareholders at Quebec, May 12, the following directors were elected: F. Ross, G. Lemoine, T. A. Piddington, Hon. P. Garneau, J. T. Ross, E. Beaudet, G. Moir, Hon. J. Tessier, E. Hanson, & F. W. Ross, in addition to the non-elective members of the Board, who are Hon. S. N. Parent, Mayor of Quebec; A. Robitaille, M.P.P., representing the Provincial Government, & Judge J. A. Gagne, representing Chicoutimi.

Following are extracts from the annual report: "The number of passengers carried during the year on the whole system has been 153,000, as compared with 130,009 in the previous year, and the number of tons of freight 199,441, as against 150,346. The freight carried in 1897 consisted of 2,020 carloads of cordwood & 740 of pulp wood, making 49,680 tons, 4,623 carloads of sawn lumber, 170 of square timber, 456 of ties, 366 of saw logs, equal to 67,416,000 feet, or 98,094 tons; 603 carloads of pulp & paper, 288 of brick & stone, 54 of cheese, 36 of grain & 1,966 of general merchandise or 51,667 tons, making in all 11,322 carloads or 199,441 tons. The quantity of cheese carried by the railway is constantly increasing, amounting last year to 2,082,676 lbs. against 1,421,459 in the previous year. The value of this was about \$200,000, in addition to which the railway also transported a large amount of butter in refrigerator cars, under the terms of an agreement with the Dominion Government, which is doing everything possible to promote the dairy industry. Several new mills have been built during the year 1897, & are giving an increasing traffic in sawn lumber. The pulp mill at Chicoutimi is completed, & is shipping its product daily. Another pulp mill is about to be erected near Roberval, & a chemical pulp mill at Lake Bouchette, & the extensive water power at the Jacques Cartier River is also likely to be utilized for manufacturing purposes during the coming year. An additional section of 10 miles of the Great Northern Ry. from Grand Mere westward has been completed by that Co. since the last annual report, & also a branch line into the Grand Mere pulp mills. Very extensive paper mills have been erected at Grand Mere, and will be in operation in July. Under an agreement between the Pulp Co. & the G. N. Ry., all the business of these mills is being carried over a portion of the G. N. Ry., which the Q. & L. St. J. Ry. is now operating. The new section of the G. N. Ry. also runs close to the Shawenegan Falls, a very fine water power which has recently been sold by the Provincial Government to a company, with the undertaking that \$4,000 will be expended in erecting manufacturing industries. The extension of the Great Northern road to a connection with the Parry Sound Ry. is not being pushed as rapidly as might be desired. This is much to be regretted, as the volume of traffic coming from Parry Sound eastward is already exceeding all expectations, 5 large steamships being now employed in carrying grain, flour & other freight between Chicago & Duluth & Parry Sound."

In connection with James Bay the report says: "During last year the Provincial Government sent an exploring party from Lake St. John to James Bay, through the centre of the large territory recently acquired by the Province in that district, covering an area of 70,000,000 acres. The result of this exploration proves that this immense country is much more valuable than has hitherto been supposed, the land being very level, well timbered, having a good soil & a climate quite as temperate as that of the Lake St. John district, & a snow fall about half that of Montreal. It is also reported to be rich in minerals. The exploration also proved the existence of an excellent route for a railway from Roberval to the mouth of the Nottaway River on James Bay, where there is a harbor having 27 ft. of water, with about 4,000 miles of coast line tributary to any railway which may be built there. This route will pass over a summit 300 ft. lower than that crossed between Quebec & Lake St. John, & will admit of the construction of a railway with very easy gradients. A charter for the construction of this road is held by the G. N. Co., & should it be carried out, must greatly enhance the value of the Lake St. John property.

"The settlement of the Lake St. John district has made very satisfactory progress during the past year. The Dominion Government having voted your Co. a grant of \$8,000 to assist in this work, a vigorous colonization movement has been pushed on. During the year 1,272 bona fide new settlers were carried free to Lake St. John under this agreement, & 191 delegates, representing 97 parishes & States, visited the country to report as to its advantages for settlement. A large proportion of these new settlers are repatriated Canadians from the New England States. The country is now becoming so well known that we may look for a very large influx of new settlers; already this spring we have sent in 291. The arrangements for carrying on this work are now very satisfactory, as there are several lines of steamers running from Roberval to the different points available for settlement."

Canada Southern Railway.

At the annual meeting at St. Thomas, Ont., June 1, the old directors & officers were re-elected as follows: President, C. Vanderbilt, New York; Vice-President, C. F. Cox, New York; Secretary, Nicol Kingsmill, Toronto; other directors, W. K. Vanderbilt, C. M. Depew, S. F. Barger, E. A. Wickes, J. E. Brown, New York; J. Tillinghast, Buffalo.

The number of miles of road in the C.S.Ry. system at the close of 1897 was 457.30, of which 380.04 were in Canada, 65.61 in Michigan, & 11.65 in Ohio. Second track 97.56 miles, & sidings 234.91, makes the total miles of single track 789.77. There are 151 locomotives, 117 cars of passenger equipment, & 3,814 of freight equipment.

The annual meetings of the Canada Southern's various auxiliary companies was held at St. Thomas, June 1 & 2, when the following directors were elected:

TOLEDO, CANADA SOUTHERN & DETROIT RY. Co.—C. Vanderbilt, W. K. Vanderbilt, C. M. Depew, J. Tillinghast, S. F. Barger, E. A. Wickes, E. D. Worcester, C. F. Cox, H. B. Ledyard.

MICHIGAN, MIDLAND & CANADA R.R. Co.—C. Vanderbilt, W. K. Vanderbilt, C. M. Depew, J. Tillinghast, S. F. Barger, E. A. Wickes, E. D. Worcester, C. C. Clarke, C. F. Cox.

CANADA SOUTHERN BRIDGE Co.—C. Vanderbilt, W. K. Vanderbilt, C. M. Depew, J. Tillinghast, S. F. Barger, E. A. Wickes, E. D. Worcester, C. F. Cox, H. B. Ledyard.

NIAGARA RIVER BRIDGE Co.—C. Vanderbilt, W. K. Vanderbilt, C. M. Depew, J. Tillinghast, S. F. Barger, E. D. Worcester, C. C. Clarke, C. F. Cox, H. B. Ledyard.

SARNIA, CHATHAM & ERIE RY. Co.—C. Vanderbilt, W. K. Vanderbilt, J. Tillinghast, C. F. Cox, N. Kingsmill.

LEAMINGTON & ST. CLAIR RY. Co.—C. Vanderbilt, W. K. Vanderbilt, C. M. Depew, C. F. Cox, N. Kingsmill, J. J. Kingsmill, J. Ross.

NIAGARA GRAND ISLAND BRIDGE Co.—J. Tillinghast, C. Vanderbilt, W. K. Vanderbilt, S. F. Barger, E. D. Worcester, E. A. Wickes, C. F. Cox, C. M. Depew, C. C. Clarke.

CANADA & MICHIGAN BRIDGE & TUNNEL CO.—A. Onderdonk, D. O. Mills, J. Ross, N. Kingsmill, J. J. Kingsmill, G. S. MacKay, W. P. Torrance, W. H. Onderdonk, J. L. Onderdonk.

The last mentioned Co. has not yet passed under the control of the Canada Southern system, but it probably will.

Qu'Appelle, Long Lake & Saskatchewan.—The net loss in operating this line for April was \$677.99, as against net earnings of \$4,401.42 for the corresponding period. This is attributable to the cessation of traffic consequent on the partial destruction of the South Saskatchewan bridge.

Grand Trunk Interest, Rentals, &c.

SUMMARY OF ANNUAL INTEREST & RENTALS AT DECEMBER 31, 1897.

Interest on loans & debenture stock	£1,023,665
Rentals	142,694
Interest on Michigan Air Line bonds	7,235
Interest on bonds, &c., of controlled lines	176,437
	£1,350,031
Annual Interest sanctioned but unexercised at Dec. 31, 1897	74,659
Total Annual Interest sanctioned at Dec. 31, 1897	£1,424,690

*This is a contingent liability, as the G.T.Co. is only responsible for this interest when the respective companies fail to earn it, & then only so far as it is responsible under traffic & other agreements.

Manitoba to Hudson's Bay.

Following are the various offers which the Province of Manitoba has made to secure a railway to Hudson's Bay:—1885, a bonus of \$1,000,000 Manitoba debentures payable in 25 years with interest at 4%.

1886, a guarantee of 4% for 25 years on the company's bonds for \$4,500,000, equal to a charge of \$180,000 a year. This was amended in 1887, but the guarantee of 4% on \$4,500,000 remained.

1890, cash bonus of \$3,000 a mile for 250 miles, a total of \$750,000 or a guarantee of interest at 4% for 20 years on bonds of the

company for \$5,600 a mile for the road within the province, which at 250 miles would be \$1,400,000, or \$56,000 a year.

1891, a cash grant of \$1,500,000 for a complete line to the Bay.

Quebec, Montmorency & Charlevoix.

At an adjourned special meeting of shareholders May 26, it was decided to exercise the rights vested in the Co., & to acquire the franchise & property of the Quebec District Ry. Co. before July 1—(Official). Further particulars as to the intentions of the Co. will be found on another page of this issue, in the department devoted to electric railways.

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase.
Jan., 1898	\$1,672,372.04	\$1,156,744.45	\$515,627.59	\$142,284.49
Feb. ..	1,494,596.98	1,070,929.62	423,667.36	38,844.28
Mar. ..	2,079,479.06	1,320,245.55	759,233.51	233,020.67
April..	1,958,461.88	1,241,371.19	717,090.69	89,973.35

\$7,204,909.96 \$4,795,290.81 \$2,409,619.15 \$504,122.79

The approximate traffic earnings for May, 1898, were \$2,229,000, against \$1,948,000 in May, 1897, an increase of \$281,000.

Grand Trunk Earnings.

These figures include the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys.

	1898	1897	Increase.
Jan.....	\$1,916,332	\$1,639,614	\$276,718

May.....	1,940,980	1,774,802	166,178

\$9,499,212 \$8,516,781 \$982,431

C.P.R. Reports Wanted.

The Editor of THE RAILWAY & SHIPPING WORLD wants, to complete a file, a copy of the C.P.R. Co's. annual reports for 1881, 1882, 1883, 1884 & 1886, together with the proceedings of the annual meetings at which these reports were adopted. Anyone who can supply any or all of these is requested to communicate with the Editor.

Financial Notes, &c.

British Columbia Railway Aid. A return recently presented to the Legislature shows that the amount of railway bonds guaranteed by the Government is \$647,072, bonds of Nakusp & Slocan; annual interest on bonds Shuswap & Okanagan, \$49,990, terminating in 17 years; Nakusp & Slocan, 4 per cent, \$25,882, terminating in 20 years; & Victoria & Sydney 2 per cent. \$6,000, terminating in 19 years, a total of \$81,875. Against this the Province annually receives 40% of the gross earnings of the Shuswap & Okanagan & Nakusp & Slocan. The amount of land set apart for subsidizing railways is 2,719,087 acres conveyed, & 3,656,040 acres reserved.

Brockville, Westport & Sault Ste. Marie.—At a recent meeting of directors at Brockville, J. G. Leiper resigned as President & was succeeded by E. R. Dick, of 310 Chestnut street, Philadelphia, Pa., who was also elected a Director.

Calgary and Edmonton net earnings for April were \$25,721.96, as against \$10,995.05 for corresponding period.

Central Ontario.—The annual meeting was held at Trenton, May 18. The directors elected & officers appointed at a subsequent meeting of directors are:—President, S. Burke, Cleveland, Ohio; Vice-President, H. S. Johnson, Cleveland; other directors, C. W. Bingham & H. P. McIntosh, Cleveland; G. G. Allen, Akron, O.; T. G. Blackstock, Toronto; G. Collins, Trenton; Genl. Supt. & Sec., G. Collins, Trenton; Treasurer, R. H. Spencer, Trenton. It was decided to extend the line from the present terminus at Coe Hill northerly to Bancroft, 18 miles. (Official.)

Dominion Atlantic receipts for the 4 months to the end of April were \$136,459, as against \$128,414 for corresponding period of 1897.

The Dominion Government has decided to pay the award of the Exchequer Court in favor of this Co., & to pay it \$100,000 for commutation of its privileges in respect of the drawback of customs and import duties.

Duluth, South Shore & Atlantic net earnings for the 4 months to the end of March were \$111,140, as against \$85,023 for the corresponding period.

Kingston & Pembroke. We made some reference in our May issue to the legislation this Co. is securing at Ottawa. It may be added that the road was originally bonded for \$5,000,000 in 30 year bonds, but no interest has been paid for the last 5 years. Some months ago the road went into the hands of a receiver, but that official had no power to sell the line. As a means of relief, it is proposed to allow the stock, amounting to \$5,000,000, to be reduced one-half, to issue preferred stock to an amount sufficient to pay off all liabilities, amounting to about \$150,000, & to discharge the overdue interest charge on the bonds. It is then proposed that bondholders surrender their 6% bonds for new ones at 3%. The difference of 3% for the unexpired portion of the 30 years is to be capitalized & distributed pro rata among the present holders of the bonds.

Lake Erie & Detroit River.—At the recent annual meeting at Walkerville, the following were elected: President, F. H. Walker; Vice-President, Dr. S. A. King; Managing Director, E. C. Walker; Treasurer, J. H. Walker; Secretary, Henry Lye; Solicitor, J. H. Coburn. The latter succeeds J. Leggat.

Manitoba & Northwestern.—In reference to the paragraph in our May issue, pg. 63, it may be stated that no action has been taken by the Manitoba Government on this Co.'s proposal to give the Government 590,000 acres of land at \$2 an acre, in extinction of its debt of \$1,185,000, which would leave the Co. 110,000 acres to sell. The proposal was made too late in the recent session for the Government to deal with it, so that nothing definite can be done before next session, even should the Government be favorable to the proposal, of which as yet there is no indication.—(Official.)

Minneapolis, St. Paul & Sault Ste. Marie net earnings for March were \$149,600, as against \$111,700 for the corresponding period.

Quebec Central net earnings for the three months to the end of March was \$10,397, as against \$13,559 for corresponding period.

PASSENGER MATTERS,

The G.T.R. Baggage Department.

A new edition of the revised rules & regulations of the Baggage Department has recently been issued by the General Baggage Agent, J. E. Quick, who, in response to an enquiry as to what important changes have been made, writes us as follows:

The Baggage Department has been practically reorganized throughout with a view of the betterment of the service. In all journeys undertaken for pleasure or profit, the baggage question is an important one, because upon its convenient, safe, & prompt transportation the success & satisfaction of such journeys almost entirely depend. To promote these results in the highest degree possible is the object of these instructions. The most important change of interest to the travelling public is the improved method of checking in the way of the introduction of card checks in the place of brass checks. The present system, as nearly every one who has had baggage checked is aware, consists of a brass check which simply bears the number & the name of the road issuing it.

In addition to being cumbersome & unwieldy to carry, it gives no information to the passenger as to the destination the baggage is checked to, & passengers receiving one of these for baggage feel that they only have a check calling for a certain piece of baggage, but are not at all certain that it is checked to the correct destination, or that they will find it at proper station when they arrive at destination, & feel more or less uneasy until baggage is again in their possession.

The new system that I have introduced is as follows: The check in itself is a neat card-board check, convenient to carry, with a good plain number, & with blank space in which

the baggagemaster must write the name of station destined for fully, so that passenger receiving check for baggage can see at once whether it is checked to proper destination or not. The strap portion of this check, bearing the same destination & number, is placed on a brass holder provided for that purpose, & attached to baggage. The advantages of this check over the old brass check are manifold. In addition to the convenience of handling & assured correctness of checking to a passenger, it is a much safer check to the railway company, & will avoid a great many vexatious delays & much unnecessary tracing for baggage by the railway company. These card checks are issued to the different stations from the General Baggage Office, & a correct record of such issue is kept, so that in case of a piece of baggage being short, a telegram to the General Baggage Agent, giving number of check, will enable him at once to trace same, as it will give him the starting point for such tracing.

It is the desire of the Management, in addition to systematizing the manner of checking & handling baggage, to avoid vexatious delays, to impress upon the staff the importance of handling baggage as carefully as circumstances will allow, & all cases of careless & rough handling will be investigated & severely dealt with.

The handling of baggage in England & on the European continent is generally more carefully performed than in America. This is not due so much to a higher standard of service as to the improved facilities for handling, to the fact that the men so employed have no other duties to perform, that the character of the baggage is not so heavy and unwieldy to handle, & that more time is granted for the work. Much of the complaint against the rough handling of baggage on our American railways is due to the high speed of trains demanded by the public for their accommodation & the rapidity required in consequence in the handling of baggage. The generous allowance of 150 lbs. free has also much to do with the matter. It is no uncommon thing for baggagemen to have offered to them trunks weighing from 200 to 250 lbs. each, &

The following leading railroads of Canada are using Page fencing in quantities of from 1 mile to 100: Canadian Pacific; Grand Trunk; Intercolonial; Lake Erie & Detroit River; United Counties; Canada Atlantic; St. Lawrence & Adirondack; Michigan Central; Manitoba & Northwestern; East Richelieu Valley; Toronto, Hamilton & Buffalo; Thousand Islands; Crow's Nest Pass.

For further particulars send to the Page Wire Fence Co., Ltd., Walkerville, Ont.

ROOF YOUR BUILDINGS

with the genuine **All Wool** Mica Roofing offered the public. Not affected by heat or cold—being wool it is pliable and yields to the frost strain. Is perfectly water, wind and fire proof: 7 years' experience has proved that fact. Samples and testimonials sent on application to

W. G. FONSECA,
705 Main St., Winnipeg.

compared to the small steamer-shaped trunk carried by Europeans, it is easy to understand why they cannot be lifted & handled with the same ease & safety. Passengers often complain of the manner in which their heavy packages are handled, without taking into consideration that they themselves are often to blame by appearing at the baggage room only one or two minutes before the departure of the train. Witness the excited crowd in the baggage room at a large station a few minutes before train time, with uplifted hands, all calling & shouting at the same time that their baggage must positively go on that certain train. How much trouble & anxiety could have been avoided by the admirable plan of having the baggage checked direct from the house by the transfer company.

Many of the packages containing baggage are unreasonably bulky; others, again, are insecurely fastened, or are too frail to withstand the ordinary usages of travel. In the practical operation of handling, a single employe is frequently called upon to load & unload trucks unassisted. When this is the case he is very often able, from the weight or bulk of a package, to exercise force enough to precipitate it to the ground; he cannot lift it or carry it, & when this is the case, the package, unless well secured, is very likely to

carriage of the passenger himself, so greatly concerns the traveller as the provision made for handling his personal baggage, & so far as the stockholder is concerned, the effective management of the baggage department directly & greatly effects the usefulness of his property & the income he derives from its operation.

"The baggage department, while once considered a department of protection, may now be considered one of both protection & revenue; for while the exemption of the company from claims, account damage, loss & detention must necessarily be secured by some comprehensive plan of handling & billing, coupled with the vigilance & care of its employes, the revenue collected from the charges for excess & storage & from the transportation of milk is sure to show equally satisfactory & improved results on the side of revenue."

The perplexities of the baggage business are many, & the difficulties are understood only by those having charge of its affairs. Many curious & interesting examples of complication could be given to prove that they are not far removed from the proverbial Chinese puzzle. The business of handling & checking baggage must be quickly performed, & while the railway cannot enforce regulations which in any way affect the public's con-

mistakes in identification when having their baggage checked at the baggage-room. Through the checking & the rechecking of the piece at the various junction points, the trace becomes difficult, & it may finally be located in California while the real owner is mourning its loss at some remote point in Canada. I enclose the Preface to the Book of Rules, which gives the gist of what is expected of employes in this department.

PREFACE.

"The relations & responsibilities of common carriers to the travelling public are such as require from the carrier the most constant & watchful care of the property of the traveller. As station baggage agents & train baggage-men you are entrusted with the safe keeping & proper transportation of effects which are valuable to the owners. Nothing can be more annoying to the traveller than the loss, abuse, or delay to his baggage. You are, therefore, expected and required by the Co. to become thoroughly familiar with the following rules & regulations in order to insure careful handling, proper protection & safe delivery of baggage, etc., entrusted to your care. The proper collection & reporting of all excess baggage, & the safe keeping of all excess baggage & C.O.D. checks, are matters that require the

A RECENTLY COMPLETED GRAND TRUNK MOGUL LOCOMOTIVE.

that the fault does not rest so much with the railway company as with the owner. If the former exercises every precaution in handling, consistent with the nature of the business & the amount of time & force available, every condition of care & diligence has been satisfied. If injury occurs under these circumstances in consequence of the package being insecure or unreasonably heavy or bulky, the fault lies with the passenger & not with the carrier.

The quantity of baggage handled by the railroads of the U.S. is enormous. M. M. Kirkman, Second Vice-President C. & N. W. Ry., in his book on the Science of Railways, says:

"The baggage of railways exceeds, generally, the express traffic; it is also of much greater value relatively, yet in its handling only a few officials are employed, while in the conduct of an equal amount of express business many supervising managers of high business capacity are engaged & paid salary commensurate therewith. The baggage traffic of railways may be said to represent an unknown quantity in their affairs, & while it seemingly offers only a limited field of inquiry, it is really extended in its scope & presents many interesting & curious problems. No phase of railway management, it may be said, save the be injured. In the latter case it is apparent

venience, it must at the same time adopt all necessary precautions for the care of property entrusted to its keeping. Passengers do not view with equanimity delays or damage to their baggage, & the inconvenience & annoyance resulting in consequence cannot be alleviated by an explanation of the cause. Safety is only secured by the careful observation of all rules and regulations for the government of the business, & the unceasing vigilance of all employes connected with this branch of the service. If the reports to the General Baggage Agent are always complete & accurate, & the check supply carefully protected & mismatched checks avoided; if the checking is always accurate according to the route & destination of ticket, & the baggage is carefully handled while in transit & guarded while stored at stations, it can be stated that loss, damage or delay could only occur through some unforeseen accident in the operation of the trains. But with the great volume of property handled, & the limited time in which the work must be performed, it is impossible, even under a most thorough & complete system, to prevent occasional mishaps. Passengers themselves frequently contribute to these. On account of the similarity in the shape & appearance in valises & trunks, & in the absence of marking, passengers often make

utmost care on the part of station baggage agents. While employed by the Co. you must try & give satisfaction to the public & establish a reputation for courtesy & civility to everyone. You are expected to be polite at all times, & to answer civilly all questions addressed to you, & if unable to give any necessary information, endeavor, when practicable, to obtain it. Endeavor to make this line popular, because its business is dependent on the good-will of the people."

It recently came out before the Public Accounts Committee in Ottawa that certain Dominion Government officials who hold railway passes use them when travelling on Government business & charge the treasury the amount they otherwise would have paid for fare.

The C.P.R.'s Summer Tours pamphlet comes out in 4 parts this season, divided as follows:—1. Quebec, Maritime Provinces, White Mountain & Atlantic Sea Coast. 2. The holiday resorts of Ontario, Niagara, The River St. Lawrence, Ottawa & Montreal. 3. The Upper Lakes. 4. Across the Continent to Banff, Glacier, Kootenay & the Pacific Coast. The four appear in different & attractive covers.

Muskoka Travel.

The G. T. R. has recently put out some very good literature about Muskoka, & also advertised this beautiful district in U. S. newspapers to a considerable extent, the result of which should be seen by a considerable increase in the number of visitors from the U. S. this season. But the Muskoka travel will never assume the proportions that the attractiveness & health-giving qualities of the district entitle it to until first-class hotel accommodation is provided. There are lots of hotels in the district now, many of them inferior, a few fairly good, but none on the scale required. The English syndicate, represented by R. D. McGibbon, of Montreal, which announced its intention of building a series of hotels in Canada, was figuring on one for Muskoka, but nothing further has been done. It is hardly likely that the G. T. R. will build one, as the management is understood to be opposed to the Co. going into the hotel business, but the Co. is so vitally interested in Muskoka travel that it is to be expected it would aid in such an enterprise by a liberal bonus, & the Muskoka Navigation Co. might do the same. What is wanted is an hotel somewhere in the vicinity of Port Carling, to cost, including equipment, from \$75,000 to \$100,000, with up-to-date plumbing & sanitation, & to be run in every respect as a first-class summer hotel. There should be no difficulty in filling it with guests at good rates, & after the 1st year it ought to be a paying investment.

Passenger Notes.

The C. P. R. Soo train now leaves Montreal at 10 p.m., instead of 9.10 p.m.

A general change of time went into effect on the G. T. R. & C. P. R. June 5.

A daily service has been established on the C. P. R., Shuswap & Okanagan branch.

The G. T. R. has issued orders to its agents to stop receiving large amounts of U. S. money, as the banks will not accept the same.

Commencing June 27, the C. P. R. will have a daily parlor car service, except Sunday, between Montreal & Old Orchard, both ways.

Beginning July 1, Pullman sleepers will be run on the G. T. R. between Toronto & Gananoque, instead of Kingston as in former years.

The G. T. R. has arranged for about 30 excursions to the Guelph Agricultural College

from various parts of Ontario during this month.

The C. P. R. now runs a special train from Fort William on Mondays, on arrival of steamer from Owen Sound, arriving at Winnipeg about noon next day.

The G. T. R. has decided to discontinue the through Seaside Special, running last summer from Chicago to Portland, by way of Montreal. It will, however, run through weekly sleepers during the coming season.

"Quebec, Summer & Winter," issued by the C. P. R. Passenger Department, has reached its 8th edition, appearing in handsome new type, & with up-to-date information.

Commencing June 15, the C. P. R. will run a through sleeper from Montreal for Portland. On & after June 26 it will run through to Old Orchard. There will be a similar northbound service.

The G. T. R. passenger literature for this season is a great improvement over previous years, especially in regard to the quality of the illustrations. H. R. Charlton, who is now in charge of this branch, is certainly doing very effective service.

The C. P. R.'s 1st eastbound sleeper will leave Montreal for St. Andrews Thursday, June 30, the next one Friday, July 8, & every Friday thereafter until Sept. 2. The 1st westbound sleeper will leave St. Andrews July 4 & every Monday thereafter till Sept. 5.

The C. P. R. is now running special sleepers between Toronto & Detroit, both ways. Eastbound leaves Detroit 12.35 a.m., eastern time, arriving in Toronto 8.05 a.m. Passengers may board car at Detroit at 9 p.m. Westbound leaves Toronto at 8.10 p.m. daily, except Saturday, arriving in Detroit at 3.15 a.m. Passengers may remain in car till 8 a.m.

The General Manager of the Wagner Palace Car Co. has issued the following instructions: "Rooms having 3 berths will be termed drawing-rooms; rooms having 2 berths & rooms now known as compartments will be termed staterooms; cars heretofore termed drawing-room cars will be termed parlor cars, and rooms in these cars will be termed compartments.

"East to the West" is the title of a handsome 100-page guide book to the principal cities of the Straits Settlements, China & Japan, & incidentally the C. P. R. transcontinental route, written by Eliza Ruhamah Scidmore, & published by the C. P. R. Passen-

ger Department. The covers, in colors, are very striking, the book is charmingly written & profusely illustrated.

The territory of H. Parry, General Agent of the New York Central at Buffalo, now includes the Province of Ontario as far east as Peterboro' & Cobourg. No change has been made in the agent at Toronto, J. J. McCarthy, who heretofore has held the title of Canadian Passenger Agent, but is now styled Canadian Agent, with office at Toronto, & jurisdiction over Ontario as far east as Cobourg.

The G. T. R. has made a contract with the Grand Rapids & Indiana by which it can give better service to Michigan points & also to Canada. Since May 15 the G. T. has been running through sleeping cars from Chicago to Montreal over its new connection, & also in connection with the Lehigh Valley to New York. By an arrangement with the Detroit & Mackinac & Flint & Pere Marquette roads the G. T. expects to secure the principal share of the travel from the territory around Ludington & Sheboygan.

The Wabash put its spring schedule in force June 5, its principal feature being the new fast train, "The Continental Limited," which is being operated as a daily through train between St. Louis & Chicago & New York & Boston. It is a splendid train, with wide vestibule equipment, the whole train, including the coaches, being operated through without change, dining cars being attached. This, with other through trains, is being run over the G. T. R. Southern Division via St. Thomas.

The U. S. Joint Traffic Association recommends to the lines in its jurisdiction the following rates for passenger train service for the U. S. military & naval forces & their equipments & supplies: Passenger fare of 1½c. per mile per capita, including the carriage in the cars, with the troops, of their personal effects & equipments. For animals, supplies & equipage, when transported in the same trains which carry troops, 20c. per car per mile. No mileage to be computed at less than 25 miles. Sleeping car fares to be charged additional, as may be agreed on with sleeping car companies.

T. WILLIAMS, Chief Accountant & Treasurer, Intercolonial Ry., Moncton, N.B., in remitting his subscription, says:—"I am much pleased with THE RAILWAY & SHIPPING WORLD, which, if kept up to its present standard, should prove a great success."

I. C. R. Refreshment Cars.

Three 1st class passenger coaches on this line were recently converted into combined dining & restaurant cars, the object being to accommodate a counter passengers who do not want to sit down to a regular dining car meal. The floor plan on this page is made from a drawing supplied by F. R. F. Brown, under whose direction the cars were converted, & who recently retired from the Mechanical Superintendency of the Intercolonial.

Each car is fitted with a standard, full-sized range, with steam table & other fittings, so that these may be used again if it is decided to replace the cars with 1st class, full length, dining cars, in which case the same kitchen & refrigerator equipment would be put in the larger cars, & the 18 ft. counter from the restaurant end would also be used. Four tables, it will be seen, are provided in the dining-room. These cars have been put on as an experiment, & while probably ample to meet the requirements during winter, it is possible larger ones will be built when the demand increases sufficiently. No changes were made in the framing or other parts of the car bodies, except where necessary to put in the new fittings.

A B.C. Switching Locomotive.

The new Vancouver Coal Mining & Land Co., Nanaimo, B.C., has recently received from the Baldwin Locomotive Works a 6-coupled switching locomotive. The cylinders

tion of freight cars & locomotives, both passenger & freight, in addition to the ordinary repair work, the men have their hands full.

In the third week of May the G. T. R. gave an order to the Michigan-Peninsular Car Co., Detroit, Mich., for 250 stock cars & 250 box cars, each car of 30 tons capacity. An order has been given to the Co.'s own Car Department to arrange for the construction of 250 refrigerator cars & 60 cinder dump cars at the Co.'s shops in Canada. (Official.)

The G. T. R. has had constructed at its London car shops 3 cars, known as the "road department equipment." They consist of a dining, kitchen & sleeping car. The kitchen car is fitted up with a large steel range, & a refrigerator in one end, while in the centre is the sink. A neat pantry & cupboard are also at hand. Pots, frying pans, dishes of all kinds & every utensil to prepare & serve an excellent meal are at the convenience of the cook. A large carving table stands on one side of the car. A cook will be taken along to look after this department. Each of the cars is supplied with a water-tank of 100 gallons' capacity, & all are well lighted & ventilated. The men, when on the road, will just work the regulation day hours, & then repair to their department cars, which will be side-tracked until the repairs or track laying is finished. A 2nd set of cars is under construction.

Canadian Pacific Items.

The C.P.R. has decided to make black the standard color for its trucks.

INTERCOLONIAL RAILWAY.—COMBINED DINING AND RESTAURANT CAR.

are 15x22 ins.; driving wheels 42 ins. outside diam.; centres 36 ins. diam. Wheel base of engine 10 ft. Driving wheel base 10 ft. Weight in working order about 74,000 lbs.; on driving wheels the same.

The boiler is of homogeneous cast steel, 7 $\frac{1}{2}$ in. thick, form straight, with 1 dome placed centrally; waist 42 ins. diameter at smoke-box end, and telescoping back. Tubes of iron, no. 13, w.g.; 102 in no., 2 ins. diam. & 11 ft. 1 $\frac{1}{4}$ ins. long. Fire-box 64 $\frac{1}{2}$ ins. long & 34 $\frac{1}{2}$ in. wide inside, of homogeneous cast steel; side & back sheets $\frac{1}{8}$ in. thick; crown sheets $\frac{3}{8}$ in. thick; flue sheet $\frac{1}{2}$ in. thick.

Stack, straight; grates, rocking & drop; smoke-box extended.

Tires of cast steel 3 ins. thick, front & back flanged 5 $\frac{1}{2}$ ins. wide; main pair flues 6 $\frac{1}{2}$ ins. wide. Axles of steel or hammered iron; journal 6 ins. diam. & 8 ins. long.

Tank, 900 galls. capacity, carried on boiler.

Grand Trunk Notes.

New Pullman cars are to be put on G. T. trains nos. 14 & 15, & new Pullman buffet cars are to be put on between Toronto & Brockville.

Our May issue (pg. 61) contained a description of the mogul locomotives recently built for the G. T. R. We were unable to obtain a photograph in time to accompany the description, so it is now given on page 80.

From the activity displayed in the shops of the Grand Trunk at Point St. Charles, Montreal, there is not likely to be any holidays again this season. What with the construc-

J. Osborne, Assistant to the Vice-President, is devoting considerable time to equipment matters, having especial oversight of the shops at Montreal, Perth & Farnham.

The Co.'s Perth shops are turning out from 8 to 10 a day of the 30 ton, 35 ft. box cars, of which 1,000 are being built. The last 300 of the order will be equipped with metal instead of wooden bolsters.

The Co. has adopted the consolidation type of locomotive, with compound cylinder, as the standard for its freight service. Since last September an engine a week has been turned out of the Co.'s Montreal shops.

The C.P.R. is building a lot of baggage cars, which are not provided with either platforms or hoods. Thus, it is said, reduces the weight about 1 $\frac{1}{2}$ ton, & does not rob them of any decided advantage in construction, as the platform & hood are of no use on a baggage car. A passage way is provided with cars attached to them by rubber diaphragms attached to the ends of the doors.

All the Co.'s passenger cars were put through the shops between October last & the end of May, with the result that the effective equipment is made about a third greater without adding to the no. of cars, as the whole equipment was in condition for continuous use during the busy summer months & will not require to go into the shops again until winter. Special attention is now being paid to getting the locomotives overhauled, so that they will fall in line with the equipment for the fall freight traffic.

The 10 sleeping cars now being completed in the Montreal shops will be far ahead of any now in use by the Co., which is saying a good deal. The interior decorations have been carried out under the personal supervision of Theodore Jongers, a member of the firm of Irene & Co., of Paris. He is a brother of the Professor of Modern Languages at McGill University, Montreal; & another brother is the celebrated portrait painter. A portion of the decorations was brought over from Paris. The carving is being done in the Co.'s shops.

It may safely be said that no system of electric lighting for passenger cars has been so far perfected as to warrant its general adoption in America or elsewhere. The C. P. R. has been experimenting for some time with a United States system of generating electricity from the axle, & has had it in operation on the sleeping-car Winchester, running between Montreal and Toronto, for the past two or three months. The test has been so far satisfactory as to justify a further trial, & the same system is now being placed on 10 sleepers now being built at the Co.'s Montreal shops. On the results obtained with these will no doubt depend the decision of the management as to the general adoption of the system. Vice-President Shaughnessy's private car Champlain is being equipped with an English system of car lighting by electricity from the axle, the same which is in use on some 70 lines in Great Britain, & is also used on the Queen's private train.

W. McWOOD, Superintendent Car Department G.T.R., Montreal, writes:—"I have now received several copies of THE RAILWAY & SHIPPING WORLD, & consider it a very good production."

L. H. WHEATON, Superintendent & Chief Engineer, Coast Ry. of N.S., writes:—"I am glad to know that you are publishing a paper devoted to the interests of the transportation companies in Canada, & have no doubt it will meet with success. It should certainly be to the interest of every transportation man in Canada to subscribe to this paper, & it should be a good medium for advertising."

TENDERS FOR STEEL RAILS.

SEALED TENDERS FOR 50,000 tons of steel rails, & 50,000 tons of steel fastenings, to be delivered up to noon on Tuesday, August 2, next, for the supply

of the Grand Trunk & Northern Railway, at the wharf at Summerside, Prince Edward Island.

5,000 Tons of 80-lb. Steel Rails & fastenings to be delivered on the Intercolonial Railway wharf at St. John, New Brunswick.

All the above to be delivered in the month of April.

For full particulars, see the Tender & Conditions of Sale, & the Instructions to Bidders, which may be obtained on application to the undersigned, at the office of the General Manager, Grand Trunk & Northern Railway, at the wharf at Summerside, Prince Edward Island.

J. H. JONES, General Manager, Grand Trunk & Northern Railway.

A HAMILTON INDUSTRY.

The Westinghouse Co's. Works.

In previous issues we have dealt with the Westinghouse Manufacturing Co's. air brake industry at Hamilton, Ont., & to avoid repetition we will refer readers to our March issue, pg. 15, & May, pg. 60.

In 1895 the Co., having made large contracts with the Grand Trunk, Canadian Pacific & Intercolonial decided to organize a company in Canada & to establish works at Hamilton. A suitable property was purchased there in Oct., 1896. On Jan. 27, 1897, the Westinghouse Mfg. Co., Ltd., was incorporated by Dominion Letters Patent, with a capital stock of \$500,000. The works began operations on Feb. 8, & the first shipment of air brakes was made on April 1. On this & following page we give a ground plan of the works & exterior & interior views, reproduced from photographs. The works comprise office building 40x48 ft.; machine shop, 95x57 ft.; pump & tool room, 57x47 ft.; store & packing room, 58x57 ft.; & warehouse 97x57 ft. The plant is thoroughly equipped with the most modern appliances for producing air brake apparatus. A large portion of the machinery is of special design, being in many cases duplicates of apparatus for similar purposes used by the home company at Pittsburg; while many of the general tools were purchased from manufacturers in Canada. The Canadian Co. started under the most favorable auspices. The capacity of the plant is in excess of 10,000 freight car equipments a year, in addition to locomotive & passenger brakes, so that it is fully adequate to all possible requirements of the Dominion.

The Hamilton establishment, as a manufactory, is a model machine shop, & the buildings, which are well-lighted & cleanly in every

& T. H. & B. R. By some it is regarded as the most important addition of recent date to the manufacturing interests of Canada.

The officers of the Co. are:—G. Westinghouse, President; H. H. Westinghouse, Vice-President; J. Caldwell, Treasurer; G. F. Evans, Manager; P. J. Myler, Secretary &

what account should the wages & expenses of general & local storekeepers, etc., be charged?" & "The minimum amount for which one road may make a bill upon another on account of overcharge & loss & damage claims." The voting rule was amended so as to give each member the right to vote on all questions. Heretofore each system has been allowed only one vote on matters of policy. After electing the following officers the convention adjourned to meet in Montreal in June, 1899: President, P. A. Hewitt, C.C.C. & St. L., Cincinnati, Ohio; vice-president, H. D. Bulkley, B. & O., Baltimore, Md.; second vice-president, Daniel Jones, Philadelphia & Reading, Philadelphia, Pa.; secretary & treasurer, C. G. Phillips, Chicago & Northwestern, Chicago. Executive Committee: H. A. Rubidge, Chicago & Eastern Illinois, Chicago; C. J. Pollock, M. K. & T., St. Louis, Mo., & W. B. Bend, Chicago Great Western, St. Paul, Minn.—Railway Age.

The Oldest Canadian Station.

As far as can be ascertained at the time of writing, the oldest railway station in Canada, or rather the oldest building now used as a station, is at Guelph, Ont., where the C.P.R. occupies as a passenger station the first house built in 1827 on the site of the present city. If any reader knows of an older one, he is requested to send the information to the Editor.

It would also be interesting to ascertain the oldest building in Canada, originally erected & since continuously used as a passenger station. Readers are requested to assist in this by sending in names & dates of erection of any very early ones they know of, so that accurate information may be obtained.

F. W. HALES, Secretary Charlottetown Steam Navigation Co., P.E.I., in remitting

PLAN OF THE WESTINGHOUSE WORKS AT HAMILTON.

Assistant Treasurer. Messrs. Evans & Myler reside in Hamilton, where they administer the affairs of the Co. in a manner which appears to be equally satisfactory to its shareholders & to its customers.

Association of Ry. Accounting Officers.

Over 200 delegates attended the annual convention of the Association of American Railway Accounting Officers at Atlantic City, N.J., May 25 & 26, at which the following subjects were considered: "Classification of operating expenses," "Train & locomotive

THE WESTINGHOUSE MANUFACTURING CO'S WORKS, HAMILTON, ONT.

respect, have been adapted in every particular to the requirements of the Co., not only with a view to facilitating its own interest, but also with due regard for the comfort & health of the employees. The works are situated in the eastern part of the city & in close proximity to the tracks of the G.T.R., C.P.R., M.C.R.,

mileage," "Loss & damage claims," "Car accounting," "Car mileage bureau," "Bills of car repairs," "Classification of construction & operating expenses for electrical railways," "To what account should street lights prescribed by municipal ordinance maintained at highway crossings be charged?" "To

his subscription, writes:—"I congratulate you on your success with THE RAILWAY & SHIPPING WORLD. If you can keep it up, as well supplied with useful & entertaining information, you will deserve well from the community. I trust you will obtain a large subscription list."

INTERIOR OF MACHINE SHOP, WESTINGHOUSE WORKS, HAMILTON.

RAILWAY APPOINTMENTS, &c.

Canadian Pacific.—J. Murray, Superintendent at Winnipeg, who has been on leave of absence for some months, owing to illness, during which he visited Great Britain, has been appointed Track Inspector for all C.P.R. lines west of Fort William. His duties are to go over the road on a hand-car with each of the roadmasters & make a critical examination of every foreman's section, reporting to the Manager on the comparative efficiency of each foreman's division or roadmaster's section, observing carefully not only the condition of the track, but the condition of fencing, telegraph line & all other particulars. He will also make recommendation as to the number of men necessary in his opinion for the maintenance of each section summer & winter. This is a new appointment. E. A. James, formerly Chief Dispatcher at Winnipeg, who has been Acting Superintendent during Mr. Murray's leave of absence, will now be appointed Superintendent of the main line between Winnipeg & Brandon & tributary branches. (Official.)

Grand Trunk.—C. J. Crowley, who has been for many years in the G.T. service, & for some time past has been Resident Engineer of the Middle Division, with headquarters at Toronto, has resigned, much to the regret of the management, as he intends to reside in England. He is succeeded by F. L. Somerville, who has been assistant to Chief Engineer Hobson at Montreal.

W. White, Chief Operator at Bonaventure Station, Montreal, has been appointed Private Secretary to G.T.R. General Superintendent McGuigan. A. H. Lander succeeds Mr. White at the Chief Operator's desk at Bonaventure.

Wm. Yule, of Palmerston, Inspector of Bridges for the Northern branches, has been transferred to Stratford, Ont., to succeed J. C. Sanderson, who has gone to St. Thomas as Inspector of Stations & Bridges on the Southern Division. Mr. Yule will act as Station & Bridge Inspector for the line between Stratford & Sarnia, Goderich & Buffalo, & the Northern branches.

C. A. Hight is appointed solicitor in charge of the Co.'s legal business in New England, with headquarters at Portland, Me., vice A. A. Strout, deceased, to whom he formerly acted as assistant.

McKenzie & Mann's Manitoba Lines.

S. J. Jackson, M.P.P. for Rockwood, Man., has been appointed Purchasing Agent at Winnipeg for the McKenzie & Mann roads, includ-

ing the Dauphin & the Winnipeg & South Eastern. Mr. Jackson, who was one of Winnipeg's earliest merchants in the seventies, has for several years past been farming near Stonewall, Man. He has represented that district in the Legislative Assembly since 1883, & was Speaker of the House for several years.

Wagner Palace Car Co.—A. G. Adams has been appointed general accountant with office at New York, vice T. D. Boak, accountant, resigned.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—Thos. Green has been appointed Acting Chief Engineer, vice W. W. Rich, previously Chief Engineer. W. R. Collins has been appointed Freight Claims Agent, vice A. H. Bode.

Death of E. D. Boswell.

E. D. Boswell, President of the Temiscouata Ry., died suddenly at Riviere du Loup, P.Q., June 4, aged 47. He was the grandson of the late Capt. Boswell, of the Royal Navy, & was born and educated at Cobourg, Ont., where his family had resided for many years. At an early age he entered the employ of the Bank of Toronto, where his conspicuous business ability & attractive personality won him rapid promotion. When stationed at Montreal he held a prominent position as an athlete, being especially proficient as an oars-

man. He filled many important posts for the bank, & was manager of the branch at St. Catharines when he resigned his position to enter the employ of Chas. Riordon. For some time Mr. Boswell held a responsible office in the Cosgrave Brewing & Malting Co., then under the control of Mr. Riordon, & left for Quebec at the time of the founding of the Temiscouata Ry., in which enterprise he was associated with his brother-in-law, the late Hector Cameron, C. Riordon, & J. J. Macdonald. He took up his residence at Riviere du Loup, where he lived until his death. He leaves no family; his wife, nee Miss Young, of Quebec, died several years ago.

Personal Mention.

J. W. Swan, of Norway, Ont., has been appointed G.T.R. photographer.

D. E. Brown, C.P.R. Agent at Hong Kong, is in England on a protracted holiday.

The Minister of Railways, Mr. Blair, expects to go to England shortly with his family.

Jas. Leeming, recently appointed General Freight Agent of the Erie Ry., is a native of Brantford, Ont.

Lady Mount Stephen was presented to her Majesty at the Drawing Room last month, by Lady Northcote, on her marriage.

Passenger Traffic Manager McNicoll, of the C.P.R., recently underwent a slight operation, rendered necessary through an accident whereby he injured his leg.

President J. J. Hill, of the U. S. Great Northern, has leased from the Quebec Government the salmon fishing privileges of the St. John River, on the north shore, for \$3,000 a year for 10 years.

J. F. Shaughnessy, a brother of Vice-President Shaughnessy, of the C.P.R., has been appointed Purchasing Agent of the Minneapolis, St. Paul & Sault Ste. Marie, in place of T. A. Switz, resigned.

R. N. Stevens, I.C.R. Mechanical Foreman at Truro, N.S., died May 11 of paralysis. He was 64 years old, & had been connected with the I.C.R. since it was opened & was engineer of the first train out to Coldbrook. He left a wife & family.

Wm. McKenzie, of McKenzie & Mann, left for England May 21, in connection with his various enterprises. It is understood that financial arrangements in connection with the building of the Ontario & Rainy River, the Winnipeg & South Eastern & the Dauphin railways, are the principal objects of his trip.

W. R. Baker, General Manager of the

INTERIOR OF WAREHOUSE, WESTINGHOUSE WORKS, HAMILTON.

M. J. H. & N. W. Ry., recently underwent an operation in Winnipeg General Hospital for a tumor in the calf of his leg, caused by a blow from a cricket ball. He lost a good deal of blood, & the wound did not heal at all satisfactorily at first, but he is now getting along favorably.

J. W. C. Haldane, C. E., of Liverpool, England, left there June 2, for a tour in Canada, with the object of gaining special information regarding the C.P.R. system. He will travel over the Co's. whole area as far as Vancouver. The knowledge thus obtained of the line, the country through which it passes; & its steamship connections with England, Japan & Australia, is intended for future use in new literary projects.

A. G. Wand has been appointed General Agent for North America of the London & North Western Ry. (Eng.), Caledonia Ry. (Scotland), & Great Southern & Western Ry. (Ireland), to succeed C. A. Barattoni, deceased. Mr. Wand has been in the service of the L. & N. W. nearly 25 years, and was transferred to New York from the London office of the Co. when the late agent was appointed in 1887.

A newspaper rumor at the end of May appointed B. B. Osler, Q.C., of Toronto, General Counsel of the G.T.R. at a salary of \$20,000 a year, to succeed John Bell, Q.C., of Belleville. We are in a position to say the rumor had no foundation in fact & it has already been denied by Mr. Osler. No doubt he will continue to receive briefs from the G.T. as in the recent case of Hannaford vs. the G.T.R., in which he represented the defendant at Sarnia Assizes.

A report was recently sent out from Moncton, N.B., to the effect that Collingwood Schreiber, Deputy Minister & Chief Engineer of the Department of Railways, was to be superannuated & succeeded by D. Pottinger, at present General Manager of the Intercolonial, who, in turn, was to be succeeded by J. E. Price, now District Superintendent at Truro, N.S. It is not thought in the best informed quarters that there was any foundation for the rumor. In any event Mr. Pottinger would not be given the dual position at Ottawa, as he is not an engineer.

Sir Wm. Van Horne left for England May 20, accompanied by R. B. Angus, another C.P.R. director. Of course, the dailies have been busy with "authentic" reasons for the trip. First it was the Manitoba & Northwestern Ry. bonds that had to be looked after; then they had gone to float the bonds of the Laurentide Pulp Co., & this was followed by the "positive information" that it was in connection with the establishment of a fast Atlantic service. The fact is, that business has very little to do with Sir William's trip. He has been far from well lately. Early in the spring he suffered from bronchial trouble, relief from which was sought in a brief sojourn at Atlantic City. Later the trouble was diagnosed as catarrhal fever; hence the ocean trip. Sir William's visit will be only a brief one; he is expected back before the end of June.

OPERATING.

The C.P.R. Graphic Car Record.

In the early history of railways in this country it was customary for them to do their business in their own cars, transferring freight destined to stations on a connecting road at the junction point of the two roads. While this system had the advantage of keeping at home the equipment of each road, it resulted in the very slow movement of freight, which became more & more annoying as the volume of traffic increased, so that the railways found it to their advantage to allow their cars to run through to the destination of the freight without transfer. The result of this is, that at present the cars of any one company may be scattered all over the country, & located on as many as 200 different lines. The control of the movements & the distribution of freight cars were at that time under the superintendents, while the computing of mileage & other statistics in connection with the same was done by the car accountant, who was under the control of the auditor. The general superintendent's duties were very numerous, & the greater part of his time was given to looking after the running of his trains, examining bridges, the condition of the roadbed, etc., so much so, that the handling and distribution of the cars received little attention, & was often entirely overlooked, in fact, in some instances the greater part of the distribution was done by yardmen & agents. As a natural result the expenditure for mileage of foreign cars increased very rapidly, while his own cars were allowed to remain on other roads just as long as they wished without any request being made for their return. Moreover, no check whatever was kept on foreign roads to see if they paid a fair amount for the use of the cars. The car accountant was not responsible for this state of things, as he considered it was his duty to only compile the mileage statements, the expenditure for mileage being a matter entirely under the control of the operating department, with which it was not his duty to interfere.

The general managers, however, noticed that in many cases half-a-million dollars annually was being paid out of the treasury for mileage, & were, therefore, confronted with the problem how to change this debit to a credit. The reply was—Improve the movements of cars belonging to your company by getting them home from foreign roads & reduce, as far as possible, the use of other roads' cars on your line, improve the time of through freight, & thereby improve the service. The first step towards the accomplishment of this result was to organize & fully equip the car service department. The head of this department is known as the manager of transportation, or superintendent of car service, & has been given full charge of the distribution & use of all passenger & freight car equipment, & the movement of time or fast freight, also the compiling of mileage & statistical statements. The duties of this of-

ficial have increased to such an extent on many of the large railways that it has been found necessary to appoint two subordinate officers, so as to relieve him of some of the routine work, & thus allow him to give more attention to the more important part of his duties. The two subordinate officers are known as car accountant & car distributor. The car distributor is, as a rule, immediately under the control of the head of the department; in fact, in many cases it is found necessary for him to be in the same room or office, so that the cars may be distributed to the best advantage & under the personal supervision of the head of the department. The car accountant's office may be divided into two parts, viz., mileage & record. In the 1st-mentioned is compiled statements of the mileage made by the different classes of cars on each division, section or branch, & the mileage of trains & locomotives, which information is extensively used by the accounting officers. The mileage made by other roads' cars on the line is computed, for which a stated rate per mile is paid, & monthly accounts issued for same. The record part of the office may be considered the most important, & is certainly the most interesting to the head of the department. It consists of a complete record being kept of the daily movement & location of each & every car upon the road, & may be considered a check on the distribution & handling of the cars on the line. The car accountant is called upon daily to give a variety of information regarding the location of the equipment. He must know what cars owned by his company are located in any foreign territory, where a large shipment is in sight to be loaded to or via his line, so that arrangements can be made to have his company's cars supplied for the shipment; watch the movements of the cars on foreign roads, & "catch on" to any abuse of them, & call the attention of the guilty parties to same; trace or write to foreign roads for cars delayed & endeavor to secure their return home, also issue to agents tracers for cars delayed over a certain period at stations on the line, & when the explanations given are not considered satisfactory, the tracers are referred to the head of the department for his action. He must also be able to supply at a moment's notice the location of the equipment owned by the company, which, perhaps, may be considered one of the most difficult problems with which car accountants have been confronted. It has been recognized by the managers of the principal railways that it is of the utmost importance to the welfare of their roads that the car accountants be placed in a position to instantly supply the various information called for, & therefore, no expense has been spared experimenting with many different systems, but, unfortunately, not altogether with success.

The movements of the cars have heretofore been generally kept in books specially ruled for that purpose, which method of car recording has been acknowledged to be unsuitable for this age, & everybody has felt the need of a change, so that car accountants, alive to

the fact, have been endeavoring to evolve a more suitable system. The system that has been considered to be the nearest approach to success is known as the Graphic Car Record System, but this system has also got its drawbacks, which the car accountants have been endeavoring to overcome during the past two years. This system, which has been in use on the C.P.R. for several years, is a very radical change from the old book form of records, as the use of books & pens is abolished. It consists of:—

1st. A box 8 ins. deep, 14 ins. wide, & 36 ins. long, which is divided longitudinally by copper wires into 10 equal spaces, each space 1 inch wide.

2nd. A stick 8 ins. long, 1 in. wide, $\frac{1}{4}$ in. thick for 1 in. from each end, & $\frac{1}{8}$ in. for the 6 ins. in the centre. A groove is cut at each end to allow a piece of cardboard to be inserted. One end of the stick is flat, on which a piece of paper representing the car number is glued, the color of the paper designating the class of car; a brass nail is also inserted in that end so that any particular stick may be readily taken from the case. The other end is slightly bevelled so as to admit of it being quickly placed in the case.

3rd. A piece of cardboard $6\frac{1}{4}$ ins. long & 1 in. wide, which may be inserted in the grooves in the stick. The stick is the same length as the depth of the case, & the same width as the distance between the copper wires, so as to allow of it being placed in the box.

The box is built on an angle of 45° to prevent the stick from dropping out. The movements of the cars are entered on the cardboard, which is inserted in the stick, those of loaded cars in black pencil, & empty cars in blue. To facilitate the recording of the movements of the cars, the stations are designated by numbers & the junction, or interchange points, with other roads, by symbols. The boxes are divided into 10 divisions by copper wire, so that the stick may be filed according to the ending unit of the number shown on end of stick; for example, stick no. 12201 would be placed in the 1st division, & stick no. 12205 in the 5th division. In this way, if 400 sticks were in the case only an average of 40 would be examined for any particular number. As many of the boxes as are necessary are placed on a stand built for that purpose, & are again subdivided into sections by movable trays to suit requirements. The clerks have then before them one large case divided into sections & stations of the road, the sections of stations running in proper order from east to west. Branches intervening are allotted a box next to the station at which the branch connects with the main line, & all the cars represented by the sticks are located in the case in the same section or station as the car is located on the line. There is also another small case set apart for cars on foreign roads, each road being assigned a space commensurate with its requirements.

The movements of the cars are recorded from the train conductors reports, & one division of the case, representing a division of the road, is under the charge of one clerk, who records the movements of all the cars on the reports for that division. Thus, the reports are handled only by that clerk, instead of perhaps by several, as is the case when the book records are used. The saving of time is obvious. When the car moves from one station or section of the line to another, the movement is entered on the stick, which is also moved in the case, so that the work of locating the cars is always being done, & the car accountant can at any time say where the equipment is. This can not be done from the book record without a great deal of labor. It may be claimed that a clerk cannot record as many movements of cars by the graphic car record system as by the book system, but a prominent car accountant who adopted

this system 4 years ago states that one of his clerks records 1,200 movements daily, which is more than can be claimed for the book record.

There are many benefits to be derived from the graphic car record system, one of which is, that cars delayed on a division where cars are required can be traced without interfering with the clerk recording the movements of the cars in that particular case; for example, a road running from Chicago to California may, at certain seasons of the year, require cars in California, while a large surplus of cars are on their tracks in the vicinity of Chicago; therefore, that part of the case in which the sticks represent the cars in Chicago territory is not interfered with, while the tracing for cars delayed on other divisions in the vicinity of where they are required is being done. This would be an utter impossibility with the book record. Another good point of the graphic system is that the movements made by 1 car during 8 or 10 months & sometimes during 18 months may be entered on one paper. This overcomes the principal objection to the book record, which necessitates bringing forward the movements from one month to another at the expense of a great deal of time & clerical labor.

The Grand Trunk's New Rules.

As announced in our May issue, pg. 68, it was decided that the new rules of the G.T.R. Transportation Department would be put into effect on July 1. These rules are practically the standard code of the American Ry. Association, & have been printed & distributed to the employees. Directly the announcement was made, objection was raised, not by any considerable body of the men, but by the few agitators who are always looking for trouble, certain members of Parliament were loaded up with the idea that startling & unprecedented innovations were to be made, that the System was to be Americanised, & that the management was attempting an unwarranted departure from what was spoken of as a tried & satisfactory system. Member after member got up in the House & spoke in this strain, & though the rules had received the assent of the Governor-in-Council, not even the Premier or the Minister of Railways seemed to understand the question, or to be able to justify the Government in agreeing to the changes.

No one would go further than we would in condemning any attempt to "Americanise" the G.T.R. system, if that meant the displacement of competent Canadians, & the employment of United Statesers in their places, & while there may be ground for discussion of the policy of the present G. T. R. management on that score, the matter under consideration does not involve anything of the sort. The standard code of the American Ry. Association is not in any sense a new thing; it is the result of years of study by the most competent operating officials in America; it is in use on over 170,000 miles of railway in the United States; it is already in force on at least two railways operating in Canada, the St. Lawrence & Adirondack & the Northern Pacific, & we believe it is of the utmost importance that it should be put in force on every other railway in Canada with as little delay as possible, specially on those lines which run into the U.S. The standard rules of the American Association are now undergoing revision by a committee of which T. Tait, Manager of the C. P. R. Eastern Lines, is a member. As soon as this revision has been completed, it is probable the rules will be put in force on all the C.P.R. lines.

While thorough in its record with the policy of putting the standard rules in force, it seems to us that the G.T.R. operating officials were perhaps in a little too great a hurry, & that they would have done better had they not at-

tempted to work under the changed rules almost immediately after having them printed or distributed. Two or even three months delay would have made but little difference, & it would have given the men a better opportunity to post themselves. This has since been realized by the officials, the result being that the coming into operation of the new rules has been postponed from July 1 until a date hereafter to be determined. In the meantime each employe required to be familiar with the rules, has been notified to study them carefully, to embrace every opportunity to attend the schools of instruction at the several terminals, & to spare no effort to familiarize himself with the rules, so that he will be prepared for the examination which he must pass satisfactorily before the rules become effective.

In speaking of the new rules recently, a G.T.R. operating official said that the present system in use on that line was not only different from that employed in the U.S., but was not uniform throughout the G.T.R. system. In the matter of train orders, he said, the method of despatching train orders on three branches of the system. On the Great Western branch the duplicate telegraph order was employed; on the Grand Trunk proper the red & white rear flag & lamp signals were used; while on the Northern the old "Smith & Brown" system was adhered to that had been preserved from the days of pioneer railroading. Under the "Smith & Brown" system, trains were named after the conductor who had charge of them, instead of by numbers. The new train order system, which has been adopted from the American Ry. Association, provides absolute security to passengers, as the engineers & conductors on each train are provided with a copy of the running orders issued, which is a much better method than trusting to an engineer to stand still until the despatcher gives him orders to move.

The difference between the rules in vogue in Canada & in the U.S. was a great source of inconvenience to the G.T. management. A Canadian train crew could not pass over Suspension Bridge & take a train into the yards on the U.S. side, because they did not understand the signals. The G.T., therefore, had to keep a crew of men on the Canadian side who understood the American rules, & placed them in charge of every train crossing the line. The same state of affairs existed at Fort Erie, though on the C. & G. T. the Canadian rules are in force.

It is confessed that the alteration in the hand-lamp signalling is most material, but the G.T. official said the change would have to be made some time, & the men had better learn the new procedure. In this department of signalling the American code has superseded the Canadian.

The objection taken by the men, that the signal to be given from the top of a freight train to let the engineer know it has parted involves danger in its execution, is flatly contradicted by the official, who says the signal was specially contrived that it might be executed while sitting down, in which position a brakeman is safe from being pitched to the ground.

The new rule no. 36 has been the chief cause of complaint among the dissatisfied men. It refers to brakemen & conductors in charge of freight trains, & says: "They must ride on top of the trains as much as possible where they can apply the brakes, if necessary, & see that their brakemen do their duty; they must require all of their brakemen to be on top of the train at least one-half mile before arriving at & while passing all stations & stopping places, descending or ascending grades, or at any point or time when extra precaution is necessary to ensure safety." This rule, said the official, merely requires of brakemen & conductors to do their duty. They cannot attend to their train while lounging in the cab

or the caboose, & so long as brake-handlers are on the roofs of cars, men must get out in the end to twist them up. A sarcastic official remarked that when the Co. introduced air brakes on its freight cars it would not trouble the brakemen any longer.

In conclusion, the official stated that he thought the dissatisfied employes were most dull not to see that if they become acquainted with & used to working under the American Railway Association rules they would have a new field of enterprise open to them.

The C. P. R. trains using the G. T. R. tracks between Hamilton & Toronto will have to be run under the standard code of the American Ry. Association as soon as it goes into force on the G. T. R.

Train Signal Lamps.

The change in train signal lamps, which the principal Canadian railways are adopting in order to conform to the standard code of the American Railway Association, requires 2 tail lamps to be carried at rear end of all trains, held in brackets which fit into slots in corner of cars; these lamps are fitted with 4 lenses, 1 red, 2 green, & 1 white.

The code requires that 2 red lights shall be shown to rear when trains are running, showing green to side & green to driver; & when train runs into siding to allow a following train to pass, the lamps require to be turned in the brackets, showing 2 green lights to rear, green to side & white to driver. This change, from green to white, indicates to driver that rear end of train is standing clear of main line, & when driver of train following sees 2 green lights he knows train ahead is standing on siding clear of main line. After following train has passed, & driver of side-tracked train wishes to pull out, he can see from cab whether he has proper running colors behind, as if train hands have not turned lamps showing red to rear, he still sees white lights & knows the rear end of his train is not protected.

The code also requires that 2 engine signal lamps be carried, 1 on each side of boiler of engine, which are constructed so as to be changeable from green to white, or white to green; lights show forward & to side. When a train is run in 2 or more sections, all running on the same schedule time, the forward sections require to show green lights to side & ahead, indicating that a train is following running on the same schedule time & entitled to the same time-table rights as the train carrying the signals. An extra or special train is required to carry white lights on each side of boiler, showing white to side & ahead.

Noah L. Piper & Son, of Toronto, have invented both combination tail & engine signal lamps which conform to the rules exactly, & large orders have been placed with them by the C.P.R. & other roads. In their engine signal lamps the color can be changed from green to white or white to green, by simply lowering or raising the slides containing the colored glass.

The C.P.R. have also adopted a cupola lamp (also invented by Noah L. Piper & Son) which is placed on the top of the cupola of freight vans. This lamp is fitted with 6 in. lenses, & by an ingenious contrivance the colors can be changed to suit whichever way the van is running, showing red behind & green to driver when train is running, & when in on siding, green behind & white to driver. Freight trains carry one of these lamps on the van in addition to regulation tail lamps, & by this arrangement of lights the rear end of a freight train is readily distinguished from a passenger train, & indicates to driver when leaving yard that he has his complete train, as this lamp being on the top of cupola it can be always seen from cab, even when tail lamps could not, owing to train being in between 2 sidings full of box cars.

The C.P.R. Mountain Division.

In a recent interview Supt. Duchesney, who has charge of the Mountain Division of the C.P.R. at Donald, said: "I expect a few heavy slides to come down as soon as the hot weather begins. But we have arranged to avoid some of the worst of them this year, & I have a big stock of powder on hand to handle them with. I would rather fight the snow-slides now than the floods later on. The traffic has so increased that it will not stand much delay. Our daily average on the main line over the division between Donald & Kamloops is 180 full cars of freight, to say nothing of our own freight, rock, timber & supplies of all kinds & the passenger trains. During one 24 hours last week 260 full cars passed over the main line of the division. We have just received some fine new engines from Montreal, & expect 8 or 10 more for the mountain work. I am not in a position to say whether or not the workshops will be removed from Donald to Revelstoke this season. The matter was shelved in the spring, but will be decided pretty soon, & I am likely to hear at any time. In my opinion, the shops should be at Revelstoke, which is the most central point from which to handle the mountain division."

The Intercolonial Porters.

In the House of Commons, June 4, E. F. Clarke, M.P., brought up again the subject of the alleged displacement of colored porters in the sleeping car service of the Intercolonial Ry. He read a letter from C. T. Dixon, now of Toronto, saying that out of 6 colored porters, of whom he was one, who were formerly employed on the road, none were at present employed in the same capacity & only 3 in any capacity at all. Dixon charged there had been an attempt to draw the color line, as he said the men were summarily dismissed without any complaint against them. The Minister of Railways said he had no further information on the subject since receiving the letter of Superintendent Archibald, of the sleeping car service. Accompanying that was one from General Manager Pottinger, who said there were then more colored men in the employ of the I.C.R. than for some time previously. The Minister assured the house there was no disposition at all to draw the color line, & that when the service was reorganized for the summer travel, if there was any foundation for a complaint, there would be an opportunity to rectify it. He promised the matter would receive his attention.

The Montreal & Ottawa Ry., extending from Ottawa to Vaudreuil, which is expected to be opened for traffic some time in July, will become part of the C.P.R.'s Eastern Division, under the immediate jurisdiction of Superintendent H. B. Spencer, at Ottawa. At present the completed portion of the line between Vaudreuil & Plantagenet is attached

to the Ontario & Quebec Division. It is not the intention to run the Atlantic & Pacific trans-continental express trains over the new line, & they will continue to run between Montreal & Ottawa via Calumet. (Official.)

C.P.R. Cheques.—A general circular has been issued by the C.P.R. to merchants, storekeepers & dealers along its lines, giving a list of banks which have arranged to cash the Co's paymasters' wages cheques without charge. Practically every chartered bank will take them; & the circular says: "Merchants & others can safely accept these cheques from employes on the same terms as the banks, and it is hoped that those doing business along the line will aid the Co. in facilitating the negotiation of these cheques, without charge."

CONSTRUCTION & BETTERMENT.

The Cassiar Central Railway.

This Co. has decided to make Glenora, B.C., the starting point of its line which is to connect the Stikine River with Dease Lake. It is said Glenora has exceptionally good facilities for landing passengers & freight, & that it affords the Co. the best point to start from in order to ascend by slow degrees & easy gradients the high bench lands to the north towards Dease Lake. The Co. has erected warehouses & offices there & it is its intention to commence the erection of a wharf almost immediately. The railway work will be commenced at a very early date. In a recent interview, in the Vancouver World, the Manager of the Co., H. Hirschell Cohen, whose headquarters are at Victoria, B.C., said:—"We have sent in prospectors, assayers with a complete plant, surveyors, etc. The General Manager in Cassiar is E. D. Sell, who was formerly in the service of the Transvaal Gold Fields, Ltd., at Johannesburg, & that Co., which has large interests in the Cassiar Central, sent him from Johannesburg to B.C. expressly to exploit the Cassiar district. The interior headquarters have been established at Dease Lake, which will be the end of the railway line, & the Co's men are already dispersed over the country engaged in prospecting & mining work. The Co. has sent, & will continue to send, large supplies of stores to Glenora in order to give prospectors who will winter in the Cassiar every facility as well as to provide food for its own men, who will continue to work on through the winter months developing its properties. The Co's. operations will naturally conduce to a very large increase of mining enterprises, since it will be its policy to assist the development of the mining resources of the country, not only inside the immediate limits affected by the charter, but also the enormous area which must find an outlet along our railway. It will maintain, however, one starting point for supplies, & in view of this & the prospect of controlling there so many separate concerns in the country, a central distributing point

We have been appointed official
watch inspectors to the Grand Trunk
Railway for Toronto and York.

INSURE IN

The Canadian Railway Accident Insurance Co.

OTTAWA, ONT. A PURELY CANADIAN CO.

Authorized Capital - - \$500,000.
Subscribed Capital - - \$175,000.

J. W. McRAE, President.
HON. E. H. BRONSON, Treasurer.
JOHN EMO, General Manager.
JOHN P. DICKSON, Secretary.

We make a specialty of Railroad Employes Insurance, also issue all classes of personal accident insurance. Policies containing all the latest and up-to-date features at rates as low as consistent with safety.

HEAD OFFICE:
26 Wellington St., Ottawa, Ont.

became absolutely necessary. This point the Co. has decided shall be at Glenora.

"The road, according to the preliminary survey, will be 99 miles long. It will be narrow gauge & we hope to have 50 or 60 miles of it completed in the next 12 months—you can safely say before August, 1899. Probably the whole of it will be done by that time. By connecting the Stikine with Dease Lake by a railway, we connect the waterway of the Stikine, 133 miles, with further navigable water on Dease Lake, Dease River & the Liard, Pelly & Frances Rivers. The railway commends itself by passing through an attractive, but virtually unexplored territory, which, it is believed, will be found to be rich in minerals, & therefore, we expect to be in the best position to command the trade of the northwest country between Klondike & the Mackenzie River, whereas, the lines from Dyea & Skaguay will, if built, tap only a narrow strip between Dawson City & the coast.

"The country is perfectly open to everyone, & the Co. is only too ready to afford every prospect for all facilities for following his calling in the Cassiar. The Co. has made no designations whatever at the present time. By the charter we have 700,000 acres in the country when we choose to designate, but we haven't yet designated, & therefore, have acquired no rights, & the whole country is still open to everyone, & even when we do designate, prior rights have always to be respected & awarded. Statements to the contrary have been made by people ignorant of the Co's. charter, & actually of the benefit the Co. will be to miners & prospectors generally. I may say that I am very confident that within 18 months from now we shall afford employment to between 1,000 & 2,000 men in the Cassiar country.

"Among the principal financial supporters of the Co. are: The Transvaal Goldfields Co. of London & Johannesburg; L. Neuman, of A. L. Hirsch & Co.; G. Imroth, & L. Ebrlich, of London; Compagnie Commerciale General de Paris, London, & many other well-known African companies."

Work on C.P.R. Lines.

Atlantic Division.—The Co. has under way the work of ballasting to extend over 100 miles of the main line between St. John, N.B., & Megantic, fully completing the same in every particular; also the laying down of 53 additional miles of 73 lb. steel rails on the same portion of the line, which will almost complete the changing of the 56 lb. rails. It is also expected to add some 5 miles of sidings & yard extensions to facilitate the handling of the winter steamship traffic, & the elevator capacity at West St. John is to be increased to 1,000,000 bushels.

Considerable filling of trestles & erection of masonry & steel in place of wooden structures is being done, a list of which would occupy too much space; suffice it to say, there will not remain a wooden bridge or trestle of any importance on the whole of the line between St. John & Megantic when the season's operations are concluded. These works, more or less, extend to all parts of the Atlantic Division, but the particular portion upon which heavy expenditures are being made is between St. John & Megantic, over which passes the increasing winter port steamship traffic, of which a very large increase is expected next winter through the port of St. John. (Official.)

Viger Square Station, Montreal.—This magnificent building, which also contains a terminal hotel, is rapidly approaching completion & it is expected that both the station & hotel will be ready for opening in August. A view of the Craig St. front of the building, facing Viger Square, is given on this page.

Windsor St. Station, Montreal.—It has been well known for some time that this station is very inadequate for the amount of business centering there, & it is said it has practically been decided to build an addition entailing an outlay of \$250,000, or possibly more. The extension will be west on Osborne street & will make the building just twice its present size. It will be built of precisely the same material, & in the same style, & when finished will make one of the most complete & up-to-date railway offices & station on this continent. When questioned on the subject Vice-President Shaughnessy said: "The project will finally be carried out, but at present no details can be given."

Galt Bridge. The masonry contract for the improvements to the bridge at Galt, Ont., has been let to E. Chalmers, of Owen Sound. It amounts to about \$20,000.

C.P.R. STATION AND HOTEL, VIGER SQUARE, MONTREAL.

Branch from Hartney.—At the last session of the Manitoba Legislature aid was given to the Northern Pacific to the extent of \$1,750 a mile & a further bonus of \$20,000 towards building a branch from Belmont to Hartney. And now so important & valuable is this part of the country, & the traffic from it being looked upon as worth having, that the C.P.R. is also reaching out to it, & will build a spur line from Hartney running easterly, for about 20 miles. This line is only a few miles north of the N.P. extension & parallels it for that distance. (Unofficial.)

Winnipeg Station.—Owing to the enormous increase in the C.P.R. traffic the advisability of increasing the size of this station has been under consideration for some time past. It is said plans have been prepared for a 100 ft. extension eastward of the present building.

Western Division.—In speaking of his recent inspection of this Division, Vice-President Shaughnessy says: "Everything is in first-class shape. The improvements have been continual for some time past, & we propose to spend a large sum during the next few months in the construction of additional sidings to facilitate the quicker passage of traffic. The question of a double track between Winnipeg & Fort William has not yet been decided, but all the improvements east of Winnipeg are constructed in a manner to

be suitable for a double track whenever we consider the traffic is sufficiently large in volume to warrant the expenditure for such work."

Calgary Workshops.—The town of Calgary, Alberta, has granted a bonus of \$25,000, in return for which the C.P.R. will expend there as follows, exclusive of cost of tools & machinery: Round-house; \$50,000; coal pockets, pump-house, track & ash-pits, \$8,000; tracks, from \$25,000 to \$30,000. The Co. agrees to maintain its repair shops, division points, &c., there for 25 years, or to forfeit \$1,000 a year.

Crow's Nest Pass Branch.—The track had been laid to 118 miles west of Lethbridge. Vice-President Shaughnessy recently went over the whole route of the line from Lethbridge to Kootenay Lake, & expressed himself as well satisfied with the progress that has been made. He expected last summer that by the first of this year the road would be completed over the summit of the Rockies, but owing to the difficulties experienced on account of the inclement weather it was found impossible to accomplish as much

as was desired. However, the grading was progressing very well, & he had no reason to feel disappointed on that score. The grading had been well advanced to Kootenay Lake, the present terminus, which will be reached with the track this year. Two years is the time which the Co. has to complete the road to Nelson, & the work will be finished well within that time, although there are many difficulties to be overcome which will require a high degree of engineering skill.

The highest point on the branch is at a point about 1 1/2 miles east of Bull Head Prairie, where the road reaches an altitude of 4,330 ft. above sea level. Crow's Nest Mountain is 8,800 ft. above sea level.

A Western M.P. recently mentioned in the House of Commons the rumor that the C.P.R. intended not to build the last 50 miles of the Crow's Nest Pass Ry., from the crossing of Kootenay River along the west side of Kootenay Lake & on to Nelson, & that a steamboat service would be substituted for it. The Minister of Railways pointed out that the steamboat service was provided for in the contract, pending the completion of the line west of Goat Hill Landing, to which point the rails are to be laid this season. It is almost needless to add that there is not the slightest intention of shirking the construction of the western end of the line, which the Co. requires to give it through connection with its Columbia & Kootenay & Robson & East end branches, & with the extension of the Boundary Creek district, & on to the foot of Okanagan Lake.

The C.P.R. proposes to build a reservoir 2 1/3 miles southeast of Cranbrook at an elevation of 270 feet above the town-site, as a means of providing the town with a water supply. The reservoir will have a storage capacity of 1,200,000 gallons of water, affording a sufficient supply for a city of 10,000 inhabitants.

Columbia & West Ry.—Superintendent Gutelius has been instructed to proceed with the widening of the gauge of this line between Rossland & Trail, on the completion of which the train service between Rossland & Robson will be greatly improved.

When appearing before the Railway Committee at Ottawa last session to oppose D. C. Corbin's application for a charter to

to build into the Boundary Creek district of B.C., Vice-President Shaughnessy refused to build it, but if the application was refused the C.P.R. Co. would build in there this year. This pledge has been promptly redeemed, the Co. having already let a contract for the construction of the line from the Columbia River to Midway on Kettle River, the route being shown on the map of the Kootenay District presented with this issue. The contract has been given on schedule prices to a syndicate composed of McKenzie & Mann, of Seattle & Montreal; Foley Bros., of St. Paul, Minn., who have been contracting on the Crow's Nest line; & P. Larson, of Vancouver, one of the largest firms of railway contractors in the west. The work is to be completed by the end of the year. W. F. Tye, C.E., will have charge of the work for the C.P.R.

It is estimated that the cost of the 100 miles will average \$30,000, an aggregate of \$3,000,000. The construction of the line from Robson to Christina Lake will require engineering skill of a high order. McCrae Pass, which is 13 miles in length, is even more difficult than the C.P.R. pass in the Rocky Mountains. There will be a number of tunnels & numerous bridges & every mile will represent a vast outlay. From Robson the line will run along the Columbia River to Dog Creek. The route from there on is up Dog Creek to McCrae Creek Pass, thence down McCrae Creek to Christina Lake to Cascade City; along Kettle River to Grand Forks; up the north fork & Brown's Creek to Eholt Pass; down Eholt Creek to Boundary Creek, & through Greenwood, Anaconda & Boundary Falls to Midway.

The construction will be done under the charter of the Columbia & Western Ry., which is the property of the C.P.R. By a recent arrangement with the B.C. Government, the C. & W. Co. surrendered its right to a land grant of 20,000 acres, accepting in lieu of it a cash subsidy of \$4,000 a mile.

In a recent interview Vice-President Shaughnessy, in reply to several questions regarding the railway situation in the Boundary Creek country & Mr. Corbin's desire to build into that region, said in substance that he did not know of any arrangement that had been or would likely be made between the C.P.R. & Mr. Corbin by which the latter would use the C.P.R. tracks along the Kettle River as far as Midway, nor did he know of the reported deal in which the C.P.R. would gain an entrance to Spokane over the Spokane Falls & Northern tracks on a basis advantageous to the Canadian route. He remarked that to have granted to Mr. Corbin a railway charter along the Kettle River valley would have been a terrible mistake on the part of Parliament. Had Mr. Corbin been given the right to build this line, he said, the ores of the Boundary Creek country would, to a great extent, have been smelted at Northport instead of on this side of the international boundary.

The total distance between Robson & Pen-tiction, at the foot of Okanagan Lake, is estimated at 216 miles. From Midway to Pen-tiction it is expected a line will be built under the charter of the Vancouver, Victoria & Eastern, which is controlled by McKenzie & Mann.

Colossal Expenditure.—In a recent interview Vice-President Shaughnessy stated that the work the Co. is now carrying out in the West will involve an expenditure of at least \$25,000,000, of which \$15,000,000 has already been provided for, & the remaining \$10,000,000 will be provided as soon as it is required.

H. W. Van Every has been appointed agent for the Ogdensburg & Lake Champlain Ry., with headquarters at Toronto.

H. D. Annable has been appointed Traveling Agent of the C.P.R. at Montreal, succeeding J. E. Millward, deceased.

Construction & Betterment Notes.

Atlantic & Lake Superior.—This line is now in operation between Metepedia Station, on the Intercolonial, & New Carlisle, 98 miles. The eastern terminus will be Gaspe Basin, 80 miles from New Carlisle, & it is expected to build 20 miles or more of 1st-class road in that direction this year. The country in that region is more beautiful than any person who has not seen it has any idea of. The Co. has purchased from the C.P.R. the line between Sorel & Yamaska, including the bridge over Yamaska River, & acquires the Government subsidy of \$50,000 for the reconstruction of the bridge. This purchased line will form a part of the A. & L. S. Co's. line between Montreal & Levis, the proposed termini between Montreal & Gaspe, the Co. having by its charter power to acquire running rights over the I.C.R. between Levis & Metepedia. Considerable work was done on the Montreal-Levis line last autumn, & the Co. announces its intention of resuming work very soon, so as to construct the line as far as Levis this year. (Official.)

Bay of Quinte.—At the last session of the Ontario Legislature this Co. was voted a subsidy of \$90,000, being \$3,000 a mile for such extension or branches of, or additions to, its projected & authorized line northerly of the village of Tweed as will enable the Co. to connect its existing line with the iron ore deposits or other mineral lands lying northward of Tweed, in renewal of the amount voted the K. N. & W. Ry. in 1893. We have so far been unable to ascertain anything as to the intentions of the Co. in regard to this work.

British Yukon.—Chrysler & Bethune, Ottawa, solicitors for this Co., make this announcement:—"The Co. is actively engaged in the construction of its railway from Skaguay through the White Pass to Lake Bennett & onward to Fort Selkirk. The portion of the line between Skaguay & Lake Bennett will be completed & in operation not later than Sept. 1. The U.S. Congress has passed a law extending bonding privileges to Canadian goods shipped into the Yukon district via Skaguay, & as soon as the railway from Skaguay to Lake Bennett is opened, Canadian goods can be shipped through in bond without payment of U.S. duties. Shippers & travellers may rely upon this route being opened as stated."

Steamers arriving at Vancouver & Victoria during the 1st week of June reported that when they left Skaguay work was in full swing on this line, some 700 men & 300 horses being employed. The men were getting \$3 a day, paying \$1 for board, & the Co's. officials stated that 1,000 would be put on if they could be got.

It is said the charter of the British Yukon Co. has been secured by the Pacific & Arctic Rys. & Navigation Co., of West Virginia, & that the work above referred to is being done by it.

The British Yukon Mining, Trading & Transportation Co., sometimes called the Duke of Teck's Co., from the fact that his name is 1st on the list of incorporators, was incorporated by the Dominion Parliament in 1897. In addition to extensive powers as to mining, trading, & operating vessels, the Co. is authorised to build & operate a railway of any gauge it may elect from a point in B.C. or in the N.W.T., near the north-western or western boundary of B.C., between 134° & 136° west longitude, near the head of the Lynn Canal, or at some point in a n.e. direction therefrom, across the White Pass, thence northerly & westerly to Fort Selkirk. The Co's. capital stock is £1,000,000 sterling.

Canada Atlantic.—President Booth visited Quebec recently & had a conference with President Garneau & Manager Scott of the Great Northern with reference to pushing

work on the latter road so as to give the Canada Atlantic connection with Quebec city.

The Canada Eastern has built a commodious wharf at Marysville, N.B., the old one being out of date.

Canadian Yukon.—In our May issue information was given of a contract having been made between the B.C. Government & Mackenzie & Mann for the construction of a line from an ocean port in B.C. to Teslin Lake, the Province of B. C. giving a subsidy of \$1,600,000. It was also stated as probable that the Dominion Parliament would aid the work with a land grant & a postal subsidy. The Dominion Government, however, decided not to submit any proposition to Parliament, & at the end of May it was announced from Ottawa that Mackenzie & Mann had notified the B. C. Government of their intention to abandon the contract. On June 10 Faith Fenton sent a dispatch from Glenora to the Globe, stating that Mackenzie & Mann had stopped work & withdrawn their outfit. A meeting at Glenora passed resolutions urging the Dominion & B. C. Governments to aid Mackenzie & Mann to complete the wagon road from Glenora to Teslin Lake, 14 miles only of which have been built. The dispatch added that Mackenzie & Mann had ceased giving the men supplies, & that the situation was critical. D. D. Mann reached Victoria June 9 to confer with the B. C. Government, but no announcement of the result has been made.

The Hudson's Bay Co. with its unending enterprise is putting a pack train of from 200 to 300 horses on the trail between Glenora & Teslin Lake.

The Supplementary Dominion Estimates provide \$5,000 towards defraying the expenses of an exploratory survey to ascertain the most practicable route for an all-Canadian railway from some point on an existing railway into the Klondike district.

The Stikine River Journal, Fort Wrangel, of June 4, says, on the authority of J. H. Russell, who has built a brewery & hotel at Glenora:—"There are about 2,000 persons encamped at Glenora. McKenzie, Mann & Co. have 250 men at work on the wagon road 12 miles out of Glenora. It was to be completed to the summit by June 4. Neil Keith, Superintendent of Construction, told Mr. Russell the road would be completed to Lake Teslin by July 4. People are already packing over the trail from Glenora to Lake Teslin. At Glenora McKenzie, Mann & Co. have 4 warehouses 50x100 ft. stored full & 3 at Shakesville. They had cleared, when Mr. Russell left, about 7 miles of the right of way out of Glenora, & have some 200 men at work on it all the time."

Central Ontario.—This line runs from Picton to Coe Hill, Ont., 104 miles. At the recent annual meeting it was decided to extend it 18½ miles, from Coe Hill to Bancroft, but no definite decision has been come to as to when this will be done. It is quite likely that a preliminary survey, & possibly a location, will be made this summer, but no further work will be done until next season at earliest, when it is possible that construction will take place. (Official.)

Great Northern.—The title of this line is really a misnomer. It belonged to roads chartered to run north, but which have been diverted into another channel, the chartered name not having been changed. The charter (Dominion, 1892,) authorized the construction of a line from Hawkesbury, Ont., including a bridge over the Ottawa River, near that point, to a point on the Quebec & Lake St. John Ry., in the vicinity of Quebec city, a distance of about 226 miles, 55 of which have been completed & accepted by the Dominion & Provincial Governments. For the present it is intended to build only 73 additional, as that mileage will suffice, by utilizing 58 miles

of the Q. & L. St. J. & 40 miles of the Lower Laurentian, to make the required connection between Quebec & Hawkesbury, where the line will connect with the Canada Atlantic for Ottawa & Parry Sound. These several links will form a new trunk line, 553 miles in length, between Quebec & Parry Sound, made up as follows:

The Q. & L. St. J. Ry. runs for the 1st 58 miles from Quebec in a nearly westerly direction to Rivière à Pierre Jct., 58 miles.

From Rivière à Pierre westward, the Lower Laurentian Ry. is completed to St. Tite, near the River St. Maurice, & the G.N. thence to Shawenegan, 50 miles.

A link is being constructed from Shawenegan to Montcalm, near Joliette, about 53 miles.

From Montcalm to St. Jérôme, the G.N. Ry. is built 28 miles.

A link will have to be built from St. Jérôme to Grenville on the River Ottawa, & a bridge over that river to Hawkesbury, where a very favorable location has been surveyed, 35 miles.

From Hawkesbury, the Canada Atlantic Ry. is built to Ottawa, 84 miles.

From Ottawa, the Ottawa, Arnprior & Parry Sound Ry. is built to Parry Sound, 265 miles.

This gives a total mileage of 578 miles, which it is proposed to reduce later on to 553 miles by building two short links, one between Lake Simon & the Batiscan River, the other to shorten the mileage between Hawkesbury & Ottawa. (Official.)

We are unable to give any particulars at present as to the progress of construction on this line, but some reference to it will be found in the report of the annual meeting of the Q. & L. St. J. Ry., on pg. 86 of this issue.

This Co. has asked the city of Quebec for \$200,000 30-year 3½% debenture bonds, of which \$50,000 is to be used for the Hawkesbury bridge, \$50,000 for workshops in Quebec, & \$100,000 for completing the line. The City Council has decided to ask authority from the Legislature to subscribe to \$200,000 capital stock of the Co., payable only upon completion of the line, so as to form a through route from Quebec to Parry Sound & the building of the workshops in the city.

Irondale, Ottawa & Bancroft.—This line is projected to run from a junction on the G.T.R.'s Lindsay-Haliburton branch easterly to Brockville. At present it is completed & in operation from the G.T.R. Jct. to Baptiste, near Bancroft, 45 miles. At the last session of the Ontario Legislature it was voted a bonus of \$30,000, being \$3,000 a mile for a 10-mile extension from a point 45 miles from Irondale, at the end of the portion to which aid was granted in 1896, & thence easterly. It is not expected that any work will be done on the extension this year. (Official.)

Intercolonial.—The contract for the deep water terminus at North Sydney has been let to M. J. Ross & J. B. McManus, of North Sydney. The work consists of grading & laying about ½ a mile of track from the station to the wharf & on the wharf, the building of a new wharf & retaining crib work & filling in between the crib work & the old wharf. (Official.)

The I.C.R. station at Moncton, N.B., now approaching completion, is a handsome building of buff brick, with red sandstone trimmings. The interior is finished in B.C. cedar & Douglas fir. The lower ceilings are of wood, the walls being wainscotted the whole height to the ceiling with panels. The extreme length is 195 ft., width 47 ft. The ground floor has the following accommodation: Express office, 39½ x 9 ft.; refreshment room, 26 x 34 ft.; ladies' waiting room, 30 x 33 ft.; ladies' parlor, 17½ x 22 ft.; ladies' lavatories; vestibule, 14¾ x 21¾ ft.; ticket office, 7½ x 21½ ft.; agent's office, 6½ x 14½ ft.; parcels, 10½ x 10½ ft.; men's waiting room,

30 x 33 ft.; smoking room, 17½ x 22 ft.; men's lavatories, mail & baggage, 32 x 34 ft. On the first floor is accommodation for Trackmaster, W. U. Telegraph Co., Train Despatcher, trainmen, etc. The plans were made under the direction of the ex-Chief Engineer P. S. Archibald, in 1896, the contract being carried out by Rhodes, Curry & Co., of Amherst, N.S.

Lake Erie & Detroit River.—Two by-laws to aid the proposed extension of this line from Ridgely to St. Thomas have been defeated. As mentioned in our last issue on May 11, the ratepayers of Dutton defeated a \$5,000 by-law, & on May 27 a \$20,000 by-law was defeated by St. Thomas ratepayers.

The L. E. & D. Ry. slip dock at Port Stanley is expected to be completed by Aug. 1. The Shenango line of car ferries will operate between Port Stanley & Cleveland, Ohio. The ferries have a capacity of 28 loaded cars.

Lake Manitoba Ry. & Canal Co.—Work on the extension from Sifton to the Saskatchewan River is under way in charge of R. J. McKenzie. A yard has been laid out at Sifton. It is expected about 80 miles will be built this year & the balance of 60 miles next year. Contractor Buchanan brought in his outfit from the Crow's Nest Pass & is at work on this line.

Michigan Central.—A press statement that the main line of the Canada Southern between Essex & Taylor, 65 miles, would be double-tracked this season would appear to be without foundation; at least, Division Superintendent Morford, at St. Thomas, informs us he had not heard of it. Of the 226 miles between Windsor & Suspension Bridge, N.Y., 93.6 miles have double-track, viz: Windsor to Essex, 16 miles; Dutton to Springfield, 32.1 miles; & Cayuga to Suspension Bridge, N.Y., 45.5 miles. (Official.)

Midland of Nova Scotia.—Location surveys are in progress for this line from Windsor east 60 miles via Kennetcook River to Truro. The contract for building has been let to W. G. Reid, of Montreal, who has sublet in part to Fitzpatrick Bros. The work is not difficult. There will be a bridge on the Subenacadie River, expected to cost between \$60,000 & \$100,000. Bids have been asked for equipment. The road is to be completed Sep. 9. It will furnish an air line from Sydney to Boston, & will pass through a fertile & populous country which should afford much local traffic.

Musquodoboit.—At the last session of the Nova Scotia Legislature a charter was granted for a railway from the Musquodoboit Valley to some point on the I.C.R. It is proposed for the road to run from Parker's Corner to Windsor, about 40 miles. A survey is now in progress under W. Yorston, C.E. (Unofficial.)

Nelson & Bedlington.—Surveys are reported to have been commenced for this line from Bonner's Ferry, Idaho, on the Northern Pacific, north through the valley of the Kootenay River to Kootenay Lake, B.C., a distance of 52 miles. N. D. Miller, Chief Engineer, Nelson, B.C.

New York & Ottawa.—As mentioned in our May issue, pg. 68, track was laid last fall for 53 miles between Cornwall & the junction of the Canada Atlantic at Hawthorne, about 5 miles from Ottawa, & ballasting is being pushed ahead. On May 30, the Railway Committee of the Privy Council granted the Co. permission to cross the Canada Atlantic tracks at grade, near Hawthorne, where connection will be made with the Montreal & Ottawa Ry. (C.P.R.) over the tracks & new Rideau Bridge of which Co. the N.Y. & O. will run as far as the deep cut, from which point the Canada Atlantic tracks will be used into that Co.'s station at the Canal Basin in Ottawa. The application for a grade crossing was opposed by the Canada Atlantic, on the

ground that the large and increasing traffic of its line at that suburban point would render a level crossing dangerous. It asked that the applicant be compelled to make an overhead crossing. The Deputy Minister of Railways examined the site, reporting in favor of a level crossing, which the Committee ordered, stipulating that the N.Y. & O. should put in the best possible equipment, maintain signals, &c., & pay the cost of the application, some \$500.

The St. Lawrence Bridge at Cornwall is being pushed with all possible speed. It will be 842 ft. long over the north channel & 1,110 ft. over the south channel, crossing from a point about a mile above the town of Cornwall to Cornwall Island & from the south side of the Island to the U.S. shore.

Northern Pacific.—J. R. McArthur, contractor for the 50-mile branch from Belmont to Hartney, Man., commenced grading June 13, & expects to complete it by the middle of October. The Ry. Co. supplies the ties & rails. G. A. Simpson, C.E., is in charge of the work for the Co., & D. D. McArthur, the contractor's brother, is manager for him.

Ottawa Central Station.—The C.P.R. & New York & Ottawa Ry. have secured permission to use the Dominion Government land leased to the Canada Atlantic & Ottawa, Arnprior & Parry Sound Rys., & also the Central Station at the canal basin. The application of the C.P.R. & N.Y. & O.R. was based on a claim to use the land as joint tenants with the C.A.R. & O., A. & P.S.R. These claims were argued at length, & the committee was asked to recognize the principles of their application & then the railways would get to work & settle the details of the agreement among themselves. The committee was also asked for an interim order allowing the two new railways the right to take possession, without prejudice to either party, pending the final settlement of the terms. On the other side it was claimed that Mr. Booth's roads should be treated as the primary tenants, who take all the risks of the lease, & that it was impossible to fix the terms, as it is not yet known what will be the character of the business done. The Minister of Railways announced that the claim of joint tenancy could not be entertained. Mr. Osler added that he hoped it would not hurt the dignity of the other roads to come in as Mr. Booth's tenants, to which Mr. Clark replied that it was dividends they wanted, not dignity. After considerable cross firing & persuasion on the part of Mr. Blair, Mr. Osler, on behalf of his client, stated that the C.A.R. would handle the trains of the 2 new roads. Mr. Blair urged him to name a rental pending a permanent agreement. This Mr. Osler did not appear inclined to do, but at length \$1,500 a month from each of the 2 roads was agreed upon. This arrangement is merely temporary, & if a less sum is agreed upon the difference will be refunded. The matter will come up again before the Railway Committee on September 6, when the Committee will fix the permanent rental, if the 3 lines interested do not come to an agreement in the meantime.

Pembroke Southern.—We have been unable to verify the press report that a contract for building this line from Pembroke to Golden Lake, Ont., has been entered into. We have written several letters to the Manager of the Co., but they have not elicited any reply.

St. Thomas, Ont., Union Station. A press report that a movement is on foot to build a union station to accommodate the G.T., the Wabash, the C.P. & the Lake Erie & Detroit River Rys., is probably without foundation. A prominent C.P.R. official, who would be likely to know if such a thing was on foot, says there is nothing in it.

The Toronto, Hamilton & Buffalo & O. C.P.R. are cramped for track room at Hunter St. station, Hamilton. Options have been obtained for the purchase of property on the

south side of Hunter Street, between James & Catharine streets, & it is possible the station property will be extended. The matter has been under consideration by the T., H. & B. Board for some time. (Unofficial.)

Vancouver, Victoria & Eastern.—This line is projected to run from the Mainland coast of B.C. in the neighborhood of English Bluff, near Point Roberts, via Chilliwack, to Penticton, approximately 230 miles, thence to the Boundary Creek district, approximately 100 miles. The charter is controlled by McKenzie & Mann, & the B.C. Government has granted a cash bonus of \$4,000 a mile for the whole distance from the coast to Boundary Creek, where it will connect with the Columbia & Western, which the C.P.R. has just placed under contract, & thence with the Crow's Nest, thus affording a second through line from the Pacific Coast to the Prairies. It is believed that McKenzie & Mann have made arrangements with the B.C. Government which will ensure the immediate construction of the line from Penticton to Boundary & also a start on the work in other sections from the coast eastward. See C.P.R. map of Kootenay district presented with this issue.

Wabash.—A press item was recently published to the effect that this Co. was about to erect a repair shop at St. Thomas, Ont. Nothing definite has yet been decided on. (Official.)

Washington County. The C.P.R. is getting a connection at St. Stephen, N.B., with the Washington County Ry. This line, the contractors for which are the J. P. McDonald Co., Calais, Me., connects at Washington Jct. with the Maine Central, whence it runs to Calais, 102 miles. Seventeen miles from Calais it turns & runs to Eastport, 17 miles, making a total mileage of 119 miles. Connection is made with the C.P.R. at St. Stephen's, over the St. Stephen & Middleton branch, 4 miles in length, now under lease to the C.P.R., & a short piece of the St. Croix & Penobscot road from Calais about 2 miles west. (Official.)

It is said that the Washington County line is controlled by Russell Sage, of New York, who also controls the Shore Line from St. Stephen to St. John, N.B.

Winnipeg & Southeastern. Work was commenced about the middle of May on the first 35 miles, between a point about three miles S.E. of St. Boniface, & St. Anne, which has been awarded to contractors Sinnott, Fisher & Strevel. In places the country is said to be pretty wet owing to little or no drainage having been done, but the railway drains & culverts will make these spots rapidly disappear. R. J. McKenzie is in charge of construction, Mr. Bruce being the engineer. It is said property has been secured in St. Boniface for terminal purposes, & that a bridge may be built across the Red River between St. Boniface & Winnipeg. Surveys will be made during the summer between the end of the 80 miles to be built this season at Whitemouth Lake & Lake of the Woods. As explained in our May issue, pg. 65, Whitemouth Lake is a common point from which the line can be continued about 25 miles across the narrows of the Lake of the Woods, or, if this route is found impracticable, it can be carried through Minnesota, which, however, would lengthen the distance about 35 miles. The decision of the Manitoba Government as to which route should be adopted is to be given by Jan. 1 next.

Grand Trunk Items.

The largest round-house on the system is to be built at the east end of the Sarnia tunnel.

The rumor that the Co. is about to double track its line between Hamilton & Niagara Falls is said to be without foundation. (Official.)

Work on the Victoria Jubilee Bridge at Montreal is proceeding very satisfactorily. Twelve of the 24 spans are in place & the rest should be up by the end of August.

The Montreal City Council's offer of a free site for the Co.'s general offices, consisting of 109 ft. on McGill St. & 135 ft. on St. Paul & William Sts. respectively, having been accepted, work will be gone on with as soon as possible. The Co. agrees to put up a building to cost not less than \$250,000, the assessment to be levied on that amount only for 20 years & the plans to be approved by the City Council. The arrangement will have to be ratified by the Legislature, but the Co. is willing to take an interim agreement from the city & start construction.

News of the Lines.

Cobourg, Northumberland & Pacific.—This Co. was incorporated in 1889 to construct a line from Cobourg Harbor, Ont., to the River Trent, to the Ont. & Quebec branch of the C.P.R., & to the mining regions of Mar-mora & Belmont. By subsequent legislation in 1891, 1892, & 1894 the charter was revived & powers given for extension to the mineral lands of Hastings County, & for leasing the line to the C.P.R. The Dominion Parliament has authorized assistance to the extent of \$3,200 a mile for 50 miles from Cobourg to Central Ontario Jct. on the C.P.R., with a further subsidy of 50% on cost in excess of \$15,000 a mile, the total subsidy not to exceed \$6,400 a mile. Municipalities on the route have voted their bonds for \$93,500. A contract has been made with the C.P.R. to lease the line, when completed, to that Co. for 999 years, the C.P.R. to provide rolling stock & equipment, pay rates & taxes, & pay the C. N. & P.R. Co. 40% of gross earnings. The C.N. & P.R. Co. has recently, through its contractor, C. H. Bower, issued on the London market £151,200 5% perpetual 1st mortgage debentures of £100 each at £102. Subscriptions were invited up to June 16, but at the time of writing (June 23) the result was not known here. Should the issue be successful, it is understood construction will be proceeded with at once. The directors of the Co. are R. Mulholland, Peterboro; W. J. Crossen & G. Guillet, Cobourg; J. B. Carlow, Township of Percy; E. Cochrane, M.P., & W. W. Armstrong, Campbellford. The Toronto General Trusts Co. is trustee for the debenture holders. Sir Douglas Fox, M.I.C.E., is Consulting Engineer in England, and F. Turner, C.E., Toronto, is Engineer to the Co. (Official.)

Grand Trunk.—In the case of E. P. Hannaford, ex-Chief Engineer of this Co., against the Co., for gravel & other material taken from his land at Blackwell for use in the construction of the Sarnia Tunnel connection in 1891, & which was heard at Sarnia Assizes early in May, judgment has been given for plaintiff with costs, the counter claim of the Co. being dismissed with costs. It is said the Co. will appeal.

In the case of E. P. Hannaford against the Co. for alleged wrongful dismissal, the evidence of President Sir C. Rivers-Wilson & ex-General Manager Sergeant, taken in England by commission, was read in Court in Montreal, June 8. Mr. Sergeant denied all knowledge of the Co.'s employees working at Mr. Hannaford's house & of Mr. Hannaford having used the Co.'s material for private purposes. Some witnesses were examined & Judge Davidson said he would hear the arguments later in the month.

F. Dupont has taken an action for \$10,000 against the G.T.R. on account of the death of his son, the late F. Dupont, M.P., from injuries sustained in an accident near Sherbrooke.

A bill designed to prevent the G. T. R. from securing control of the Central Vermont

has passed both branches of the Vermont Legislature & been signed by the Governor. It provides that no alien railway company shall be interested in the stock of any Vermont railway hereafter reorganized under Vermont laws, without leave of the Legislature, or shall own or acquire title thereof.

Great Northwest Central.—At the recent Dominion session the Co. was empowered to issue preferential debentures for \$12,000 a mile for the portion already built, & what may be placed under construction, these debentures to supersede to that extent the existing bonding power. The existing bonds are to be got in by the Co. & deposited with the High Court of Justice of Ontario, & the amount of claim of any claimant on existing bonds is to be paid either in money or new bonds. The new bonds will take priority of the old bonds. The proceeds of the new bonds are to be applied 1st to the extension of 10 miles of the line from its present terminus at Hamiota, Man., which is to be completed by Dec. 31 next, & afterwards in payment of charges on the old bonds. The time for construction of the next 20 miles beyond Hamiota, which includes the 10 miles above mentioned, is extended to Aug. 1, 1899, & the date for the completion of the whole line is further extended for 5 years from that date. A. Charlebois, who was the contractor for the portion of the line so far built, 56 miles, & who has been in litigation with the Co. for years, recently obtained from a local judge at Ottawa an ex-parte injunction, restraining the Co. from raising money for any purpose, & from transferring shares, J. B. Delap, who has invested heavily in the road, being made a party to the suit. Charlebois claims he is the owner of all the capital stock of the Co., by reason of the Imperial Privy Council having set aside the contract, which he alleges was the consideration for which he parted with the shares. Pending the receipt of the Privy Council order the injunction has been continued, & it is of course hampering the Co.'s operations. A representative of the Co. informs us that it is the intention to go on with the work as soon as possible, but if anything should prevent the new bonds being issued the obligation to build 10 miles this year will lapse. A. F. McCallum, C.E., is now going over the proposed route between Hamiota & the western boundary of Manitoba with a view to securing a final location of the extension. (Official.)

Montreal & Sorel.—A Montreal telegram says:—Negotiations are pending for the purchase of the Montreal & Sorel Ry. by the Atlantic & Lake Superior Ry. The M. & S. Ry. has never been prosperous, but its absorption by the A. & L. S. will remove a competitor for part of the distance to be traversed by the latter. If the negotiations are completed, Mayor Prefontaine, who is one of the directors of the A. & L. S., will go to England to endeavor to obtain the capital for the road. A necessary part of the scheme, however, is an \$8,000,000 bridge at Longueuil, & it is not probable that this can be floated just yet. The M. & S. Ry. runs from St. Lambert, 6½ miles south of Montreal, to Sorel, 45 miles. From St. Lambert it gains access to Montreal over the G.T. tracks & Victoria Bridge. We fail to see why, as stated in the dispatch, another bridge is necessary.

Pontiac & Pacific Jot Ry., & Ottawa & Gatineau Ry.—Special general meetings of the shareholders of both of these companies were called to be held in Montreal, June 1. In each case the objects stated were precisely the same, to authorize the issue of \$500,000 1st mortgage bonds of each company, to build the Interprovincial Bridge across the Ottawa River between Nepean Point & Hull. Application to the Secretary of the two companies has failed to elicit any information as to the result of the meetings.

A C.P.R. Inspection Trip.

Vice-President Shaughnessy returned to Montreal June 20, after a month's absence in the west. From Montreal he went via Toronto, Chicago & St. Paul, thence taking the Minneapolis St. Paul & Sault Ste. Marie line to Portal & on to the main line of the C.P.R. at Assiniboia, Assa. He again left the main line at Dunsmuir, proceeding to Lethbridge, & from there over the Crow's Nest line for the distance the track was then laid, 116 miles, continuing on to the Kootenay district, where he inspected the Columbia & Kootenay, Columbia & Western, Slocan Lake & Nakusp & Slocan ranches, then on to the main line at Revelstoke, visiting Vancouver & Victoria & returning by Winnipeg & the north shore of Lake Superior.

On his return to Montreal he spoke of his trip as being a very satisfactory one, having found the system in first-class condition from Montreal to the Pacific. He was struck with the evidences of prosperity on every hand, & there was every indication that during the coming summer there would be a bountiful harvest & that the people of the Northwest would be in a satisfactory condition so far as the crops were concerned.

In answer to a question in regard to the solution of the smelter question & the profitable production of the low grade ores of British Columbia, he said the C.P.R. had taken steps to do the best possible for the country, & it remained to be seen what the results would be. The Trail smelter would be blown in July 1, after a thorough re-arrangement of the plant, & it was expected that the results would be of a satisfactory nature. This is the property which was purchased some time ago from Mr. Heinze, & the proposition was to make it profitable for the mines to ship their ores there for smelting. At present an average of 225 tons of ore is being shipped to the smelter each day, mostly from 3 or 4 mines, but it is expected that later on a larger number of mines will be shipping. The heaviest shippers at present are the War Eagle & Centre Star mines. The re-arrangement of the smelter is expected to bring about the most satisfactory results.

The Vice-President was very much pleased with the progress British Columbia was making. No other concern, said he, was in a position to judge of this so thoroughly as was the C.P.R. Co., whose interests in B. C. now are simply enormous, & still they are extending & spreading out in every direction. Said Mr. Shaughnessy: "The people of B.C., generally are not aware of the fact that the works that the C.P.R. are carrying on this year in the West will involve an expenditure of at least \$25,000,000. Of this \$15,000,000 has already been provided for, & \$10,000,000 more will be forthcoming as soon as it is required. Referring to the progress Vancouver was making, Mr. Shaughnessy stated that since his visit there last September he had observed a great change, & all for the better. He had never wavered in his opinion with regard to Vancouver, & that was that it was certain to become Canada's Liverpool on the Pacific coast.

While it was true that the Klondike boom had subsided for the time being, Mr. Shaughnessy thought the general improvement all along the line in business would make up for the loss in that respect. In conclusion, he remarked that the outlook for business generally, from one end of Canada to the other, was never more hopeful than it is at the present time. This is possibly the most prosperous time that Canada has ever enjoyed, & it is likely to last for some time.

The fast C.P.R. service between Montreal & the Pacific coast, of which something has been said, is at present under consideration, but nothing has yet been definitely decided in regard to it.

The Crow's Nest Pass Commission.

On returning to Montreal recently from his western inspection trip, Vice-President Shaughnessy of the C.P.R. was interviewed in reference to the Crow's Nest Pass Commission report.

"In the 1st place," said Mr. Shaughnessy, "I have been travelling; in the 2nd, I have not seen the report of Judge Dugas in its entirety. What I have seen have been extracts from that report, something of the discussion in the House, & certain comments in the papers. I prefer not to go into the question at the present. If, after I am seized of the full report in question, it seems necessary for the C.P.R. to make defence, I will not be slow in doing so."

Reference was made to the deaths of the two men from diphtheria under conditions suggesting the grossest cruelty & inhumanity.

"I have no objection to refer to these two cases," Mr. Shaughnessy remarked, "but observe that I am not going into the general question. If any person, in whatever capacity has been guilty of cruelty in the cases you mention, the C.P.R. will consider it an imperative duty that such person or persons be punished. But it is not for the Co. to punish; it is for the authorities to take the matter up, & I understand that the Government, before the close of the session, gave a pledge in the House that an investigation would be made. We are thoroughly in accord with public opinion on this point. I venture to think I know the conditions which prevail in railway construction a little better than some of the critics. These two men, when they started out, probably did not know the nature of their disease. They were ill, & they wanted relief. But the moment the character of the disease was discovered, no camp along the line would take them in. Why? Not because the men in such camps were inhuman. But self-preservation is the first law of nature. This law exerts itself in a railway camp precisely as it exerts itself, say, on Dorchester street in this city. Suppose application be made to the private residents of Dorchester street on behalf of two men suffering with smallpox or diphtheria, that they be given shelter, how many do you think would respond to such an appeal? Not one, I venture to say; & this not because they were at all inhuman, but because of the imperative law of self-preservation. These men would not be taken into any of these camps; they could not be received into any of the tent hospitals, because there were other patients there who would be liable to catch the disease. Mind, I say the cases were heartrending; but it will remain for this Government investigation to show that anything more could have been done under the circumstances of the case. I do not know if there was negligence or cruelty which might have been avoided under the peculiar circumstances, but if so, then the guilty party should be punished."

To the remark that as the public money had been given for the construction of the road, & that therefore the public had an immediate interest in having all the circumstances in connection with the employment & treatment of the men fully disclosed, Mr. Shaughnessy said that this reference to public money having been given was just what he objected to. "Why, the Co. gives back to the Government & the country far more than it receives. A subsidy is granted; but the Co., in a low schedule of rates & concessions, gives an ample—a full equivalent—for what it receives. The construction of the Crow's Nest Pass Ry. is simply a bargain, which we are carrying out. Whether the money be public or private, every man connected with the work, in whatever capacity, should receive fair play. That is certainly the duty of the Co. I do not urge the point that it is not public money

to justify any improper treatment of any man; but the contention in this regard is misleading. The Co., I may say, is no novice in the matter of railway construction. We pretend to know a little about it. We have employed hundreds of thousands of men. At present there are between 4,000 & 5,000 men employed on the Crow's Nest Pass Ry., which I expect will reach Kootenay Lake this fall. The work is proceeding satisfactorily; all is harmonious; it was never anything else as far as the Co. was concerned. At the time of these complaints there were between 2,000 & 3,000 men working away with the utmost content. I would not be understood as criticizing the judicial report at all, for I have not seen it in its entirety; but I may remark that the clause providing for the fare for the return journey is a perfectly proper one, for if it were not inserted in the agreement with the men, not a few of them, ill-selected, unfit for the work, not understanding the conditions, would be demanding to get home the second day. It is one thing to put that clause in the agreement to ensure some degree of permanency in the employment, & another thing to enforce it when the work is done. But the wages offered were the highest in Canada, & that is why so many flocked to the work. I am not aware that even at home, & without the deductions which have been enumerated, & working 20 days in the month, laboring men are able to save a great deal at the end of a given period of work."

Mr. Shaughnessy also made the remark that it was contrary to the experience of railway construction that when men chose to leave work they were fed by the camps along the way. "Such a practice would have the most demoralizing effect. It is no slight thing to handle 5,000 men. You must have strict rules; & when I say that no man in Canada need be idle at present, I mean no man who is willing to work. I do not mean loafers or vagabonds, who only mean to give trouble. I am speaking in a general way with respect to public works of any kind."—Montreal Witness.

Across the Plains by the C.P.R.

Westward from Manitoba it is easy to realize that Canada has the greatest railway system in the world. The night, the long day, & again the night over the level prairie, the winding, straining climb among the mountain peaks, where the clouds settle in the thin atmosphere a mile above the ocean level, the giddy descent from ledge to ledge, skirting along the mountain sides high above the swift rivers & mirror-like expanses, tunneling projecting crags, bridging dizzy gorges, & falling gently with the more subdued landscape, to where the salt tides rise & fall on the western shore of the continent—these tell of a heroic struggle with nature in her grandeur & her greatness. Awakening on the prairie, the first impression is that of an open sea.—S. T. Wood, in Toronto Globe.

A Russian Air Brake Contract.

For some months negotiations have been going on between representatives of the Manchurian Ry. in Russia & the Westinghouse Air Brake Co. of Pittsburgh & the Westinghouse Brake Co. of London, Eng., for the purchase of a large quantity of Westinghouse air brakes. A deal has just been closed by which the Manchurian Ry. purchases between \$2,000,000 & \$3,000,000 worth of Westinghouse air brakes. The placing of this contract means that shops for the making of these air brakes will be built in Russia, probably in St. Petersburg, by the Westinghouse Air Brake Co. The contract is the largest that has ever been placed for air brakes & means that other roads throughout Europe will probably adopt this brake.

Along the Winnipeg & Southeastern.

In speaking in the Manitoba Legislature recently on the proposal to aid in the construction of a railway southeasterly from Winnipeg, Mr. Greenway said: "This road will be a great advantage to Winnipeg for the reason that it will connect it with a country of great resources. There is building up now even under unfavorable circumstances a little place down there called Mine Centre. The population of the settlement is about 1,500 people. They get their supplies, no doubt, for a short season of the year, from Canada, but at certain times their supplies are purchased from U.S. cities. It is a very great advantage to Winnipeg that this district should be connected with it. One of the most important things we can undertake to do is to provide all the facilities we possibly can for making Winnipeg the great distributing centre of all the surrounding country."

"Perhaps we do not always realize just what that country is. I was curious to look into the matter myself, & I have the opinions of some gentlemen who have traversed the country, & who have something to say in regard to it. They refer first of all to the timber which is to be found there. In that regard I believe the Canadian lumbermen have been husbanding our own timber & drawing their supplies from U.S. territory, & that in the Rainy River country the timber is almost intact."

Surveyor Dawson gives the same opinion respecting the country. He says: "There appears to be a large extent of good land northwest from Rainy River, & there are doubtless large tracts of good land in other parts of the territory, & it is said that the country is very good for agricultural purposes. I think it is generally admitted by those who have looked into it that there is a very fine area adjacent to the river of agricultural lands."

Hon. Mr. Hardy says: "There is a stretch of 80 miles along the Canadian bank of unparalleled fertility, capable of maintaining at least 500,000 people. Wheat threshes out 30 or 40 bushels to the acre. The balance may be called mining or timber districts, with parcels of land capable of being converted to agricultural uses."

Frank Yeigh estimates "the total area of the Rainy River to be 22,500 square miles. The Rainy River takes its course through a rich valley of over 80 miles, & is eminently adapted to support a large agricultural population. Land fronting on the river fit for settlement reaches back 20 or 30 miles from the river. The greater part of this land requires little or no drainage. Very little snow."

Mr. Blue, Director of Mines, Ontario, says: "I saw lands equal to the best in Ontario."

The representative of that district in the Local Legislature, says: "The belt of good land is not confined to the valley of the river, but extends northeast along the shore of the Lake of the Woods & for a considerable distance along the northern shore of Rainy Lake. I estimate the agricultural belt is equal to an area of 140 miles in length by 40 miles in width, or 4,084,000 acres. This by no means includes all the good lands in the district; there are other valleys of excellent land, but none so large as Rainy River valley. The valleys of the Kawawagamog and Seine Rivers, emptying into Rainy Lake for instance. The means of access to this agricultural belt is by way of Rat Portage & Lake of the Woods. Too much cannot be said in praise of this country & its resources as a home for the settler. That it will yet contain millions of people I have not the slightest doubt."

I have a very large number of these extracts, but do not propose to detain the House by reading them all.

As regards the mineral wealth of this country only little is known, but that is sufficient to indicate that considerable traffic must take place over a railway passing through

this territory, & it is safe to assume that a large portion of the produce required must come from Winnipeg or the fertile region about Rainy River. There are numerous mining camps springing up, & the town of Mine Centre on Vermillion Lake is a prosperous place, from which & to which considerable is drawn. Immense quantities of supplies are now drawn from Tower, Minnesota, which on the opening up of this country must be drawn from Winnipeg for the territory now supplied. Numerous small towns would spring up & the mining industry would receive such an impetus that the trade of Winnipeg would be materially improved, & the produce of Manitoba farmers go to feed the miners of Ontario.

Dominion Railway Legislation.

Following is a list of acts relating to railways passed at the recent session of the Dominion Parliament:—

Respecting the Lake Erie & Detroit River Ry. Co.

Respecting the Hudson's Bay & Pacific Ry. Co.

Respecting the Ontario & Rainy River Ry. Co.

Respecting the Columbia & Western Ry. Co.

Respecting the B. C. Southern Ry. Co.

To confirm agreement between the St. Stephen & Milltown Ry. Co. & the C.P.R. Co.

Respecting the C.P.R. Co.

Respecting the Calgary & Edmonton Ry. Co.

Respecting the Edmonton District Ry. Co.

Respecting the Brandon & South-Western Ry. Co.

To incorporate the Miles Canyon & Lewes River Tramway Co.

Respecting the Montfort Colonization Ry. Co., & to change its name to the Montfort & Gatineau Colonization Ry. Co.

Respecting the Nakusp & Slocan Ry. Co.

Respecting the Kingston & Pembroke Ry. Co.

To incorporate the Windsor & Detroit Union Bridge Co.

Respecting the St. John Bridge & Ry. Extension Co.

To incorporate the Montreal & James Bay Ry. Co.

Respecting the Brockville & St. Lawrence Bridge Co.

Respecting the Lake Manitoba Ry. & Canal Co.

To incorporate the Seven Miles Canyon & White Horse Tramway Co.

Respecting the Ottawa & New York Ry. Co.

To incorporate the London & Lake Huron Ry. Co.

Respecting the Vancouver, Victoria & Eastern Ry. & Navigation Co.

Respecting the Canada Atlantic Ry. Co.

To incorporate the Timagami Ry. Co.

To incorporate the Canada Atlantic Transit Co.

To incorporate the Toronto & Hudson Bay Ry. Co.

To authorize the Canada Eastern Ry. Co. to convey its railway to the Alexander Gibson Ry. & Mfg. Co.

To incorporate the Lake Bennett & Klondike Ry. & Tramway Co.

Respecting the Saskatchewan Ry. & Mining Co.

Respecting the London & Lake Huron Ry. Co.

Respecting the transport contract between her Majesty & the Winnipeg Great Northern Ry. Co.

Respecting the repayment of the moneys advanced to the St. John Bridge & Ry. Extension Co.

To confirm a certain award in favor of the Dominion Atlantic Ry. Co.

Incorporating the Western Alberta Ry. Co.

To further amend the Railway Act.

To incorporate the Ottawa Inter-Provincial Bridge Co.

Respecting the Montreal & Southern Counties Ry. Co.

Respecting the Montreal & Province Line Ry. Co.

Respecting the Great North-West Central Ry. Co.

Lunenburg Marine Railway.

The port of Lunenburg, N.S., 45 miles west of Halifax, & the most important fishing centre in the Dominion, has lately had completed the most up-to-date marine railway in the Maritime Provinces. It is constructed specially for handling the bank fishing fleet & vessels engaged in the West India trade, although it can accommodate vessels of 400 tons capacity. There are 2 cradles, 120 ft. & 75 ft. in length on one track. These cradles can be operated separately or together, at will. The foundation is of piling driven to bedrock, & all the timber used in the construction of the track is pitch pine & hard wood, sheathed from low water mark outward with zinc & iron over felt. The hauling is done by a pair of horizontal coupled reversible engines of the most improved pattern. No expense was spared in the construction, & it is considered as good a wooden railway as can possibly be built. It is owned by the Lunenburg Marine Railway Co., & cost \$20,000.

C.P.R. Land Sales.

	Acres.		Amount.	
	1898	1897	1898	1897
Jan.....	22,044	9,943	\$7,924.00	\$33,872.00
Feb.....	20,550	8,163	66,399.00	27,573.00
Mar.....	35,421	8,727	109,010.00	29,080.33
April.....	43,145	10,785	140,275.84	37,745.09
May.....	43,148	15,802	13,783.500	51,508.00

There are 41 ships engaged in the ocean cable telegraph service. The total capital invested in the submarine lines is estimated at \$200,000,000 & the number of lines is 1,305, of which 37 are over 1,000 miles long & 93 over 500 miles.

Kingsmill, Saunders & Torrance, solicitors for the Canada Southern Ry., have sent J. Montgomery, from their Toronto office, to take charge of their St. Thomas office, where the local railway work is transacted. He succeeds Mr. Plunkett, the previous clerk in charge.

A report sent out from Vancouver to the effect that the C.P.R. steamships Athenian & Tartar were to be leased to the U. S. Government for the carriage of troops to Manila is not believed to have any foundation in fact, as the C.P.R. officials most likely to know of such a matter deny it emphatically.

The Government has acquired 9 Wagner cars to be attached to the Maritime express running between Montreal & Halifax on the Intercolonial. They consist of 6 sleeping & 3 dining cars, their total value being placed at about \$175,000. The sleeping cars are named the Raritan, Raleigh, Rialvke, Inca & Inex, & the dining cars are nos. 600, 402 & 403. They are identical with the Wagner cars running on the Lake Shore between New York & Chicago.

In answer to Mr. Ganong, M.P., the Minister of Public Works recently stated in the House of Commons that in June, 1897, a cursory survey was made with the S.S. Newfield, which was then on the ground engaged in cable repairs, with a view to ascertain the cost of establishing telegraph communication by cable between Deer Island, Charlotte County, N.B., & a point on the mainland near Eastport, Me. The approximate cost was placed at \$3,500, which would include telephone communication between the fishing villages on the island & the landing-place of the cable.

NOTICES TO MARINERS.

By the Dominion Department of Marine.

All bearings, unless otherwise noted, are magnetic & are given from seaward, miles are nautical miles, heights are above high water, & all depths are at mean low water.

No. 21, May 4.—Temporary Range Lights—Main Channel, Parry Sound.—On the western Lyon rock has been erected a white-washed pyramidal beacon which from a height of 20 ft. above water exhibits a fixed white light visible in the line of the range towards Gordon rock channel 6 miles. On the south end of the large heavily timbered island next north-east of Knightsleigh Island has been erected a similar beacon which also from a height of 20 ft. above water exhibits a fixed white light visible in the line of range 6 miles. These two lights in one bearing S.E. by E. lead through the channel at Gordon rock in 5 fathoms least water. On the south-east side of Harold Point (Kill Bear Point) has been erected a whitewashed pyramidal beacon surmounted by a pole which from a height of 25 ft. above the water exhibits a fixed white light visible in the line of range 8 miles. On the main land 1,300 ft. N.E. by E. $\frac{3}{4}$ E. from the front light is erected an exactly similar beacon & pole which from a height of 50 ft. above the water exhibits a fixed white light visible in the line of range 8 miles. These two beacons & lights in one bearing N.E. by E. $\frac{3}{4}$ E. lead fairly between Nias Islands & Carling Rock on the north-west & Rose Island, Hugh Rock & Cameron Island on the south-east. In passing through the channel the range should be held exactly on to lead past a rock with 10 ft. water on it (black buoy) lying east 2,000 ft. from the east side of Nias Island & also to lead past a rock with 16 ft. water on it (red flag buoy) lying W. by S. $\frac{3}{4}$ S. 2,000 ft. from Cameron Island beacon. These rocks lie only 50 yards off the line of range, one on each side.

SAILING DIRECTIONS.—A vessel entering Parry Sound after passing the 15 ft. spot off Hooper Island should either return to the Jones Island—Gordon rock range, or bring the above range on bearing S.E. by E. to pass through the Gordon rock channel. Keep this on until the lights on Harold Point are seen clear of the south-east point of Nias Island, when haul up for Hugh Rock light bearing E. $\frac{1}{4}$ N. until the lights on Harold Point come in line bearing N.E. by E. $\frac{3}{4}$ E. Keep them exactly on until abreast of Cameron Island when proceed as directed in Notice to Mariners no. 15 of 1898. If leaving Parry Sound, before passing Cameron Island, see that the Harold Point range is exactly on bearing N.E. by E. $\frac{3}{4}$ E. Keep it so until between Hugh & Gordon Rock, when haul up for Gordon Rock bearing W. $\frac{1}{4}$ N. until the Lyon Rock range comes on to lead through Gordon Rock channel bearing S.E. by E.

Steer on this range (Red rock light should be seen a little on the port bow) until the Jones Island—Gordon Rock range comes on, when haul over for Twin Rocks for a short time to avoid the 15 ft. spot off Hooper Island. When Pancake Island comes abreast (it can generally be made out even on a dark night) a vessel will be abreast of the shoal & may haul over to get the range on again & she must keep it so. This affects Admiralty charts 327 & 1731.

No. 22, May 10.—Color of Buoy on Middle Ground, Midland Harbour.—1. The buoy on Midland Bay shoal, Midland Harbour, Georgian Bay, is a red spar buoy & not a black buoy as shown on charts. This affects Admiralty charts 327, 678 & 2102.

2.—Russell Island Upper Light no. 12. Notice has been received from the U.S. Light-house Board that on or about May 5, 1898, the fixed red lantern light will be moved to & established on the structure on the upper end of

the shoal at the head of Russell Island, & about 3,600 ft. N. by E. $\frac{3}{4}$ E. from Russell Island light no. 11, with which it will form a range to guide in the St. Clair River above the head of the shoal. The light will be 14 ft. above water. The structure consists of a crib, in 15 ft. of water, surmounted by a white lantern house, from the top of which the light will be shown. This affects Admiralty charts 339, 332 & 978.

No. 23, May 10.—Government Rifle Range, McNab's Island, N.S.—1. The usual annual notice has been issued by the Chief Staff Officer of the Imperial troops in garrison at Halifax with reference to target practice on McNab's Island, commencing May 10, as follows: Owing to the extreme range of the Lee-Metford or magazine rifle, with which the musketry training of the troops will in future be conducted, & with a view to the better protection of the public, it has been found necessary to demarcate more clearly the area of water seawards, & to the south of above ranges, liable to be struck by spent or ricochet bullets. This area has been marked by four spar buoys, placed at intervals between the Thrum Cap Shoal & the Eastern Passage, at a distance of 3,000 yards from the stop butts. The buoys mark the extreme limits of the danger zone. The spars are painted red, & are surmounted by cross heads painted red & white. Any ship or boat passing inside these buoys, during the hours of practice, incurs serious risk, & no attempt should, under any circumstances, be made to cross the aforesaid area as long as the red flag hoisted at the south end of McNab's Island is left flying.

2.—No Hand Fog Horn at Cape Gaspe Light Station, N.S.—There is no hand fog horn at Cape Gaspe light station, as stated in the Canadian list of lights & fog signals. A statement to this effect in the column, under the no. 509 in the 1897 list, should be struck out.

No. 24, May 14.—Navigation on the Stikine River, B.C.—The Department of Marine has made arrangements for a system of signalling at Little Canyon on the Stikine River to prevent collisions. Immediately after the opening of navigation a station will be established at each end of the Canyon, at which signals will be displayed for the guidance of vessels. A white ball or disc hoisted on the top of a mast will denote that the channel is clear, & that a vessel may enter the Canyon from the end at which the ball is displayed. A black drum or square will denote that the channel is not clear & a vessel must not enter the Canyon on any consideration when the drum is displayed. The drum & ball shown together will be a signal between the two stations for information of the signal men, & no vessel may enter the Canyon when this signal is shown. In the event of vessels approaching the Canyon from both ends simultaneously, the upward bound vessel will be held below the Canyon until the descending vessel has run the Canyon. One prolonged blast of a steamer's whistle will be a request to the signal men to give the all clear signal. In any other part of the river within Canadian territory if a vessel is warping up, a downward bound vessel must keep clear of her & her warping lines, stopping & tying up if necessary to prevent collision. In the event of 2 vessels simultaneously approaching where warping is required, the upward bound vessel must allow the downward bound vessel to pass before running out her warping lines. Two long blasts followed by 2 short blasts of a steamer's whistle will be a signal that she is actually engaged in warping.

No. 25, May 14.—British Columbia.—1. **Dangerous Rocks in Race Passage.** Information has been received from the Commander of H.M. surveying ship Egeria of the location of a dangerous rock with 10 ft. water on it at low water spring tides in Race Pas-

sage, Johnstone Strait. This is the rock reported by the Master of the ship Richard III., as described in Notice to Mariners no. 14 of 1898. It occupies nearly the position given on Admiralty chart no. 581 as 7 fathoms, Ripple shoal, & bears S. 42° 30' W. from the extreme of Eden point, Thurlow island, distant 1.2 miles. Also of a pinnacle rock with 20 ft. water on it in the position occupied by 9 fathoms on Admiralty chart 581, with the extreme of Eden point bearing N. 23° E. distant 0.95 mile, or $4\frac{1}{2}$ cables from the 10 ft. rock.

2 Buoyage of Northern Channels.

1. **RIPPLE ROCK.**—A steel can buoy, painted in red & black horizontal bands, was on April 23rd moored in 6 fathoms water near the 10 ft. spot on Ripple shoal above described. Lat. N. 30° 24' 0"; Long. W. 125° 51' 20". This affects Admiralty charts 581 & 1917, & B.C. Pilot, 1888, pg. 207.

2. **DALL PATCH.**—A square, steel platform buoy, surmounted by a pyramidal wooden slatwork with a diamond-shaped topmark, the whole painted in red & black horizontal bands was, on April 25 moored on Dall Patch, Seaforth Channel, to replace the less conspicuous spar buoy heretofore maintained there. The buoy is moored in 2 fathoms water close to the more easterly and shoaler part of the patch. Lat. N. 52° 13' 0"; Long. W. 128° 11' 1". This affects Admiralty charts 1923 B & 2449, & B. C. Pilot, 1888, pg. 372.

3. **Hewitt Rock.**—A black steel can buoy was, on April 25 moored in 3 fathoms on Hewitt rock, Hickish narrows, Finlayson channel. Lat. N. 52° 52' 50"; Long. W. 128° 30' 40". This affects Admiralty chart 1923 B. & B. C. Pilot, 1888, pg. 387.

4—Dangers in Alice Arm & Approach.

1. **PADDY PASSAGE UNSAFE.**—Paddy passage, on the east side of Brooke island, Observatory Inlet, is reported by local Indians to be unsafe for navigation, & should not be used until examined.

2. **ROCK OFF LARCOM ISLAND.**—The rock marked awash on Admiralty chart 2458, off the south-east extremity of Larcom island, shows 3 ft. at high water.

3. **ROCK OFF SOUTH END OF LIDDLE ISLAND.**—A rock, drying about 6 ft. at low water, lies $1\frac{1}{2}$ cables west from the south extreme of Liddle Island. A line from the north extreme of Perry Bay Point past the south extreme of Liddle Island passes through the rock.

4. **ROCK IN PASSAGE BETWEEN LIDDLE ISLAND AND DAVIES POINT.**—A rock on which a depth of 10 ft. at low water has been found lies between Liddle island & the point separating Hastings arm from Alice arm, which will hereafter be known as Davies point. The rock lies nearly in the middle of the passage, where 16 fathoms are shown on the chart. The channel on the west side of the rock is recommended, being the wider, with six fathoms in the middle. There is a ridge between the island & the point with a greatest depth of 8 fathoms. Sextant angles to locate the rock are as follows: Hans point & Davies point, 83° ; Davies point & east tangent Brooke island 109° 52'.

5. **ALICE ROCK.**—A dangerous rock, with 7 ft. on it at low water, exists in Alice arm, $1\frac{1}{4}$ miles north of Liddle island, almost in mid-channel, & nearly where the soundings of 39 fathoms, no bottom, is shown on the chart. There is deep water between the rock & the point on the western shore, & 13 fathoms between the rock & the eastern shore. The west tangent of Brooke island sounds one with the west tangent of Brooke island clears the rock $\frac{1}{2}$ cable to the eastward. The channel east of the rock is the wider & should be used. Sextant angles to locate the 7-ft. spot are as follows: Hans point & tangent of point north of Sopha island, 109° 52'. — Sextant point on Davies point 36° 9'.

This affects Admiralty charts 2431 & 2458, & B. C. Pilot, 1888, pgs. 477 & 478.

No. 26. May 17. Changes in Yellow Island Light, B.C. It is intended to replace the present revolving light on Yellow Island, southern entrance to Baynes Sound, by range lights arranged to clear Maple Spit. The present revolving light will consequently be permanently discontinued on or about May 17. Pending the construction of the range light towers a fixed white light will be shown from the present lighthouse tower, visible 7 miles from all points seaward. Further notice will be given of the establishment of the proposed range lights. This affects Admiralty charts 580 & 1917, B.C. Pilot, 1883, with supplements, pg. 156, & Canadian List of Lights & Fog Signals 1902.

No. 27. May 31.—Navigation in U. S. Waters.—1. Masters of Canadian vessels sailing to U. S. ports are warned that in consequence of the existence of war with Spain, the U. S. Government has discontinued the exhibition of several lighthouses on the U. S. coasts, has taken up several buoys, and has laid submarine mines in many harbors. It is therefore necessary for masters to keep themselves informed respecting the latest regulations issued by the U. S. Government for the safe navigation of the coasts and harbors of that country during the continuance of the war, and they are especially cautioned not to approach fortified harbors at night, no entrance being allowed between 8 p.m. & 4 a.m., & a risk of being fired upon being incurred in the event of violation of the published regulations.

Newfoundland.—Alteration in color of day marks, St. John's Harbor.—2. Notice has been received from the Newfoundland Government that on or about April 30 last the color of the day marks on the 2 leading light structures in the harbor were changed from black & white to white. This affects Admiralty charts 296, 298 & 2902, & Newfoundland & Labrador Pilot, 1897, pg. 422.

Richelleu & Ontario Navigation Co.

G. A. Browne, Assistant Traffic Manager, has been appointed Traffic Manager, to succeed Alex. Milloy, who has been pensioned by the Co. after a continuous service of over 50 years. On retiring, Mr. Milloy issued the following circular to passenger & ticket agents: "After over 50 years of active service, increasing infirmity compels me to pass to the retired list of the Co. I have served so long. In doing so, it is a pleasure for me to issue one more circular to my old friends, the passenger & ticket agents of Canada & the U.S. Although I will not be personally with you in the future as in days gone by, I will ever continue to watch & take a deep interest in all that concerns our vocation. It will also be a great enjoyment for me to recall the many gatherings we have had; the many consultations for mutual benefit; the many social reunions at which, amid quip & yarn & other entertainment, the inner feeling which gave zest to everything, was that we were brothers a'. I believe in this sentiment of brotherhood. It smooths much of the friction of our business life, it is conducive to honorable dealings & to the best interests of the public, as well as of our employers & ourselves, & I trust that it will long continue a leading feature with the members of our craft, in their intercourse with each other.

"On this occasion I am sure I have only to ask & you will gladly accord to my successor in office, G. A. Browne, the same consideration & courtesy which has always been so cheerfully extended to myself; & if, in the conduct of your work, it should also be in your power to do a good turn for my old Co., with its improving service; & if you can occasionally call a pleasant thought for its long-time traffic manager, I will esteem these kind actions on your part very highly, & feel that you

are doing for me what I would in like case do for you. Trusting that success & happiness may attend you & yours, I remain, your old friend, A. MILLOY."

The Co.'s steamer *Toronto*, now being built at the city after which it is named, will be launched June 21, & it is said an effort will be made to have her in commission by August. She is to run between Toronto & Prescott, where passengers will be transferred to the Co.'s smaller boats, in which they will run the rapids. The Co. is contemplating building another boat of the same size for the same route, to be ready some time next year.

The Co. has decided to meet the competition of the railways on all its boats while the rate cutting lasts. The single rate put in force by the Co. is \$5 from Toronto to Montreal, the same as the railways, this rate being good on all boats except the *Hamilton*, where the rate is \$4.50.

The Co. is having its head offices in St. Paul street, Montreal, thoroughly renovated & altered after the fire of last winter. At the up-town ticket & stock transfer office even greater changes are being made, & soon the office of the past will have been transformed into one of the handsomest ticket offices in the Dominion.

The name of the Co.'s steamer *Passport* has been changed to the *Caspian*, & she will appear on the river this season practically a new boat.

The Co.'s steamer *Canada* had a collision on the night of May 16 with an ocean vessel which was anchored in the St. Lawrence. The hull was not damaged, but the paddle-box & the railings were smashed. She put into Sorel to be fixed up, & the *Quebec* took her place on the Montreal-Quebec line.

A B.C. Wrecking Tug.

The latest addition to R. Dunsmuir & Son's fleet is the tug *Pilot*, the hull of which has been built under the supervision of Capt. J. S. Gibson, at Chemainus, B.C., where she was launched May 30, after she was towed to Victoria for completion. She will be fitted with the most modern appliances, including a towing machine, which is the latest device known to shipbuilders. It consists of a small steam engine fashioned somewhat after the style of a winch, which replaces the solid bitts usually used. By using this machine there is no strain on the tug or its tow, as the drum of the machine gives & takes as the hawser is tightened or slackened. She will have a large electric light plant with a 3,000 candle power searchlight, a patent windlass, & a large quantity of wrecking appliances, so that she may be a wrecker as well as a tug. She is 132 ft. long, 24 ft. on the beam, 12 ft. 6 in. deep, & has an 8 in. close frame. Her keel is 14x20, her keelson 18x20, & sister keelsons 18x18, making a most solid backbone. In her hull 168,000 ft. of lumber have been used, 5,000 locust treenails & 15 tons of copper & iron fastenings. Her engines & boilers are ready, & will be put in at once, & a force of shipwrights put to work on her to finish her. She will be ready for service about the middle of July.

The *Pilot* is to be fashioned somewhat differently from the usual style in which tugs are built, & the forward part housed in from the bow to the towing machines, only the space aft being left open to allow play to the hawser. A hurricane deck will cover the forward house, & on this will be built a wheel house & chart room similar to that of the *Lorne*. She is built expressly for ocean towing, taking long tows, such as to Alaska or San Francisco, & for wrecking purposes, in which work she will undoubtedly be of much profit to her owners; for since the *Whitlaw* was lost there has been no wrecking vessel on the B.C. coast. She will have 2 masts & be schooner rigged. The crew will have quarters in the

after hold & the officers & engineers in the deck houses forward.—Victoria Colonist.

The C.P.R. Kootenay Steamers.

Capt. Short, the pioneer commander on the C.P.R. steamers on the Columbia River & Arrow Lakes, has been given the command of one of the steel steamers built by the C.P.R. to run on the Stikine River between Wrangell and Glenora. Capt. Short was in command of the *Lytton* in 1890-91, before the *Columbia* was built, & stuck to the old boat till very recently, when Capt. Gore, of the *Nakusp*, became Commodore on Capt. Troup's removal to Vancouver to establish the C.P.R. Co.'s fleet of Stikine River steamers, when Capt. Short took command of the *Kootenay*. The *Columbia* & the *Nakusp* were both burned to the water's edge, the former near Waneta in 1894 & the latter at Arrowhead last December; but the old *Lytton* is still in active service. She has never met with a serious accident, Capt. Short being one of the most careful as well as most courteous pilots on the river. Capt. Short is succeeded on the *Kootenay* by Capt. J. Whitmore, who for years filled the position of Mate on the *Nakusp* & latterly as Capt. of the *Lytton*. Mate McLennan, of the *Lytton*, has been promoted as Capt. of that boat. Albert Forslund is Capt. of the *Rossland*, & Capt. Fraser has charge of the cargo steamer *Trail*.—Vancouver News-Advertiser.

Recent Dominion Legislation.

Among the Acts passed at the recent session of the Dominion Parliament were the following:—

Further to amend the Act respecting Government harbors, piers & breakwaters.

Further to amend the Act respecting certificates to masters & mates of ships.

Respecting the inspection of steamboats & the examination & licensing of engineers employed on them.

To incorporate the Klondike & Peace River Gold Mining, Land & Transportation Co.

To authorize the Quebec Harbor Commissioners to borrow money.

To authorize certain contracts with steamship companies for cold storage accommodation.

To grant further aid to the Harbor Commissioners of Montreal.

To incorporate the Lake Champlain & St. Lawrence Ship Canal Co.

Respecting the Montreal, Ottawa & Georgian Bay Canal Co.

The Fast Atlantic Service.

A London cablegram of June 7 says:—Messrs. Petersen have failed to satisfy the Canadian Government, as they undertook to do before May 31, of the completion of the underwriting of \$6,250,000 of capital in the new company. This failure causes to lapse the supplementary contract by which the Government extended the time for building, & made other concessions. The general outside idea is that this lapse of the supplementary contract frees the Government's hands. On the contrary, Mr. Petersen now falls back on his original contract. Unless he is bought out, no fresh steps to carry out the service can be taken until he absolutely fails, to place two steamers on the route in July, 1899, though everyone realizes that it will be physically impossible to build the steamers in the time.

Among the legislation of the recent Dominion session was an act to incorporate the Dawson City & Victoria Telegraph Co., & one to incorporate the Northern Commercial Telegraph Co.

The Edmonton-Yukon Route.

A. C. Waters, of the Alaska Trading & Mining Co., wrote us from Edmonton, Alberta, May 26, as follows: "Next week the machinery & fittings for our large screw propeller that will run from Ft. Smith to Peel River will leave Athabasca Landing, together with another flat boat on which I am taking 6 large draft horses & 3 waggons & 200 bushels of oats. These teams will be used at the Portage at Smith's Landing, 16 miles. The hull of this boat is completed, & as soon as the machinery is placed on it on the other side of Smith's Landing, & the cabin placed on it, we will be ready. This will not leave Ft. Smith until June 25, on account of the ice on Great Slave Lake, which goes out from about June 15 to 25. The boat will be ready to start on schedule time, & several days before."

"We have completed at Athabasca Landing a 40-ft. screw-wheel boat that will remain there until June 10, to take any passengers & tow any freight that goes down & is ready at that date. This boat makes connections with the large boat at Ft. Smith. Passengers will be taken to Grand Rapids, towed in a 45-ft. flat boat the same as the Hudson's Bay Co. uses. Our guide here takes this flat bottom boat through the Rapids from Grand Rapids to Ft. McMurray, while the 40-ft. screw-wheel steamer is lined down light. At McMurray this steamer tows the boat to Smith's Landing, making connections with the large boat. This 40-ft. boat is taken across the portage, where we have trucks & horses. This boat will attend to the towing during the busy time, & when the big boat returns with any passengers from Peel River will take the same on this side & tow them back to McMurray. From McMurray to Grand Rapids passengers are tracked to Grand Rapids, 87 miles; this is the weak point in this route, but it is by no means an unpleasant trip when in experienced hands."

"We have just sent to Athabasca Landing the machinery for a 50 ft. flat-bottom, paddle-wheel boat. This will be built inside of 30 days, & will run to Grand Rapids, where flat boats will be taken to McMurray, & then the steamer to Smith's Landing, making connection again with the large boat. This may seem complicated, but it is the way I manage it to get the boats in their places & at the same time make money."

"After this 50 ft. paddle-wheel steamer is completed & makes a trip, I will place it on the run from McMurray to Smith's Landing, & shall build another small 50 ft. boat of the same kind to use on the run from Athabasca Landing to Grand Rapids, while the 40 ft. screw boat will be placed on Great Slave Lake permanently for towing purposes."

"The run from Grand Rapids to McMurray will probably always have to be made with 40 ft. flat boats, & to avoid changing cargo so often, it is better for the passengers to get in them at the Landing & be towed down to the Rapids, & then run through to McMurray, where they can take the steamer."

"You can rely on it, I can get passengers & freight through to Peel River & in good time. I have over 20 at the Landing who will go down with us next week. I brought the machinery & fittings complete for 3 boats from the U.S., beds, pilot wheels, &c., & have the same, over 16 tons, now at Athabasca Landing."

"The run from Athabasca Landing to Grand Rapids, 167 miles, is good, smooth sailing. The small Pelican Rapids, which do not amount to much, are in this run. From Grand Rapids to McMurray there is one rapid after another, which necessitates a guide. From McMurray to Smith's Landing, 287 miles, is good water, perfectly safe. There are two ways of making the Smith's Rapids, by making several short portages or by going over the 16 miles. From Smith's Landing

down is good water navigation. Great Slave Lake gets very rough at times, & is as bad as any other large lake. The side of the lake is rocky for a considerable part of the distance. There is a stretch of 30 miles, where a boat has to run before one finds a place to get into should a storm come up."

"From Edmonton to Athabasca Landing, 98 miles overland, freighters have been charging 1c. a lb. There are plenty of freighters, & now they are hauling for 75c. per 100 lbs."

If readers will refer to the map of the routes to the Yukon gold fields published with the March issue of THE RAILWAY & SHIPPING WORLD they will find it useful in connection with the above article.

Cariboo-Omenica Chartered Co.

At the recent session of the B. C. Legislature F. Owen, W. J. Stokes, R. G. Newman, Lord Henry Fitzgerald, R. P. Sellon, C. V. Paull, H. Walters & G. Whitehead, all of London, Eng., were incorporated as the Cariboo-Omenica Chartered Co. The Co. contracts to execute works of improvement necessary to render navigation possible, & to establish & maintain during the season of 1898, 1899 & 1900, regular steamboat communication between Quesnelmouth, Cariboo district, & North Tacla Lake, Omenica district, via the Fraser River, the Lower Nechaco River, the Stuart River, the Thatcher River & lake, & the Middle River; the means of communication employed to be fit & proper for the safe navigation of the waters to be traversed & to provide suitable accommodation for the carriage of freight & passengers; & the contractors undertake, as common carriers, the carriage of passengers & freight between the points mentioned.

The contractors also agree to engage, equip, transport & maintain during the working portions of 1898, 1899 & 1900, corresponding as nearly as may be with the season of navigation, an exploring party for the exploration of the Omenica, Cassiar & Cariboo districts, to continuously & efficiently explore in one or all of these districts during the whole of the seasons.

The contractors also contract to examine & explore the north fork of the Fraser River, lying between Fort George & the Giscomb portage, & ascertain the extent to which such portion of the river is navigable, & so soon as may be possible after such fact is ascertained; to establish steamboat communication between the said points, & to maintain such communication regularly during the seasons 1898, 1899 & 1900, which shall not have elapsed at the time such fitness for navigation shall have been ascertained.

In return for these privileges the government agrees to allow the Co. to purchase 6 tracts of land in the districts named, each tract to consist of not more than 640 acres, & the right of passage along waterways & highways traversed by the Co.

B.C. Freight and Shipping Report.

R. P. Rithet & Co., Victoria, B.C., say under date of May 31: The activity noted in our last circular has not been maintained. Indeed, practically nothing has been done in chartering from San Francisco, & any fixtures reported have been for the Columbia River & Puget Sound. Spot rates are high, but as low as 31s. 3d. has been done from Tacoma to Portland at charterers' option, Sept.-Oct. loading. Lumber tonnage continues scarce. Thus for many destinations freights are more or less nominal, but the tendency of the market is towards greater ease, & in some instances quite substantial reductions have been made on the quotations previously current. Business is also more limited in scope, which accounts for the smaller list of charters annexed.

OCEAN, LAKE & RIVER.**British Columbia & the Yukon.**

The B.C. Iron Works Co. has built a steamboat, the Marquis of Dufferin, for the British America corporation.

All the leading transportation companies of Vancouver, San Francisco & Seattle have agreed to make the rate to Dawson via St. Michael's \$300 first-class & \$250 second.

The Bennett Lake & Klondike Navigation Co., headquarters at Victoria, B.C., announces that 3 swift steamers will shortly be running from the head of Lake Bennett to Dawson City.

The Stikine River steamer Skagit Chief ran against a rock recently, and had her escape pipe blown off. All the live stock in her hold were killed by being scalded to death. The vessel suffered other injuries.

Two barges, one 100 ft. long, the other smaller, built for the British-American Corporation, were launched at Vancouver June 4. The smaller one will be placed inside the larger for towing to St. Michaels. They are to be used on the Yukon.

The Klondike, Yukon & Stewart River Pioneers' stern-wheel steamer James Donville, built at Vancouver, was launched early in June, & is now on her way to St. Michaels in tow of the S. S. Manauense. She will run on the Yukon & tributary streams.

The C.P.R. Co.'s stern-wheeler steamer Yukon is making splendid time on the Stikine. On June 1 she left Wrangel at 1.30 a.m., with her usual load of passengers & freight. She discharged at Glenora, reloaded & got back to Wrangel at 9.20 p.m. the next day, making her time for the round trip less than 44 hours.

The Casca Trading & Transportation Co. has been incorporated under the B.C. Companies Act, with a capital of \$100,000, & headquarters at Glenora. Amongst its objects are the carrying on of business as wharfinger, forwarding & shipping agent, also as carrier by land & water, underwriter & insurer of ships.

The C.P.R. stern-wheel steamer Tyrrell was launched in Vancouver June 6. Her steel hull & machinery were built in Toronto by the Polson Engine Works. (See our April issue, pg. 50). The C.P.R.'s other 2 stern-wheel steamers, of which the steel hulls were also built in Toronto, are now being put together at Vancouver.

On May 17 the Passenger Department of the C.P.R. issued the following circular: The Stikine River is open for navigation & the C.P.R. Steamer Hamlin has just returned to Wrangel, having made the round trip between Wrangel & Glenora in 3½ days. It is expected the trip will soon be made regularly in less time. It is stated that a number of contractors are putting teams on the Glenora-Teslin trail.

The supplementary Dominion estimates provide \$14,000 for Stikine River examination, &c., & Chief Engineer Anderson, of the Marine Department, left Vancouver at the end of April for the north coast, after arranging for a new light at Garry Point, at the mouth of the Fraser. He went to Wrangel on the Quaden, attending on the way to inspect the coast & arrange for its proper buoying & lighting.

At Vancouver, May 20, Commissioner Chipman, of the Hudson's Bay Co., christened the Co.'s 2nd north coast river steamer, Strathcona, when she was launched at Burrard Inlet, with the Commissioner & an influential party on board. The Strathcona was chartered by the Omenica Chartered Co. for the transportation of passengers & freight on the Stikine River to Wrangel in October. Captain Odin commands her.

At the end of May the Canadian Development Co.'s stern-wheel steamer Victorian,

The Victoria, was given her trial trip, & a few days later was sent north to her route on the Stikine. She is 147 ft. long, & 33 ft. 4 ins. beam, registered tonnage 150 tons, draught about 17 ins. The lower deck & hold will carry about 250 tons of freight, & on the upper deck there is accommodation for about 250 passengers. Capt. Foster is in command.

The regulations adopted by the treasury department at Washington to govern the transshipment of goods at Wrangel up the Stikine River to the Yukon are said to be of such a character as to meet every requirement for the Canadian Yukon trade. It is expressly provided that goods arriving in a British vessel may tranship at Wrangel under customs supervision into another British vessel, & this river boat may proceed up the river, with permission to land to purchase fuel & supplies & for passengers to land temporarily.

The Alpha, an iron screw, bark-rigged steamer, 653 tons gross, & 514 tons net register, owned by Pickford & Black, of Halifax, N.S., & formerly running between Halifax & Bermuda, is to be put on between Victoria, B.C., & St. Michaels, Alaska. She left Halifax May 6 for Victoria, from which port she will tow to St. Michaels, the Yukon & Hootalinqua River Navigation Co.'s stern-wheel steamer, Reindeer, which will run on the Yukon between St. Michaels & Dawson City. It is expected the Alpha will make 2 trips during the season to St. Michaels, from which point her passengers & freight will be taken up the Yukon by the Reindeer. The latter steamer, recently built in Victoria, is 135 ft. long by 22 ft. beam, & has a speed of 15 knots in smooth water.

The Union S.S. Co.'s steamer Cutch, formerly used between Vancouver & Nanaimo, has been remodelled & improved at a cost of about \$40,000, & is to be put on between Vancouver & Wrangel, where with the same Co.'s steamer Coquitlam, she will connect with its 3 Stikine River boats. The Cutch has had new boilers put in, the engines & machinery have been overhauled, electric light & heating plants have been installed, & cabin accommodation for about 60 has been provided on the upper & lower decks, together with accommodation for about 140 second-class passengers. She is expected to average 14 miles an hour on the northern trip. H. Newcome, her former Captain, is again in charge, with Mr. Saunders as 1st officer & Mr. Kick as chief engineer.

The Klondike Trading & Transportation Co.'s stern-wheel steamer Iskoot, recently built in Vancouver, left there May 30 under her own steam, for Wrangel, Capt. Gray in command. She is 145 ft. long, 31 ft. 5 in. beam, powerfully engined, supplied with electric light, including a searchlight, & has capacity for 200 passengers & 125 tons of freight. The Nahleen, a sister boat, owned by the same Co., was completed about 2 weeks later. The Iskoot went ashore on June 1 in Kuna-lone Inlet, on the north side of Granville Channel, about 5 or 6 miles from the mouth of the Stikine, & is likely to become a total wreck. It is said the pilot, Capt. O'Brien mistook the Inlet for the mouth of the river. The Iskoot is listed badly & has a large hole in her bottom on the starboard side. The tug Chieftain & a barge were secured at Essington to take out her machinery & stores.

Lake Superior to the Rockies:

This season promises to be the busiest in the steamboat line in the history of the Lake of the Woods.

The Hudson's Bay Co. is offering its Saskatchewan River stern-wheel, steamboats, Northwest, Northcote & Marquis, for sale by tender.

One of the latest industries that has taken up the attention of Winnipeg's mechanics is a boat for the Athabasca River which will be driven like a tandem bicycle. The pedals, cranks, sprocket wheels & chains are exactly as on a high-g geared tandem, but the rear axle is bevel-g geared to a shaft which drives a 3 blade screw at high speed. Sails & oars are also provided, so that the traveller has a choice of 3 kinds of motive power.

Pilot W. D. Clark reports that he was successful beyond expectations in removing 7 of the worst boulders from the channel in the Grand Rapids of the Athabasca River. As a result, boats can now be run with their cargoes, & 6 days' hard work can be accomplished in 2. Clark had to stop work owing to the scarcity of dog feed & the water rising on the ice. He thinks \$2,000 would make a channel that boats could drift through with full cargoes.

The Pioneer Steam Navigation Co., Wabigoon, Ont., is building 2 propellers, each 65 ft. long, with 12 ft. beam. One will run on Rainy Lake, the other on Wabigoon Lake in conjunction with the Co's other 2 steamers,

making a through connection from Wabigoon to Port Frances & Mine Centre in 20 hours. This new route is directly through the Wabigoon & Manitou mining districts, & will provide transportation for places which have hitherto been practically inaccessible.

The Maritime Provinces.

The steamer Victoria commenced running on the St. John River route May 24.

The S. S. Marion has begun her trips from New Glasgow to Pictou, N.S. for the season. Capt. McDonald is in charge.

The public are anxiously awaiting the arrival of the new boat for the Guysboro, Mulgrave & Port Hood service.

Capt. R. Pratt, of Cheverie, N.S., is building a steamer to run between there & Windsor, N.S., & one trip a week to St. John, N.B.

The S. S. Evangeline, belonging to the Dominion Atlantic Ry., is making regular trips between Parrsboro & Kingsport, N.S.

Capt. Micehan, late of the S. S. Blue Hill, will command the steamer lately purchased in Quebec for the Mulgrave & St. Peter's route.

Capt. Rudolf of New Glasgow, N.S., thinks of placing the S. S. Mayflower on a route between Pugwash & some point in P.E.I.

G. F. Baird, St. John, has secured the subsidy for running the S. S. Monticello between Dalhousie, N.B., & Gaspe. The S. S. Admiral formerly ran on the route.

It is reported that the Dominion Atlantic Ry. will shortly give up Yarmouth as the place for the arrival & departure of its boats, & that Digby will be the point selected.

Letters patent have been granted incorporating J. T. Burchell, of New Campbellton, J. J. Moffatt, John Vooght, of North Sydney; N. McDonald, of Sydney, & A. C. Bertram, of North Sydney, N.S., as the Bras d'Or Steamboat Co., Capital, \$20,000.

The Nova Steamship Co. has been incorporated with a capital stock of \$50,000, & headquarters at Halifax, to operate steamships & other vessels for general transportation purposes. The incorporators are J. T. Hamilton, A. E. Jones, G. Musgrave, R. T. Braine & F. J. Phelan, of Halifax.

It is now anticipated by the Yarmouth Steamship Co. that the new steamer Express will shortly leave England for Yarmouth, N.S., in command of Capt. E. O. Smith, & she will be put upon the south shore service of the line,

Esplanade East, Foot of Sherbourne Street, -:- TORONTO.

& may be transferred to the service between Yarmouth & Boston in conjunction with the steamers Boston & Yarmouth, should the business of the Co. warrant taking such a step.

The steamer Weymouth will run between Sydney, North Sydney, C.B., & Aspy Bay & intermediate points along the eastern shore of Victoria County, in place of the Arcadia, which has been running there for the past 2 or 3 seasons. Capt. Carlin of Sydney will command her. This is a most convenient route by which tourists can visit the well-known & interesting scenery & the excellent fishing grounds around Cape North, Ingonish & St. Ann's, in northern Cape Breton.

Dominion letters patent have been issued to the following companies: The Ship Africa Co., capital \$5,000. The Ship Ontario Co., capital \$3,000. The Ship Bristol Co., capital \$5,000. The Ship Hamburg Co., capital \$10,000. The Ship Austria Co., capital \$10,000. The Ship Swansea Co., capital \$4,000. The Ship Persia Co., capital \$5,000. The Ship Plymouth Co., capital \$5,000, & The Ship Avon Co., capital \$2,000. The incorporators of these nine companies are the same for each company, & are G. W. Churchill, J. Churchill, E. Churchill, L. M. Churchill, & W. C. Churchill, all of Hantsport, N.S.

A number of promotions are expected to take place in the service of the Dominion Atlantic Ry. when the new steamers Prince George & Prince Arthur have been put on the service. Capt. A. N. McGray, of the Prince Edward, is slated for the captaincy of the Prince George, recently launched at Hull, Eng., & the command of the Prince Arthur will probably fall to either Chief Officer Kinney, of the Prince Edward, or to the present skipper of the sidewheeler Prince Rupert, running between Digby, N.S., & St. John, N.B. Second Officer Stanwood, of the Prince Edward, stands a good show for promotion this summer, when the new boats are commissioned.

Ontario & the Great Lakes.

Capt. Henry Donaldson, well-known as a steamboat master on Lake Ontario, died at Toronto recently.

The Wahnapiatae Navigation Co. is being wound up by the liquidators, F. Cochrane & B. Chapin, of Sudbury.

Donnelly Bros., of Kingston, have sold the steamer Cambria to G. Palmer, of Toronto, & others. She will ply between Buffalo & Point Avenue Park this season.

The Minister of Public Works recently stated that he quite realized the importance of having a dry dock at Owen Sound, but he had no proposal to make regarding it.

The steamer Carmona, of the Brown Line, is being almost rebuilt at Collingwood. She is to be completed early in July, when she will ply between Detroit, Sarnia, Goderich & Southampton.

It is said the traffic on the Welland canal this year has so far been the greatest in the history of that waterway. The immense quantity of grain going to the sea-board accounts for this.

Capt. Finlay McKay, of Belle Ewart, one of the pioneer navigators of Lake Simcoe, died recently, aged 78. He had been successively captain of the steamers Morning, Simcoe, Victoria, Emily May & Orillia.

The steamer Empress of India is on her usual route between Toronto & Port Dalhousie. She had extensive repairs made to her this spring, & it is said that next year it is proposed to build an entirely new hull for her.

Parliament has voted \$2,000 for repairs to Burlington Channel. The Minister of Public Works says it is intended to do the most urgent work this season, & next year he will

ask for a much larger sum for improvements, as the piers are rotten.

Superintendent Boyd, of the Sault Ste. Marie canal, gives us the following statistics of the business which passed through the canal last season. No. of lockages, 2,976; no. of craft, 4,386; total tonnage, 3,804,361; Canadian tonnage, 408,232; average time of locking 13 min., 58 seconds.

The Lake Temiscamingue Navigation Co., with a capital stock of \$25,000, has been incorporated, with headquarters at Ottawa, to carry on the business of navigation, including passenger & freight traffic, towing, etc. The incorporators are: John, Jas., & David Gillies, of Carleton Place; L. Laconture, of Montreal, & J. O. Blondin, of Baie des Peres.

In a recent discussion in Parliament on the estimate of \$30,000 for Collingwood Harbor, the Minister of Public Works said the present contract, which would cost \$144,000, would give a depth of 18 ft. in the outside harbor & 16 in the inner one. The Government had been asked to make the depth 20 ft., which would cost \$100,000, but he had not accepted the suggestion.

The Prescott & Lake Superior Navigation Co. has been incorporated, with a capital stock of \$100,000 & headquarters at Prescott, Ont; to acquire & operate steamships & other vessels for general transportation purposes. The applicants for incorporation were the following: J. D. Reid, of Cardinal; G. F. Benson, of Montreal; D. Gow, of Cardinal; Geo. Hall, of Ogdensburg; & J. K. Dowsley, of Prescott.

The Minister of Public Works recently announced in Parliament that an arrangement was made to expend \$25,000 in harbor improvements at Port Burwell, on condition that certain parties interested in the coal trade contributed \$50,000 for the same purpose. The parties agreed to do so, but backed out. Notwithstanding that, Mr. Tarte says he will go on and spend the \$25,000 in view of the importance of the harbor.

A paragraph has been going the rounds of the press stating that a Toronto shipbuilding firm had secured a contract from the St. Lawrence & Chicago Steam Navigation Co. to build a large grain carrier, the dimensions & other particulars being given. J. H. G. Hagarty, the Manager of the Navigation Co., emphatically denies that a contract has been entered into. He says his Co. asked for bids, but that nothing further has been done.

The steamer Eurydice, the property of Sylvester Bros., Toronto, has been sold to Campbell & Rosenecke, of Buffalo, for, it is said \$6,000. She has been the subject of considerable litigation recently. Last summer she was sold to parties at Port Stanley for \$10,000. The purchasers afterwards refused to receive her & took action against the owners. The new purchasers, it is said, will run her between Buffalo & Chippewa as an excursion steamer.

A steamer, the White Star, has recently been built in Montreal by W. C. White. She is constructed of steel, is 166 ft. long, 42 ft. beam, & has a tonnage of 228 net. Her engines, which are of about 180 nominal h.p., were built in Scotland, & her boilers are of the Scotch type. She will run as an excursion steamer between Grimsby Park, Lorne Park & Toronto, & will be permitted to carry 800 excursionists. Capt. Boyd, of Toronto, formerly on the Greyhound, has been appointed to her command.

The C.P.R. steamer Athabasca has been supplied with a direct connected lighting unit consisting of a 500-light incandescent dynamo, direct connected to a 50 h.p. high speed Ideal engine. This unit, which is very compact, occupies a floor space of less than 600 ft. The dynamo is of the latest steel frame multi-

polar type, with ventilated armature. A marble switchboard, on which are mounted a standard equipment of instruments, is part of the new equipment, which is said to be the most complete on any of the steamers now running on the upper lakes.

On May 31 there was a long discussion in the House of Commons of the scheme to construct a ship canal from the Ottawa River to Georgian Bay. The Premier said that there was evidence as to the correctness of the estimated cost of \$17,000,000 & as to the probability of it being a commercial success. If the Government was satisfied that the conditions could be fulfilled, the request for a Government guarantee of interest on \$17,000,000 at 2% was a moderate request.

The annual miles-ton report of the Canadian & U. S. canals at Sault Ste. Marie for 1897 shows an enormous increase in the amount & value of freight which passed to & from Lake Superior last year, over any previous season. In 1896 the value of all articles was given at \$159,575,129.43. In 1897 it amounted to the stupendous sum of \$218,235,927.77, an increase of \$58,660,798.34. With an increase of 2,743,694 net tons, or 11% in freight carried in comparison with the season of 1896, the rate per mile-ton was materially lowered, it being .83 mill in 1897, while it was .99 mill in 1896.

The Province of Quebec.

The Dominion Parliament has voted \$7,000 for the establishment of a marine biological station in the Gulf of St. Lawrence.

The Montreal Hotel & Navigation Co. has been incorporated with a capital stock of \$25,000 & headquarters at Montreal, to acquire & operate athletic grounds, hotels, refreshment-rooms & parks. The incorporators are: C. H. Catelli, W. L. Hogg, H. Laporte, & J. P. Mularkey, of Montreal; & W. D. Harris, of Ottawa.

The Dominion Parliament has passed a bill to incorporate the Lake Champlain & St. Lawrence Ship Canal Co. to build a canal from the St. Lawrence River, at Montreal, to Lake Champlain, over a route which has been indorsed by the Deep Waterways Commission. The Co. is to be capitalized at \$6,000,000, & the Government is given power to take over the work at any time on giving 30 days' notice.

A barge service has been commenced between Coteau & Montreal for the western grain, which is being brought over the Ottawa, Arnprior & Parry Sound & Canada Atlantic Rs. The grain, which has so far been taken for Montreal by these roads, has been carried from Coteau over the G.T.R. In future it will all be taken to the Canada Atlantic elevator at Coteau & there transferred to barges, in which it will be taken to Montreal & delivered at the ship's side.

Government Steamer for P.E.I.

The Dominion Government steamer Stanley, which has rendered satisfactory service for some years in maintaining winter communication between P.E.I. & Island & the mainland, has been found altogether too small to cope with the increasing trade between these points, & the Minister of Marine has, therefore, deemed it advisable to procure a larger and more powerful vessel.

Parliament, at its recent session, appropriated \$180,000 for the purpose of its construction, & Captain McElhinney, Nautical Adviser to the Department of Marine, is now in Glasgow, Scotland, preparing plans & specifications & is expected to return for the construction of such a steamer as is contemplated. The Stanley is being replaced according to the plans & under the direction of Captain McElhinney.

ELECTRIC RAILWAYS.

Mimico Sunday Car Case.

At Toronto, June 15, County Judge McDougall quashed the indictment against the Toronto & Mimico Electric Ry. Co. for running cars on Sundays. The decision is due to the finding that the indictment was faulty in two particulars. It was based on a section which is an amendment to the Lord's Day Act, & then asks for a penalty as provided under the criminal code, which, the Judge holds, cannot be consistent, as the breach of the statute should be punished in accordance with the provisions of the Lord's Day Act, but as there is a difficulty in bringing up a corporation under the latter act, according to the holding of Judge McDougall, the point will probably be carried to the Court of Appeal for adjustment. It was also found that the prosecution was delayed beyond the statutory limit.

This judgment is on a motion to quash an indictment preferred at the December Sessions, 1897, against the T. & M. E. Ry. Co. The alleged offence set out in the indictment read:—That the defendant, at the Township of Etobicoke, in the County of York, on June 27, 1897, being the Lord's Day, did unlawfully & without excuse disobey a statute or act of the Legislature of Ontario, 60 Victoria, cap. 14, section 95, by unlawfully running cars or trams, & unlawfully & wilfully carrying passengers thereon, the same not being necessary for the purpose of keeping the track clear of snow or ice or for other acts of necessity or charity, & that the T. & M. E. Ry. & L. Co. did thereby commit an indictable offence contrary to the Criminal Code, sec. 138.

Section 138 of the Code reads as follows:—"Every one is guilty of an indictable offence & liable to 1 year's imprisonment who, without lawful excuse, disobeys any act of the Parliament of Canada or of any Legislature in Canada by wilfully doing any act which it forbids, or omitting to do any act which it requires to be done, unless some penalty or other mode of punishment is expressly provided by law."

Section 95, cap. 14, of 60 Victoria, of Ontario, for the breach of which the defendants were indicted, reads as follows:—"No street car company or tramway company, or any electrical railway company, except where it shall be necessary for the purpose of keeping the tracks clear of snow or ice or for other acts of necessity or charity, shall run cars or trams upon the Lord's Day. The foregoing shall not apply to companies which have before April 1, 1897, regularly run cars on Sunday, nor shall it confer any rights so as to run cars on the Lord's Day not now possessed by them, nor shall it affect or apply to any company which has by its charter or any special act the right or authority to run cars on Sunday, nor shall it affect the right (if any) of the Toronto Ry. Co. to run cars upon the Lord's Day, if or when sanctioned by the vote of the electors under 55 Victoria, cap. 99, & 57 Victoria, cap. 93, but this proviso shall not confer upon the Toronto Ry. Co. any right to run cars upon the Lord's Day which it does not now possess (if any) if sanctioned by such vote, nor shall this section apply to or affect any of the provisions of the Electric Railway Act of 1895."

The defendant's counsel took 5 objections to the indictment, as follows:

1. The indictment does not show that the defendant did not prior to April 1, 1897, regularly run on Sunday.
2. The statute contains other exceptions, & the indictment does not show that the defendant does not come within the exceptions.
3. The statute is an amendment to an act of the Province, being Chap. 203 of the Revised Statutes of Ontario (1887), "An act to

prevent the profanation of the Lord's Day," & the act provides a penalty or mode of punishment for disobedience thereto. The act has now been repealed by the Revised Statutes of Ontario (1897), & no prosecution can be continued thereunder.

4. The indictment does not allege that no penalty or other mode of punishment for the disobedience of the statute was expressly provided by law.

5. The prosecution was not commenced within 1 month after the commission of the offence.

The Judge holds that the 3rd & 5th objections go to the root of the whole matter, & if they can be sustained it would be unnecessary to consider the others. He then set out his decision, that sec. 95 is undoubtedly an amendment, relating to the observance of the Lord's Day, having been added after it was shown in the Hamilton S. Ry. case that the general prohibition of the Lord's Day Act did not apply to a company incorporated for the purpose of operating street cars. He continues: "If sec. 95, cap. 14 of the statute of 1897, from the date of its being assented to, should be read into the Lord's Day Act as it stood upon that date, it is contended the present indictment will not lie, because the Lord's Day Act provides its own penalties & procedure for breaches of its provisions, & therefore, the case falls within the exception of the latter part of sec. 138 of the code."

The Judge quotes authorities, & argues that amendments passed to statutes are usually directed against defects which have since come into notice since the statutes were passed. He holds that sec. 95 is clearly an enactment in *pari materia* with the Lord's Day Act, & the two acts, together with section 136 of the Electric Railway Act, which deals with Sunday traffic upon railways coming within the act, form one homogeneous & consistent body of law, & each of them may explain every other part of the common system to which they belong. "It is, in my opinion," he continues, "only carrying out the clear intention of the Legislature to read all the amendments contained in that act into the proper statutes, even though such statute intended to be amended may not be expressly named in the amending clause."

Judge McDougall then quotes Lord Mansfield: "Where there are different statutes in *pari materia*, though made at different times, or even expired, & not referring to each other, they shall be taken and construed together as one system & as explanatory of each other."

"If, then," he continues, "sec. 95 of the Act of 1897 is to be read as forming part of the Lord's Day Act from April 13, 1897 (the date of its sanction), the prosecution for the alleged offence committed by the defendant is governed by the provisions of the Lord's Day Act. The remedy given is to proceed summarily before a justice of the peace, & the penalty is a fine not exceeding \$40, to be collected by distress, but if default is made in payment, & distress fails to realize the fine, imprisonment may be imposed."

The Judge holds that the 5th objection, that the prosecution was not commenced within 1 month after the offence was committed, holds good, as the date of the latter was June 27, & the indictment was not found until December.

The indictment is, therefore, quashed, but without costs, the defendant succeeding upon the 3rd and 5th objections.

The case was argued at the last general sessions by J. Bicknell for the defendant, & Crown Attorney Dewar for the Crown.

Judge McDougall, the day after the delivery of the above judgment, granted the County Crown Attorney's motion for a reserved case, which he did with much doubt as to his jurisdiction, expressing the opinion, however, that the points were important & that the

Court of Appeal could decide the question of jurisdiction.

It is a notable fact that all Canadian street railways have done an excellent business this year. In Montreal & Toronto the earnings have been running away ahead of a year ago, & the same is reported from Hamilton, London, St. John & Halifax. The returns all over certainly afford a very fair indication of prosperity.

Electric Railway Legislation.

The following Acts were passed at the recent Dominion session:—

Respecting the Montreal Island Belt Line Ry. Co.

Respecting the Intercolonial Radial Ry. Co. To incorporate the Dawson City Electric Lighting & Tramway Co.

To incorporate the Three Rivers & North Shore Electric Ry. Co.

To incorporate the Seven Miles Canyon & White Horse Tramway Co.

Respecting the Queenston Heights Bridge Co.

British Columbia Lines.

B. C. Electric Ry.—The half-yearly interest on the $\frac{1}{2}\%$ debentures & the 6% income bonds due May 15 has been paid at the offices of Spurling & Co., London, Eng.

The Vancouver City Railway & Light Committee has been discussing with the City Solicitor the proposed extension of the speed limit to be granted to the B. C. E. R. Co. for running its cars in the city. Finding that there was insufficient data on which to act, within the experience of the city itself, the Clerk was instructed to write all the leading cities of Eastern Canada & the U.S. to ascertain the rate of speed permitted by civic authorities compatible with the public safety.

On May 24 an electric car with 60 passengers was proceeding from Vancouver to New Westminster at a rapid rate, when the axle broke & the car completely overturned. The occupants were jumbled together as the car, still on its side, ploughed along the side of the track. Miraculous as it seems, nobody was killed, though several were more or less injured. Many were cut by broken glass.

The Maritime Provinces.

St. John Ry.—The annual meeting which was to have taken place June 8 has been adjourned till July 6. The annual statement & report will consequently not be issued till that date. It is understood the Co. has had a very satisfactory year. A dividend of 3% for the 6 months ending April 30 has been declared, payable June 15. This is an increase over the first half of the year of $\frac{1}{2}\%$.

Ontario Lines.

Amherstburg, Windsor & Harrow.—A company in Detroit has made a proposition to build an electric railway from Amherstburg to Windsor & Harrow, & wants a bonus of \$15,000. Several bridges would be required.

Berlin & Waterloo St. Ry.—A press report that the G.T.R. has obtained an option on this line & that it will be extended to Preston, lacks confirmation.

Brantford Electric St. Ry.—J. Easton, who was so badly injured in a street railway accident 2 years ago in West Brantford, has settled with the Co., getting \$4,000 in full of all claims, defendant to pay all costs. The sensational law suit to recover damages will be well remembered. The jury awarded Easton the immense verdict of \$12,000, which

was reduced to \$9,000 by the appeal court. After that the St. Ry. Co. assigned, & since then Easton has got nothing except \$1,500 paid without prejudice during the proceedings.

Bobcaygeon & Peterboro'.—At a recent meeting in Bobcaygeon the following were elected as officers of the Co. which proposes to build an electric line between Bobcaygeon & Peterboro': W. C. Moore, President; S. H. Thorne, Vice-Pres.; Rev. Mr. Innis & J. T. Robinson, Directors; W. J. Read, Sec.-Treas.

Galt & Preston Electric Ry.—A by-law for \$12,000 bonus was carried in Waterloo June 10. This is the town's share towards the \$40,000 asked from Waterloo & Berlin by the Ry. Co., which will give both towns C.P.R. connections. If Berlin carries its by-law for the balance, \$28,000, it is said the C.P.R. will be installed in the twin towns by September next.

The Hamilton Radial Electric Ry. directors went over the road recently in a special fast car, fitted up to make the trip from Burlington to Hamilton and vice versa in, at most, 25 minutes. Two of these cars have been fitted up, having new trucks with wheels considerably larger than the old ones & motors of 50 h.p. The Company expects to be off Sherman Avenue very soon & running over the new Birch Avenue subway line. The G.T.R. workmen have completed one subway, & have the other nearly finished. They will do away with the dangerous level crossing. Nearly all the property owners over the new line have been settled with, & those who will not settle have been served with expropriation notices. One man wants at the rate of \$20,000 an acre for a small piece of land.

Hamilton St. Ry.—In the consideration of the application of this Co. for better terms at a recent meeting of the City finance committee, the question of municipal control was brought prominently before the aldermen. Not a single member favored the granting of the Co.'s application, although Ald. Hobson believed that the city, now having a good bargain, should extend the franchise. Several members considered that the City should acquire the franchise. After a long discussion, the committee decided to recommend that steps be taken to acquire the franchise. The committee will employ an expert to value the system.

The H.S.R. Co. has given the City notice that it "protests against the agreement between the City & the Hamilton Radial E. Ry. Co., on the ground that it is illegal, & if the provisions thereof are attempted to be carried out will interfere with the rights & property of the St. Ry. Co." The Co. will resist any attempt to interfere with its rights.

Kingston Electric Ry. The Kingston branch of the Lord's Day Alliance, through the Secretary of the Provincial Lord's Day Alliance, recently applied to the Attorney-General for a fiat to take proceedings against the S. R. Co. for running cars on Sunday, May 22. The Attorney-General's reply was: "It appears the Co. have no intention or systematically running its cars on Sunday. Though the cars ran on the Sunday preceding the Queen's Birthday, this was in consequence of there being a large number of volunteers in Kingston, and many visitors who were desirous of seeing the camp. Under these circumstances it is thought a fiat should not be granted on the present application, but should the cars at any time be run regularly on Sundays a fiat will be granted."

The London Street Ry. Co.—The earnings for May were \$7,695.65, compared with \$7,312.38 in May, 1897, an increase of \$383.27.

Niagara Falls Park & River Ry. The Co. is making some improvements in the power house, by installing two 500 h.p. power generators for the purpose of selling power

for commerce, etc. Already 400 h. p. of this has been contracted for, & it is probable the whole of the 1,000 h. p. will be in use in a very short time. The Co. has facilities for another 1,000 h.p. should requirements demand them. (Official).

For some time past negotiations have been going on between Manager Phillips, of the N. F. P. & R. Ry. & Mr. Bostwick, of the Upper Suspension Bridge Co., with reference to the Ry. Co. obtaining the right of way over the bridge, so as to run its electric cars over to Niagara Falls, N.Y., where it will have a station in the park. Early in May a conference was held between E. B. Osler, President; W. Hendrie, Vice-President; H. C. Hammond, Manager, & W. Phillips, Manager, representing the N. F. P. & R. Ry., & the President & directors of the Bridge Co., at which an agreement was effected. The Ry. Co. expect to have its cars into Niagara Falls, N.Y., before the end of June. (Official).

The N. F. P. & R. Ry. has entered into traffic arrangements with the Gorge Road across the river for the season of 1898, by which round trip tickets are sold at reduced rates. The N. Y. Central Ry. is issuing round trip tickets for both sides of the river.

Peterboro' to Chemung & Lakefield.—In reference to what we said about this project in our May issue, page 80, it may be added that the town of Peterboro' offered a bonus of \$20,000 to the project, but hedged it round with so many provisos that the promoter of the scheme could not see his way clear to accept it. The matter at present is in statu quo, & will probably remain so until the money market gets easier. (Official).

St. Thomas Electric Ry.—A correspondent writes: "There is one thing I have been anxious to know ever since the road was begun, but have been afraid to mention it in this righteous city. It is this: Will the cars of the St. T. E. Ry. run on Sunday? I hope they will. But I don't expect they will. Public morals are so very immaculate in this saintly city that it would never do to endanger them by allowing electric cars to run on Sunday."

This road, which was commenced Mar. 24 & is 6 miles long, has been about completed. The first car ran June 15, & the formal opening will be on July 5.

Smith's Falls, Rideau & Southern Ry. The paragraph published in our May issue, pg. 81, on the authority of The Kingston News, saying that a contract had been let to a U. S. Company to build this line, was incorrect. We were unable to verify it before publication, but have now learned that the S. F. R. & S. Directors have been negotiating with a United States firm in regard to construction, but that since the declaration of war they have been unable to proceed with negotiations. The directors are anxious to arrange for construction in the town of Smith's Falls, & from there to the Rideau Lakes, which are fast becoming important summer resorts. There are a number of villages en route. (Official).

Strathroy & Western Counties Ry. In 1893 the Ontario Legislature incorporated the Strathroy & Western Counties Ry. Co. with power to construct & operate a steam or electric railway from St. Thomas via Strathroy & Arkona to Forest or some point in the township of Bosanquet. The provisional directors were C. Grist, J. Cox, C. Bixel, W. J. Dyas, D. M. Cameron, W. Geddes & R. Pincombe, of Strathroy; Dr. J. A. McLeay, of Watford, & G. M. Everest, of Arkona. Work was to be commenced in 3 years, & completed in six years, but the time has been extended, & will expire next year. It is said work will be commenced this year on a portion of the line from Strathroy to a point on the C.P.R., and there is a strong

desire to have the portion from Strathroy to some point in Bosanquet also constructed. C. Gustin, of Valley Grove, is taking an active interest in the matter, & would be pleased to consult any others who feel interested. The line would doubtless have a large summer traffic between London & the Lake.

Toronto Ry. Co.—The gross earnings for the first five months of 1897 & 1898 are as follows:

	1897	1898	1899
Jan'y....	\$74,545.55	\$86,562.36	\$12,016.81
Feb'y....	69,744.61	82,402.19	12,657.58
March....	78,891.45	92,818.12	13,426.67
April....	73,756.38	86,898.83	13,142.45
May.....	82,461.51	92,670.35	10,208.84

The City Treasurer of Toronto says in his recent annual report:—"The revenue from the St. Ry. under its contract with the City amounted last year to \$145,673, an increase of \$6,751 over 1896, \$85,673 of which was percentage of gross receipts, & \$60,000 mileage. This year the estimated revenue from St. Ry. services is \$154,000, an estimated increase of \$8,327 over last year. During last year the service was extended by the introduction of Sunday cars. While the Sunday service has been taken advantage of by the citizens generally, & has evidently been popular, it is too soon to form an estimate of the general effect on the revenue from this special source. It is due to the working staff of the road, the conductors & motormen, to acknowledge their exceptional courtesy to the public in the carrying out of their arduous and sometimes trying duties. A tabulated statement shows that the mileage & percentage have increased from \$55,134 & \$65,239 respectively in 1892 to \$64,000 & \$90,000 (estimated) in 1898.

The Court of Appeal has set aside the decision of the board of County Judges in the T. R. Co.'s appeal against the assessment of its rails, poles & wires at \$84,860 & \$79,254, in wards 1 & 2 respectively. Acting upon the authority of the court, the City Clerk has amended the assessment roll by restoring these amounts, & has also amended the collector's rolls accordingly. It has been decided by the T. Ry. Co. to appeal to the Imperial Privy Council, & Wm. Laidlaw, Q.C., is preparing to start for England in order to move for permission to enter an appeal. The Corporation Counsel has advised that the City Council authorize him to contest the application of Mr. Laidlaw, upon grounds which he believes to be unassailable.

The Mayor & City Engineer of Toronto recently received communications from Manager Keating of the T. Ry. Co., asking that bicyclists be kept off that portion of the public streets upon which the Co.'s rails are laid, & which are known as the track allowances. The letter to the City Engineer is as follows:—"I enclose copy of the resolution passed by the directors of the T. Ry. Co., at its last meeting with reference to this matter. While the Co. is willing to give fair & reasonable consideration to the privileges of all persons who ride bicycles on the streets, it complains that the provision embodied in the agreement with the city & in the act of incorporation, that cars shall have the right of way, & that their operation shall not be delayed or obstructed, has been constantly violated by some of the bicyclists, & it is thought the city authorities should discourage as much as possible the riding of bicycles on the street railway portion of the roadway, & should forbid bicycle riding on the strip between the tracks. I understand that in some American cities ordinances have been passed making it an offence to ride bicycles on the strip between the street railway tracks, & subjecting any person offending to arrest & fine. You will, I think, admit that it is unreasonable that the ordinary speed & operation of cars which accommodate 75,000 to 80,000 passengers daily should

be delayed or interfered with by persons who are constantly taking the risk of riding bicycles immediately in front of the cars as well as on the strip between the tracks. The matter seems to be of such importance that I would respectfully suggest the advisability of your consulting with the legal department of the City, & that the Council should devise some way to regulate the speed & system of bicycle riding on streets in order to reduce the great & increasing danger arising from the use of the track allowances for this purpose. I shall be pleased to meet any committee that may be appointed for dealing with the matter in order to discuss the whole question. I may mention that instructions have been given to change the jets on the trolley sprinklers so as to water the portion of the track allowance lying between the Street Railway Company tracks in accordance with the agreement between the Co. & the City. Will you please give this matter your most careful consideration, & I hope that some reasonable & proper means may be devised to check the fast & often reckless riding of bicycles on the track allowance & to prevent bicyclists from using the strip between the tracks.

The City Solicitor informed the Council that, without having looked up the law, he was of opinion that the Co. has no power under the charter to water the streets, & as the only right to do so is that under the agreement with the City, the Co. can only water such portions of the streets as the City directs. The Co. has been notified that the city will not allow it to carry out the policy indicated in Mr. Keating's letter.

Wm. Banks, a Toronto newspaper man, has been employed by the T. R. Co. to take charge of its excursion business during the summer. The Co. proposes to greatly extend its business in this direction, both in connection with the new pleasure ground at Munro Park & the other resorts adjacent to the city.

Conductor McMurray has been awarded a bronze medal for conspicuous bravery in saving the life of Motorman Cruise, by freeing him from a live wire in March last.

Quebec Lines.

La Patrie & Scotstown.—It is proposed to build an electric railway between La Patrie & Scotstown.

The Montreal & Southern Counties Ry. Co. has secured Dominion legislation empowering it to issue preference stock to construct an electric railway from La Prairie to Montreal.

Montreal Park & Island Ry.—As far as we can ascertain, the story that this line was about to be purchased by the Montreal Street Ry. Co. was made out of whole cloth. On June 7, at a meeting of the shareholders & creditors of the M. P. & I. Ry., President Holt explained that although the road was thoroughly equipped & the receipts increasing, certain old liabilities had to be met shortly, & this hampered the directorate. Further, large blocks of stock had been issued to the original promoters, & he, with his fellow directors, believed that in fairness to all concerned a reorganization of the Co. was absolutely necessary. A committee representing the different interests involved was appointed to draft a plan of the reorganization as follows:—H. S. Holt, for the directors; Mr. Beique, Q.C., for the bondholders & Montreal Construction Co.; Mr. Geoffrion, for the Banque du Peuple & the Seminary of Quebec, & W. Strachan, for the shareholders. In order to facilitate matters & make things run easy, the trustees of the bonds were appointed to act as receivers & will manage the road until the plan of reorganization is com-

plete. The trustees are, for the original bonds, E. Hanson & S. H. Ewing, & for the new issue A. A. Thibaudeau & D. Morrice.

C. A. E. Carr, Superintendent of the London, Ont., Street Ry. Co., has been appointed Superintendent of the M. P. & I. Ry., in succession to A. J. Corriveau, who recently resigned. Mr. Carr still retains his position with the London Co., & will manage both jointly. The new Manager of the M. P. & I. will be remembered as having been Secretary to H. A. Everett.

The constantly increasing traffic on the lines of the M. P. & I. Ry. warranted the Co. in commencing in the middle of May a quick & frequent service, so that the public can take advantage of the beautiful scenery through the country. Cars run on Sundays round the mountain, cemeteries & Lachine lines every 15 minutes, & on Back River & St. Laurent-Cartier Ville every 20 minutes. On week days cars run round the mountain, cemeteries & Lachine lines every 20 minutes, & Back River & St. Laurent-Cartier Ville every 40 minutes. These latter lines, as well as the Lachine line, are now operated with high speed cars.

The case of the M. P. & I. Ry. Co. & the Town of St. Louis came up in the Court of Appeal May 26 as an appeal from a judgment of the Superior Court condemning the Co. to carry out within a delay of 2 months its obligations towards the municipality of St. Louis, the obligations including the sale of tickets at a reduced rate, a 5-minute service on St. Lawrence-st., & the granting of transfer tickets to the cars of the M. S. Ry. Co. without extra charge. After hearing argument the Court took the case en deliberé.

Mrs. E. M. Aulton recently obtained \$6,000 damages against the M. P. & I. Ry.

Montreal St. Ry.—In 8 months Montrealers have spent over \$900,000 in street car fares, an increase of \$80,681.00 over the corresponding time last year. During May the earnings of the street railway reached \$123,508.09, against \$110,819.37 the month previous & \$116,337.03 for May, 1897. The average daily earnings of the railway during the 8 months were \$3,712.45, and the average daily increase, \$332.03. The monthly earnings in detail, with comparisons, are as follows:

	1897.	1896.	Increase.
Oct. . . .	\$116,292.09	\$109,110.38	\$ 7,182.71
Nov. . . .	110,929.60	100,818.57	10,111.03
Dec. . . .	113,128.91	103,116.02	10,012.89
Jan. . . .	110,140.83	89,620.55	10,520.28
Feb. . . .	102,625.49	89,951.68	12,673.81
Mar. . . .	114,677.91	99,441.87	15,236.04
Apl. . . .	110,819.37	103,045.93	7,773.44
May. . . .	123,508.09	116,337.03	7,171.06
	\$902,123.29	\$821,442.03	\$80,681.26

The M. S. Ry. will shortly inaugurate a couple of changes in its service in the city, which will considerably facilitate the means of inter-urban communication. Rails are being laid on Place d'Armes Hill, connecting Craig & St. James streets, & when completed the Bleury & St. Catherine cars will run over the new line. This will greatly shorten the present circuitous route taken by these cars, & will be a further advance in the direction of rapid transit. Another change will be made in the extension of the Bleury & Park avenue line from Craig street to the river front by way of Craig & McGill streets. The new service from the Exhibition grounds to the water front will be practically the first cross-town car line in Montreal.

A deputation from the municipality of Verdun recently asked the Provincial Government that the charter of the M. S. Ry. Co. be extended to allow it to run to that suburb of the city, & also that the village be empowered to borrow \$10,000 to assist in the work.

The Recorder of Montreal has given judgment against the M. S. Ry. Co. for the nominal sum of \$25 & costs for refusing to build & operate its line up Cote des Neiges Hill, as agreed in its contract with the City, within a certain space of time that expired on May 1, 1897. In his judgment the Recorder refers to the fact that although the Secretary & the President of the Company have signed the specifications upon which the by-law which contains the section providing for the building of the line was based, they now claim that the City could only call for such a line by means of a simple resolution, so that the by-law passed for that purpose must be illegal. The Recorder holds that though everything that may be decided upon by the passing of a by-law might not be legally decided upon by the passing of a simple resolution, there is no doubt that as long as a decision reached by a simple resolution is legal, a similar decision reached by a by-law must be legal. But all these objections on the part of the Co., states the Recorder, dwindle into insignificance before the one prominent one, namely, that such a line would be too dangerous. The Co. brought up all sorts of expert witnesses to support this view, but the City, on the other hand, brought its own experts to prove that the new street car line in Quebec is built with much shorter curves, much steeper hills, & much shorter declines & inclines than would mark the line in question in Montreal. In addition to this, Mr. McKenna, of Cote des Neiges, has sworn that in 1892 the Co. itself had made overtures to the municipality for the building of a line like the one which it now objects to, & that in May, 1893, the Co. accepted the terms offered by the municipality of Cote des Neiges for the building of the line, & never made any mention of the danger. In short, the Recorder says: The preponderance of testimony shows that it there is to be any danger attached to the line, that danger can only be caused by negligence, ignorance or imprudence on the part of the Co., its engineers, or other employees, & to this all institutions of a similar nature are liable. He regretted exceedingly to be compelled to find the Co. guilty, because, as a rule, it had fulfilled its duties towards the City well; but it had neglected its agreement with the City, in this instance, & without being able to prove that there was really anything to prevent its carrying out its obligations.

The proposed bridge over the canal will be 217 ft. in length & 44 in width, & will cost \$85,000. It will have 2 tracks for electric cars, a double road for vehicles, & space for foot passengers. Two electric motors of 50 h.p. will supply the power.

The North Shore Electric Ry. Co. has been incorporated to build from Three Rivers to Montreal. Among the incorporators are Hon. W. Owens, Westmount; Hon. V. W. Larue, Quebec; W. Strachan, R. Prefontaine, T. Gauthier & A. J. Corriveau, Montreal.

Quebec City & Suburbs—At a special general meeting of shareholders of the Quebec, Montmorency & Charlevoix Ry. May 26, it was decided to exercise the rights vested in the Co. & to acquire the Quebec District Ry. by July 1. The Co. will then control the Quebec City Electric Ry., & will commence operations to electrify the Q., M. & C. steam road to St. Anne de Beaupre, 21 miles from Quebec. It is expected that the steam road will be electrified as far as the Falls of Montmorency, 9 miles, this summer, & that the change to St. Anne de Beaupre will be completed for the summer of 1899. It is not likely that the city electric system will be extended this season. (Official.)

An extension of the Q., M. & C. line from St. Anne de Beaupre to Murray Bay is said to be contemplated in the near future. (See April issue, pg. 54.)

TELEGRAPHS & CABLES.

The Western Union's B.C. Cable.

The cables which will be used by the Western Union Telegraph Co. to establish connection between Seattle, Wash., & Victoria, B.C., have been completed. One section to be laid between Port Angeles, Wash., & Vancouver Island is 20 miles in length, the other, which will be laid across Puget Sound from Seattle, is 9 miles. The former required 6 cars of 60,000 lbs. capacity, & the latter 3 cars, to transport them to Seattle from Trenton, N.J., where they were made, with the exception of the core, consisting of 3 small insulated conductors, which was made in England. Each cable was loaded on the cars in the shape of the figure 8, layer upon layer, back & forth. Upright boards were placed along the sides of the cars to give greater capacity, & a temporary roof built over the cable. The entire cable weighs 421,080 lbs. It was made at the rate of about a mile a day.

During the entire process of manufacture the Western Union Co. had an electrical expert on the ground to see there was no flaw or defect in its construction. He was equipped with the most delicate appliances for detecting defects. The cable as it was made passed into a large tank of water, & from there to a small room, in which, all day long, sat the expert, notebook in hand, ready to jot down any indication of a flaw that might be shown by the delicately-adjusted galvanometer. An electrical current was constantly passing through the cable, & if at any time the slightest blemish had occurred, the current, assisted by the water, would have sought it out, & a telltale kick in the mirror of the galvanometer would have thrown a beam of light reflected by it upon a graduated scale. The expert had little to do, however, & his notebook was a blank so far as flaws were concerned, for so accurately was the work done that not a single blemish was found throughout the entire 29 miles of cable.

The very best gutta percha was used for insulating the 3 conductors of which the cable consists. Ordinarily one thinks of gutta percha & India rubber as identical, but as a fact they are widely different. Gutta percha is far superior for submarine cables, because of its electrical properties. It is carefully prepared & applied to the copper wire forming the conductor in such a way as to make a uniform coating to prevent the leakage of electricity. In this cable 3 conductors were covered & then twisted together, forming the cable proper. The conductors were a little more than $\frac{5}{16}$ of an inch in diameter, made of the finest copper wire. The gutta percha covering increased the size of each to $\frac{1}{4}$ of an inch. Around the conductors after they were twisted together were wrapped layers of Jute twine, forming what is technically known as the "jute bedding." The object of this was to protect the insulation from the outside wire known as the armoring, as the cable is to be laid along the bottom of the Sound, & may come in contact with jagged rocks, & possibly be suspended here & there between rough crags for several hundred feet. This armor is made by winding about the jute bedding 14 wires nearly as large as a lead pencil. This wire was previously treated with the double galvanizing process, to prevent the action of the sea water upon the steel. This latter covering was what gave the cable its silvery glistening serpentine appearance as it curled & twisted through the cupola of the building.

The nine miles of cable provided for Puget Sound is divided into 7 sections of various lengths, the 8th, a 20 miles section stretching from Port Angeles, Wash., to Albert Head, Vancouver Island, from which point there is a short land line into Victoria. The new route embraces Tacoma, Seattle, Port Townsend,

Port Blakeley, Port Ludlow & Port Angeles, in Washington, & is the first line the Western Union has opened to British Columbia. The course for the cable was surveyed last December, when the deepest sounding showed 80 fathoms. Owing to the comparatively shallow water, & the numerous currents & the general strain upon anything submerged in Puget Sound, this cable is exceptionally strong & heavy.

Heretofore, Victoria has had but one telegraph connection with the mainland of B.C., viz., the C.P.R. route via the E. & N. Ry. to Departure Bay, thence by the C.P.R. cable to Vancouver. That cable has recently been replaced by a new one, & by relaying the old one between Beachy Point & Port Crescent, Wash., the C.P.R. has secured an alternative route to the south.

The Western Union is also about to secure connection with Vancouver City, by building a line from Wooley, Wash., via Fairhaven, Blaine & New Westminster. The C.P.R. has connection in this direction by means of the Postal Telegraph between Vancouver & Tacoma. The Puget Sound Telegraph Co. has a line down the Sound shores of the Straits by way of Seattle & Port Townsend, extending to Cape Flattery.

We are not indebted to the Western Union Co. for the foregoing information, as, although we sent several letters to different officials of that Co., asking for particulars, no reply was received. The President of the Western Union & some of his subordinate officers do not seem to act on the principle that civil communications demand a reply.

C.P.R. Telegraphs in B.C.

Quickly following on the laying of the C.P.R. Co.'s new cables connecting Vancouver Island with the mainland comes the announcement of some important reductions in the tariffs from B.C. coast cities to various U.S. points. The Co. recently announced that the rates to the various States, which have been \$1.25 day & \$1 night, will now be \$1 both day & night for a message of 10 words. Thus, New York, Chicago, St. Louis, New Orleans, etc., may be reached for 25c. each less than the former tariff. The rate to Seattle & Tacoma, which has been 60c. day & 40c. night, has been brought down to 40c. & 30c. Port Townsend, which has been 85c. will now be 25c., while Dungeness & Port Angeles, which have been \$1.10, will also have a 25c. rate. The Co. is enabled to lower these rates owing to the new direct connection.

The Victoria Colonist gives a brief resume of the telegraphic history of that city since the C.P.R. took over the B.C. telegraph system from the Dominion Government in 1886. It says: "At that time the only outlet was from Victoria by road to Saanich Arm, which was crossed by a short cable, thence by wire along the road to Nanaimo, thence by wire & cable across channels & 2 islands, then a plunge under the Gulf of Georgia to Point Gray, 15 miles from Vancouver, where a trail through the woods brought it to a highway bound for New Westminster. This was the regulating point, & at the boundary the Canadian line was spliced to the Western Union wire, which took it through a heavily wooded country to Seattle, from which point telegrams were distributed over the country. At that time it cost 90c. to telegraph to Seattle, \$1.25 to San Francisco & \$1.50 to eastern points. In 1886, when the C.P.R. assumed control, local rates in B.C. were immediately reduced 50%. San Francisco was put down to \$1, & Seattle to 75c. In 1887 San Francisco was reduced to 75c., with 60c. night rate, Seattle 60c. day & 40c. night, New York & other eastern U.S. points to \$1.25 per day & \$1 night, Montreal & other eastern Canadian points \$1 day & 75c. night, which rates are

now further reduced as shown above. The California & Oregon rates have not yet been interfered with.

"The rates enjoyed by Canadians compare well with those prevailing on the U.S. side of the line. San Francisco is a large city & has 2 big telegraph companies operating out of it. The rate from there to New York (about 3,500 miles) is \$1 both day & night. Victoria is a small city, with a much less number of telegrams, & yet Victorians have for years been able to telegraph to Sydney, N.S., the farthest easterly point of the Dominion & some 4,500 miles distant by wire, at a rate of \$1 day & 75c. night for messages of 10 words. The C.P.R., therefore, with its monopoly has been giving the people a very much longer service for considerably less money than has been enjoyed by U.S. cities in much more thickly populated states. The C.P.R. has been gradually but steadily improving its wire service out of this city for years, until now it is claimed to be strictly first-class.

"It has been the aim of the C.P.R. people to make the burden as light as possible on their customers. It must be borne in mind that, up to a very recent date, Victoria & Vancouver were the only 2 cities which made any money for the Co.; outside those points it was all expense. Hundreds of miles of wire had to be maintained through an exceedingly rough & sparsely populated country to keep us in touch with the outside world. The Co. now feels itself in a position to grant one of its periodical concessions in a further reduction of certain rates, & no doubt, the public will heartily appreciate the fact."

The Pacific Cable.

In the House of Commons, May 26, Mr. Casey brought the subject of the proposed cable between Vancouver & Australia to the attention of the House, & urged the Government to co-operate in carrying out the project.

Sir Chas. Tupper endorsed the scheme, which he characterized as a very important one, & recalled Mr. Chamberlain's statement to the Australian & Canadian delegates, that, after a study of the matter, he was convinced it entailed practically no financial responsibility. In response to a demand for tenders, the India Rubber & Gutta Percha Cable Works, of England, had offered to carry out the work for a million dollars less than Sir Sandford Fleming had estimated the cable would cost. In view of that fact, he regretted Sir Wilfrid Laurier's refusal to pledge Canadian co-operation in the carrying out of the scheme, because of distrust of the promoters' estimates.

Sir Richard Cartwright took the ground that of the 3 principal parties concerned—Australia, Great Britain & Canada—this country was the least interested in the scheme. Canada should, therefore, only be called upon to contribute to the cost in proportion to the benefit which it derived from the cable. The Government, so far, had not found it possible to come to an understanding with the other parties to the scheme, but they had not abandoned the hope that, ultimately, it might be carried to a successful issue. Although the matter was in the air, it had not crystallized as yet, & the Government could not, therefore, make any announcement at the present time.

Mr. McNeill urged the Government not to be apathetic in the matter, otherwise the opponents of the scheme would be encouraged to place obstacles in its way.

The cable steamer Francois Arago recently came into St. John, N.B., having on board 200 miles of the French cable, which she took up on Grand Banks for the purpose of repairing. She left a few days later to relay it.

C. P. R. Telegraph Notes.

M. T. Quigley, of the C.P.R. Telegraph staff in Vancouver, has been appointed Local Manager of the Vancouver office, in place of T. W. Dowling, who has been given another position in the operating department.

Owing to the great increase in press matter created by the war now in progress, the different Montreal newspapers have deemed it necessary to have operators placed in their offices to receive the bulletins direct. Consequently the C.P.R. Telegraph Department is at present minus some of its expert machine men.

The old cable between Vancouver & Nanaimo, which was taken up by the C.P.R. recently, after the laying of the new one, has been relaid by the Co. between Beachy Bay, Vancouver Island, & Port Crescent, Wash., where it connects with the Postal Telegraph lines. At the other end a short land line connects it from Beachy Bay to Victoria.

An exclusive contract has been made between the C.P.R. & the Lake Manitoba Ry. & Canal Co., for the interchange of telegraph business, under which all business originating on the latter Co.'s line will be handed over to the C.P.R. at Portage la Prairie, Man., to which point the C.P.R. has built an additional wire from Winnipeg to handle this business.

Owing to the large increase in traffic on the Ontario & Quebec division of the C.P.R. the telegraph work of the operating department has increased to such an extent as to render additional facilities absolutely necessary. An additional wire is being strung from Montreal to Megantic & another one from Farnham via Montreal, Smith's Falls, Toronto & Schaw to Hamilton, Ont.

Very satisfactory progress is being made in stringing the C.P.R.'s copper wire between Montreal & Vancouver, about half of the total distance of 2,900 miles being already completed. The new wire is already in use between Ottawa & Sudbury & between Fort William & Winnipeg, & it is confidently expected that by the middle of June it will be working through from Montreal to Winnipeg. West of Winnipeg the pole line is being largely reconstructed, which is delaying the stringing of the wire. All but 6 car-loads of the wire, representing some 760 miles, have been shipped & the intention is to have the whole work completed through to Vancouver by about Aug 1. The rapidity with which this important work is being carried out reflects great credit on Electrician Camp & the several division superintendents through whose territory the line passes.

Telegraph Office Changes.

GREAT NORTH-WESTERN.

OPENED.—Little Metis Lighthouse, Que.; Chaudiere Basin, Que.; Ahmic Harbor, Ont.; Muskoka Wharf, Ont.; Tobermory, Ont.; Victoria, B.C.

CLOSED.—Ayonmore, Ont.; Stonehaven, N.B.; Waupoos, Ont.

CANADIAN PACIFIC.

OPENED.—Bull's Head, N.W.T.; Altamont, Man.; Okotoks, Alta.; International Pier, N.S.; Garden River, Ont.; Leonard, Ont.; Margach, Ont.; Niagara-on-the-Lake, Ont.; Queenston, Ont.; Papineauville Station, Ont.

CLOSED.—Oakville, Man.; West Lynne, Man.; Cutler, Ont.; Farran's Point, Ont.

The majority of people look upon it as a trivial offence to throw a stone at a telegraph wire, but under the new criminal code the penalty is 3 months, or \$50, & if you injure the wire or one of the glass insulators, the penalty is 2 years in a penitentiary.

EXPRESS.

The Dominion Company.

This Co. announces the opening of a route on the C.P.R. between Slocan City & Slocan Jet., B.C., also on the United Counties Ry. between Iberville & Henrieville, Que. Routes have been reopened for the season of navigation on the Toronto, Port Dalhousie & St. Catharines Steamboat Line, the Bay of Quinte Steamboat Line, the Georgian Bay Transit Co., & the North Shore Navigation Co.

R. E. Helme has been appointed Route Agent, with headquarters at London, Ont., & will have charge of the following territory: Credit Valley Section of C.P.R. between Galt, Ont., & Detroit, Mich., inclusive, including Ingersoll Branch; Lake Erie & Detroit River Ry., including London & Port Stanley Division; Erie & Huron Ry., & the following stage routes: from Galt to Hespeler, from Galt to Waterloo, from Ayr to Brantford, & from St. Thomas to Aylmer.

H. Henderson has been appointed Acting Route Agent for the territory of New Brunswick & Nova Scotia, with headquarters at St. John, N.B., vice R. J. Smith, resigned.

W. J. Kirby has been appointed Acting Route Agent, with headquarters at Winnipeg, & has charge of the following territory: all offices on main line of C.P.R. between Fort William & Moose Jaw, inclusive; Gretna & Emerson, Stonewall, West Selkirk, Pembina, South-Western, Pipestone, Estevan, Pasqua & North Portal, & Prince Albert Branches: Manitoba & North-Western Ry., Lake Dauphin Ry., & G.N.-W. Central Ry.

A. Devitt, with headquarters removed to Revelstoke, B.C., has charge of the following territory: all offices on main line of C.P.R. west of Moose Jaw to Revelstoke inclusive; Lethbridge, Edmonton & Macleod Branches, & all offices in Kootenay District.

E. J. Millard having been assigned to other duties, A. W. Lee has been appointed Route Agent, with headquarters at Seattle, Wash., & will have charge of all offices in B.C. west of Revelstoke, & all offices in State of Washington.

Shipments to Yukon.—Until such time as some regular line of transportation is established and which has complied with the requirements of the Department of Customs, shipments cannot be forwarded "In Bond" beyond the terminal point or office of this Co. on the Pacific Coast.

The Co. has inaugurated a free collection & delivery system at Rat Portage, Ont.

The Western Express Co. has re-opened a route on the Duluth, South Shore & Atlantic Bessemer Branch, between Bessemer Jct. & Bessemer, Mich.

The Ontario Express & Transportation Co., which made such a sensational attempt to open up business over the G.T.R. a few years ago, by equipping & opening up some hundreds of offices all over Ontario, but which at the last moment was refused permission by the management of the G.T.R. to do business over its lines, has declared a first & final dividend of 12% on the amount of capital stock paid up.

On June 5 the Pacific Express Co. which operates on all lines of the Wabash & Missouri Pacific Systems in the southwest & on the Union Pacific System in the northwest to Portland, Ore., & beyond, having some 3,000 offices, extended its service over the Southern Division of the G.T.R., & is now handling business on Wabash trains running through Canada. Local agencies have been established at all points between Windsor & Niagara Falls, Ont., & Route Agent C. E. Johnson has been going over the route instructing the agents.

TELEPHONES.

Peelee Island Telephone Cable.

The Government is about to relay the Peelee Island telephone cable. This time it will be placed east of Point Peelee bar out to the dummy light, where an instrument will be placed, thence south of the "middle ground" to Peelee Island light. Whether it will be landed at Brown's dock, on the east side of Peelee Island, & thence by land to the light-house, is not yet quite decided. This change in the cable will remove it from the anchorage off Point Peelee in Pigeon Bay, where it has often been broken & greatly strained by vessels dragging their anchors over it. It will give a much needed station at the dummy light, & lying south of the "middle ground" will be sheltered during winter from the drifting ice floes, which, driven by the westerly gales, grind over the reefs, wearing & twisting the cable on the rocky bottom.

Nova Scotia Telephone Co.

This Co. is completing a branch line of about 25 miles to establish communication between Halifax & the pilot stations at Chebucto Head Light & Sambro, with connections at Ferguson's Cove, Herring Cove, Portuguese Cove & Ketch Harbor. This line will prove of very great service to the shipping community in the vicinity of Halifax. The Co. is also planning extensions & improvements to its system in Pictou County. A metallic switch board is being constructed in Montreal for its New Glasgow exchange. A new switchboard is also to be placed in the Westville office, which will give the patrons a much better service than they now enjoy. A lot of new business has been secured in Pictou & important extensions of the lines are to be made in that town.

The Bell Telephone Co. has opened an office in Brownsville, Ont.

The Fort Wrangel & Glenora Telephone, Telegraph & Electric Lighting Co. has been incorporated, with headquarters in Wrangel.

The Metis Telephone Co., Metis, Que., has been incorporated with a capital of \$2,500, to build & operate a telephone line in the counties of Matane & Rimouski.

The Little Salmon River Telephone Co., Sussex, N.B., has been given supplementary letters patent to enable it to extend its lines into adjoining municipalities.

England is said to have only about 75,000 telephones in use, while Canada has about 40,000. Government control is said to hamper the use of the telephone in England. France has but 35,000, while Germany has 140,000, & the United States 900,000. Sweden has 50,000, & Switzerland 30,000. Little Denmark has 15,000.

The Pan Handle Ry. is putting in telephones at points where improvements are in progress & in this way furnishing a means for facilitating the movement of trains without the expense of telegraph operators, which has been the custom heretofore. This is only one of many cases in which the telephone is crowding out the telegraph.

The People's Telephone Co., of Windsor, Ont., has been incorporated, with power to operate a telephone system in Windsor, Walkerville & Sandwich, the provisional directors being R. H. Evans & L. S. Larrabee, of Detroit, Mich.; W. A. Fraser, of the Lansing, Mich., Telephone Co.; A. H. Clarke, W. J. Pulling & W. J. McKee, M.L.A., Windsor.

TORONTO, CANADA, JULY, 1898.

\$1 A YEAR.

The Deputy Minister of Railways.

Collingwood Schrieber, C.E., C.M.G., was born in England, Dec. 14, 1831, his father being the late Rev. Thos. Schrieber, of Bradwell Lodge, Essex, & his mother a daughter of Admiral Bingham. Having been educated in England he came to Canada in 1852, & obtained a position on the engineering staff of the Hamilton & Toronto Ry. until its completion in 1856. He was in private practice in Toronto with Sandford Fleming & Thos. Ridout, in the firm of Fleming, Ridout & Schrieber, until 1860, when he entered the service of the Northern Ry. as Superintending Engineer of Construction under Sandford Fleming. On the completion of this work in 1863 he became Division Engineer for the Nova Scotia Government on the Pictou Ry. & remained in charge of the works up to their completion in 1867. In 1868 he entered the service of the Dominion Government as a district engineer in connection with the survey & construction of the Intercolonial Ry. In 1869 he took charge of the Eastern Extension Ry. as Superintending Engineer, & was afterwards Superintending Engineer & Commissioner's Agent for the whole road. Subsequently he associated himself with E. R. Burpee as a contractor for the construction of the Prince Edward Island Ry., the Springhill Branch & the Springhill & Parrsboro Ry. In 1873 he was appointed Chief Engineer of the Dominion Government Railways in operation & in 1880 he succeeded Sandford Fleming as Chief Engineer of the survey for the C.P.R., the duties of both which positions he discharged for a considerable period. He was admitted a member of the Canadian Society of Civil Engineers in 1887; was a member of the Royal Commission on Railways in 1886, & was appointed Deputy Minister & Chief Engineer of the Department of Railways & Canals Nov. 30, 1892, which position he still holds. He was created a Companion of the Order of St. Michael & St. George, June 3, 1893. In religion he is an Anglican. He married a daughter of the late Lieut.-Col. A. H. Maclean, of H.M. 41st Foot. She died in 1892. His residence is Elmsleigh, Argyle Avenue, Ottawa.

Sir Wm. Van Horne, who returned from England at the end of June, paid a visit to Minneapolis & St. Paul in the middle of July.

An Era of Railway Building.

At the recent annual meeting of the Bank of Commerce shareholders in Toronto, the President, Senator Cox, in the course of his address, said:—It is evident that we have entered upon an era of railway building & of great increase in our ocean carrying trade. After the building of the Intercolonial & Canadian Pacific railways it was but natural that a young country like Canada should pause,

COLLINGWOOD SCHRIEBER, C.E., C.M.G.

a little exhausted by its effort; & there were those who, therefore, thought that we had ended our day of railway building on a large scale, whereas we have but commenced. Many things have happened lately which should cause us to take stock of our country afresh, & estimate from a wider point of view its future possibilities & its immediate wants. In Manitoba the branch roads & local systems feeding the main lines are prospering, & new communities of settlers are being created, the people are awakening to the great value of new districts which were not discussed a few

years ago, & the feeling that the railway must be the pioneer—must go in advance of settlement—is greatly strengthened by the success of some recent efforts in railway building of that kind. Gradually we are making it possible for pioneers in farming to get into that more northerly country in the Northwest, which so attracted the early travellers that they called it the "fertile belt" at a time when the prairie country west of the Red River Valley was accounted worthless. Further west along the foothills it is clear that railways must be built northward, & when built we shall wonder at the possibilities of cattle ranching thus opened to the world. In British Columbia the need of railways is even more evident to the most careless observer. In the southern part where mining is being developed much has been done & much remains to do. But looking northward everything is yet to do. We have all been discussing freely the needs of the Yukon district, partly because it has become a political question, & partly because it has been so suddenly thrust upon our attention. But the Cassiar & the Cariboo districts require aid also, & there can be little doubt that before long a railway system will serve all these, touching at some Canadian port on the Pacific, & eventually reaching down to the main line of the C.P.R. On the Pacific a great ocean traffic is being created, & while much of it is merely coastwise & carried on mainly by U.S. vessels, when the first rush of the mining excitement is over I feel sure that of the steady trade that remains we shall have a considerable share. In the traffic with Asia there is a great increase, of which we get a fair share. On the Atlantic our traffic is rapidly increasing, & whether the proposed fast line service is carried out by the present projectors or not, the need of it is more evident than ever before.

On retiring from the C.P.R. service recently, after being Receiver-General of the Owen Sound branch for 30 years, John Gordon was presented by the sectionmen with an easy chair, a bookcase & some other very handsome books, a gold-mounted stick & an address.

J. M. Herbert, recently appointed to the General Superintendency of the Eastern Division of the G.T.R., came from the Wabash under the new management. He first went to Island Pond, N.Y., as engineer, & in June was removed to Belleville, whence he has gone to Montreal.

THE OFFICIAL ORGAN.

At a Meeting of the Canadian Freight Association, held at Montreal, July 7, 1898, it was unanimously resolved:

"That THE RAILWAY & SHIPPING WORLD, the only publication in Canada exclusively devoted to the interests of Transportation, will be recognized as the Organ of this Association."

MODERN SIGNALLING AND INTERLOCKING.

By P. F. Hodgson, Signal Engineer, G.T.R.

In taking up the subject of signalling, I will try to point out the most important phases in the growth & development of this science. Some idea of the perfection to which signalling has been brought may be gathered from the following figures. Out of the 957,000,000 passengers carried during one year, over the 20,000 miles of railway in the United Kingdom, only 1 person in 53,000,000 was killed, & 1 in 1,930,935 injured.

In looking back over the history of signalling during the last 60 years, some of the earlier methods of working trains appear as very crude & primitive. The earliest signal of which we have record took the form of a rushlight placed during the night in the station window whenever it was necessary to stop a train. This was followed in 1834 by a system of signals & a corps of signallers. In the day-time the signalman—usually a policeman—acted as a human semaphore, & by means of extension of the arms, or by the waving of flags of different colors, telegraphed: allright, go on, caution, danger, or stop, to an advancing train. This same style of signalling is still in use for shunting operations. For night, warning hand lamps with bullseyes of different colors were used for signalling allright or danger, as the white or red glass was turned towards the coming train. In the absence of a red light, any light waved violently was regarded as a signal of danger. As late as 1841 the only station signals used on the Liverpool & Manchester line were flags which ran up & down a mast by means of a rope through a pulley.

The first mechanical semaphore was introduced by Sir Charles Gregory in the same year, & consisted of a vertical post with a movable board or arm pivoted near the top, capable of being moved to a right angle by means of a lever fixed at the bottom of the post. A lamp was also provided somewhere about the same position on the post as the arm, the light being made to revolve so as to exhibit different colors to an approaching engineer. At first 2 handles were supplied to these posts, one to move the arm up & down, & the other to make the lamp revolve. This arrangement was subsequently modified, & one handle only was used for working the arm & simultaneously revolving the lamp. This was done by means of bevel wheels connected with the rod between the lever & the arm. This semaphore worked to 3 positions, indicating to engineers allright, caution, &

danger. In process of time the caution signal was dispensed with in England, although it is still retained in this country; & the allright signal, instead of hanging vertically, was indicated by the arm being placed at an angle of 45 or 60°, the latter being preferable, as it ensured a more decided signal, being displayed under all circumstances, notwithstanding variations in length of connections.

On some railways the semaphore arms are pivoted in the centre of their length on special brackets attached to the post; the allright signal in this case consists in the arm being turned to a vertical position, but unlike the old semaphore arm it is not concealed by the post, but appears to the approaching engineer to be held out from the post at a distance of about 3 ft. Instead of the old arrangement of lamp turning round, we now have in the new semaphore a fixed lamp, in front of which spectacles work up & down, so that when the semaphore arm is horizontal, viz., danger, a red glass is in front of the lense, & when the arm is lowered to 60° the allright position, a green glass takes the place of the red.

A great deal has been said in the United States about the use of a white light for allright, & it would take too long to go into all the arguments pro & con. My experience is, that a distinct light is necessary, such as green, owing to the fact that there are so many white lights about a railway which are liable to be mistaken for semaphore lights, should the proper semaphore lamp be out. Again, should the red glass of the semaphore be broken a white light would be exhibited, whereas green is not liable to be mistaken for anything other than what it is.

A very good lamp was invented by Mr. Saxby in 1858, in which the interior revolved, leaving the exterior stationary. This is used exclusively by the London, Brighton & South-coast Ry. to this day.

The most recent type of mechanical semaphore is that now used by the G.T.R., & adopted by it as its standard. The arm is weighted both by the means of the spectacle which carries the colored glass, & by a balance lever attached to the post, thus ensuring the arm flying to danger under all circumstances should breakage occur in any part of the connection working the same, also preventing possibility of the arm being lowered by an accumulation of snow upon its face.

At junctions it is often necessary to have several semaphore arms on the one post, either fixed one above the other, or side by side. Thus we often have one post with several arms on each side of it, but these are distinguished by the direction in which they point. The American rule is that all arms controlling the approaching trains shall point to the right, while on the G.T.R., & in England it is exactly the opposite, the arms pointing to the left. This is owing to the fact that in the U.S., on double track, they run on the right hand track, while here we run on the left.

In cases where semaphore arms are fixed one above the other, the top arm as a rule governs the main line, the lower arms the sidings. A great improvement on this arrangement of placing one arm above the other, & one which will, I think, come more into use as it is better known, is to have the arms side by side, & to fix the mainline arm higher than the others. To do this several short posts are fixed on a cross-tree, supported by one main stem, & each of the short posts carries a semaphore arm & lamp. This is what is called a bracket signal. Engineers can readily understand in which direction they are about to be turned. For instance, supposing an engineer is approaching a junction, & the track upon which he is travelling diverges into 3 tracks, on either of which he might be switched, a bracket signal with 3 arms would be placed at the point of junction, each of

the 3 posts on the bracket signal would carry 1 semaphore arm. If, therefore, the left hand arm is lowered the engineer will know that he is being switched to the left hand track. If the middle arm is lowered he would know he is switched to the middle track, & so on.

Semaphores in Canada are divided into 3 classes, distant, home & station. The distant signal arm is notched, or fish-tailed, & is fixed 1,200 ft. from the home signal, & is used to denote the position of the home signal at the junction or crossing. In yards which are interlocked it is very important that the switch targets or pot signals should be as low as possible to avoid the possibility of their being mistaken for the allright signals. This is more particularly necessary at night, when the lights are apt to be confused one with another. In many cases the pot signal is attached to and works with the switch, so as to move whenever the switch is moved, but the best arrangement is for them to be worked by separate levers & interlocked with the other signals in the yard, so that the switches can be moved without disturbing the signal, which can afterwards be worked as required.

A very important point in signalling is to ensure getting the best possible location for the signal, taking great care that there shall be no dark background or anything to intercept the view of the approaching engineer. For this reason signals should be made various heights to suit the location, for it must be remembered that these signals are the means by which instructions are given to the engineer to regulate his progress through a crowded yard or junction. It is, therefore, of the utmost importance that these signals be unmistakable, & that they shall always indicate such instructions as ought to be observed & obeyed, so as to ensure the safety of the trains. For some time it was contended that it was quite unnecessary to inform the engineman in which direction the signalman was about to send him, but this has long been recognized as a mistaken notion, & it is now a generally conceded fact that it is necessary for a driver to clearly understand the direction in which he is about to be turned, as in the event of the signalman making an error through mistaking him for another train, & turning him into a wrong direction, he will have an opportunity of discovering it & pulling up his train in time.

In the early days semaphore arms were usually worked by means of levers fixed at the bottoms of the posts, but as distant signals came more generally into use they were worked by means of pullover levers or drums fixed in some convenient position near the stations, these levers being connected to the signals by means of wires. The next progressive movement in signalling was rendered necessary by the increased traffic & complication of tracks, to facilitate the working of which the switch & signal levers were brought together at one central point, so that they might be handier to the operator & save him running about from switch to switch. Although being more convenient for working, this was found to be very unsafe, owing to the signalman being able to pull over the wrong lever. It was to obviate this danger that Mr. Saxby in 1856 devised and patented his first system of interlocking points & signals. Since this date various modes of interlocking levers have been invented. The fundamental principle established by Mr. Saxby remains the same, viz., that it shall be impossible for a signalman to give any conflicting signals either accidentally or otherwise, or to work signals contradictory to the position of the switches. The switch & signal levers being concentrated & brought together in a signal cabin, were readily worked by the signalman, & by means of a mechanical connection between the switch & signal levers made it impossible to move them in a contradictory manner.

In 1860 the system of locking, which consisted of slide bars with hooks or locks, was moved to & fro by the action of the levers themselves. It was then found that when the parts became worn a lever which was supposed to be locked could be moved part way. To overcome this difficulty, the spring catch handles which were used to keep the lever in its vertical or back position, similar to that attached to the reversing lever of a locomotive, were utilized in order to set in motion the locking gear, so that before a lever could be moved the spring catch must be lifted, thus locking other levers, &, when fully moved over & the spring catch lowered into notch, releasing other levers. This improvement was made in 1867. It also had the advantage of making the locking much less cumbersome, an arrangement which was found to be of increasing advantage as the number of levers multiplied.

At the present time as many as 280 levers have been placed in one cabin at the London Bridge terminus on the London, Brighton & South Coast Ry. We have in Toronto yard one cabin containing 66 levers, which will give some idea of the growth of the interlocking system.

I will now pass on to the switches & their connections. Switches are worked by means of rods, bellcranks, &c., connected to the levers fixed in the signal cabins. In 1870 it was found that in many cases where switches were worked from the signal cabins accidents were liable to happen, owing to the signalman moving the switches whilst trains were passing over them, thus causing what is commonly known as the splitting of trains. It then became evident that the switches must be held perfectly closed & firm until the whole train had passed over them. This led to the invention of what is commonly called "the facing point lock." This apparatus not only effectually prevents the possibility of the points being moved while the train is passing over them, but also, by means of the bolt lock connected to & worked with the detector bar, ensures the switch being completely closed before the signal to pass over it could be given. The detector bar is made about 3 ft. longer than the longest wheel base of a car in use on the particular railway. On the G.T.R., for instance, the length of the bar is 45 ft. This bar has to be lifted to the top of the rail, so that it is absolutely impossible for the signalman to move his lever without lifting the train, & he must move this lever before he can alter the position of the switch.

As the speed of the modern express trains increased it became at once seen of what vital importance it was that the switches over which the trains ran should be perfectly closed & securely locked in position before the signal could be lowered, & also to notify the signalman in the event of any of the rodding or other gear connected with the switches becoming broken or out of order. For instance, suppose the switches are set for the main line & the signalman wishes to reverse them so as to set them for a branch line. To do this he would pull over the lever connected to the switch. Should the rods to the switch be broken, the switch would remain set for the main line. The signalman, thinking he has set the switch for the branch line, proceeds to lower the branch signal, thereby endangering the safety of the train. To overcome this difficulty a contrivance was invented called a signal detector. The form of detector most generally adopted is as follows: A rod connected to the switch tongue passes through a cast-iron box placed in line with the signal wires. In this rod a notch is cut, & in the signal wire a slide is inserted which will pass through the notch in the rod if the switch point is perfectly close. If on the other hand the switch tongue is the least way open the notch in the rod will not be opposite the slide in the signal wire & the signal cannot possibly be

lowered. This was called the detector because it detects whether or not the switch is properly set.

To reduce the cost of the interlocking plants a device was invented by which the switch & detector bar were worked by one & the same lever. This is known as the economical facing point lock, & is greatly in favor in the U.S., although in England a separate lever-facing point lock is preferred.

Another contrivance for reducing the expense of an interlocker is an invention called the selector, by means of which 2 conflicting signals are worked by 1 lever. The action of the setting of the switches selecting which signal shall be lowered, of course only 1 signal can be lowered at a time. This effects a saving, not only of a lever in the cabin, but also one line of connection from the cabin to the signal. The action of the switch moving to either position sets the mechanism in the selector, so that the slide working the signal for that route is free to be pulled, while the slide working the conflicting signal is locked.

Owing to the switches being at considerable distance from the signal cabins, the levers were found very hard to work. To reduce as far as possible the friction on the rods working these switches, anti-friction rollers were brought into use. These not only revolve on their own axis, but are also suspended in curved links. These are specially adapted for the working of the rods on curved lines.

In order to facilitate the working of these long distance switches so as to retain the control of the yard in the hands of 1 man instead of having 2 or 3 cabins, Geo. Westinghouse, Jr., invented his pneumatic, interlocking machine, thus giving the signalman much greater power. To this, later on, he added the electric attachment, & we now have the electro-pneumatic system, very fine installations of which are in operation at the Boston & Maine depot in Boston, & at St. Louis Union Terminal Station.

In addition to the working of switches & signals, gates or barriers are often worked from the signal tower, & interlocked with the signals, so as to ensure the gates being against street traffic before the signal can be lowered for a train to pass.

Another system for working long distance switches is the hydraulic system which is largely in use in Europe, but has not as yet been introduced in this country. The principal hindrance to the working of the hydraulic system in this country is the liability of the freezing up of the liquid. This has been overcome by the mixture of glycerine with the water, which has been found to withstand the extreme cold of Russia.

I now come to the block systems, of which there are two kinds, the manual block & automatic block. The manual block differs from the automatic in that the former depends entirely upon the vigilance of the operator, & is worked in the following manner. The line is divided into sections of various lengths, one train not being allowed to enter the section until the preceding one is reported by telegraph as having reached the block station ahead. In order to check the vigilance of the operator a scheme was devised by means of which the train on entering the section passed over a treadle which put the signal to danger behind it, locking it in that position until the train was clear of the other end of the section, when it passed over another treadle, which released the signal behind it so that the operator was permitted to lower it to admit another train into that section. This was found to work all right so long as the trains were not badly broken up, but on a heavy line of traffic it was found that the breaking loose & the front portion getting clear of the section & passing over the releasing treadle while the rear part of the train was still left in the section, in which case the operator could lower the signal for a follow-

ing train owing to the fact of the first part of the train having released his instrument.

The automatic block, which has been successfully operated in the U.S., is worked by means of an insulated rail or track circuit. The train on entering the circuit puts the signal to danger behind it & locks it in that position until every wheel of that train is clear of the circuit, when the signal returns to the all-right position. In the same way in the event of an open switch or a broken rail the signal goes to danger & remains in that position until the line is again secure.

I will now pass on to the various means of communication between the different signal towers. The simplest system is by means of telephones, which are very handy, but are not altogether reliable. The system which I now describe to you is for recording the departure & arrival of trains at the various cabins. For example, we will call the right-hand instrument A, & the left hand B. A wishes to send a train to B, & to notify B of this fact he places the little peg or pin in the hole opposite the section on which is recorded a description of the train he wishes to send. The dials on B's instrument are similar to those of A's. Having placed the peg in the required hole A pulls out the knob which sets the machinery of the instrument in motion, when the same indication is repeated on B's instrument by means of electricity. B then acknowledges receipt of the message by placing the pin of his instrument in the hole opposite the section on which the corresponding description is written. When both pegs are removed from the instruments they return to their normal position & are ready for another message to be sent. Another means of communication is by the ordinary telegraph instrument.

Before leaving this subject I would say that electricity is of great use in controlling the action of the signalmen by means of electric locks operated by the trains themselves.

Grand Trunk History.

The most important feature of the 4th of July festivities at Portland, Me., was the celebration of the semi-centennial of the G.T.R., the original Atlantic & St. Lawrence Ry. from Portland to Yarmouth, Me., having been opened for traffic just 50 years ago. The G.T.R. was represented by General Traffic Manager G. B. Reeve, who, in the course of his speech, said:

The Grand Trunk was the pioneer in the railway field in Canada, & the line between Portland & Montreal was opened in 1853, having taken about 6 years in building, the openings of the several portions taking place as follows:—Longueuil to St. Hyacinthe, in the spring of 1847; Longueuil to Richmond, in the fall of 1851; Longueuil to St. John's, in Aug. of 1852; Longueuil to Island Pond, in July, 1853.

From the Portland end of the line the following sections were inaugurated as follows:—Portland to Yarmouth, Jan. 1858; Portland to Danville Junction, Dec., 1849; Portland to Mechanic Falls, Feb., 1849; Portland to South Paris, Jan., 1850; Portland to Bethel, Mar., 1851; Portland to Gorham, July, 1851; Bethel to Newry (now Greenville), July, 1852; Portland to Island Pond, Feb., 1853; thus connecting the two portions of the line. The Grand Trunk had no railway facilities. Longueuil was then the western terminus of the system. Owing to this fact, there was a great deal of business transacted at Longueuil, & it was found that the Grand Trunk had to be transferred by boat in summer & by horse-drawn sleds in winter. The Grand Trunk had to be transferred by boat in summer & by horse-drawn sleds in winter. The Grand Trunk had to be transferred by boat in summer & by horse-drawn sleds in winter.

construction of the Victoria tubular bridge, which was built at the enormous expense of \$7,000,000, & which, at the time of its opening, 1860, was considered a marvel of engineering achievement, & among the wonders of the world.

The construction of the present piers of the Victoria Bridge was an undertaking that was beset with many serious difficulties. The contractors had to contend with a roaring rapids 2 miles wide, intense "shoves" of ice, sometimes several feet thick, with a pressure of millions of tons, & without any of the modern means now used in sinking piers. The total weight of the piers is given as about 10,000 tons of blue limestone, & reaching a height of 60 ft. above the water line.

On Aug. 25, 1860, the laying of the last stone & the driving of the last spike by the Prince of Wales was accomplished & the celebration was an event long remembered. Since then, in addition to its large & ever-increasing Canadian business, its through traffic between the Atlantic seaboard & Western points has developed to such an extent as to necessitate the re-construction of this bridge, & in its place a magnificent open work steel bridge is being erected, with double tracks, & on each side of the immense structure will be carriage ways & walks for foot passengers.

From the time when the line between Portland & Montreal was completed, the Co. has extended its rails to vast proportions, from a mileage of 292 miles in 1853, to a total of 4,186 miles at the present day, tapping all the principal centres of the States of Maine, New Hampshire & Vermont, & the provinces of Quebec & Ontario, & the States of Michigan, Indiana & Illinois & rightly claiming for itself the "Commercial Highway" from the Atlantic Ocean to the West. In the early days of the road's history the Co. had almost insurmountable difficulties to beset them, especially during winter, & at a time when the modern ideas of railway management were unknown. Rail communication with Montreal was, however, made during the first winter of the completion of the road, & after the close of navigation in 1853, screw steamers ran between Liverpool & Portland with passengers & goods, thus opening up for the first time an entire winter route for Canada; & notwithstanding the deficiency of engine power & the defective state of the new line, the traffic of these vessels was conveyed with a dispatch that gave general satisfaction.

The traffic receipts of the early days compared with 1897 are interesting, & illustrate the growth of the Grand Trunk:—1854, traf-

fic receipts, \$835,577, mileage, 388; 1897, traffic receipts, \$23,624,191, mileage, 4,186. The rolling stock & equipment has increased in like proportion, as the following figures demonstrate:

	1854.	1897.
Locomotives.....	64	1,019
Passenger Cars.....	66	885
Freight Cars.....	935	22,075
Snow Plows.....	14	72
	1,079	24,701

During 1856 the total number of passengers transported amounted to 686,924, while for 1897 the figures roll up to over 8,000,000. Likewise the increase in freight tonnage has been something enormous, comparing the figures of 1854, which amounted to 619,990 tons, with those of 1897, which totalled 11,769,657 tons.

The branch line from Richmond to Quebec was completed in 1854, the main line from Montreal to Toronto in 1856, & the Sarnia Division in 1858. In the extension of the G.T. System to the westward, the importance of through international connections was considered, & with this end in view, the Co. in 1875 acquired the Chicago & Lake Huron Ry., thus gaining a direct connection with Chicago. The large through business between Chicago & Portland & the Atlantic seaboard controlled by the G.T.R. has amply justified the wisdom of the extension. The Co. later added to its mileage & business by acquiring numerous other lines; & on Aug. 12, 1882, the original G.T.R. was consolidated with the Great Western Ry., & with the company thus formed was united on Jan. 24, 1888, the Northern Ry. Co. of Canada, & its leased line, the Hamilton & North Western Ry., the amalgamated system taking the present style of the G.T. Ry. Co. of Canada. Several other railways having been acquired, the G.T. division, embracing 2,174 miles, with the Great Western division (including the Hamilton & North Western), embracing 1,338 miles, brought the mileage of this system up to 3,512 miles, exclusive of the Chicago & Grand Trunk, the Detroit, Grand Haven & Milwaukee, & the Toledo, Saginaw, & Muskegan railways controlled by the Co., & the Cincinnati, Saginaw & Mackinaw Railroad operated by it, all of these lines now being operated under the title of the G.T.R. System, with an aggregate, as stated, of 4,186 miles. The G.T.R. System is laid, throughout its entire length, with heavy steel rails, while with its steel bridges, solid masonry & most improved modern structures; it is in no particular behind the great trunk lines of the United States.

RAILWAY APPOINTMENTS, &c.

Canadian Government Rys.—The position of General Traffic Manager at Montreal held by A. H. Harris having been abolished, the offices in the Board of Trade Building were closed on July 19, when the services of the following were dispensed with by General-Manager. Pottinger: T. H. Underwood, Chief Clerk; T. R. O'Dell, Secretary; T. E. Dodd, clerk; J. A. Ryan, Messenger.

The staff which remains in Montreal is as follows: J. Hardwell, Divisional Freight Agent; F. H. Thompson, Chief Clerk; R. E. Perry, clerk; A. McKinnon, Jr., S. A. McQuestin, City Canvasser; J. B. Lambkin, Divisional Passenger Agent; T. H. Blair, City Ticket Agent; P. DesLauriers, clerk, N. McAlpine, office boy.

T. H. Blair, the present Ticket Agent, will be transferred elsewhere in the service, & H. J. Scriver, formerly Agent of the G.T.R. at Hemmingford, Que., & son of J. Scriver, M.P. for Huntingdon, will take his position.

The published rumors of changes in the divisional superintendents & promotion of other officials are said to be without warrant. The only changes in the Train Despatcher's office are the transfer of J. E. Rhind from the New Glasgow office to Truro; of A. Dunn, from Truro to Moncton, & of B. Ward from Moncton to be Chief Train Despatcher at New Glasgow.

Canadian Pacific.—The C.P.R. lines west of Toronto on the Ontario & Quebec Divisions, which since the removal of W. K. Thompson to the Atlantic Division have been under one Superintendent, T. Williams, with headquarters at Toronto, have again been divided. Mr. Williams will again have his office in London, & will have under his jurisdiction all the lines west of Toronto except the Owen Sound, Orangeville & Teeswater branches, which will be in charge of A. Price, at present Chief Despatcher & Car Distributor at Toronto, who has been promoted to a superintendency. J. G. Willson, Chief Clerk in General Superintendent Leonard's office, will probably succeed Mr. Price as Car Distributor.

Grand Trunk.—A. B. Atwater, Superintendent of the Western Division, having resigned to become Assistant General Superintendent of the Michigan Central, the following changes & appointments took effect July 12:

W. Cotter, Superintendent of Eastern Division, at Montreal, to be Superintendent of the

MADE IN THE
FOLLOWING WIDTHS

24, 27, 32, 36, 50 & 72 inches.

STANDARD

SHADES

Saloons.

"LISANGO" is very strong, durable, and altogether the richest velvet extant.

MAY BE HAD OF ALL LEADING WAREHOUSEMEN.

Duluth, Superior & Western. This line, which is controlled by the Duluth & Winnipeg Ry., which is controlled by the Great Northern Co., for, it is said, \$378,400. The line, which is 124 miles in length, will, it is said, be built from Duluth to Superior, and from Superior to the Red River valley to the head of Lake Superior.

paper. Heretofore it has been under the management of W. F. Fitch, who is also General Manager of the Duluth, South Shore & Atlantic, one of the subsidiary lines of the C.P.R. The following extract from the last annual C.P.R. report is of interest in connection with this transaction: "Arrangements, permanently assuring the traffic interests of the Duluth, South Shore & Atlantic Ry., west of Duluth, having been made, the amount advanced to that Co. for the acquisition of the Duluth & Winnipeg Ry. has been returned to your treasury."

Erie & Huron.—A rumor that this line is to be leased to the Lake Erie & Detroit River Co. cannot be confirmed. There is no doubt the L. E. & D. R. people have been looking into E. & H. matters, but it would appear that nothing definite has been decided on.

Great Northern.—Quebec City Council has decided to take \$200,000 of the capital stock of this Co. provided the Co. establishes its workshops in Quebec city & completes the line so that through trains can be run between that city & Parry Sound, Ont.

London & Southeastern.—At the annual meeting of this Co. at London, June 28, the following directors were elected: President, W. J. Reid; Vice-President, T. H. Smallman; Sec.-Treas., J. W. Little; M. Masuret, J. Campbell, C. S. Hyman. The L. & S.E. R. is leased to the Michigan Central & the annual meetings are simply held formally for the purpose of keeping the Co. in existence.

New Westminster Southern.—The annual meeting called for New Westminster, B.C., for July 5, was adjourned for a month.

New York & Ottawa.—The State Board of Railway Commissioners at Albany, N. Y., has been requested to grant authority to the New York & Ottawa Ry. Co. to increase its capital stock from \$1,480,000 to \$3,000,000, in order to enable it to acquire the stock of the Ottawa & New York Ry. Co. of Canada & of the Cornwall Bridge Co. When these corporations are absorbed, it will form a line through to Ottawa shorter by about 57 miles than the present route from New York. When completed the line is to extend from

Ottawa, via Cornwall, to Tupper Lake, N.Y., where connection is made for New York City with the Adirondack Ry. of the Delaware & Hudson Canal. S. D. Trask & Co., New York City, are among the financial backers of the road.

Nickel Steel Co. of Canada.—The Act incorporating this Co., passed at the last session of the Dominion Parliament, provides that it may, with the consent of the Governor-in-Council, lease or purchase the Bay of Quinte, Central Ontario, & Irondale, Rancroft & Ottawa Rys.

Ontario, Belmont & Northern.—The annual meeting of this Co. was called for June 11 at 103 Bay St., Toronto. The President, J. T. Sills, promised to supply us with a report of the proceedings, but changed his mind, absolutely refusing any information. This Co. was incorporated by an Ontario Act in 1891. In 1896 Dominion aid was granted it for the construction of a line from the Belmont iron mines to Marmora, & from Marmora to the Ont. Central Ry. This was paid in the following year to the extent of \$30,720 for 9.60 miles. The directors of the Co. recently made a call of 10% on the unpaid shares, payable July 25.

There is no truth in the report that the O. B. & N. Ry. is to be taken over by the Central Ontario Ry., which is operating the O. B. & N. under lease. (Official).

Pontiac & Pacific Jet.—The fact that the P. & P. J. Ry. & Gatineau Valley Ry. employes are some 9 months behind in their pay was recently brought to the attention of the Minister of Railways, who said he would get the Deputy Minister to look into it & see what could be done. P. Heney, of these companies, states that no employe of the roads can truthfully say his pay is 9 months in arrears. It is true, he says, that some employes are not fully paid, but they all receive pay every month, either in cash or orders, which are invariably honored. In reference to the financial condition of the roads & the extent of their present business, he says both are improving, & that their condition to-day is 25% better than a year ago.

The Quebec Government has issued execution against the Pontiac & Pacific Jct. & Gatineau Valley roads, in connection with a judgment secured in the Superior Court in 1884. The Co., it is alleged, owes commercial taxes to the Government.

Pullman Palace Car Co.—On July 1, the directors declared a quarterly dividend of \$2 & a special dividend of \$20 a share; & recommended that the stockholders at the regular annual meeting, on Oct. 13, declare a stock dividend of 50%, in other words, to issue \$18,000,000 new stock, to represent that much of the surplus assets of the company. The capital stock now amounts to \$36,000,000, & this will increase it to \$54,000,000. The directors recommend that hereafter the dividend be regularly 6% per annum. The stock has been selling at about 211, & it is estimated that after the payment of the three dividends it will be worth 127. The surplus at the beginning of the current fiscal year was \$27,505,959.

Qu'Appelle, Long Lake & Saskatchewan.—The net loss in operating for May was \$1,487.35, as against net earnings of \$1,698.21 in May, 1897.

Quebec Central.—At the annual meeting in London, Eng., in June, the old directors were re-elected. The gross earnings for 1897 amounted to \$457,643, an increase of \$60,537 over those of 1896. The working expenses amounted to \$309,555, an increase of \$40,761. The net earnings were \$148,088, an increase of \$19,776, to which was added interest on balances, etc., \$2,830, & there had been written off some items amounting to \$2,954, making the available net revenue \$147,964. After paying interest on the prior lien bonds, \$85,166, there remained a balance of \$62,798, out of which a dividend of 1½% had been declared, & paid on the income bonds, leaving \$13,450 to be carried forward.

The receipts for the 5 months to end of May were \$44,462 as against \$57,225 for corresponding period.

St Catharines & Niagara Central.—Pursuant to judgment in the case of Rolls vs. this Co. the railway, about 12½ miles, from

ALL OF THE LEADING

Railroads, and most of the best farmers of this country, now use Page Coiled Spring Woven Wire Fencing. It is THE fence, because it is proof against all animals large or small; it will not sag because of snowdrifts, or from contraction and expansion; it is everlasting, as it is made of hard spring steel wire; and it is as cheap or cheaper than the inferior make-shift would-be competitors. Further information gladly furnished to interested parties. The Page Wire Fence Co., Limited, Walkerville, Ont.

W. G. FONSECA,

705 Main St., Winnipeg.

St. Catharines to Clifton, where it connects with the Michigan Central, was offered for sale in June, subject to vendor's liens. The road has been in the Receiver's hands for some time, & latterly, according to statements made by parties interested, it has only paid the expense of running the cars, leaving nothing for the repairs necessary. The road is bonded for \$240,000, which, with accrued interest, makes up a debt of \$350,000, the chief creditor being the City of St. Catharines, which holds two-thirds of the bonds, amounting to \$160,000, & has an additional claim of \$50,000. It is said the whole value of the road, that is, structure, rails, bridges, & right of way, is not more than \$25,000. It is stated that in view of the bad shape the road is in it would cost \$100,000 to put it in proper running order. Before the Master in Ordinary at Toronto, June 28, there were 4 offers made for the purchase of the railway, as follows: F. W. Wilson, \$20,000; R. Cameron, \$22,000; G. M. Neelon, \$25,990; J. A. MacMahon, \$31,800. These were not regarded by the Master as high enough, & it was decided to adjourn the matter. Shortly afterwards, however, MacMahon raised his offer to \$34,000, which was accepted. Neelon protested against the sale, contending that the matter had been adjourned. It came up again July 4, when MacMahon's counsel objected to a re-opening on the ground that his client,

& on the Canadian side, as the Red Mountain, 11 miles, a total of 17 miles. It was persistently asserted that both the C.P.R. & the Northern Pacific were after the system, & then it was stated that the Northern Pacific had secured it. It turns out that it has been bought by the Great Northern (U.S.), & that it will be operated as part of that system. The road has, ever since the mining development of the Kootenay district began, done a large passenger & freight business, & should be on a paying basis. It has, however, probably seen its best days, as the C.P.R. Crows' Nest Pass line will cut into the whole of its territory north of the Boundary Line. It is more than likely that Mr. Corbin's failure, during the last Dominion Session, to secure power to extend to the Boundary Creek district, had much to do with his decision to sell out. The system has a bonded indebtedness of some \$3,500,000.

Toronto Belt Line Ry.—A writ has been issued by the Scottish, Ontario & Manitoba Loan Co. against the G.T.R. Co., W. S. Lee & Sir Casimir Gzowski, in connection with the Toronto Belt Line Ry. The original company acquired about 4½ acres of land in Rosedale from the plaintiffs, & it is claimed the financial obligation was not liquidated. Messrs. Lee & Gzowski are included in the writ because they are trustees for the bondholders. An application is made for the ap-

EQUIPMENT.

A Nova Scotia Industry.

During a recent visit to the Maritime Provinces the Editor of THE RAILWAY & SHIPPING WORLD had an opportunity of looking over the works of Rhodes, Curry & Co., at Amherst, N.S. This establishment, which is certainly one of the largest & most enterprising of all the Maritime Province industries, covers 7 acres of ground. The wood-working shop is 60 x 160 ft., 2 stories high, the lower story being used for preparing wood-work for freight cars, the upper story for passenger & street cars. The general foundry is 70 x 100 ft., with a capacity of 20 tons of castings a day. The wheel foundry is 70 x 90 ft., with a capacity of 44 car wheels, or 13 tons in weight per day. The machine shop, 70 x 80 ft., is equipped with all necessary plant for car building & general machine work. The blacksmith shop, 70 x 80 ft., is equipped with 12 forges, 3 furnaces, forging & bolt heading machine, steam hammer, shears, etc. The erecting shop is 80 x 360 ft. with four tracks. Power is supplied by 2 boilers 250 h.p., & 3 stationary engines, aggregating 250 h.p. In addition to the above there are connected with the car shops the usual store-houses, dry kilns, pattern shops, etc.

A C.P.R. COMPOUND TEN-WHEELED TYPE LOCOMOTIVE.

believing he had purchased the line, had made contracts to the extent of several thousand dollars for which he would be held liable. The Master decided to reopen the sale, announced a tender of \$35,000 from Neelon, & again adjourned till July 12 to let MacMahon raise the bid if he so desired. On July 12 the Neelon tender of \$35,000 was accepted, subject to the question of any claim of the Riordan Co. An agreement was produced between the Railway Co. & the Riordan Co., made in 1894, by which a siding was put into the latter's paper mills, subject to being removed on 3 months' notice. The Riordan Co. gave notice to the Receiver last year, & was taking steps to remove the siding. It is said the business of the Riordan Co. amounts to 25 % of the Railway Co.'s receipts, & that in future it will be given to the G.T.R.

Spokane Falls & Northern. Rumor has been busy for some time past with the Corbin System, consisting of the Spokane Falls & Northern, running from Spokane, Wash., to the International Boundary, 140 miles, & thence, under the name of the Nelson & Fort Sheppard Ry., to Nelson, B.C., 60 miles, a total of 200 miles. From Northport, on the Columbia River, 18 miles south of the Boundary, a branch runs to Roysland, B.C., under the name, on the U.S. side, of the line, of the Columbia & Red Mountain, 6 miles in length,

pointment of a receiver & an injunction commanding the G.T.R. to take up the rails.

Vanderbilt Lines.—The following dividends were declared in June:—Semi-annual in Lake Shore of 3%; Michigan Central, 2%; & Canada Southern 1%. The rate on New York Central was 1% quarterly.

A. H. Harris, ex-General Traffic Manager of the Government Railways, is spending the summer at Murray Bay, Que. He was connected with the G.T.R. from 1874 to Nov., 1897, during which time he held the positions of Secretary to Traffic Manager, Assistant General Freight Agent through traffic at Buffalo, N.Y., General Freight Agent through traffic at Detroit, Mich., District General Freight Agent Southern Division, & District General Freight Agent in charge of all lines east of Belleville, Ont., having been appointed to the last-named position in May, 1892. He was appointed to the Government lines in Nov. 1897.

A. C. LYTLE, Superintendent Orford Mountain Railway, Eastman, Que., in remitting his subscription to THE RAILWAY & SHIPPING WORLD, says: "Your paper fills a much needed want as a supply of information that should be in the hands of every railway man in the Dominion."

Rhodes, Curry & Co. are now engaged turning out 50 box cars for the Intercolonial Ry.; 20 box cars for the Quebec & Lake St. John Ry.; 150 coal cars for the Dominion Coal Co.; 10 coal cars for the General Mining Association; also electric cars for Halifax & Sherbrooke, Que.

In addition to the above-mentioned plant the firm has a large factory for the manufacture of building materials, & also owns & operates saw-mills.

Canadian Government System.

An appropriation of \$600,000 for Intercolonial rolling stock was made at the last Dominion Session. It is probable that some 15 or 20 freight locomotives, 12 passenger coaches & 400 box cars will be procured, tenders for which will shortly be invited.

A passenger coach is being added to the equipment of the Prince Edward Island Ry. this year, following the practice of building one at Charlottetown each season. Seven stock cars are also being built. The locomotives are being generally overhauled, & new fire-boxes are being put in.

The Wagner cars, 6 sleepers & 3 diners, mentioned in our June issue, pg. 102, as having been placed on the Intercolonial Ry., have not been purchased by the Government,

have been closed for a limited period. It is probable that a similar number of sleepers & coaches will be built for the line, to be owned by the Government, & run on the through express lines between Montreal & Halifax.

The combined dining & restaurant cars placed on the Intercolonial, as described & illustrated in our June issue, pg. 91, have not proved a success, their operation having shown that there was no general demand for first-class meals to be served on board, as it was anticipated there would be when the dining stations on the line were closed. Two of the combined cars have been altered by extending the dining-room accommodation, & the other is being kept as a spare car to be used in case of emergencies.

Towards the end of June a press despatch from Montreal stated that A. M. Peterson, of Colborne, Ont., had concluded arrangements with the Minister of Railways for the use on the Government Railway System of the Cleveland cylinder for locomotives, a Canadian invention which, it is claimed, will develop a high rate of speed. Mr. Peterson has since written us stating that he has made such an arrangement. A subsequent enquiry from this office to the Mechanical Superintendent of the Government System at Moncton elicited the information that he had not been advised of any such action. On taking the position recently he found that an engine fitted with a Cleveland cylinder had been running between Moncton & St. John for some months, & it was claimed it had given satisfaction, but no tests had been undertaken & it was very likely these would be made in an exhaustive manner before such a change would be generally adopted.

Speaking to a press representative recently Mr. Peterson stated that the main features of the device are a double piston, large central exhaust & the application of the suction or inductive principle to the nozzle. Each cylinder has 2 piston heads on 1 rod, & consequently the cylinder is longer than that ordinarily in use on a locomotive. Near the centre of the cylinder a groove is cut in its wall, of sufficient area to afford an ample exhaust under any conditions. As the piston passes over this point the exhaust assumes the characteristic of an explosion rather than anything else, opening as it does into the chamber between the 2 pistons, which are in constant communication with the smoke stacks. As the piston passes back on the return of the stroke & covers the main exhaust port, the valve or supplementary exhaust passes out through the nozzle in such a way that the main exhaust operates to create a vacuum in the cylinder. The valve & valve motion of the ordinary engine can be used in the device.

Grand Trunk Passenger Cars.

The 20 passenger coaches recently built at the Pullman shops, Chicago, have all been delivered at Chicago, & are ready for service. The cars are 62 ft. long, fitted with wide Pullman vestibules, 6 wheeled trucks, 33 in. steel tyred solid disc wheels, Westinghouse quick action triple brake & air signals. Sixteen cars, numbered 807 to 822, are fitted with patent drawbars & buffers, & 4 cars, numbering 823 to 826, are fitted with the interchangeable drawbar, to work in harmony with the M.C.B. or Miller drawbar by changing the knuckle, & are intended for the Portland Division. Each car is fitted with wrecking tools. The cars have high-back walkover pattern seats, with seating capacity for 64 passengers in the body of car & 8 in smoking-room, 72 in all. The cars are fitted up in mahogany, lighted by 7 Acme, no. 121, two-burner lamps, heated by steam, & have roller blinds. There is a strip of carpet in the centre aisle. Ladies' dressing-room at one end of car, with flush closet & washbasin. Wash-

basin at the smoking end of car & flush water-closet for men. They are painted & ornamented G.T. standard color outside. Average weight of car 89,550 lbs.

The 6 cars recently built at the Co.'s shops, Montreal, numbered 801 to 806, are the same length & style generally, no vestibules, ordinary platforms, patent drawbars & buffers, brass hand railing, lighted by gas, 7 four-burner lamps, roller blinds. Three of these have gone into service & balance will be out almost immediately.

Canadian Pacific Items.

A considerable force is engaged in the C.P.R.'s Winnipeg shops placing Westinghouse air brakes on the freight cars. About 2,000 cars have already been fitted with these brakes there.

The compound 10-wheeled type locomotive illustrated on page 121 one of 13 received by the C.P.R. in the latter part of last season from the Baldwin Locomotive Works. The general dimensions were given in our April issue, pg. 34.

The first of the 10 magnificent sleeping cars which are being built at the C.P.R. shops at Hochelaga is ready for service. These cars are exceptional in design & finish, & will be the handsomest & costliest cars on the Co.'s tracks. Each car will be finished in Louis XV. style, with Watteau decorations, richly upholstered, & most comfortably furnished. The natural woods used in the wood-work are especially fine. There will be no oil lamps, electric lighting taking their place. Two electric lights will be suspended from each berth rod bracket. In each seat, or compartment, a reading light will be attached to the side of the car, to be turned on or off at the wish of the occupant. The smoking compartments have been made 2½ ft. larger than the ordinary sleeping car smoking room. It has been the object of the management to build 10 little palaces on wheels that shall be unexcelled by anything on the continent in workmanship, & it has succeeded.

The extent of the Westinghouse Mfg. Co.'s business is well illustrated by the change in their advertisement in our current issue. When we first published their advertisement in March last the number of freight cars on which the Westinghouse air brake was in successful operation was 520,000; to-day it is in operation on 650,000 freight cars. At a recent stockholders' meeting of the Westinghouse Co. it was decided to increase the capital stock to \$11,000,000.

A London, Eng., cable says: "The North-Eastern Ry. has just completed a locomotive which, it is hoped, will soon gain the world's record. It is triple expansion, weighs 80 tons, & will drag a heavier load than any locomotive now on the rails in any country. At all events, that is what the builders claim. With an ordinary passenger train no doubt is felt that it will maintain a speed of 80 miles an hour for hours at a stretch. But this engineering marvel has not yet been seen outside the North-Eastern Ry.'s works at Gateshead.

OPERATING.

G.T.R. Air Brake System.

The employees of the G.T.R. are not only being instructed in the new code of signals, but the brakemen are getting special instructions on the air brake system. A special car is fitted out with a complete outfit, with an instructor in charge, who gives lectures several times each day & in the evening. In the car there is represented an air brake train of 20 cars. In explaining the manner in which the brake is operated from the engine & the coach, the instructor points out the meaning of various colors representing different pressure. The method of turning on the air in case of an emergency & otherwise is demonstrated in a clear & intelligible manner. In the engine department are located 2 pumps & 2 large main reservoirs, with a capacity of 4,000 cubic inches. The new system is known as the automatic, which will replace the old straight air brake. Formerly when a train broke in two the air brake was useless, but the new brake remedies that fault, as it applies immediately to the train with rapidity & force. The first pump compresses the air & is stored in the reservoir located on the engine in a convenient place. The air passes from there into the train pipe through the engineer's brake valve located in the cab of the engine, then from the train pipe through a triple valve into the auxiliary reservoir.

The train is then charged for a journey. The brakes are applied by a reduction of train line pressure. Then the triple piston & slide valves go to the applied position & allow the pressure to pass from the auxiliary reservoir to the brake cylinder, which applies the brake. To release the brakes an increase of train line pressure is applied. In the main reservoir on the engine there is more pressure than that carried in the train line. The pressure, which is called excess pressure, is derived by an automatic feature of the brake valve. When the brakes are released the engineer throws that excess pressure into his trainline,

**Rhodes,

of all descriptions.

Special Cars for Coal, Ore,
Lumber, &c., with Ball-
Bearing Wheels.

**Car Wheels, Castings, Forgings, &c.
AMHERST, NOVA SCOTIA.**

which forces the piston & slide valves to release their position, lets the air out of the brakes, & releases them. The signal line, which is used for the conveyance of signals from the train to the engineer, is operated by compressed air. This system replaces the old bell cord.

C.P.R., Ontario & Quebec Division.

In connection with the changes in the superintendencies, &c., west of Toronto, referred to on page 116, General-Superintendent Leonard has issued the following circulars, taking effect August 1. T. Williams, Superintendent, will have charge of the London & Windsor sections, & the Ingersoll & Guelph branches, with office at London; & A. Price, Superintendent, will have charge of the Owen Sound & Hamilton sections, also Orangeville, Elora, Teeswater & Wingham branches, & Toronto Terminals, with office at Toronto, & time checks will be issued by them accordingly under the usual regulations. J. G. Wilson is appointed Car Distributor west of Smith's Falls Junction; office at Toronto.

G. S. MacKinnon, Master Mechanic Ontario & Quebec Division, Toronto, has issued the following circular to engineers & firemen: "The position of travelling engineer is abolished, & the following are appointed road foremen of locomotives: John Scott West & North of Toronto; D. Linahen, between Toronto & Montreal; F. O'Dell, lines East of Montreal. Road foremen of locomotives shall supervise, under the Master Mechanic, the working of locomotives on line, taking cognizance of & reporting on their condition in every respect when turned out for & in service. They have authority to instruct in all such matters, & will report neglect of any description on the part of engineers or firemen. In serious cases they have authority to request locomotive foremen to suspend any engineer or fireman guilty of conduct warranting such action, in such a case advising the Master Mechanic by wire & sending full report by first train. Engineers being responsible for the conduct of their firemen will govern themselves accordingly. Road foremen of locomotives are especially charged to watch & direct the consumption of fuel & stores, the record of which, on their respective sections, will show the manner in which the same are handled. They are expected to be on the line night or day, when & whenever their services may be most needed, sending to the Master Mechanic report of every locomotive they ride on, or examine, on Form 1630. They will also carry out any special instructions given them by the Master Mechanic."

Operating Notes.

An acetylene gas plant has been installed on the government car Cumberland.

F. G. Hunter, who had charge of the brass finishing, tool & Westinghouse air brake work at Moncton shops, has been appointed Acting Locomotive Foreman, in place of G. Hall.

A new code of whistling signals has gone into effect on the Intercolonial. Formerly on approaching road crossings & stations 1 long continuous whistle was sounded; now 2 pretty long & 2 short ones are given.

The C.P.R. Operating Department, Western Division, has taken over from the Construction Department the portion of the Crow's Nest line between Lethbridge & Macleod, 39 miles. It now appears in the time bills as part of the Lethbridge section, which is 146 miles long from Dunmore Junction to Macleod, Alberta.

Early in July the section men on the Canada Atlantic struck. They were getting \$1, & had been trying to get \$1.10, but the management

refused to treat with them as a body. On striking they demanded \$1.25. A committee of drivers & conductors acted as intermediaries, & after being out a few days the men went back to work, on being advanced to \$1.10.

Two C.P.R. trains, an express & a freight, were brought to a standstill between Ottawa & Carleton Place, Ont., recently by caterpillars which covered the track, & being crushed, rendered the rails so slippery that locomotion was impossible. The caterpillars were of the tent variety & formed a column two miles long. Every vestige of foliage along their route was eaten up. The rails had to be swept & sanded before the trains could proceed.

F. W. Jones, Assistant to the Manager C.P.R. Western Lines, has issued the following circular to passenger trainmen: "Complaints have reached me of the distressing noise produced by the slamming of doors in passenger cars. There is a good deal of truth in this, as I have noticed that many trainmen seem to be always testing the strength of doors & seeing how hard they can slam them. A little care in the closing of doors will remove all cause for complaint."

The Montreal & Ottawa Ry., Vaudreuil to Ottawa, was transferred to the Operating Department of the Eastern Division July 20 & placed under the jurisdiction of Superintendent H. B. Spencer, at Ottawa. It is expected to commence through train service between Montreal & Ottawa on Aug. 1, & to make the trip of 111½ miles in 3 hours, with only 3 stops on the way, Vaudreuil, Vankleek Hill & Caledonia. There will likely be one fast train each way daily, & a local each way for general business.

The Train Dispatchers' Association of America convention was held in Montreal in June, the report showing a membership of 437. The G.T.R. gave the members a trip to Vaudreuil & Beloeil, & to inspect the Victoria Jubilee Bridge, & the C.P.R. took them on a special to Quebec. The following officers were elected:—President, H. B. Ware, B. & M.R. Ry., re-elected; Vice-President, F. N. Shultz, G.R. & I. Ry., re-elected; Secretary-Treasurer and Editor, J. F. Mackie, C.R.I. & P. Ry., re-elected. The next convention will be held at Milwaukee, Wis., June 3, 1899. E. Kettle, of the G.T.R., Detroit, Mich., was elected a member of the executive committee. None of the present officers or members of committees reside in Canada.

At Niagara Falls June 22, owing to a misunderstanding of the signals, G.T.R. train no. 12 collided with an engine of the Erie Railway & driver Geo. Jack, of the latter, was pinned between the locomotive & tender & killed. Jack is supposed to have taken the signals given by the G.T. signalman to stop, for those of his Co., which are American standard, to come ahead, & the sun being low, shone brightly in his eyes, preventing him from seeing the approaching train until too late. The jolt threw the throttle wide open, & the Erie engine dashed across the bridge at a high rate of speed, & tore through the city yards, until reaching the Tunnel District Jct., where the telegraph operator, having been advised of its coming, ditched it. This accident shows the emphatic necessity for uniform rules.

T. Tait, Manager C.P.R. Eastern Lines, has issued this circular:—"The following instructions must be carried out in releasing the Lindstrom brake on the wide vestibule cars in order to prevent brake lever striking & damaging wood work, & injuring the hands of party releasing brake. The lever should be held firmly with both hands, while small ratchet on floor is set free by steady pressure from foot. (This ratchet should never under any circumstances be kicked off.) The lever should then be pulled forward to release the dog, & then be allowed to go back slowly under

control until the ratchet strikes the cam & releases the brake. If lever is not held firmly & controlled, it will, as soon as ratchet is set free, & dog on lever released, fly back against wood work of vestibule with great force."

The time record on the Intercolonial was broken recently by special trains between Newcastle & Moncton & Moncton & St. John. F. C. Ayer, of Bangor, Me., a passenger on the Maritime express, desired to make connections with the Boston express, which leaves St. John at 16 30, & in order to do this he chartered a special from the Intercolonial. The special took Mr. Ayer in charge at Newcastle. The Maritime express reached there at 12 55, & the special, made up of engine 156 & 1st class car, left Newcastle at 12 58, & reached Moncton at 14 22, a distance of 78 miles. The special was detained 5 minutes at Chatham Jct. & 5 minutes at Rogersville. On arrival at Moncton Mr. Ayer was transferred to another special, engine no. 59, & left for St. John at 14 25. One stop was made at Sussex for water, & the special arrived at St. John at 16 12, the distance covered being 89 miles. Mr. Ayer, who paid in the vicinity of \$135 for the train, probably never had a faster ride for the same distance in his life.

Telephone Items.

The following were crowded out of pg. 140, where other matter relating to telephones will be found.

Letters patent of incorporation have been granted to the People's Telephone Co., of St. Thomas, to operate the general business of a Telephone Co., the incorporators being, A. E. Wallace, E. A. Smith, F. M. Griffin, S. Chant, W. H. Murch, D. McLarty, T. W. Duncombe, J. Campbell & A. McCrimmon, of St. Thomas, & H. C. Walters, & R. H. Evans, of Detroit, Mich. The capital stock is \$60,000.

The appeal of the Bell Telephone Co. v. the City of Hamilton has been allowed. The city wanted to tax the poles, wires & other equipments of the Co. at \$27,000, on the basis of its prospective value as a going concern. The Court of Appeal held that the poles, etc., could only be taxed for their abstract value as raw material, \$3,488.40. The Board of County Judges, to whom the Co. first appealed, settled the assessment in the Second Ward, where the Co.'s property chiefly is, at \$13,940, but the Court of Appeal has done \$10,000 better for the Co.

A very interesting telephone case has recently been decided in Sweden. A business man in Stockholm had entered into a commercial arrangement with a banker, the affair having been arranged through the telephone. As the business did not pay the profit expected, the dealer absolutely refused to come to settlement, & was sued by the banker. When the case appeared in court the dealer insisted that the bank had no written security from him, & no witnesses to prove the transaction. It was, however, shown that the telephone at the bank was provided with two receivers, & everything transpiring through the telephone could therefore be heard & legally proven. The dealer lost his case.

More than a year ago the Bell Telephone Co. applied to the Dominion Government for power to increase its rates. The application was heard by Mr. Blair, Sir Henri Joly, & some other members of the Cabinet. Nothing came of the matter & the interested parties have been waiting ever since for a decision. Recently, Sir Louis Davies & Messrs. Fielding, Fisher & Patterson were appointed a committee to consider the application, & they held a meeting in Ottawa, discussing the question at length, but it is said no decision has yet been arrived at.

CONSTRUCTION & BETTERMENT.

News of Various Lines.

Atlantic & Lake Superior.—This Co. is building an extension from its eastern terminus at New Carlisle, Que., to Paspebiac, 3 miles, for the purpose of reaching a deep water port, said to be open all the year round. It is said wharves, &c., will be built at Paspebiac. (Unofficial.)

Canadian Yukon. It was announced in our June issue, pg. 98, that Mackenzie & Mann had stopped work on this line & withdrawn their outfit, & it seemed to be generally recognized in British Columbia that the project had been abandoned, partly as a result of the threatened competition of the White Pass & Yukon Ry. via Skagway, & partly as the result of the failure to obtain in addition to the promised subsidy of \$1,600,000 from B.C. a large land grant from the Dominion Government.

However, Premier Turner, addressing his constituents shortly before the recent general election in B.C., said: "The Teslin Lake Railway project has not been abandoned. On the contrary, the contract has been signed for the construction of the road from Telegraph Creek to Teslin Lake, & the plant & materials partially removed from the North are being shipped back from Vancouver, so that active construction may begin at once. Ten or 20 miles will be completed this fall, & I may say that as a guarantee the Co. has made a deposit to build through to the Lake, taking its chance of securing the subsidy from the Dominion at some later day. In the meanwhile the wagon road is going through to relieve the congestion & provide work for the men on their way to the river, & we have accurate reports of the navigability of both Teslin Lake & the Hootalinqua. The Dominion engineer confirms Mr. Hamlin's verdict that one can get on boat or steamer at the lower end of Teslin Lake & go through without interruption to Dawson or anywhere below."

On the other hand, D. D. Mann, during his recent visit east, said there was no intention of going on with the railway at present.

A dispatch from Telegraph Creek, dated July 12, to the Globe, said: "Mackenzie & Mann's agent at Telegraph Creek received orders on June 27 to proceed at once with the work of making the Teslin trail road, & to widen the road bed to 4 ft. & put at least 150 men at work if necessary. The first 45 miles have already been completed, & the road is in excellent condition for that distance. It is wide enough for narrow-built vehicles, & all the miners are loud in their praises of this action, which is believed to be among the arrangements made with the contractors by the Provincial Government. Miners & others are now enabled to pass over the ground easily & take in their supplies on handcars. One hundred men are now at work. The extra ones will be put at work in the Murkey County, beginning 40 miles east of Teslin Lake, & they expect to finish the trail in 6 weeks at the furthest. The Mackenzie &

Mann men understand their business & are now pushing on the work in good shape. The weather is favorable for the prosecution of the work, & a much better feeling prevails now than was the case a few weeks ago. Having gone up the trail a considerable distance & personally examined it, I believe all that Mr. Robinson, Manager for Mackenzie & Mann, has stated concerning the whole undertaking."

East Richelieu Valley.—This line is being built from Iberville to St. Thomas, Mississquoi County, Que., 24 miles. It is said track-laying is going on & that connection will be made with the Canada Atlantic Ry. shortly. (Unofficial.)

Lake Manitoba Ry. & Canal Co. Work on the extension of this line from Sifton Jct., Man., towards the Saskatchewan has been somewhat delayed by unusually wet weather, but steady progress is being made.

Midland of Nova Scotia.—Work is in progress on this line, which is to run from Truro to Windsor. Z. J. Fowler is Chief Engineer. W. G. Reid, of Montreal, has the contract for the whole line & has sub-let it to Fitzpatrick, Bros., of New Glasgow. M. J. O'Brien, of Renfrew, has the 1st 20 miles of grading from Windsor to Riverside Corner or vicinity. R. L. & D. R. McDonald, of Pugwash, have the contract for the masonry of the St. Croix River bridge. Truro has voted \$30,000 bonus towards the line on condition that it be built via Clifton. The Co. has decided to issue mortgage bonds. (Unofficial.)

Montford Colonization.—This line, which runs from Montford Jct. on the St. Jerome branch of the C.P.R. to Arundel, Que., 33 miles, is being changed from 3 ft. to standard gauge. (Unofficial.)

Nelson & Bedlington.—This line & connections, which will be built by the Great Northern (U.S.) will run from the G.N.R. at Bonner's Ferry, Idaho, through the valley of Kootenay River to Kuskanook, the point at which the C.P.R. Crow's Nest Pass line strikes Kootenay Lake. Tenders have been invited & it is expected construction will be commenced at an early date. There will be tributary to the line a mining district nearly all the way. The Kootenay Valley lands are well adapted to fruit raising, which has been commenced to quite an extent. N. D. Miller is Chief Engineer.

Newfoundland Northern & Western.—This line having been completed, the 1st through train left St. John's, the eastern terminus, June 29, arriving at the western terminus, Port Aux Basques, 548 miles, in 24 hours. At Port Aux Basques the ferry steamer Bruce, with a speed of 17 knots, takes passengers aboard for Sydney, C.B., landing there in 6 hours & connecting with the railway systems of Canada. This service gives Newfoundland a tri-weekly connection with Canada. Track has been laid for 25 miles on the extensions from Brigus, Nfld., to Tilton, & from Harbor Grace to Carbonær. The Co. is making

further extensions from Sandy River to Coalville, from St John's to Dunville, & to Burnt Bay.

Northern Pacific.—Work on the branch from Belmont to Hartney, Man., is being pushed as rapidly as possible, though it has been somewhat delayed by wet weather. The western terminus has not yet been definitely decided on. (See June issue, pg. 99.)

Ottawa & New York.—The following statement of the progress of work was furnished us July 4.—The road between Cornwall & Ottawa is ballasted to within 4 miles of the Canada Atlantic Jct. Grading between C. A. Jct. & the connection with the C.P.R.'s Montreal & Ottawa branch at Rideau River will be completed this week. Grading is complete between Cornwall & Moira, N.Y., except the crossing of the O. & L. C. at Moira, & the erection of the 2 steel bridges at St. Regis & Raquet River. Track laying will begin at Helena this week. On the St. Lawrence Bridge the masonry in the south channel is all completed, & one span erected. On the north channel, the metal work of the north viaduct & the draw span is completed, & the south viaduct is now going up. The foundations for the 2 last piers in this channel are above water, & there is nothing now to delay the erection of metal to a finish. (Official.)

Pembroke Southern.—This line, now under construction from Pembroke, Ont., southwesterly to Golden Lake on the Ottawa, Arnprior & Parry Sound Ry., is 21 miles in length. The grading has been about completed & track is being laid. The contractors are Russell, Poulin & Co., of Pembroke, who practically control the road, which the town of Pembroke has bonused with a view of getting more direct connection with Toronto. The completion of a link between Golden Lake & the eastern terminus of the Irondale, Bancroft & Ottawa line would give almost direct communication between Pembroke & Toronto. The Pembroke Southern will open up a very fine agricultural country. (Official.)

Restigouche & Western.—This Co. was incorporated by the New Brunswick Legislature in 1897 to construct a line from Campbellton on the I.C.R. to the St. John River, at or near Grand Falls. Construction of the first 20 miles has been commenced by Malcolm & Ross, contractors, who will own the line. It will be about 100 miles long, 70 miles of which will be through heavily timbered country. The projectors consider they have good prospects in making connections with at least 5 different roads, the I.C.R., C.P.R., Atlantic & Lake Superior, Temiscouta & Bangor, & Aroostook C. L. B. Miles is Chief Engineer. (Official.)

Vancouver, Victoria & Eastern.—In addition to what we stated in our June issue, pg. 100, it may be said that, on June 17, the B.C. Government passed an Order-in-Council granting a subsidy of \$4,000 a mile to this Co., the leading spirits in which are Mackenzie & Mann. The subsidy covers the line from Vancouver by way of New Westminster to the south side of the Fraser River, where a

junction will be formed with the line running westerly to English Bluff, or thereabouts, & thence easterly through Surrey, Langley, Matsqui, Chilliwack, & across the Coast Mountain range, through the Similkameen country, to Penticton, at the foot of Okanagan Lake, from which point a start is to be made at once on the line eastward to the Boundary Creek district to meet the line being built west from Robson by the C.P.R. Engineers are to be placed at once upon the route from Abbotsford to Chilliwack, & the line will be permanently located, & this done, work on construction will be begun. From Penticton westward, engineers have been in the field making a preliminary survey of the route, & it is believed there will be no insurmountable difficulties encountered excepting the Coast Mountain Range, which extends from Chilliwack to Hope. The building of the line will be undertaken in sections; the first will be known as the eastern section, & will extend from Penticton to Boundary, the distance being in the vicinity of 100 miles; the next, that from Abbotsford to Chilliwack, will possibly be known at present as the central, the distance being about 35 miles. This will be followed by the laying out of a road from Vancouver & the coast to Penticton, & which of course will include the Chilliwack division. (Unofficial.)

White Pass & Yukon.—Work is said to be progressing very favorably on this line, some 1,000 men being employed. It is intended to have the 1st 20 miles of the road, which will take it from Skaguay to the summit, completed by September. The statement referred to in our June issue, pg. 98, that the charter of the British Yukon Ry. Co. had been secured by the Pacific & Arctic Ry. & Navigation Co., of West Virginia, is incorrect. The latter Co. was merely formed for the construction of the portion of the line which is in territory now in the possession of the U. S. It is merely an auxiliary company formed for the purpose of assisting in the construction of the railway. The construction of the portion of the line to be built in Canada will be undertaken by a company formed in England, & the whole line will be built by British capital. Close Bros. & Co., of London, Eng., & Chicago, are the financial agents of the Co., & S. H. Graves, of that firm, is the principal representative of the Co. on this side of the Atlantic. The engineer in charge is Mr. Hawkins. (Official.)

Winnipeg & Southeastern.—It was intended to build 80 miles southeasterly from Winnipeg to Whitemouth Lake this season, but it is now said only 40 or 45 miles will be completed, there having been considerable delays owing to wet weather. Arrangements have been made with the C.P.R. for temporary terminals in St. Boniface, where construction material, &c., will be received. Engineer Bruce is now making a survey around the southern end of Lake of the Woods to Rainy River. Another line will be run across the Narrows of the Lake of the Woods entirely through Canadian territory & on the result of these surveys the Manitoba Government will decide which route to adopt. See June issue, pg. 100. (Unofficial.)

Canadian Government System.

A large amount of ballasting has been done on all parts of the Intercolonial Division this season. About 3,000 tons of 67 lbs. rails have been laid, replacing 57 lbs., between Truro & Stellarton. All the main line from Quebec to Halifax & St. John is now laid with 67 lbs. steel. Some 6 bridges between Moncton & Truro are to be replaced this season & tenders have been asked for the steel structures.

The construction of the deep water terminus at North Sidney, referred to in our June issue, pg. 99, is well under way & is expected to be completed in September.

The station at Moncton, described in our June issue, pg. 99, has been completed.

At Halifax a wharf 600x150 ft., with a 150 ft. dock on each side, is to be constructed. A large freight shed will be built on the wharf with 2 tracks inside & 2 out. The wharf will be built of creosoted piles & Georgia pine timber. Money has also been voted for elevators at Halifax & St. John, but contracts have not yet been let.

On the Prince Edward Island Division a mile of track is being built between Colville & North Wiltshire, which will save $\frac{1}{2}$ of a mile in distance, reduce the curvature from $9\frac{1}{2}^{\circ}$ to 4° & save about 2 miles of snow fencing. Part of the work is across a ravine, necessitating some 100,000 yards of earth work. The cost altogether will be between \$20,000 & \$25,000. Several other bad curves will also be taken out this season & the North Wiltshire station-yard will be improved.

The steel rails for the Intercolonial & P.E.I. Divisions, advertisement inviting tenders for which appeared in our June issue, are to be delivered in June, 1899, instead of April, 1899, as originally intended. For the Intercolonial there will be 5,000 tons of 2,240 lbs. of 80 lbs. rails with 300 pairs of angle fish plates, & 5,000 bolts & nuts to be delivered at St. John, N.B. For the P.E.I. Division there will be 1,000 tons of 2,240 lbs. of 50 lbs. rails without fastenings, to be delivered at Summerside. (Official.)

Grand Trunk Work.

A daily press telegram from Montreal July 20 stated that the management announced that extensive terminal facilities were to be provided at Sarnia & Port Huron, & with that object in view architects were figuring on the cost of round-house & machine shops for these places, the estimated value of which would be \$70,000 each. In reply to an enquiry from Mayor Johnston, of Sarnia, General-Manager Hays wired that the statement was incorrect.

The Co. will build a brick round-house 331 ft. diameter, with flat gravelled roof, at Sarnia Tunnel. (Official.)

Work on the Victoria Jubilee Bridge at Montreal is progressing very satisfactorily, the erection of 24 spans being almost finished, & it is expected that the new structure will be brought into service in the autumn. (Official.)

The Co. is putting in full interlocking & derailling apparatus at the crossing of its lines by the C.P.R. at St. John's & St. Constant, Que. (Official.)

It is said that the bridge near London, Ont., is to be enlarged & double-tracked. (Unofficial.)

The laying of the 80 lbs. rails on the southern division between Windsor & Niagara Falls is being gone on with.

There is a hitch between the Co. & the Montreal City Council in reference to the site for general offices. The City Finance Committee provided in the agreement that none but local labor should be employed in the construction of the buildings, that if the Co. should ever remove from the site it should revert to the city, & that if the Legislature would not permit the city to convey the land with a clear title to the Co. the latter should make good to the city any loss from rental or otherwise thus occasioned. The Co. will not accept these conditions, & the matter is still unsettled.

W. J. Singleton has returned to Montreal from his leave of absence & has resumed his duties as Superintendent of C.P.R. terminals there.

The underground railway in London, Eng. was the most expensive to construct in the world. Some parts of it cost as much as 1,000 guineas per yard or £30 for every inch.

Canadian Pacific Work.

Montreal Terminals.—The freight yard facilities at the Montreal terminals—Hochelaga, Quebec Gate, Mile End, & Outremont are being largely extended & improved. The Hochelaga yard is being remodelled & its capacity increased by about 4 miles of additional tracks. At Mile End a new yard is being built, & about a mile of track is being laid. At Quebec Gate the freight accommodation is being increased to the extent of about a mile of track. At Outremont an extension of the yard is being graded, & about 2 miles of track are being laid. (Official.)

Tracks are being laid into the Place Viger passenger station, Montreal. The combined station & hotel are nearing completion & are expected to be opened early in August. (Official.)

A double track is being laid between Outremont & Montreal Jct., 7 miles, & will be completed this month, forming a complete double track between Windsor Street & Place Viger station, $15\frac{1}{2}$ miles, & making almost a belt line round the city of Montreal. (Official.)

A passenger station is being built at Outremont. (Official.)

The Montreal & Ottawa Ry., which was fully described in our May issue, pg. 64, is about completed, & is expected to be opened for traffic Aug. 1. (Official.)

Eastern Division.—The reballasting & improving of the main line between Carleton Jct. & Chalk River is well advanced, $\frac{3}{4}$ of the distance being done. The ballasting, etc., west of Chalk River to Fort William & Sault Ste. Marie is well under way. On the main line 80 miles are being laid with 73 lbs. steel, replacing 60 lbs. Of this 50 miles is on the Lake Superior section, the balance east. A number of wooden structures are being replaced by permanent work & open culverts are being replaced by permanent culverts & filling. Some 50 will be completed this season. (Official.)

Winnipeg Station. Plans have been prepared for an extension at the east end of the building to accommodate the express office, so that the space now occupied by the Dominion Express Co. could be utilized for a private ladies' waiting room. It is not likely the work will be gone on with this season. (Official.)

Stonewall Branch.—This line is to be extended this season from Stonewall to Foxton, Man., some 15 miles. (Official.)

Branch from Hartney.—It was stated in our June issue, pg. 97, that the Co. would likely build a branch of about 20 miles from Hartney east, which would for that distance parallel the Belmont-Hartney branch now building by the Northern Pacific. Surveys have been made, but nothing definite can be learned as to construction. (Unofficial.)

Pipestone Branch.—This line, which runs from Monteith Jct., on the Souris section, to Weston, 31 miles, is to be extended west this year. (Official.) It is said this year's extension will be 30 miles, & that 50 miles more, extending to the Moose Mountain country, will be built next year. (Unofficial.)

Crow's Nest Line.—Up to July 29, track had been laid 82 miles west from Lethbridge to the crossing of the Kootenay River. For the balance of the distance 80% of the work has been completed, & the balance will be done by the middle of September. For the present connection between Kuskanook & Nelson will be carried on by means of a steam car ferry. (Official.)

There is said to be no foundation for the report that the Co. does not intend to complete the portion of the line between the southern end of Kootenay Lake & Nelson. (Unofficial.)

R. C. Clute, barrister, of St. Catharines,

One, who has been appointed a Commissioner by the Dominion Government, is investigating the death of the two Nova Scotians, Fraser & Macdonald, who died of diphtheria in a Crow's Nest construction camp last winter.

Whitewater Extension.—A party in charge of H. B. Walkem, C.E., is making a final location of this line in the Slocan district. It is said construction will commence as soon as the survey is completed. (Unofficial.)

Western Lines Steel Bridges.—No less than 14 steel bridges are being built on the lines west of Fort William this season, all but one of them being on the Pacific Division. They are as follows, the figures before each giving the mileage from Vancouver:

119. White's Creek, 2 steel spans, 100 ft. each, deck, replacing trestle.
167. A 130 ft. steel truss deck, replacing 150 ft. wooden truss.
179. Nicola River, 150 ft. steel truss thro' replacing 2 wooden spans 80 ft. each.
335. Sicamoose Narrows, steel swing replacing wooden swing.
407. 11th crossing Illecillewaet, 100 ft steel truss deck replacing 100 ft. wooden span.
410. 8th crossing Illecillewaet, 100 ft. steel truss deck, replacing 100 ft. wooden span.
410. 7th crossing Illecillewaet, 100 ft. steel truss thro', replacing 100 ft. wooden span.
414. 5th crossing Illecillewaet, 100 ft. steel truss deck, replacing 100 ft. wooden span.
419. 2nd crossing Illecillewaet, 80 ft. steel truss deck, replacing 70 ft. wooden span.
429. Cascade Creek, 2 steel trusses 60 ft., 1 thro' & 1 deck, replacing trestle.
438. Mountain Creek, 1 steel truss, 125 ft., on steel towers, replacing wooden span 150 ft.
457. 1st crossing Columbia, 2 steel trusses, 125 ft. each, replacing 2 wooden spans of 150 ft. each.
400. Moose Creek, 1 steel truss, 60 ft. thro', replacing trestle.

On the Western Division, at the 3rd crossing of Devil's Head Creek 1 steel truss 60 ft. thro' is replacing a trestle.

At mileage 163 from Vancouver, an 80 ft. stone arch is replacing a 125 ft. wooden truss. (Official.)

Columbia & Western.—On July 15 a contract was let to Winters, Parsons & Boomer, for standardizing the gauge of the 15 miles of this line between Trail & Leroi, 2 miles beyond Rossland. This firm built the standard gauge section of the line between Trail & Robson, when it was under Mr. Heinze's control, & have lately had a heavy contract on the Crow's Nest line. Their outfit has been brought in from Montana, & it is expected the work will be completed by Oct. 20. The steel will be laid by the C.P.R. Co., but W. P. & B. will furnish the ties. It is said the whole work will cost about \$120,000. F. P. Gutelius, Superintendent of the line under the Heinze regime, is in charge of the work for the C.P.R. Much of the line will be entirely reconstructed, to get a better location. The proposal to do away with the Tiger switchback by the construction of bridges & loops has been abandoned, although the grade will be made much easier. (Unofficial.)

In our June no., pg. 97, we announced the letting of a contract for the construction of 100 miles of line by the C.P.R. under the Columbia & Western charter, from the south end of Lower Arrow Lake to Midway, in the Boundary Creek country. The firm of contractors is known as Mann, Foley Bros. & Larsen. W. Mackenzie's name does not appear, but it is believed he is interested in it with D. D. Mann. W. F. Tye is Chief Engineer of Construction & is in control of the whole work. The new line starts from Robson, the present northerly terminus of the C. & W. R., but the construction headquarters are a few miles west, at Brooklyn. From

Robson the 1st section of the line will run along Dog Creek, through the McRae Pass to Christina Lake & on to Cascade City, a distance of 38 miles. The tote road to Cascade City is well under way. (Unofficial.)

Canadian Freight Association.

At the regular meeting at Montreal, July 7, there were present: G. M. Bosworth, J. N. Sutherland, E. Tiffin, W. B. Bulling, Jr., W. A. Kiltermaster, C.P.R. J. W. Loud, J. J. Cunningham, F. J. Watson, S. Hopkins, J. Pullen, J. H. Hanna, M. C. Sturtevant, J. E. Dalrymple, G.T.R. J. J. Wallace, J. Hardwell, Intercolonial. C. J. Smith, W. P. Hinton, Canada Atlantic. W. Macmillan, Michigan Central. W. Woollett, Lake Erie & Detroit River. F. H. Brown, Central Vermont. A. Lalond, Boston & Maine. H. Upton, United Counties. W. C. McCullough, Delaware & Hudson. A. C. Lytle, Orford Mountain. F. Conway, Kingston & Pembroke. G. Collins, Central Ontario. F. F. Backus, Toronto, Hamilton & Buffalo. G. W. Hardisty, Northern Pacific. D. DeCooper, Lehigh Valley. J. D. Seeley, Seeley Packet Line. J. Earls, Sec.-Treas.

President C. J. Smith presided. The following were elected active members: T. Jenkins, Toronto, of Tilsonburg, Lake Erie & Pacific Ry.; C. Cameron, Collingwood, of Great Northern Transit Co.; M. Burton, Collingwood, of North Shore Navigation Co.; C. W. Graves, Toronto, of Great Northern Ry. (vice H. McMicken).

The Classification Committee reported a number of additions & amendments, which were approved on the understanding that those which could be promulgated as "Rulings of the Committee" would be printed & distributed as soon as possible. The other items, together with all amendments & additions to date, to be embodied in a new book & issued as effective on Jan. 1, 1899, if previously approved by the Governor-General-in-Council.

It was decided that the minimum weight of articles carried under 5th & 6th class carload rates in the Canadian Joint Freight Classification be established at 24,000 lbs., & the Classification Committee was instructed to adopt this arrangement at the earliest possible time. The Committee was also instructed to make an exception in respect to articles which it may be considered should not be established on the basis of 24,000 lbs., & to note such exceptions in the classification.

The Weighing & Inspection Bureau report for March, April & May showed these gains, as per inspector's correction in weight: 1,517,649 lbs., revenue gained, \$3,595.60; in classification revenue gained \$4,579.32; live stock in lbs. 5, 779,200, revenue gained, \$11,048.26; total gain, \$19,223.18. The live stock weighed at Montreal was: G.T.R. 1,314 cars, average weight 22,882 lbs; C.P.R. 455; cars, average weight 22,687 lbs. In accordance with previous authority J. Brayley has been appointed inspec-

tor at St. John, N.B., & the Committee recommended that in view of the favorable results already apparent he be continued for the present, subject to a month's notice, & that in future he alternate between Halifax & St. John.

The cash account showed \$201.47 to the credit of the Association.

The car service report for quarter ended May 31 was as follows:—cars reported inwards & outwards, 41,539; cars on which car service accrued 868; collections, 2,499.

The report of cars released & time occupied after arrival for the same period was, loaded cars reported inward, 35,972. Released after arrival, 3 days, 18,422; 4 days, 6,919, 5 days, 4,436; 6 days, 2,341; 7 days & over, 3,854. The committee reported that the Manager's reports & these statistics, also reports from Inspector Perry, indicate an improvement in the handling of cars since this department was organized. The cars held under load 7 days & over appears largely to be in consequence of want of sufficient track delivery room at large places, where frequently the volume of business is greater than some of the railways can promptly provide for. The question of the railways concerned increasing their accommodation at such points is earnestly recommended to the favorable consideration of the general managers & traffic officers of the roads affected, so that the serious delays to cars from this cause may be largely avoided or entirely removed. J. B. Morford, per W. MacMillan, M. C. Sturtevant, G. S. Cantlin, W. P. Hinton, A. White, per J. E. Dalrymple, committee. John Earls, Chairman.

The report on car service claims for the same quarter showed that 172 were presented, involving \$1,763.25, of which \$992.50 was refunded, \$770.75 being retained.

After consideration of a letter from the National Board of Fire Underwriters, New York, it was resolved that, in the opinion of this Association, all packages of Carbide of Calcium should bear a conspicuous label in large type, reading, "Carbide of Calcium. Dangerous if not kept dry," & that the Secretary communicate with shippers of this article requesting them to take immediate action to comply with this resolution.

It was resolved that at any station at which the railway companies undertake to perform a cartage service the additional charge for cartage will be, on 1st, 2nd, 3rd & 4th class freight 1 1/4 c. per 100 lbs., & on 5th class freight 1 c. per 100 lbs., but on no single consignment shall the charge for cartage be less than 10c. This to be effective on & after Aug. 1, 1898.

Attention having been called to THE RAILWAY & SHIPPING WORLD, published in Toronto, it was resolved that THE RAILWAY & SHIPPING WORLD, the only publication in Canada exclusively devoted to the interests of transportation, will be recognized as the organ of this Association.

The question of the advisability of having all forms of contracts with shippers made uniform, printed in the classification & approved by the

HEAD OFFICE:

26 Wellington St., Ottawa, Ont.

Governor-in-Council, was discussed, & left over for further consideration. In the meantime the Secretary was requested to communicate with the Canadian roads, to obtain copies of the forms now in use.

The question of the adoption of a joint notice of reminder to consignees when cars were not unloaded promptly was considered, & it was the sense of the meeting that such notices, if used, should be issued by each road concerned, if thought advisable, & not issued as joint notices by two or more roads.

Liability to a Free Passenger.

In the High Court of Justice of Ontario, Trial Court, at Toronto, July 23, Justice Rose gave judgment in *Bicknell vs. G.T.R.*, an action tried with a jury at Napanee, brought by R. F. Bicknell, a cattle dealer, to recover \$30,000 damages for injuries received by him while travelling on a freight train from Napanee to Montreal by reason of a collision. The defendant admitted that the plaintiff was rightfully where he was at the time of the accident, & that the injury to him was caused by negligence of its servants, but alleged that the plaintiff was being carried in pursuance of the terms of his contract with the Bay of Quinte Ry. & Navigation Co., & that the defendant was entitled to the benefit of such terms & was exonerated from liability. The contract between the plaintiff & the Bay of Quinte Co. was for the carriage of 23 cattle from Ernsville station on the Bay of Quinte line to Montreal, the greater part of the transit being by defendant's line. The plaintiff accompanied the cattle for the purpose of superintending their loading & unloading & conveyance. By the 17th clause of the agreement between the plaintiff and the Bay of Quinte Co. it was provided that "when free passes are given to persons in charge of animals it is only on the express condition that the Railway Co. is not responsible for any negligence, default or misconduct of any kind on the part of the Co. or its servants or of any other person or persons whomsoever causing or tending to cause the death, injury or detention of any person or persons travelling upon any such free passes, & whether such free passes are used in travelling on any regular passenger train or any other train whatsoever, the person using any such pass takes all risks of every kind, no matter how caused." Held, that this clause was by its terms expressly confined to the agreement between the plaintiff & the Co. *Grand Trunk R.W. Co. v. McMillan*, 16 S.C.R., 143, followed. *Hall v. Northeastern R. W. Co.*, L.R. 10, Q. B. 437, distinguished. Nor upon the evidence did the plaintiff authorize the Bay of Quinte Co. to make any arrangement with defendant which would free it from liability. It was not necessary for the plaintiff to prove a contract; the onus was on the defendant to prove exoneration. Judgment for the plaintiff for \$5,000, the amount found by the jury, with costs of action. Entry of judgment stayed for 30 days. Aylesworth, Q.C., for plaintiff. Osler, Q.C., for defendant.

Advance in Transcontinental Rates.

Transcontinental rates went up about 10% on June 25, as the result of a decision arrived at between the interested lines, including the G.T.R. & C.P.R. These rates have been in an unsatisfactory condition for some time & the decision to advance them was reached by mutual consent. The tariff is a bulky affair & of the usual intricate nature. It supersedes tariff no. 1b, of Dec. 15, 1897, & states that through rates will be arrived at by the addition of arbitraries as authorized by tariff F.T. 49 to the rates from Chicago to Seattle.

In order to give an idea of the character of the increase of rates it may be stated that all

are based on the Chicago rate to the Pacific, the difference between here & that point being added. As an instance of the increase it may be stated that the freight on nails will hereafter be 75c. per 100 lbs., instead of 66. Bar iron will be the same. That rate refers to commodities. The class rate is somewhat different. In the Canadian Joint Classification the numbers run from 1 to 10, & in the Western Classification it runs from 1 to 5 & then from A to E, or 6 to 10; In class 1 the increase is from \$2.40 to \$3.00 per 100 lbs.; class 2, from \$2.15 to \$2.60; class 3, from \$2.00 to \$2.20; class 4, from \$1.70 to \$1.90; & class 7 from \$1.10 to \$1.25.

These new rates do not apply to any intermediate points, being only applicable to points on the Pacific Coast.

Freight Notes.

Cold storage cars have been provided on the Prince Edward Island Ry. to accommodate the export produce trade.

Both the G.T.R. & C.P.R. have made special arrangements for refrigerator car service from points in Ontario & Quebec to Montreal to carry dairy products for export to Great Britain.

The Dominion Government is paying the Alaska Transportation Co. \$300 a ton for carrying the Yukon military expedition freight from Seattle, Wash., & Victoria, B.C., to Fort Selkirk, Yukon.

Manager Whyte, of the C.P.R. western lines, has issued the following circular:—"Commencing with this year's crop the C.P.R. Co. will furnish cars to producers of grain to be loaded direct from waggon or teams, provided there be no unreasonable delay about loading the cars."

The Southern Pacific recently announced that it would put into effect a tariff of 50c. per 100 lbs., car load lots, for canned salmon from San Francisco to New York, Boston & other Atlantic ports, the previous rate being 75c. At a meeting of the northern transcontinental lines, including the C.P.R., Great Northern & Oregon Ry. & Navigation Co., at Portland, Ore., a lake & rail rate of 65c. was agreed on.

Circulars giving the new joint east-bound & freight tariffs on lumber, ashes, bran & mill feed, etc., have been issued. The tariff affects traffic for the Eastern States only. The rate sheet shows a special rate made on lumber, other than pine or hemlock, of 23¼c. per 100 lbs., this rate being made in competition with the lake & rail route via Buffalo. The rate does not apply to intermediate stations.

The boats on the lakes do not appear to be making much money, judging from the low rates at which they are carrying wheat. This grain is being taken from Fort William to Prescott for 2½c. a bushel, the lowest rate ever known. Sales of Manitoba wheat are reported at Prescott at 96c. The Fort William price is 95c. From Prescott to Montreal the water rate is 2c., making 4½c. from Fort William to Montreal.

The freight traffic departments of the G.T. & C.P. Rys. have received word of a cutting in grain rates which had been going on among the roads, & in which, of course, the Canadian lines have to participate at the end, & that through the efforts of the Joint Traffic Association a new basis of rates has been made. The new tariff reduces the rates from Chicago to New York, a haul always used in the creation of standard rates, from 20 to 18 cents per 100 lbs. The rate from Chicago to Montreal, the latter being an export point, is also affected, being made 16c., or 2c. lower than the rate to New York.

Under the Act granting a subsidy to the C.P.R. for the Crow's Nest Line, provision was made for the reduction of certain freight

rates in the West. Some of these went into effect at the beginning of the year, & it was provided that there should be a reduction in the rates on grain & flour from all points on the Co.'s lines or connections west of Fort William to Fort William & Port Arthur & all points east, of 3c. per 100 lbs., 1 1-2c. on or before Sept. 1, 1898, & 1 1-2c. on or before Sept. 1, 1899. The Co. recently decided to put the 1st reduction in effect on Aug. 1, a month earlier than it was required to.

The C.P.R.'s transportation facilities have become so complete in the Kootenay district of B.C., that there was recently witnessed the arrival of Smelter hill of through cars from Toronto. The freight goes to Arrowhead, is placed on a barge, & is taken to Robson, where it is run on to the C. & W. Ry. In view of this convenience the C.P.R. has made the C. & W. a part of its system with a general reduction of freight rates to Rossland & common points. The idea in this reduction is to place the C. & W. on the same basis as the other portions of the C.P.R. in the district. Heretofore it has been operated as a separate & distinct system.

A correspondent of the New York Sun gives this doleful account of Canadian railway competition: "Canadian railways earned for the year ended June 30, 1898, not less than \$20,000,000 in carrying State-to-State traffic. Our own roads are hauling east and west empty cars constantly, & therefore could carry this traffic with very little additional cost. In other words, the traffic earnings which are now diverted from U.S. lines by Canadian roads would be nearly all profit to U.S. roads. Within 25 years Canadian railways, if the bonding regulations continue in force as at present, will divert \$50,000,000 of traffic earnings from our own roads annually. This represents interest at 4% on \$1,250,000,000. Why should the U.S. contribute this enormous sum to sustain railways under an alien flag?" The answer is easy. It would cost the forwarders of freight probably ten millions a year more to ship around by U.S. railways. The Canadian routes to the sea are the shortest & cheapest.—Globe.

Interstate Commerce Complaint.

The Michigan & Ohio Car Ferry Co. has filed a complaint before the Interstate Commerce Commission against the Michigan Central Ry., in which it alleges that it is a common carrier engaged in the transportation of railway cars & their contents between Sandusky, O., & Detroit, Mich.; that at Sandusky it connects with the Baltimore & Ohio Ry., & under contract with that Co., forms part of a through line between Detroit & all points in Ohio, Pennsylvania, Indiana & other States reached by the Baltimore & Ohio Ry. & its connections; that it receives from the Baltimore & Ohio at Sandusky inter-State traffic for transportation to Detroit, there to be delivered to consignees or to the Grand Trunk Ry. System or other railways for further carriage to destination points beyond Detroit; that freight traffic from Baltimore & Ohio points to Detroit, part of which is now transported by the complaining Ferry Co., is also forwarded via Toledo over the Lake Shore & Michigan Southern Ry. & other lines, including the Michigan Central Ry. from Toledo; that the established switching charge made by the Michigan Central for delivery to industries & private sidings on its line in & around Detroit is \$2 a car, with free return of the empty car to the connecting company from which the loaded car had been received, & that this would be the switching charge exacted by the Michigan Central on a carload of freight originating at a point on the Baltimore & Ohio Ry., & consigned to an industry on the defendant carrier's line in Detroit, pro-

vided such carload was forwarded all rail; that defendant also performs such switching service for local industries or manufacturers in the city of Detroit at the same charge of \$2 a car; that the defendant carrier has refused to accept from the complainant the established switching charge of \$2 a car for switching cars containing inter-State traffic transported by the complainant & turned over to it for delivery to industries on its line, & has demanded & exacted from complainant \$5 a car for this service; that in making such discrimination the defendant, the Michigan Central Ry., directly violates the provisions of sections 1, 2 & 3 of the Act to Regulate Commerce.

NEWS OF THE LINES.

Atlantic & Lake Superior.—Negotiations are pending for the purchase by this Co. of the Montreal & Sorel, or South Shore Ry., which runs from St. Lambert on the G.T.R., 6½ miles from Montreal, to Sorel, 45 miles. It is said the Government refused to subsidize the A. & L. S.'s projected independent line between Montreal & Sorel, & that without the Montreal & Sorel line could be acquired the project of a continuous system between Gaspe & Montreal would have to be abandoned. On the other hand, an official of the A. & L. S. states that unless the M. & S. line is purchased, the A. & L. S. will build from Longueuil to Levis, without going round by Sorel. Of course it would be an advantage to the A. & L. S. to get 45 miles of completed line which could be utilized immediately, although it would make a longer route. It is stated on excellent authority that the question as to price is the only remaining one to be settled. The A. & L. S. is said to have made an offer of \$350,000, while the M. & S. people ask \$400,000. It is also said that if the present deal can be consummated, the capital to push the whole of the Atlantic & Lake Superior scheme to conclusion can be obtained in England, & one of the immediate results will be the beginning of work on the long projected Longueuil Bridge across the St. Lawrence between Longueuil & Montreal. (Unofficial.)

Canada Eastern.—A report was recently sent out from Montreal to the effect that the visit of the Minister of Railways, Mr. Blair, to England was in connection with the Canada Eastern Ry., & his desire to acquire it as part of the Canadian Government system, it being added that the line is largely in the hands of Farnworth & Jardine, of Liverpool, & that the Minister wanted to get an option on the road at \$1,500,000.

This line runs from the C.P.R. at Fredericton to Loggieville, N.B., 125 miles, crossing the Intercolonial at Chatham Jct., 17 miles from Loggieville. At the last Dominion session an Act was passed authorizing the Co. to convey its railway to the Alex. Gibson Ry. & Mfg. Co. The share capital is \$1,000,000 fully paid up, & the bonded debt \$1,854,754.60. It received the following aid: Dominion Government, \$366,839.04; New Brunswick Government, \$400,000; municipal aid, \$20,000; & capital from other sources, \$320,525.21. Its total capital subscribed is \$3,961,539.65 & paid-up \$2,087,365.05; floating debt \$13,534.19, total cost of railway & rolling stock \$2,087,365.05. These figures are taken from the returns made June 30, 1897. Its gross earnings for the year ended June 30, 1897, were \$127,735.48, net earnings \$44,541.14.

Cobourg, Northumberland & Peterboro'—Referring to the information given in our June issue, pg. 100, respecting this line. The contractor is F. A. Bowen, of Cobourg, not C. H. Bower, as there stated. We are informed that the issue of 1st mortgage debentures, of which we gave particulars, has been successful. (Official.)

Manitoba and Northwestern.—Last winter it was announced that a majority of the bonds of this line, which were held in Great Britain, had been sold through brokers to persons whose names were withheld. It is now said that the sale was made to a syndicate, of which E. B. Osler, M.P., of Toronto, a director of the C.P.R., is the principal member, & that this syndicate has since secured the interest of the Allan family, of Montreal, in the line, thus getting complete control of the property. It is impossible at present to get any information as to the intentions of the purchasers, but it is surmised they will either sell or lease the line to the C.P.R., & that it will be operated as a branch of that system. For several years past it has been in the hands of receivers, & has been the cause of a large amount of litigation. The coupons on the bonds due June, 1893, & since, have not been met. Of the total of £540,000 of the bonds, about £490,000 was deposited with a committee, who, early in 1898, as above mentioned, negotiated a sale of the certificates issued against bonds, & practically all the certificates have come in under this agreement. The certificate holders have received 50% of the nominal amount of their holdings, & are to receive 35% on October 1 next, with land certificates for their interest in the lands to which the bonds were entitled. Bonds that were not deposited with the committee retain their original position.

The line runs from Portage la Prairie, 55 miles west of Winnipeg, northwesterly to Yorkton, Assa., 223 miles, with a branch of 11 miles from Binscarth, to Russell, Man. The Co. also operates a leased line, the Saskatchewan & Western, from Minnedosa to Rapid City, Man., 15 miles. The late Sir Hugh Allan was at one time President of the Co., & a large amount of money was invested in the line by the Allan family. The present President of the Co. is Andrew Allan, of Montreal; H. M. Allan being Vice-President. The General Manager is W. R. Baker, who resigned the Local Treasurership of the C.P.R. at Winnipeg some 15 years ago to take the position of General Superintendent of the M. & N. W.

Following are particulars of the Co's capital as at June 30, 1897, the last statement published: Ordinary share capital, authorized \$12,000,000; subscribed & paid up, \$5,837,500. Bonded debt, authorized \$4,700,000; issued & sold \$3,824,100; rate of interest 5 & 6. Provincial government aid paid \$649,934.27; municipal aid paid \$215,600. Total capital subscribed & paid up \$10,527,134.27. Floating debt \$1,374,919.76. Total cost of railway & rolling stock, including Saskatchewan &

Western Ry. \$3,712,467.43. The Co. also received a large Dominion land grant. The gross earnings for the year ended June 30, 1897, were \$314,298.06, working expenses \$241,169.29, net earnings \$73,128.77. The line traverses a magnificent agricultural district, & has for years been a valuable feeder to the C.P.R. (Unofficial.)

Ontario & Rainy River.—In Toronto recently Justices Rose & McMahon gave judgment in the case of Allen vs. the O. & R. R. Ry. Co., on appeal by the defendants, Gorham & Mitchell, from the judgment of Chancellor Boyd, who tried the action without a jury at Port Arthur & Toronto, in favor of the plaintiff for the recovery of \$600 for work done & services performed by the plaintiff in the promotion of the railway of the defendant company by means of an advocacy in Port Arthur at one time conducted by the plaintiff. The judgment is against the defendant company with a direction for the payment out of a fund belonging to the appellants & others of the defendants. The appellants contend there was nothing in the evidence to fix the liability upon the company. The appeal was dismissed with costs.

Some reference to this line appears on page 129 of this issue. Since it was written we have been placed in a position to state that 20 or 25 miles of the eastern end of the line will be built this season, starting from some point on the P. A. D. & W. (Official.)

PASSENGER MATTERS.

The Rate Cutting Continues.

During the past month there has been practically no change in the rate cutting, which has gone on as before, though its effects have been plainly discernible in the decreased traffic receipts of both the leading Canadian lines. The novelty of low rates has worn off, & travel has got back nearly to a normal condition.

A new feature, however, is the decision of the Interstate Commerce Commission to meet in Chicago Aug. 1. The notice calling the meeting states that it has come to the knowledge of the Commission that there exists a contest in passenger rates between the C.P.R., on the one hand, & certain U.S. lines & their connections, including the Grand Trunk, on the other hand; that it is charged by the U.S. lines that the C.P.R. has been, & is, in open violation of the act to regulate commerce, making unreasonably low rates between various points in the U.S., not as a measure of legitimate competition, but as a means of exacting certain unreasonable de-

THE BEST BOOK OF AMERICAN LAKE SHIPPING.

Beeson's Marine Directory for 1898.

A cloth bound, gilt embossed volume of 258 pages, just from press, containing alphabetically arranged lists of all American steam and sailing vessels on the Northwestern Lakes, giving tonnage, length, breadth and depth of each, place and year of build and name and address of managing owner. These lists are the originals published annually and are not taken from other publications. Their correctness is all that can be possibly obtained in a technical work.

Many miscellaneous features are comprehended in its contents. Among them a list of American lake ports, with description of each, numbering over two hundred.

308 Royal Insurance Bldg.,
CHICAGO.

This directory will be mailed to any address, postage prepaid, on receipt of subscription price, \$5.00.

mands upon its part, & that such illegal action on the part of the C.P.R. will result, if persisted in, in the utter demoralization of passenger rates over a large portion of the U.S., & incalculable damage to the interests of the U.S. lines, all of which is either denied or justified by the C.P.R. The document further states that it seems advisable that the Commission should be fully informed of the whole situation in respect to passenger rates, as affected by the C.P.R., with a view to determining what relief, if any, should be applied.

A report that the C.P.R. had decided to abandon its claims to differentials on trans-continental business was recently emphatically denied by Vice-President Shaughnessy.

Sir Wm. Van Horne visited St. Paul, Minn., about the middle of July, & the daily press at once assumed that he had been in conference with President Hill, of the Great Northern, respecting the rate cutting. On returning to Montreal Sir Wm. said to a reporter: "It was not the so-called rate war, but other business, that took me west. I know nothing of any settlement. We are quite content as matters stand. The enemy pays."

On the same subject President Hill said: "The rate war is no nearer a settlement now than it has been for 6 months. The report that President Van Horne & myself have reached a settlement of the differences between the roads is absolutely without foundation."

C.P.R. Mountain Guides.

That the exceptional beauty of the scenery is attracting even more & more attention in the older parts of the world is demonstrated by the continuously increasing number of U.S. & European tourists who invade the Dominion, summer by summer. The latest & most significant evidence of this fact is a move just made by the management of the C.P.R. It is announced that the Co. has sent an official to Switzerland to engage a number of Alpine guides, who will be brought over to Canada to act as guides for tourists in the Rocky Mountains. In a short while, accordingly, it will not be surprising to learn that mountaineering is one of the national sports of Western Canada. There are no mountains in the world offering more inducements & opportunities for mountain-climbing than do those magnificent, snowcapped, perilous heights that constitute the Canadian Rockies. They are destined, in time, to become the Alps of America, & that beautiful mountain country that stretches on all sides about Banff will some day become a second Switzerland.

The C.P.R. differs, in one respect, from all U.S. western lines, in the manner in which it goes through the Rockies. The most famous of the U.S. roads, for instance, the Denver & Rio Grande, is built at an elevation of 10,000 ft., going practically over, & not through, the range. The highest elevation reached by the Canadian Pacific is a little less than 5,300 ft., so that the higher peaks still tower 5,000 ft. above the railway line itself. This gives excellent opportunities for the adventurous mountaineer, & does not detract from the sublimity of the scenery. Even when this fascinating sport of mountaineering does become popular in Canada, it is estimated that at least 100 years will pass by before all the many heights of the yet unknown Rockies are climbed & explored. In a few years it will be as commonplace & natural for the Montreal & Chicago man to go mountain-climbing in the Rockies as it now is for the Londoner & the Parisian to go to the Alps to spend their summer.

The Michigan Central & Toronto, Hamilton, & Buffalo have met the cut of the G.T.R. & C.P.R., & made a reduction of rates to competitive points between Hamilton & Windsor, Ont. There is no cut in rates on through business.

Contract to Carry Passengers.

The Divisional Court of Ontario has given judgment in the case of Clarry v. G.T.R., where the plaintiff was a passenger on defendant's railway under a contract by which he was to be carried from Harrisburg to Stratford via Galt & Berlin. There was a break in the line at Galt, the distance being $\frac{3}{4}$ of a mile. An omnibus was provided, as advertised by defendants, but a fare of 10c. was demanded. Plaintiff refused to pay this fare, was not permitted to be transported free, failed to make his connection & brought action. He held that he was entitled to be transferred free but should have paid the 10c. and made his connection. The damages were restricted to that sum, but full costs allowed as it was to test a right.

Passenger Notes.

The G.T.R. did a tremendous 12th of July business in Ontario; on the Northern Division over 12,000 Orangemen were carried.

The G.T.R. has this year, for the 1st time, competed with the C.P.R. in its harvest home excursions. The same rates as the C.P.R. were quoted into Winnipeg, Brandon & Portage la Prairie. The G.T.R. quoted the same rates as the C.P.R. to North Dakota points also.

The C.P.R. authorities are enforcing at Winnipeg the rule that baggage left unclaimed in the baggage room for a longer period than 24 hours will be charged 25c. a piece for the 1st day & 10 cents for every day thereafter. This rule has not been strictly enforced heretofore. Baggage awaiting shipment on local trains leaving only 2 or 3 times a week will be exempt; also settlers' effects under certain conditions.

Travel to Muskoka, Ont., this year shows a considerable increase again, it being estimated by the railway officials that fully a third more people have gone into the district this year than up to the same time last year. The placing of a customs officer at Muskoka wharf has been a great convenience to tourists from the U.S., as it enables them to have their baggage checked right through, & thus do away with the delay in having it examined at Toronto.

Japanese newspapers are eulogistically noticing an artistically-prepared map issued in that country by the C.P.R. Co., showing the various routes across the Pacific & Canada & the Atlantic to England. The map has a beautifully-lithographed picture of the 7 gods of good fortune, 6 of whom are gazing down from cloudland on one of the magnificent white Empress steamships, & the other is depicting in Japanese on the mountain side the information that the C.P.R. is the only road by which passengers from Yokohama can reach New York in 17 days & London in 24. It is a well-conceived idea, & is capably & cleverly worked out.

The G.T.R. through trains to the sea are being largely patronized, the hot weather having whetted the desire to escape the discomforts of the hot city streets. These trains are models of comfort, having buffets & parlor & dining cars, which are fitted up in the most modern style. In fact, they are palaces on wheels, & are designed chiefly for those who can pay for luxuries. The cars are of the vestibule pattern, with cosy nooks & corners for groups of friends who desire to be together; the cuisine is tempting to the gourmand, while the attention which has been given to the smallest detail appertaining to comfort has immediate appeal for every class of patron. These specials are a feature of the G.T.R.'s summer service, which has been increasingly appreciated of late years.

J. E. Quick, General Baggage Agent G. T. R., has again been elected Secretary & Treas-

urer of the American Association of General Baggage Agents, whose convention was recently held at Detroit. While at the convention Mr. Quick read the legal opinions of expert railway lawyers in regard to the handling of excess baggage, & the best methods of collecting the charges on it. There is considerable difference of opinion among baggage agents in regard to this matter. Some agents hold that when checks are issued to travellers the railway can have no further claim for excess. They consider that the passenger should be given notice beforehand of the possibility of being assessed for overweight. The legal opinions read to the convention were not made public. A. D. MacTier, General Baggage Agent of the C.P.R., was at the convention & was appointed a member of the Committee of Arrangements.

The Apprentice Boy.

As an appendix to the report of the Master Mechanics' Association on The Apprentice Boy, G. R. Joughins, Mechanical Superintendent of the Canadian Government Railway System, wrote a special letter on scientific education, from which the following are extracts:—

It is my conviction that the question of a scientific education is the most important part of our work. I will confine myself to that aspect of the subject. I am particularly interested in it, because I have taught the apprentice boy in science schools for many years, & my experience of the benefits resulting therefrom have been most satisfactory, both to the pupil & the railway company.

My experience has altogether been in favor of educating our boys, not expecting that they will all attain responsible positions, but because even those who are dull will become better workmen, & the few who possess real ability will be separated from the ordinary mechanic & given an opportunity to rise above their surroundings & do better work in the world. If only for the sake of these few & for the good work which they will do in our profession & for our country, we ought to put forth every effort to make it easier to obtain a scientific education, & by largely increasing the number of schools make it more universal than at present. The importance of educating our apprentices cannot be overrated. It is of national importance, the prosperity of our nation largely depends upon it, because educated workmen are the backbone of a manufacturing country, such as ours.

I do not agree with those members of the Association who suggest that each apprentice should pay the full cost of instruction, & that he should depend on his own efforts for an education. That principle is not applied to the education of any one else, no matter what school, college or university he may attend, or what profession he may adopt. I believe it to be absolutely necessary to assist apprentices, & to assist them very substantially, both in school fees & in books. Various ways can be taken to raise money to help them, without making it a serious burden upon the railway companies; it is done at the present time in some places, & could be done in all.

Having persuaded our members & the roads they represent to raise the funds necessary, the Association ought to map out a plan of education. Then at the end of the session examinations should be held at the different schools, using the same examination papers. In this way a system of certificates of acquirements could be issued on a uniform standard, & which would prove of incalculable value both to the employer & employee.

Intimately related to the school question is the establishment of a technical library, which, no matter how small the beginning, could be gradually built up.

The Association should also find out what scholarships for mechanics, mathematics, &c., are given in each province, state or college for which our apprentices might compete, & publish them, special stress being laid upon the existing Master Mechanics' Scholarship at Stevens Institute.

The proposed science schools would not, of course, be confined exclusively to locomotive railroad apprentices. Apprentices from other shops who wished to join should be heartily welcomed on an equitable financial basis. Other organizations might wish to join in the plan of education, & should be encouraged to do so, but in the meantime the Master Mechanics' Association should go forward in the good work, & we, as its committee, should find out what ought to be done, what the railway companies are willing to do, & make the best recommendations within our power to further the highest interests of the apprentice, which no doubt lie in the direction of a scientific education side by side with careful training in the workshop.

Telephone vs. Railway.

The use of the long-distance telephone has diminished passenger travel on the railways. The extent of the loss suffered by the railways is not very well known & the importance of it is not admitted by all; but the newspapers have now & then given certain definite statements from well-informed men, & there can be no question that the value of the telephone is increasingly appreciated. Another bit of significant evidence, reported to us on good authority, is the statement of a railway officer that the business of one of the limited trains between New York & Chicago has been practically ruined by the telephone. This comes from the chief executive officer of "one of the lines interested," & as there are only 4 or 5 roads interested in these trains the reader can perhaps guess where the statement comes from.

This result is not very surprising. One of the definite objects had in view in putting on 25-hour trains between New York & Chicago was the accommodation of brokers & business men of Chicago & the Northwest, who demanded quick time. Their trips to New York were taken on occasions of utmost importance, when a little time meant thousands of dollars. By means of the "Limited" the broker or business man was taken to New York in the quickest possible way. He talked as fast as he rode & made an equally quick return to Chicago. The business man was willing to pay the price assessed for this development in rapid transit.

The patronage of people whose time was less valuable to them was not expected to contribute much to the income of these trains, so that their whole dependence was expected to be, & was, on two classes; the business men aforesaid & pleasure travellers to whom a few dollars extra was not a noticeable item. Then came the introduction of the long-distance telephone. People at first were slow in realizing its benefits. Slowly but surely they have, however, come to appreciate its significance. A broker or grain dealer in Chicago has in mind a "big deal;" he telegraphs to New York asking for certain information & adds: "Call me up by long-distance telephone & give me your answer." The result is that for 15 or 20 dollars a talk is held with the New York man. Having received the telegram he has had an opportunity to concentrate his expressions to the shortest possible statements; he has even jotted them down & at the proper time calls up his man & transacts his business. So it is done every day.

The railway president quoted said that in the past he had found it necessary to spend about 20 days of each month on the road, leaving but 10 days of his time at his office.

But now, by aid of the long-distance telephone, he has reversed matters; but 10 days are required on the road, giving him 20 days in the office. Half-a-dozen grain men who had been in the habit of making frequent trips between Chicago & New York said that for 3 or 4 dollars they could now transact business which formerly required a three-day trip.—*Railroad Gazette.*

Chapleau as a Railway Man.

Sir Adolphe Chapleau, who died last month, always had a great penchant for railways, & his name will for ever remain closely linked with the history of railways in Quebec. He was instrumental in building the North Shore & its branches, & after administering it for a time made it a part of the C.P.R. Mr. Dandereau, who was intimately connected with him in most of his railway enterprises, says:

"He has been the champion of railways in this country, & his eloquent word it was which revived in the Provincial Legislature the old subsidy to the North Shore Ry. & obtained one for the Northern Colonization Road, thus taking the original steps toward a national railway policy. He had his share in contributing to the success of these, financially, perilous enterprises; & he can boast of having directly brought about the building of 5 lines of railways, the Laurentides, the Pontiac, & the continuation of the St. Jerome, by his active & persistent co-operation, & the St. Eustache & Joliette roads, by his official & personal protection."

"In 1884, when the Ottawa Government seemed determined to refuse the Province of Quebec its just demands, regarding the debt contracted for the building of the North Shore Ry. as part of the C.P.R., almost all the Quebec contingent to the Federal Parliament begged him to take their lead in forcing the Government's hand. He had only a word to say (at least the probabilities authorize the statement) to hold the destiny of the Cabinet in his own hands; but he remained thoroughly loyal to Sir John Macdonald knowing that justice would be done in the end without violence."

Chapleau was very severely criticized for the manner in which he sold the North Shore Railway in two sections to the C.P.R. & to the Senecal Syndicate, refusing a much better offer made at the time by the Allan syndicate. It has been charged that this most valuable asset of the province was sacrificed, but his biographer in defending his act in this respect, says: "He it was who realized for the Province of Quebec \$8,000,000 by selling the North Shore Ry. This act, which has procured for him so many insults, will perhaps be his greatest title to glory, for it is a matter of public notoriety to-day that the C.P.R., which made the purchase, would be disposed to lose some millions upon the original price, could a purchaser be found. It is sufficient to read the reports which he published then as Minister of Railways to see how clearly he foresaw the construction of the Canada Atlantic & the Smith's Falls line of the C.P.R., two rival roads which reduced to a relative insignificance the old Q.M.O. & O. Ry."

Railways & Prairie Fires.

The most prolific cause of prairie fires, says the *Western Prairie*, published at Cypress River, Man., is the traction engines used for threshing. The burning of large piles of straw is another prolific source, for fire will remain for many days amongst the charred cinders ready to fly before a high wind, when the greatest danger is to be apprehended. The railway locomotives sometimes cause fires, but not very often, considering the number of trains that run at all hours on the various railways, even during the most windy

weather. Hunters, smokers & tramps start fires. There are fires kindled on purpose, fires by accident, & fires by carelessness. Some years ago the C.P.R. Co., knowing the dangerous & inflammable character of the natural covering of the prairie, attempted to have blue grass introduced all along their lines in Manitoba, & large quantities of seed were given free to those whose farms were near the roads. The season chanced to be dry, & the seed did not grow in a satisfactory manner, so the attempt failed. But the Co. was taking the only course that can ever be successfully adopted for the prevention of prairie fires; for until houses, barns, stacks, towns & railways are protected by fields of green grass that will not burn, danger will not be lessened or removed.

The Empire Route to China.

Sir George Baden-Powell writes: "Across the Atlantic & across Canada we have the straight & short route to China. Mr. Goschen, when Chancellor of the Exchequer, had the patriotic foresight to assist in establishing across the North Pacific an embryo line of British mail steamers connecting China & Japan with Canada. What is necessary now, & in view of the greater opening up of China, is that this service shall be improved into a regular weekly service. By this route already passengers, mails, & light goods pass between England & the far east all the way in British ships & through British territory. The route followed does not, like the Suez route, pass by the arsenals of a long series of possibly hostile Powers. Moreover, the route is a direct 'great circle' all the way in temperate latitudes, & has not to follow the sinuosities of the Mediterranean & Red Sea, or travel as far south as the equator at Singapore. It is calculated that with a 20-knot steamer service on the Atlantic & Pacific, & no more than the present speed on the great Canadian Pacific Ry., that the time of transit between Liverpool & Shanghai need not exceed 20 days. Thus the establishment of a first-class weekly service along this empire route would be of the most crucial value to our securing our fair share of the new development of China."

Liability to Pack Frogs.

The appeal of the defendants in the case of *Washington v. the G.T.R.* has been dismissed by the Imperial Privy Council. The case was brought by G. Washington, of Hamilton, Ont., who was employed in the Stuart St. freight yard, against the G.T.R. for damages for injuries received while shunting cars. He had his right arm so badly crushed that it had to be amputated. The case was tried before Justice Street & a jury in 1896, & a verdict was given for plaintiff for \$2,500 & costs. It was decided that the defendant had been guilty of negligence in not having the frog, where the plaintiff caught his foot, properly blocked or properly protected. The Court of Appeal reversed the verdict & dismissed the action with costs. Then the case was carried to the Supreme Court, when the decision of the Court of Appeal was set aside, & the verdict of \$2,500 restored. The G.T.R. carried the case to the Privy Council, desiring to have the ruling of the highest court on the liability of railway companies to pack frogs, the same point having been raised in the Curran case, in which the plaintiff got a big verdict.

A. H. Harris, ex-General Traffic Manager of the Canadian Government Ry. System, has been appointed Canadian Traffic Agent for the Fitchburg R.R., "The Hoosac Tunnel Route." This Co. operates 457 miles, its longest line being between Troy, N.Y., & Boston. The Fitchburg terminals at Boston are used by the Dominion Line steamships.

APPLICATIONS FOR INCORPORATION.

Alaska & Northwestern.—Gemmill & May, Solicitors, Ottawa, give notice of application to the Dominion Parliament for the incorporation of the Alaska & Northwestern R. R. Co., to build a line from near Pyramid Harbor, on Lynn Canal, or from a point on or near the International Boundary between Canada & the U.S., in the vicinity of Lynn Canal, thence by way of Dalton Trail to at or near Fort Selkirk, Yukon, with various other powers.

Algoma Central.—H. C. Hamilton, Solicitor, Sault Ste. Marie, Ont., gives notice of application to the Ontario Legislature for the incorporation of the Algoma Central Ry. Co., to build a line from at or near Sault Ste. Marie, Ont., to at or near the Michipicoten River, thence northerly to the main line of the C.P.R., & southerly to Michipicoten Harbor, Lake Superior. Very extensive general powers are asked, including carrying on mining operations, &c.

Haliburton, Whitney & Mattawa.—Gordon & Sampson, Solicitors, Toronto, give notice that application will be made to the Ontario Legislature for an act to incorporate The Haliburton, Whitney & Mattawa Ry., with power to build a railway from at or near the terminus of the G.T.R. at Haliburton, to a point on the Ottawa, Arnprior & Parry Sound Ry., at or near Whitney, thence northerly to at or near Mattawa; & with power to equip & operate the same by steam or electricity; & if the latter, with power to sell the surplus electricity for light, heat & power purposes, & to supply miners, lumbermen & others doing business in the district through which the railway will run, with electricity for their works & operations.

Ontario Lands & Oil Co.—A. E. Shaunessy, Sarnia, gives notice of application to the Ontario Legislature for powers to be given this Co., which is incorporated under the Imperial Company's Acts, 1862 to 1890, to carry on various businesses, including the building of tramways, railways, wharves & ships.

Pyramid Harbor to Fort Cudahy.—G. W. Kyle, St. Peters, N.S., gives notice of application to the Dominion Parliament for the incorporation of a company to build & operate a railway from Pyramid Harbor, near the head of Lynn Canal, or from the International Boundary Line to Dalton's Post, on the Dalton Trail, thence to Fort Selkirk, thence northerly to the 141st meridian near Fort Cudahy, with various other powers.

RAILWAY PROJECTS.

Amherst & Eastern.—It is said the surveying of a route for the proposed railroad from Amherst, N.S., to the North Shore, via Truemanville & Chapman Settlement, has been decided upon by the A. & E. Ry. Co.

Brandon & Southwestern. This Co. was incorporated by the Dominion Parliament in 1890 with power to build a line commencing within township 1, ranges 23 or 24 west of the principal meridian in Manitoba, at a point at least $\frac{1}{4}$ of a mile north of the International Boundary, thence running north-easterly to the main line of the C.P.R., near Brandon. The incorporators were D. Hyslop, G. R. Crowe, G. H. Campbell, H. G. Crawford & C. H. Campbell, of Winnipeg, & W. A. Macdonald of Brandon. The Co. was given power to sell or lease to the C.P.R. The same year Parliament voted the Co. a land subsidy of 6,400 acres a mile for 17 miles, from the place of starting, as above mentioned, to Deloraine. The time for construction was extended in 1894 & again in 1896, & it is now required that construction be commenced by Nov. 1, 1898, & completed by Nov. 1, 1901.

In response to an enquiry, Robt. Weddell, Trenton, Ont., writes us:—"I have the con-

tract for building the Brandon & Southwestern Ry. from Turtle Mountain coal fields to Deloraine & Waskada, thence to Brandon. The distance is 90 miles. Engineers are locating now. Work may be started next fall. Arrangements are in progress for ties, telegraph poles, fence posts, lumber, rails & rolling stock for active operation in 1899. The railway is to be completed by Nov. 1, 1901."

C.P.R., Toronto Sudbury Branch.—The surveys for this line have been about completed under H. Lumsden, C.E., but nothing has been announced in regard to the prospects of construction.

Central Ontario.—In our June issue, pg. 98, we stated that the proposed extension from Coe Hill to Bancroft, 18½ miles, might possibly be gone on with next season. It is now stated that the road will not be built unless liberal donations are received from the people whose territory it will benefit. (Official.)

Dominion Eastern.—This Co. was incorporated by the Nova Scotia Legislature in 1897 to build a line from the terminus of the Nova Scotia Steel Co's. Ry. at Sunny Brae to Country Harbor, with a branch from Upper Country Harbor to Guysboro', about 65 miles in all. The Nova Scotia Legislature has granted a bonus to the extent of \$3,200 a mile & the Dominion Parliament has made a similar grant, to be increased should the average cost of the line be more than \$15,000 a mile. An instrumental survey of the whole line has been made & 10 miles have been located. We have been unable to ascertain anything in regard to when construction is likely to be proceeded with. Jamieson & Baker, contractors, Quakertown, Pa., are said to be interested in the charter, together with some prominent members of the N. S. Steel Co., whose line of 12¾ miles, which runs from Ferrona Jct., on the I.C.R., 6 miles from New Glasgow, the Co's. headquarters, to Sunny Brae, is under option to Jamieson & Baker, the option having some months yet to run. It is the intention, should the Dominion Eastern go on, to amalgamate the Steel Co's. line with it. (Partly Official.)

Edmonton District.—The charter for this line granted by the Dominion Parliament in 1896 empowers the building of a line from Edmonton to South Edmonton to connect with the Calgary & Edmonton line; from Edmonton via St. Albert to the Athabasca River near Fort Assiniboine, with a branch to Stony Plains; & from Edmonton to Fort Saskatchewan, with a branch to Sturgeon River. The incorporators were Dr. Willson & others of Edmonton, Alberta, & W. T., Jennings, C.E., of Toronto. The charter has been sold to people in St. John, N.B., among whom are W. Pugsley, Q.C., G. McAvity, & A. G. Blair, Jr. The two last named recently visited Edmonton & on their return stated that as soon as the railway & traffic bridge over the North Saskatchewan, now being built by the Government, is completed, work will be started on the Edmonton District line, first to connect Edmonton with the C. & E. line at South Edmonton, & then to go on towards the Athabasca River, making the first section of a line to the Upper Yukon Territory.

The Grand Trunk & Sault Ste. Marie. Superintendent Tiffin, of the G.T. Co's Northern Division & Division Freight Agent White, of Toronto, visited Sault Ste. Marie recently. The Express of that place credits Mr. White with saying that General Manager Hays was taking a very active interest in the Co's property there, & was having a survey made from Burk's Falls & Powassan to the Sault. The Express says:—"Mr. White continued as follows: "Mr. Tiffin & myself have just had a discussion with F. H. Clergue, who we freely admit represents the very largest commercial industries in Canada, & after a con-

sultation with Judge O'Connor & other gentlemen as to the business outlook in this part of Ontario, we feel that Mr. Hays will, in connection with Mr. Hill, of the Great Northern Ry., afford to Sault Ste. Marie a G.T.R. & Great Northern connection which will assure the town of competition in the event of any attempt on the part of one road to embarrass the vast trade now established & yet to be established at this point. The Portland export route, which Mr. Hays has put in force, will be 7 steamers a week. That means that the manufacturers of your city will have full & reasonable access to every market in the world."

Enquiry at the G.T.R. head offices has failed to elicit any information on the question.

Grand Trunk, Ottawa Branch.—The daily press has been teeming with items lately stating that the G.T.R. was contemplating the construction of a branch line to Ottawa, & that a survey was in progress. There was no foundation in fact for these statements, there being no intention whatever on the Co's part to construct such a line. (Official.)

The Kootenay Construction Co. has been registered in London, Eng., with a capital of £100,000, to construct railways & tramways in the Kootenay district of British Columbia.

Lake Erie & Detroit River.—It has been decided by the management that the proposed extension from Ridgetown to St. Thomas, Ont., will not be gone on with this year. It is hoped, however, that definite arrangements will be arrived at for the building of the link next year. (Official.)

McKenzie & Mann's Projects.—A Winnipeg despatch says:—"It is stated, on what purports to be good authority, that the railway schemes of Mackenzie & Mann contemplate, besides a line to Hudson's Bay, a line to Prince Albert, striking westward from Dauphin, across Gilbert plains into the Saskatchewan valley, & ultimately reaching the Pacific coast, via the Yellow Head or Peace River pass."

Musquodoboit.—This Co. was incorporated at the last session of the Nova Scotia Legislature to build a line from Windsor Jct. easterly by Musquodoboit Valley, 40 miles, to Parker's Corner, or from Dartmouth easterly to Musquodoboit Harbor, thence up Musquodoboit Valley to Parker's Corner, with power to extend the line to Halifax or Dartmouth. The provisional directors are: A. Stephen & W. Chisholm, Halifax; A. C. Johnson, Dartmouth; D. W. B. Reid, Middle Musquodoboit; & B. C. Wilson, Waverley. Early this season the Co. applied to the N.S. Government to have a preliminary survey of the route made, the Government agreeing to do the engineering portion of the work, the Co. finding common labor. W. Yorston, C.E., is now making the survey under direction of Provincial Engineer Murphy. (Official.)

Nipissing & James Bay.—The Mayor of Toronto recently stated that the promoters of this line were desirous of proceeding with construction from North Bay into the James Bay country at once, but wanted assistance from the city. As the opening of this country was the main object which induced the city to apply for a charter, the Mayor thinks they should be aided.

Ottawa & Gatineau Valley.—It is rumored that this Co. contemplates the extension of its line from Gracefield to the Desert River, some 35 miles. At present the line runs from Ottawa to Gracefield, Que., 60 miles. (Unofficial.)

Ontario & Rainy Riv. r.—T. H. White, recently Chief Engineer of the Canadian Yukon Ry., has been given a similar position on this line by Mackenzie & Mann, & is now in the Mattawan district making a preliminary survey. Some 60 miles from the point of departure on the Port Arthur, Duluth & Western was surveyed by Mr. Turnbull, & the present

survey will likely continue from the end of his work towards Rainy River. Under the terms of the charter, work must be commenced Aug. 1. It is said Wm. Mackenzie has been successful in securing the co-operation of British capitalists, & that 40 or 50 miles are likely to be built this year. (Unofficial.)

Port Arthur, Duluth & Western.—The proposed branch from near Stanley to Kakabeka Falls will not be gone on with this year. (Official.)

Prince Edward Island, Belfast Branch.—This branch of the Government line is projected from Charlottetown to Murray Harbor, on the sea coast. It would necessitate the bridging of the Hillsboro' River at Charlottetown, at an estimated cost of \$800,000, which would provide a combined railway & traffic bridge, in the building of which the Provincial Government is expected to aid. The length of the branch would be about 50 miles, its estimated cost, narrow gauge as is the rest of the line, being from \$7,500 to \$8,000 a mile. The branch would pass through one of the best & most prosperous districts of the Province, & the Hillsboro' River bridge would be a great convenience to people living east of the river, who now have difficulty in reaching Charlottetown when the ferry traffic is interrupted by ice. A preliminary survey of the proposed line was made for the Department of Railways some 5 or 6 years ago, & a more complete one was made last year by H. J. Mackenzie, C.E. Of course nothing further can be done till next session of the Dominion Parliament, & it is by no means certain that it will be taken up then. (Unofficial.)

Toronto & Hudson's Bay.—W. T. Jennings, C.E., left Toronto July 7 on behalf of the Toronto & Hudson Bay Ry. Co., to examine the country to the north of the C.P.R. & west to the Temiscaming & possibly to the Abitibi & Moose Factory, thence, as far as circumstances & time will permit, over rivers & inlets at the foot of James Bay, returning by Moose River & a route heretofore unexplored southward to Wahnapiatae Lake. The examination of Wahnapiatae & Temogami districts will then be taken up. The object of the examination is that an intelligent idea may be formed of the commercial value of the districts between the C.P.R. & James Bay, with the view of the immediate opening up & advancement of those districts as far as found practicable. Mr. Jennings took with him City Surveyor Sankey, of Toronto, & a sufficient number of canoe men & packers, who know the country, & will, therefore, be able to carry the expedition over as rapidly as possible. (Official.)

Woodstock & Brantford.—D. A. Middleton, C.E., of Ottawa, is making a survey for a line between Woodstock & Brantford, some 26 miles. It has been persistently stated that the proposed line is to be built by or in the interest of the C.P.R., but prominent officials of that Co. deny any knowledge of the matter.

There are now nearly 200,000 miles of railway in the U.S. They are capitalized at about \$10,000,000,000. They earn \$1,125,000,000 annually & disburse for material & wages \$793,000,000, & have a system of rates for the carriage of freight which is $\frac{1}{3}$ less than that of the railways of Europe. There are directly in the service of the railways of the U.S. about 800,000 men, & about 2,000,000 members in the families of these employees.

The world's railway mileage at the present time is equivalent to more than 17 times the length of the equator. In more exact figures, the world's railway mileage, according to the latest verified returns, aggregates 433,953 miles, or 38,810 miles more than in 1891. This enormous mileage is distributed among the various subdivisions of the globe in the following manner: America, 299,722 miles; Europe, 115,284 miles; Asia, 26,890 miles; Africa, 8,169 miles, & Australia, 13,889 miles.

SHIPPING.

The C.P.R. Stikine Steamers.

The steamer Ogilvie, an illustration of which is given on page 131, is one of the fleet of 12 steamers built by the C.P.R. last winter & spring for the Stikine River, an extended description of which appeared in our April issue pg. 50. She made the round trip from Wrangel to Glenora & back in 44 hours, but was beaten by her sister steamer, the McConnell, which did it in 43½.

The C. P. R. Co's. stern-wheel steamer Schwatka, recently built at Port Blakeley, Wash., for the Stikine River, has been taken to New Westminster, there being nothing for her to do in the northern trade.

Owing to the slump in the Stikine River trade, 2 out of the 3 steel-hull steamers built in Toronto for the C.P.R. & sent to Vancouver in sections will be put on the inland waters of B.C. One is being put together at Nakusp for service on the Arrow Lakes, & the other at Nelson for Kootenay Lake. All the other Stikine River steamers owned by the Co. have been taken off. Some of them may be utilized on the inland waters of B.C., or they may be laid up in the expectation that the business will revive.

In previous issues we have given pretty full descriptions of the C.P.R. Stikine River steamers, but it may be of interest to give the following extracts from the specifications of those built in Toronto with steel hulls, by the Polson Iron Works, as they were a decided departure in river steamer construction:

The dimensions are: length over all 161 ft. 6 ins., length from stern to transom 140 ft., breadth moulded 30 ft., depth moulded keel plate to beam at side 5 ft., ditto at centre 5 ft. 7 1-2 ins.

The hull is of open hearth mild steel, equal in quality to the requirements of English Lloyd's rules.

The keel and bottom tie plates are of $\frac{1}{4}$ in. plate 12 ins. wide, the former strongly rivetted to lower end of stem, lapped and treble rivetted with $\frac{5}{8}$ in. rivets, the latter extending the length of longitudinal bulkheads.

The stem is of wrought iron 5 ins. x 1 $\frac{1}{2}$ in. extending well under forefoot & scarping over fore-end of keel plate.

The rudder frame is of forgings 3½ ins. diam. and 4 in. no., fitted into bearings at aft side of transoms.

The frames are of angle steel 3 ins. & 2½ ins. x $\frac{1}{4}$ in., spaced 21 ins. centres in after body & 18 ins. centres in fore-body, double at bulkheads.

The reverse frames are of angle steel 2 x 2- $\frac{3}{8}$ ins. rivetted across top of floors & continued to upper turn of bilges.

The floors are of steel channels 7 ins. deep, 9.75 lbs. per foot between longitudinal bulkheads, to which they are rigidly connected with $\frac{3}{8}$ in. plate. Brackets from the longitudinal bulkheads to the sides are of $\frac{3}{8}$ in. plate, 7 ins. deep, tapered at one end to size of frame & turned so as to extend up to upper turn of bilge. Floors forward of fore-bulkhead are of $\frac{3}{8}$ in. plate of sufficient depth to suit frame of vessel.

The centre keelson is a bulb T 6 ins. deep, 15.3 lbs. per foot, extending from transom plate as far forward as practicable.

The main deck stringer plate is 15 ins. wide amidships, $\frac{1}{4}$ in. thick, diminishing to $\frac{3}{8}$ in. at ends, lapped & treble rivetted, the rivets being countersunk. The bar is 2½ x 2½ x $\frac{1}{4}$ in. worked outside underneath, close-rivetted & caulked.

There is 1 beam to every frame, of 3 x 2½ x $\frac{1}{4}$ angle steel extending 2 ft. 3 in. on each side, fastened to main deck stringer plate & longitudinal bulkhead by angle lugs of sufficient length, supported at centre by 2½ in. pipe stanchion having wrot.-forged ends, rivetted to beams and keelson, with alternate

frames. The deck openings are framed out to suit requirements of machinery, etc. Holes are punched for deck bolts.

There is a stanchion to each alternate beam, as described in foregoing paragraph.

The steel plating is of $\frac{3}{8}$ in. steel extending from main deck springer plate to a distance down the side sufficient to allow the last strake of wood sheathing on bottom being brought up around bilge & finishing on the side planking, & to receive the upper strake of the planking. An angle bar of 2½ x 2½ x $\frac{1}{4}$ in. is worked all around the vessel. The butts of the plating are lapped & treble rivetted, all holes being punched fair & holes countersunk outside. The bottom of the vessel was covered with wood sheathing by the C.P.R. Co., at Vancouver, but the bolts for same were furnished by contractors, who have also punched the holes necessary to receive the bolts through the bottom, & the same for the deck.

The diameter and spacing of rivets is in accordance with Lloyd's rules, all plates & bars being punched & sheared from the laying side & all rivetted work is laid up close.

There are two longitudinal bulkheads throughout, placed each 7 ft. apart from centre line, of 3-20 in. steel plate, extending the whole moulded depth, connected to the bottom tie plates & deck beams by 2½ x 2½ x $\frac{1}{4}$ angle bars stiffened by double 3-16 in. brackets, one on each side at every floor, one 3-16 in. bracket at each deck beam, & a vertical stiffening bar 2½ x 2½ x $\frac{1}{4}$ in. opposite each alternate frame space. The lower bars connecting with the plates are close rivetted for water-tight work. Five athwartship water-tight bulkheads are fitted between double frames formed of 3-20 in. plate, stiffened with 2½ x 2½ x $\frac{1}{4}$ in. angle bars 30 ins. apart & strongly attached to longitudinal bulkheads between double bars. A partial bulkhead is fitted two or three frame spaces from transom, arranged so that its upper edge is above the load line level, & is stiffened as required.

Wale bar, a steel angle 3 x 2½ x $\frac{1}{4}$ in., is worked all around beam ends to act as a tie to beams & to receive the wale strake fastenings.

A flanged 3-16 in. bracket is worked & rivetted to each alternate frame head & main deck stringer plate on each side.

A wrot.-iron tiller is fitted to each rudder stock & all connected together by one rod. The necessary sheaves, rods or wire, wheel, chains & fairleaders are furnished by contractors, also a set of deck castings, consisting of 10 bollard heads, 4 warping chocks, 4 side pipes & 1 chain conductor & cap.

Steel coamings are fitted to deck openings.

One coat of paint was given after fitting up at Toronto & another was put on after erecting & riveting at Vancouver.

The work was all fitted up in Toronto & as much of the riveting completed as possible. It was then taken down, placed on cars & dispatched to Vancouver with sufficient materials & tools to re-erect & complete the hull there, by the contractors. The C.P.R. Co. provided suitable premises at Vancouver, with sufficient blocking, staging, &c.

The vessel is efficiently stiffened between decks with a lattice girder or truss; underneath the I-beams carrying the engines, & the beams are also strongly supported by brackets or otherwise outside the transom. A gutter or trough is furnished in deck to receive the swing of pitman rod.

The fire-room floor is covered with $\frac{3}{8}$ in. steel plating, with holes for piping punched out.

THE BOILER is of the locomotive fire-box type, shell 62 ins. diam., & 14 ft. long. The fire-box ends from 32 ins. to 36 ins. below the shell, & is 5 ft. wide & 7 ft. long on the inside, surrounded by a water space 5" thick.

The boiler contains between 200 & 210

American 2 ins. tubes 14 ft. long, at least $\frac{3}{4}$ in. apart.

All plates are of steel of required tensile strength to pass Government inspection.

There is a steam drum 30 ins. diam. & 10 ft. long.

The smoke stack is 24 ins. diam., 8 ft. above smoke box, then 34 ins. diam. for rest of length.

The boiler is built for a working pressure of 175 lbs., subject to Government inspection.

THE ENGINES are 1 pair high pressure non-condensing type, 16 ins. bore, 72 ins. stroke, with double piston valves, all parts designed for a working pressure of 175 lbs. to the sq. in. The steel shaft is of sufficient length to allow for a wheel having 18 or 19 ft. buckets. Four wheel flanges are provided for shaft, also an iron wheel rim & 8 wheel stirrups for each of the 17 buckets.

Two outside packed plunger Blake pumps no. 6 are furnished, entirely interchangeable, for feeding boiler, or flushing spark arrester, & fire service.

The vessel to be modelled & constructed with a view not to exceed a draft of $14\frac{1}{2}$ ft., with all equipments on board, steam up, & 50 tons of coal in the bunkers. The vessel to be tried on the measured mile & over a series of 4 consecutive runs to attain an average speed of $15\frac{1}{2}$ knots an hour.

To be rigged with 2 pole masts of pitch pine formed in one piece. To have one suit of sails, mutton leg fore sail & main stay sail, jib & main sail.

As the vessel is to be built for the purpose of crushing her way through heavy ice fields where the pressure is sometimes very great, the scantlings of the keel, stern, stern-frame keelson, & stringer plates must be increased in proportion as required to give the necessary strength; the stern, stern-frame, & rudder post to be at least $1\frac{1}{2}$ heavier than required by Lloyds' rules. The frames, reversed frames, bulkheads, & pillars to be heavier where required. The spacings of frames to be, forward & in bluff of bow, not more than 15 ins., & widening to 18 & 20 ins. at sides, & 22 ins.

best manner, diagonal stringers riveted to beams as required, on main deck beams, so placed as to give resistance to twisting pressure from side to side.

To have extra hold beams built & fitted where required at & near the load-water line & greatest pressure from the ice. To have centre line & quarter pillars where required.

Plating to be all of the best Siemens-Martin ship steel, & where not otherwise specified to be according to Lloyds' rules, doubled on the bows & under bottom 70 ft. from stern, & to have a belt of doubled plating all 7 ft. deep placed $\frac{1}{2}$ above & $\frac{1}{2}$ below the line of deepest draft when after-ballast tank is filled. Oak chocks to be fitted between the side plating & the deep draft stringer, or some other device, if approved, to support the plating at the centre between the frames where required.

To have a cellular double bottom, to run from the forward bulkhead in fore hold under boilers & engines to after bulkhead of engine-room, & to be made 6 ins. deeper than is usual to give better room for cleaning.

THE C.P.R. CO'S STIKINE RIVER STEAMER OGILVIE IN VANCOUVER HARBOR.

New Winter Steamer for P.E.I.

As announced in our June issue, Capt. McElhinney, Nautical Adviser to the Dominion Department of Marine, went to Glasgow, Scotland, some time since in connection with the construction of a steamer to perform the winter service between Prince Edward Island & the Mainland, in place of the Stanley, which is inadequate for the work. Parliament has voted \$180,000 for a steamer & tenders have been invited, but it is not probable that the vessel will be constructed till next year.

The specifications call for a single screw steamer, length between perpendiculars 225 ft., breadth moulded $32\frac{1}{2}$ ft., depth moulded 21 ft. Following are some extracts from the specifications which will be found of interest.

The vessel to be built under special survey of Lloyds' Register of British & Foreign Shipping, & to be fitted & equipped in all respects to the Board of Trade regulations, & to class in English Lloyds' Register A1. 100. To be constructed throughout of Siemens-Martin ship steel, unless otherwise stated.

aft, as may be required by the Nautical Adviser; scantlings of frames to be increased to get more strength where required.

To have a bar keel. To be a straight stem, forged of best selected scrap iron, size at least $1\frac{1}{2}$ larger than given in the rules, the scarf to keel must be carried well aft under the forefoot. To have a heavy shield or cutter fitted over face of stem & ends of plates, as directed, securely riveted.

Stern-frame & rudder post of best selected scrap iron forged in one piece, with the propeller space of sufficient size. The bosses for rudder pintles to be forged on, as also the lugs at sides & upper end, to support the rudder stock & pintles when backing into ice, & to have a strong bearing on it for heel of rudder; pintles & bosses to be bushed with gun metal.

Stringers & keelsons to be fitted with extra stringer plates, knees, braces, girders, & stanchions where required, extra stringer at line of deepest draft with braces where required.

Deck beams to be of bulb plate, spaced as in Lloyds' rules, knees fitted & riveted in the

To have the usually fitted ballast tanks in bottom & under boilers, & to have large trimming tanks aft & forward as required, all to have longitudinal midships partition for trimming to either side, & all necessary filling & emptying pipes, pumps, & attachments.

To have a large fresh water tank constructed with the ship, placed just forward of forward cross bunker, & to have 3 divisions to make it 4 separate tanks. Capacity in all 5,000 gallons.

Main deck to be of steel covered with pitch pine $3\frac{1}{2}$ x $3\frac{1}{2}$ ins. thick, to have teak or oak bindings. Tween decks to be steel, all hatches, manholes, coal shafts, & openings of whatever kind in tween decks to lower hold to be fitted with strong & strongly secured to compare with the water-tight bulkheads.

To have 2 cargo doors at forward end of tween decks, 1 on each side, open space 6 ft. high by 5 ft. wide, to close with 2 doors strongly made, & hung with proportionately strong lugs, & protected by heavy gun outside, strong fastenings.

Water-tight bulkheads, 1 collision, & 100

end of main hold, 2 in. & separating lower holds, 1 after end of main hold, 1 after end of engine room, & 1 at stern pipe stuffing-box, 7 in all; also partition of sufficient strength for coal bunkers, & a partition between engine & boilers, with all necessary sluices, valves, tunnels, doors, & slides, fitted complete to B. of T. requirements.

Shaft tunnel to have water-tight sliding-door from engine room, large enough to admit engineers to attend to shafting, stools for shaft-bearing blocks to be carried down & connected to ship's floors; thrust stool to be immediately abaft the bulkhead, & to be heavy plated & closely riveted. The tunnel to be made strong & water-tight on account of the after ballast & trimming tank running at each side & over it, & to be roomy as possible for handling the extra heavy shafting, & fitted with all necessary appliances for lifting the tail shaft.

Platforms for two small guns, 1 forward & 1 aft, to be properly arranged on deck.

Deck house to be built of $\frac{1}{4}$ in. steel plate with iron angle frame, hardwood door casings & doors. The deck to be of narrow white pine 1 $\frac{1}{2}$ in. thick, tongued & grooved, put together with white lead, covered with heavy cotton duck, fastened on with copper tacks. Frames on each side where required to extend to the rail & form skids for boat chocks, to have scuppers on each side of 1 in. lead pipe running inside wood finish to deck. Inside of deck house to be fitted with saloon, state rooms, engine-room, stokehold entrance, galley, pantry, steward's room, purser's office, engineers' & officers' rooms, mess-room, lavatory & w.c.'s, also aft of engine room a purser's room, lamp room, & smoking room. The top of the deck house to project over sides or eve 1 ft., to prevent the water dripping in over doors & sidelights. House to extend from the fore hatch as far aft as may be required to give the required accommodation. To have strong-hinged glass sidelights of heavy plate glass. To have galvanized iron railings round top of deck house where required. Wood top rail on account of frost.

Smoking room to be fitted up in after end of deck house, with door on each side. Seats round sides to be cushioned and strongly upholstered. Copper heating pipes all round under seats, & radiator in centre.

Bridge house and pilot house to be on forward end of deck house abaft the bridge; to have heavy plate-glass look-out windows all round forward & aft; to be finished in hard wood, & as large as the space forward of funnel will allow, with room for steering wheel, steering compass, 2 engine rooms, telegraphs, signal code, chart table, & officers' lounge; also steam heating pipes; to be fitted with doors on each side to reach the bridge shortest way, and a stairway to saloon without going out to main deck; to have brass hand rail where required. Captain's cabin to be in after end of pilot house.

The officers' bridge to be strongly built of galvanized angles, with necessary ladders; bridge to extend from side to side over top of deck house, with brass railing over same and around pilot house, the whole to be well secured to deck house & deck. House to be built of oak or teak.

Accommodation for seamen & firemen, separate, to be arranged under fore-castle deck, space for 24 men, finished in a good strong manner, with berths & lockers for each, one folding table on each side, a sufficient number of side lights, fitted, to be of strong brass, having hinged cast-iron galvanized plugs, glass of best plate, 1 in. thick, as many as required, handles & double screws, a w. c. & urinal on each side, all to be well ventilated as required; also fitted with steam heating pipe on both sides.

Six pairs of strong davits to be placed where required. Four boats with equipments, etc., complete to B. of T. requirements.

To have steam & hand-steering gear placed as required; steam steering engine to be fitted forward of engine room. Particular attention to be given to have the steering gear, in every detail, made in the best possible manner to secure strength. Engine to be large size approved.

Saloon & staterooms to be in the forward end of the deck-house. Saloon to forward of amidships in deck house, from side to side of house. A ladies' cabin to be arranged & neatly furnished, on the port side, forward of the ladies' cabin, to have a large clean linen locker, & 3 staterooms on port side. On the starboard side next to saloon to be an extra fitted stateroom for bridal parties, then 2 staterooms, staircase to captain's room, linen locker, & 2 more staterooms. All staterooms to have 2 berths & cushioned seat full length of room, neat cabinet washstand to close up.

Messroom to be neatly finished and fitted. Pantry to be fitted up in the best manner. Galley to be supplied with cooking range & utensils large enough to cook for 75 persons.

Two closets for crew fitted forward, 2 for officers on main deck, & 2 closets fitted aft, 2 urinals on deck, all supplied with galvanized iron salt water tank, connected with sanitary pump worked from main engines, also by hand; discharge pipes through ship's side to be extra thick of lead with storm valves; scuppers supplied where necessary, as per Board of Trade requirements, with brass gratings; one bath-room fitted complete.

After cabin to be fitted up plainly in 'tween decks aft; rooms, berths & seating for pilot, carpenter, boatswain, watchman & others; entrance by stairway at after end of smoking-room in deck house.

All steam & heating pipes to be made of copper, all pipes to have sufficient bends to allow for expansion & contraction; all joints to be made on the most approved plan, to be arranged & carried inside as much as possible away from the weather & frost.

The ship to be wired throughout for electric light; dynamos & all necessary electrical apparatus provided; to run 150 sixteen c. p. incandescent lamps and 1 large searchlight; the searchlight is to be fitted on main deck forward.

The heating arrangements of the cabins, officers' rooms, pilot house, & captain's cabin to have double the capacity usually furnished to steamers in the coasting trade; all steam pipes to be copper, & exhaust connected to tank in stokehold.

Engines to be direct-acting, surface-condensing, tri-compound engines, with 3 inverted cylinders fore & aft over crank shaft secured to sole-plate by 3 strong cast iron columns at back & polished wrought-iron columns in front, with all the latest improvements, & of sufficient power to maintain a speed of 15 knots at sea in ordinary weather.

Crank shaft of Siemens-Martin steel, of sufficient increased size to give the required strength. To be built & made in parts, all interchangeable.

Tunnel and propeller shafts to be made of the best selected scrap iron, of the increased size required; tunnel shaft rough turned all over, solid couplings truly faced & bolted with 6 heavy bolts each, sufficient bearings provided, built extra strong, blocks to have white metal strips cast in them. Propeller shaft to be of proportionate size, lined in wake of stern bush & gland with gun metal $\frac{3}{4}$ -inch thick, to have suitable feather & nut, to secure propeller boss.

An evaporator to be fitted up in engine-room of sufficient size to supply not less than 15 tons a day.

Propeller to have cast steel boss, & 4 portable blades of Forsyth & Miller's cast malleable iron annealed, to be carefully fitted & firmly secured to boss with longitudinal key & Muntz metal studs & brass-capped nuts with safety bolts to approved plan, 4 spare

blades & a full spare set of nuts & bolts, all fitted to boss. The propeller to be of sufficient diameter & suitable pitch to drive vessel the guaranteed speed, 15 $\frac{1}{2}$ knots. End of shaft to be capped, & all bolt-ends & nuts to be carefully covered with cement.

To have 2 double-ended cylindrical return tubular boilers to be fired in the latest & most approved manner. Plating & stays of Siemens-Martin steel, & boiler to be of such dimensions as to supply a constant full pressure of steam, at 160 lbs. a square inch, & to give the vessel & maintain the required speed; back combustion chambers to have back plates and water spaces. The boilers throughout to be constructed in the best manner, according to & to comply with B. of T. rules, & to be tested with cold water to twice the working pressure.

Donkey boilers fitted in stokehole. To be larger than usual, so much steam being required for heating purposes, & to have all required connections.

The engines & boilers, & entire machinery, to be upheld for 3 months from date delivery is taken. Any defect in material or workmanship during that time to be made good by & at the expense of the builders. Such cost, however, not to exceed what the work could be executed for on the Clyde.

Richelieu & Ontario Navigation Co.

The steel hull of the steamer Toronto, which this Co. is building in Toronto, to run between Toronto & Prescott, was launched June 21, being christened by Mrs. Forget, wife of the President of the Co. The launching was witnessed by a large number of guests on the steamer White Star. The following is a detailed description of the steamer, as she will appear when completed.

The hull is of open hearth steel, & of the following dimensions: Length over all, 278 ft.; length, keel, 270 ft.; beam, moulded, 36 ft.; beam, over-guards, 62 ft.; depth, moulded, 14 ft. The engines are of the triple expansion, inclined jet condensing type; cylinders, 28, 44 and 74 ins. by 72 ins. stroke. The feathering paddle wheels are 22 ft. outside diameter, & 10 $\frac{1}{4}$ ft. face of bucket. The air & feed pumps are attached to & worked from main engine. The boilers are 4 in number & are of the return tubular type, 11 ft. diameter, & 11 $\frac{1}{2}$ ft. long, over heads. Each boiler has two 4 $\frac{1}{2}$ ins. outside diameter, suspension furnaces. The boilers are fitted with the hot draft, & are designed for a working pressure of 176 lbs.

Spacious & elegant passenger accommodations are provided, 140 staterooms, including 4 parlor rooms & large Pullman sleeping cabin, furnish sleeping accommodation for 430 passengers. The dining room, placed on the upper deck, has seating capacity for over 100.

The interior finish & decorations of the spacious halls & deck saloons are most elaborately executed, the main & gallery saloons being finished in Francis I. Renaissance style, with the dining rooms in Louis XVI. The entrance hall is decorated in Neo Grec, with modern Renaissance details, with the smoking room in Oriental treatment. The refreshment & writing rooms will be in Elizabethan panelling of prima-vera, natural wood finish. The main staircases are in Honduras mahogany, with wrought metal balustrades, in hammered leaf work, finished in antique bronze, the main newels carrying bronze figures supporting electric torches.

A 700-light electric light plant, with ornamental electrolliers, in carbons, furnishes light throughout the steamer.

The upper works & machinery are now being rapidly proceeded with & it is said the vessel will be ready for her trial trip during August, though it is hardly likely she will be put on the route this year.

The officers will be Capt. H. Esford; Engineer, W. Black; Steward, F. M. Hepburn.

At a meeting of directors, July 13, it was decided to build a sister vessel to the Toronto, precisely similar for the same route, to be ready next year.

The Co's steamer Caspian, plying between Clayton, N. Y., & Montreal, ran into the Twin Islands, opposite Thousand Island Park, in St. Lawrence River, July 7. She was taken to the Kingston dry dock, when it was found that about 6 ft. of her forefoot was damaged. The damage was very slight, considering the force with which she ran on the shoal. The Caspian, formerly called the Passport, was built in 1845.

The Corsican, with about 135 passengers on board, had a trying time in the Lachine Rapids July 8. She passed Lachine at 6.35 p.m., with the intention of running the rapids, but in a few minutes a storm came on in full force. The Captain & Pilot, when near the head of the rapids, decided not to run them & the boat was turned round in the strong current, under full steam. It was with great difficulty she was kept in position for nearly an hour owing to the storm, but finally was got back to the landing-place at Lachine. The Corsican runs between Kingston & Montreal, & the Pilot, Alfred Ouellet, who had charge of her from Cornwall down, said it was the worst storm he ever had to contend with. The lifeboats were displaced by it, & several chairs were blown from the deck where passengers had been sitting a few minutes previously.

The Co. has returned to the 4 days a week service on the Saguenay River, instead of the daily service, the reason stated being that the Government has withdrawn the extra subsidy for a daily mail service. Boats now leave Quebec Tuesday, Wednesday, Friday, & Saturday.

Capt. T. J. Craig has been appointed Superintendent of the Thousand Island district, & will have the management of the steamers Columbian & Caspian.

On July 1, just after the steamer Corsican had cleared the Long Sault Rapids, about 12 miles above Cornwall, the iron tiller of her rudder broke & the crew lost control of the steamer. The anchors were quickly hove overboard, & holding well, the vessel swung round with her head up stream. The hand-steering gear was rigged, & with this the boat proceeded to Cornwall under half steam.

The double service between Montreal & Kingston has been withdrawn. Heretofore two steamers left Montreal daily for the western port, but now there is only one, this being considered sufficient for the business.

The Co. has restored the rates between Montreal & Toronto. When the season opened the rate was made \$4.50, including meals & berths, in order to compete with the railway rates. As no difference was noticed in traffic, as compared with previous years, the rates have been restored, & now they are as follows: From Montreal to Toronto, with meals & berth, \$8. From Toronto to Montreal, not including meals & berth, \$10; round trip, including meals & berth, westward, only \$16.70. The fare by the steamer Hamilton will remain for the present at \$4.50.

The Owen Sound Times recently stated that it had been decided to transfer the management of the C. P. R. Upper Lake steamers from Montreal to Owen Sound, & that Lincoln Smith, chief clerk in the office of the Superintendent of Steamships in Montreal, A. Piers, had been appointed Manager. There is not the slightest truth in the statement. Mr. Piers has simply transferred the book-keeping department of the lake steamers from Montreal to Owen Sound in charge of Mr. Smith, who will do his work at Owen Sound instead of in Montreal.

Thousand Island Steamboat War.

On July 15 the Richelieu & Ontario Navigation Co. declared war against the American Line & started competing boats to cut rates in the Thousand Island district. The R. & O. Co. took the Columbian & Caspian from the Montreal-Kingston route & put them on the Thousand Island route, which had hitherto been left to the American Line. The cut in rates amounts to about 75 per cent.; for instance, the R. & O. put into effect a rate of 25c. from Kingston to Alexandria Bay, calling at Gananoque, for which run the American rate was 75c. The new service will extend from Kingston to Ogdensburg, N. Y., including all intermediate points in the Thousand Islands, & it is said that if the R. & O. Co. finds it necessary it will carry passengers free. The R. & O. Co., in meeting the competition of the American Line, did not desire to cut the rate from Kingston to Montreal, as that would mean a reduction in the rate between Toronto & Montreal, on which route it has about all the business it can handle. It was decided, therefore, to go into the territory hitherto occupied almost exclusively by the Folgers, and cut the rates between Kingston, Ogdensburg & local points in the Thousand Islands.

The American Line was organized last year by the Folgers, of Kingston, who are said to be the principal parties behind it, although they are supposed to have some backing from the New York Central Ry. At first there was only one boat, the America, running between Clayton and Montreal. This season, however, it was decided to extend the operations of the line, & give a daily service between the points mentioned. Two boats were placed on the route, the United Empire & the New York. The latter was formerly called the Shrewsbury, but was rebuilt in Buffalo last winter, & renamed. The American Line has a traffic connection with the New York Central, which issues through tickets via the American Line to Montreal.

The General Manager of the R. & O. when asked for an explanation respecting the move said: "Self protection alone has compelled us to take this step. The American Company, not satisfied with its own territory, invaded ours. It attempted by every means to steal our business. The time has arrived for us to strike back. We will maintain the best service between the two points, & will call at other points, including Clayton & Alexandria Bay."

Another director of the same company said: "The American line is really owned by the Folgers, the monopolistic owners of steamboats in the Kingston district. For a period they respected our territory & we respected theirs. Last season, however, they ran boats twice a week between Alexandria Bay & Montreal. This year the Co., still further enraged by our refusal to buy 2 of their boats offered to us, began a daily service. Their experiment of running their boats ahead of ours proved a great failure. We make better speed, & our boats reach here at a more seasonable hour. Last night, for instance, their boat carried 9 passengers to Montreal, while ours numbered 141. Our captains in the new competing territory in the Kingston district have been instructed to accept business even if at a sacrifice. The district in the summer time is one of excursions, & we are bound to secure all of them even if we have to carry the passengers for nothing."

At the recent annual convention of the American Society of Railway Superintendents at Alexandria Bay, Mr. Folger in speaking said: "On an occasion of this character it is fitting that something new should be told you, and so I will announce here for the first time that a company has already been formed by the strongest men of this country to carry the shields that have been to Quebec & the

Saguenay, & to furnish a service there as we have here, to make the hearts of the tourists rejoice; & I wish it understood by this assemblage & their association that our hospitality to it will be as broad & as long as our route."

In reference to this the General Manager of the R. & O. Co. said: "The Saguenay project of our rivals is easier said than done. Talk is cheap. To become our competitors in the lower river traffic would require an investment of at least a million dollars. The capital represented by the American line in the Kingston-Montreal service does not exceed \$30,000. The boats were bought for a song, & the only improvement has been the addition of some interior fittings. We are having a daily walk over in the carrying of tourists from the Thousand Islands to Montreal. Yesterday, for instance, the Columbian left an hour behind our rival, the Empire State. We overtook them before Brockville was reached, and got out of Prescott 10 minutes ahead. We reached Montreal at 6.20, beating them by an hour. Our passengers all succeeded in making connections with the Quebec boat."

OCEAN, LAKE & RIVER.

British Columbia & The Yukon.

The Secretary of the U.S. Treasury has appointed Capt. G. Whitney Inspector of Steam Vessels & Hulls, & C. F. Lehnert Inspector of Boilers for the district of Alaska.

The river steamer Casca was thrown against the walls of the Stikine canyon as she was returning to Wrangel on her first trip. Her stem was smashed & a big piece of her guard broken off.

A press item to the effect that the C.P.R. Empress steamers are to be managed from Vancouver is without foundation. The management will remain in Montreal in the hands of Superintendent Piers.

The Bennett Lake & Klondike Navigation Co. has had 3 steamers built at Bennett, under the direction of W. H. T. Olive, of Victoria, & is running them between Lake Bennett & Dawson City, Yukon. One of them makes the trip from White Horse to Bennett, 120 miles, against the current, in 10 hours. Each boat has capacity of 60 passengers & 40 tons of freight.

The Polson Iron Works Co., Toronto, is building for the C.P.R. 2 fore & aft compound jet condensing engines with Clyde boilers, to be placed in tugs which that Co. is building on the Kootenay Lakes. One of the engines has cylinders 16 x 22 ins. x 10 ins. stroke; boiler, 7½ ft. diameter; 10 ft. long. The other engine has cylinders 12 x 26 ins. x 18 ins. stroke; boiler, 8 ft. 4 ins. diameter; 10 ft. long.

The C.P.R. steamers Athenian & Tartar have been withdrawn from the Vancouver-Wrangel route, owing to the collapse or cessation of the Yukon rush. It is probable the Tartar will be placed on the route between Vancouver & Japan & China, the business on which has increased to such an extent as to require the service of another boat in addition to the three Empresses. The disposition of the Athenian is not yet announced.

Up to July 7 only 4 river steamers had come down the Yukon. The May West left Dawson June 10, & arrived at St. Michael's July 3, with 100 passengers. The steamer Hamilton left Dawson June 24, & the B.B. Weare June 25, both arriving at St. Michael's July 5, the Hamilton being in tow of the Weare, having broken her chains. The Hamilton had 100 passengers & 100 tons of freight. The Yukon is unusually low this season, & boats that are already at St. Michael's have slight chances of passing Dawson. When the Bella came down, it surprised 3 steamers stuck in

the mud at Fort Yukon. The water in the river is not deeper than 3 feet in many places.

There is no foundation for the rumor that the C.P.R. Co. intends putting on a steamer between Vancouver & Victoria, but it is probable that the Co. would have done so had not the Canadian Pacific Navigation Co., in which the C.P.R. Co. has no interests, decided to do so. The present service between the two principal cities of B.C. is quite inadequate, & what is required is a fast boat to carry only passengers, mail & express matter, & not to be loaded down with freight as is now the case. The C.P.N. Co. has, it is said, opened negotiations with builders in Great Britain for the construction of a 1st class 21 knot steamer, which will be 270 ft. long, 34 ft. beam & 14½ ft. hold. A speed of 21 knots would enable her to make the trip between the two cities mentioned in less than 4 hours.

The experience in towing-stern wheel river steamers oceanwards to St. Michaels, Alaska, has proved a very unfortunate business, several having been lost. Early in July the stern-wheeler Marquis of Dufferin, built at Vancouver for the British American Corporation, at a cost of \$30,000, & which was being towed by the steamer Progress, went to pieces & sank between Cape Flattery & Cape Beale. The steamer Victorian, which is owned by the Canadian Development Co. of Victoria, started from Wrangel in June, in company with the river steamers Canadian & Columbian, consorted by the steamer Tordenskjold. A short distance north of Wrangel the river steamers put into a village for water. While there the tide went out & the Victorian settled down on the rocks, which came up through her hull. When the tide rose she was floated & after being temporarily patched taken to Wrangel for repairs, & the Tordenskjold & the other two vessels continued their voyage to St. Michaels.

Pickford & Black's steamer Alpha, referred to in our June issue, pg. 106, reached Vancouver, July 7, from Halifax, N.S. She is capable of running 11 knots an hour & is very comfortably fitted up, the saloon being amidships, with comfortable cabins off each side. She can carry 40 first & 20 second class passengers, and 100 in the steerage, while her freight capacity is 800 tons, & has been engaged in the service between Halifax & the Bermudas. A. H. B. McGowan is the local agent, but Mr. Black, of the owning firm, went to Vancouver to inaugurate the service, which will include the steamer Fastnet,

sent out by the same firm. As foreshadowed in our June issue, on her first trip to St. Michaels, Alaska, the Alpha took in tow the Yukon & Hootalinqua Co's. stern-wheel steamer Reindeer, which was built at Victoria. Her dimensions are: length 120 ft., beam 22ft., depth of hold 5 ft. Light she draws 22 ins. of water, & when loaded with 150 tons of freight draws only 6 inches more. On her trial trip she developed a speed of 17 knots. From St. Michaels, in addition to her own cargo, she is intended to tow a loaded barge up the Yukon.

The Maritime Provinces.

The Marine railway, which forms part of the plant of the Halifax Graving Dock Co., is to be rebuilt.

The S.S. Damara from St. John, N.B., to London, Eng., via Halifax, recently took 300 tons of pulp valued at about \$12,000.

The North German Lloyd steamer Ems ran down the schooner Gypsum Princess of Parrsboro', N.S., June 12. Six were drowned.

The Avon Tow Boat & Ferry Co., & the Wm. Weatherspoon Tow Boat & Ferry Co., both of Hantsport, N.S., have been incorporated.

The N.B. Government has issued supplementary letters patent increasing the capital stock of the Deer Island & Campo Bello Steamboat Co., from \$7,000 to \$15,000.

G. W. Churchill, of Hantsport, N.S., & 4 other members of the Churchill family have been incorporated by Dominion letters patent as the Ship British-America Co.; capital, \$2,000; headquarters, Hantsport; powers, to acquire ships & carry on business as ship owners & common carriers by sea.

The S. P. Benjamin Co. has had a steel steam tug built to tow lumber barges. She is 60 ft. long, 15 ft. beam & 7 ft. hold, & as it will be necessary for her to tow under 3 bridges on the Avon, her smokestack is removable, & when so trimmed she measures only 7 feet from her water to her top line.

The annual general meeting of the Chignecto Marine Transport Railway Co. was held in London in June. The old directors were re-elected, but no other business of importance was transacted. The Co. pays a heavy tax on their property in the shape of school & other rates in Cumberland County, N.S.

The steamer Mayflower, which has been laying idle for nearly 2 years at Port Hawkesbury, N.S., & which was sold to a company a short time since, has been thoroughly overhauled & fitted. She has been engaged by the government for the ferry service on the Strait of Canso in place of the S.S. Mulgrave, which has been laid off for general repairs.

J. T. Hamilton, H. Mc. Hart, G. Musgrave, C. W. Outhit, R. T. Braine, T. Dixon, W. J. Butler, F. J. Phelan, L. Hart, W. N. Wickwire & J. A. Johnson, of Halifax, are applying for Dominion Letters Patent to incorporate them as The Acadia Steamship Co.; capital, \$60,000; headquarters, Halifax. The first three named applicants to be the provisional directors.

Under the Nova Scotia Joint Stock Companies' Act letters patent of incorporation have been granted to G. W. Churchill & 4 other members of the Churchill family, of Hantsport, for the following companies: The W. M. Weatherspoon Tow Boat & Ferry Co., capital \$2,000; the Avon Tow Boat & Ferry Co., capital \$2,000; & the Chester Tow Boat & Ferry Co., capital \$2,000.

The question of a direct steamship service between St. John, N.B., & the West Indies has been discussed a good deal of late. There is a feeling that with a faster service more trade could be done, & that a local business would be supplemented by a growing western trade with the islanders through the port of St. John. The St. John board of trade has declared in favor of a direct line, & the city council has appointed a committee to co-operate with the board of trade in considering the subject. In this they will have the hearty support of the C.P.R., which is anxious to develop trade between the West Indies & points in Western Canada.—Maritime Merchant.

The steam ferry Chebucto, built in Great Britain to run between Halifax & Dartmouth, N.S., reached Halifax June 27 from the Azores, where she put in for shelter about a year ago, since which it was found almost impossible to get any captain to attempt to bring her the balance of the distance. Her voyage is probably the longest ever made by a ferry boat, without being towed, & altogether unaccompanied. The cabin windows were boarded, the cabins & gangways shored and braced to prevent straining, & she was boarded across the ends in a sloping manner to shed the water. The voyage from the

Azores was made in less than 20 days, under Captain Crockett, formerly of the Anchor Line Scotia on the Mediterranean route, with a Glasgow crew. She is under 150 ft. long, but is one of the most up-to-date ferries extant, with compound engines, a propeller at each end & a line of shafting running fore & aft. The cabins run fore and aft, with no break such as side wheels produce. Her cost was about \$70,000.

Ontario & the Great Lakes.

The Victoria, a \$30,000 steamer, capable of making 18 miles an hour, has been launched at Pembroke for the Pembroke Navigation Co.

Letters patent of incorporation have been issued under the Ontario Act to the Georgian Bay Navigation Co., with a capital stock of \$20,000.

The steamer Algonquin made a fast trip between Kingston & Toledo last month, covering the return trip in 5 days & 22 hours. She carried 70,000 bushels of corn.

The lighthouses on the Great Lakes are having their supplies taken in this year by the Collins Bay Rafting Co's. steamer Saturn, not the Sequin, as previously stated erroneously. The charter price is said to be about \$3,750, a little less than last year.

The steamer Rosedale, which was badly damaged through stranding on one of the shoals of Lake Ontario last fall, but released, is again in commission, & is a competitor for the limited amount of business that is now offering for the general freighters.

The Department of Railways & Canals has decided upon an arrangement for the utilization of the canals on Sunday, as a sort of compromise between the demands of the Sabbatarians & the forwarders. The canals will be open to navigation until 6 a.m., & will remain closed until 9 p.m. On the one hand the Department was urged to allow the navigation of the canals continuously, while on the other a protest was entered against operating the locks between midnight Saturday & midnight Sunday.

The Canadian steamer Tecumseh struck on Ripley's Rock, in the lower Marquette harbor, Mich., June 27. Her crew attempted her release by the use of a line, but the steamer stuck all the harder & finally broke her shoe & wrenched her rudder. A bad leak was started, & during the afternoon the leak increased & the steamer filled until finally she slid off the rock part way & settled down with her forward decks awash & her stern high in the air. An attempt was made to hold her with the schooner Georgia, but the lines were not strong enough & parted. The bridge & light upper works of the steamer were torn away by the steam when she sank. The officers & crew escaped in the yawl & on rafts & saved most of their personal property.

The steamer Shrewsbury, purchased by the Folgers, of Kingston, last year for the American Line, between Clayton, N.Y., & Montreal, underwent extensive alterations and improvements at Buffalo, N.Y., last winter, & is now known as the New York. She is about 180 ft. long & 44 ft. beam. All on the main deck is a handsome dining room, enclosed by large observation windows, with mirrors between. The dining room is supplied with small individual tables. Forward the main deck is also enclosed by observation windows, & is arranged for lounging & smoking. On the promenade deck is a large saloon cabin, on each side of which is a row of state rooms, each containing a double lower & double upper berth. Forward of the saloon cabin is a broad promenade. It is said that on her

trial trip the New York made 20 miles an hour. Capt. C. Hinckley is in command.

To the G.T.R. belongs the honor of handling through its elevator at Midland, Ont., the largest cargo of grain that has ever been loaded in a single vessel on fresh water. The steamer Superior City loaded at South Chicago with 266,505 bushels of corn for Midland. This cargo is 34,550 bushels in excess of any that has hitherto been handled on the lakes, its net weight being 7,462.9 tons—equivalent to 443 carloads. A prominent official of the G.T.R. says: "On the completion of the G.T.R.'s elevator at Midland, which is in course of construction, it is expected that even the extent of this cargo will be exceeded, as vessels are now being built, to be operated on the lakes, whose capacity is larger than that of the vessel above referred to, & with the new & improved facilities at Midland, it is expected the handling of grain at that point will be performed more expeditiously than at any other port on the lakes."

No. 81 of the Standard Oil Co. boats went through the Welland Canal early in July. She is a large tow barge, 258 ft. long on the water line, 41 ft. beam, & when loaded draws 18 ft. of water. She was being taken to Boston to carry fresh water for the U. S. navy. Her capacity is 900,000 gallons. On account of her size a novel way was adopted for getting her through the locks. Being too large to tow by horses, two tugs were brought into requisition. These fetched her to the head of the locks, where she was securely snubbed. The tugs were then locked through & snubbed outside the foot gates. A line was then put out & fastened to the tugs, & she was pulled in by means of her own donkey engine, thus necessitating a double lockage each time. While in tow of the tug Rival going down the St. Lawrence, & running the Cedar Rapids, she ran ashore on Hog Island & was reported to be in a very bad condition.

The first general meeting of the shareholders of the Brockville Navigation Co. was held July 8. N. Cossitt, O. K. Fraser, R. Bowie, T. Wilkinson & W. S. Buell were elected directors. N. Cossitt was elected president, & W. S. Buell, Managing Director & Secretary-Treasurer. The Co's steamer Brockville, recently built in Toronto, arrived at Brockville July 9, & will run between Brockville & Union Point, 7 miles, making 4 trips a day & calling at the various summer resorts en route. She is 105 ft. long, 21½ ft. beam & 7 ft. deep, & licensed to carry 375 passengers. Her draught is only 5 ft. & the contract calls a speed of 14 miles an hour. The engines were built by the Polson Iron Works, & are compound fore & aft, with cylinders 9 x 18 & 14 ins. stroke. She is fitted with an incandescent light plant, with a large searchlight on the top of the wheel house, which will show the localities of the river by night.

Judge McDougall, of Toronto, has given judgment in the Admiralty case of the steam tug Fern against the schooner Porter. The case was tried at Windsor, Ont. During the season of 1897 the Fern was engaged in raising the wreck of the Grand Traverse, which lay in the middle of the channel over a mile north of the Colchester reef light on Lake Erie. The wreck was known to ship captains & the fact that the Fern was raising her was also known. On Sept. 2, 1897, the Porter, Capt. McDonald, on her way light from Buffalo to Detroit, ran into the Fern. The Porter had all sail set & was going about 4 miles an hour. Captain Herminger entered suit for \$252 damages, & Judge McDougall awards that amount. The evidence given at the trial was contradictory. The Porter's crew swore that there was no light on the Fern, while the latter's crew swore that the top light was burning brightly. They were corroborated by the keeper of the lighthouse, who saw the light burning.

A Nova Scotia Steamer.

The Yarmouth Steamship Co.'s latest acquisition, the Steamer Express, has been brought out from England, & is now on the South Shore route between Halifax & Yarmouth, N.S. She is of the low & rakish type, with a splendid hull & fine lines, resembling in some respects the D. A. R. liner Prince Rupert.

The Express was built for the Morecambe, Llandudno & Isle of Man passenger service, & was popular on that run. Her dimensions are: length, 202 ft; beam, 24 ft; depth moulded, 11 ft; across the paddle-boxes she measures 50 ft. Her engines are of the disconnecting type, the high pressure cylinder being diagonal & the low pressure oscillating. They indicate 1,200 h. p., being capable of driving the vessel 14 knots. Steam is supplied at a pressure of 100 lbs per square inch.

When in the Channel service she was fitted with fore-castle & bridge deck erections only, but since being taken over by the Yarmouth S. S. Co. she has been built up fore & aft, & covered in with a flush hurricane deck. On this 2 deck houses have been erected, 1 forward & 1 aft. The forward house contains accommodation for captain & officers, a smoking room & forward saloon companionway. On top of this is the pilot house.

The companion leads down to the forward saloon, along both sides of which are fitted very comfortable sleeping berths, settees being arranged where convenient. Below this again is a lower saloon, the forward part of which is fitted as a men's cabin, & the after part is fitted with berths. Below deck is the after saloon, a long apartment containing the staterooms, & at the forward end of the saloon galley. Along the sides are ranged settees, & a centre table is fitted abaft a large lower deck opening. The cabins, staterooms & upper saloon are decorated in white & gold & the upholstery is in maroon plush & American cloth. Baths, lavatories & the usual sanitary arrangements are provided for the several large apartments. The staterooms are all fitted with tip-up lavatories.

The dining saloon on the lower deck, with accommodation for 25 passengers, is a handsome apartment, finished in whitewood & cherry, fitted with 2 beautiful electric chandeliers. The sides of the saloon are adorned with panel landscape paintings. The Express is fitted throughout with electric lights, bells & telegraphs & has accommodation for over 200 passengers.—Halifax Chronicle.

The St. Lawrence Canals.

The Deputy Minister of Railways & Canals, who recently inspected the construction work upon the St. Lawrence canals, reports that operations are progressing rapidly. The contractors for the deepening of the channel below Prescott are taking out 500 cubic yards of earth & 500 yards of rock per day, & the output will shortly be doubled. At the increased rate of progress the channel will be ready for 14-ft. navigation next spring. On the contract for the Cardinal section of the Galops Canal, 8,000 cubic yards of earth are being taken out each day. On the Larkin & Sangster contract the rock & earth work are advancing towards completion. The masonry work on the lock is in progress & a large quantity of cut stone has been deposited on the ground. The work of the Canadian Construction Co. at Farran's Point is being energetically pushed forward. The cutters, dredges & dredges are constantly in operation, & the equipment will be increased by 2 more dredges in a few days. The masonry is well under way & cut stone is arriving from the quarries daily. Everything possible is being done to expedite the construction work on the St. Lawrence canals.

NOTICES TO MARINERS.

By the Dominion Department of Marine.

All bearings, unless otherwise noted, are magnetic & are given from seaward, miles are nautical miles, heights are above high water, & all depths are at mean low water.

No. 28, June 2. Parthia Shoal, Fairway Marks Brockton Point.—An open triangle, with sides 6 ft. long, painted white, has been placed apex uppermost on the eastern or back range mast at Brockton Point (see Notice to Mariners, no. 21 of 1897), so that the 2 masts may be more readily differentiated. This affects Admiralty charts 1022, 1022 N 2689, & B. C. Pilot, 1888, pg. 138.

2. Spar Buoy, Burrard Inlet, B.C. First Narrows.—A spar buoy, painted red, has been moored in 3 fathoms off the spit on the southern shore of First Narrows, Burrard Inlet. The following sextant angles fix the position of this buoy: Tangent of Brockton Point & East Beacon, $78^{\circ} 50'$; east Beacon & tangent Prospect Bluff, $82^{\circ} 24'$. This affects Admiralty charts nos. 922, 1922 & 2689, & B. C. Pilot, 1888, pg. 138.

3. Reef off Gibson Landing, Shoal Channel.—Pending the construction of a beacon, a small spar buoy has been temporarily placed on the outer rock that dries 3 ft. $2\frac{3}{4}$ cables eastward of Gibson's Landing, Shoal Channel. (See Notice to Mariners, no. 16 of 1897.) This affects Admiralty charts 579 & 585, & B. C. Pilot, 1888, pg. 169.

4. Welcome Point Shoal.—A spar buoy, painted red, has been moored in 6 fathoms water, off Welcome Point, eastern entrance to Welcome Pass, Seachelt Peninsula, to mark the extent of the shoal ground off that point. For a distance of 1 mile eastward of this buoy & the same distance as the buoy is from the shore the average depth is 5 fathoms, shoaling shoreward to 4 & 3 fathoms. The water is very deep close southward of the buoy & also west of it. The shoalest spot, which is awash at low water, is about $\frac{1}{2}$ a cable N. E. by N. from the buoy. Angles for Welcome Point Buoy:—Northerly tangent Merry Island & tangent Thormanby East Island, $29^{\circ} 24'$; Northerly tangent Merry Island & tangent Welcome Point, $46^{\circ} 00'$; tangent Welcome Point & tangent east shore trend westerly point of S.E. bay, $127^{\circ} 48'$. This affects Admiralty charts 579 & 1917, & B.C. Pilot, 1888, pg. 174.

No. 29, June 10.—Reef in Blinkinsop Bay, B.C.—An uncharted reef has been located by J. T. Walbran, Master of the D.G.S. Quadra, extending west south-westerly about $1\frac{1}{4}$ cables from Point Tuna, at the entrance to Blinkinsop Bay, Junction Strait, Lat. N. $50^{\circ} 28' 34''$, Long. W. $126^{\circ} 1' 37''$. The reef is marked by kelp & the middle is awash at low water spring tides. This affects Admiralty charts 581 & 630 & B.C. Pilot, 1888, pg. 211.

No. 30, June 10.—Derelict between Nova Scotia & Newfoundland.—Captain Jorgensen, of the Norwegian barque Svea, reports that on May 29 he passed a wrecked schooner apparently of 200 or 300 tons, in Lat. 46° N. & Long. $57^{\circ} 3'$ W. This derelict may prove dangerous to vessels crossing between N. S. & Newfoundland or entering the Gulf of St. Lawrence.

No. 31, June 10, Nova Scotia.—1. Hand Fog-Horn at Page Island Light Station.—A hand fog-horn is being supplied to the light station at Page Island, Port Latour, which on and after June 20 will be sounded during thick & foggy weather in answer to signals from vessels. This affects Admiralty charts 340 & 730, & Canadian list of lights & fog signals 148.

2.—Hand Fog-Horn at Pubnico Light Station.—At the same time a similar horn will be established at the light station at Beach

Point, on the east side of the entrance to Pubnico Harbor. This affects Admiralty charts 339, 352 & 2537, & Canadian lists of lights & fog-signals 138.

3.—Canso Harbor Fairway Buoy.—The Government has established a fairway buoy off the northern entrance to Canso harbor, in Chedabucto Bay, on the south-easterly coast of N. S., Lat. N. $45^{\circ} 21' 45''$; Long. W. $60^{\circ} 59' 45''$. The buoy is an iron can, painted in black & white vertical stripes, moored in 13 fathoms water, $1\frac{1}{8}$ miles N. $\frac{1}{2}$ E. from Hart Island light, & is intended as a fairway buoy to guide vessels into Canso Harbor by the northern entrance, & between outlying shoals. It will be maintained during the season of navigation & taken up for the winter. This affects Admiralty charts 729, 2163 & 2517.

4.—Beaver Island Shoal buoy.—The shoal extending easterly from the eastern extremity of Beaver Island, Halifax county, on the southern coast of N. S., has been marked by an iron can buoy, established by the Government. The buoy, which is painted black, is moored in 7 fathoms water, $\frac{1}{2}$ mile E. from Beaver Island light & $\frac{3}{8}$ mile from the eastern extremity of the island, Lat. N. $44^{\circ} 49' 45''$; Long. W. $62^{\circ} 19' 35''$. It is to be left on the port hand by vessels bound into Beaver Harbor or Salmon River. It will be taken up at the close of navigation for the winter. This affects Admiralty charts 2396 & 2663.

No. 32, June 27.—New Brunswick.—Improvement in Preston Beach range lights.—The masts, from which range lights were shown on Preston Beach, on the south shore of Miramichi Bay, have been replaced by lighthouse towers. The front tower stands on the top of a sand ridge which follows the shore of the bay, & is 68 ft. N. 18° W. from the former range light mast. Lat. N. $47^{\circ} 4' 47''$; Long. W. $64^{\circ} 54' 58''$. The tower is a wooden building, square in plan, with inclined sides, surmounted by a square wooden lantern, & is 29 ft. high from the ground to the vane on the lantern. It is painted white, with the lantern red. The light will be, as heretofore, fixed white, elevated 47 ft. above high water mark, & should be visible 10 miles in the line of range & also eastwardly down the bay approximately between the bearings of N. W. & E. S. E. The illuminating apparatus consists of a single wick lamp strengthened by a pressed glass lens. The back tower is erected on the south side of the high road, 804 ft. S. by E. $\frac{3}{8}$ E. (S. $40^{\circ} 30'$ E. true) from the front tower. It is a skeleton steel frame work, square in plan, with sloping sides, surmounted by a wooden lantern & light room. The height from the ground to the vane on the lantern is 59 ft. The lantern & ironwork are painted red; the enclosed upper part of the tower is painted white. The light is a fixed white light elevated 58 ft. above high water mark, & visible 10 miles in the line of range & also eastwardly down the bay. The illuminating apparatus is similar to that of the front light. The two lights are in exactly the same alignment as the old lights & in one lead vessels entering Miramichi Bay from the Bar buoy up through the ship channel east of the Lump buoy. This notice affects Admiralty charts 435, 2034 & 2187.

No. 33, June 29.—British Columbia.—1. Beacon at Gibson's Landing. A small stone beacon, surmounted by a wooden staff & lattice work ball, the whole painted black, & showing 9 ft. above water, has been erected by this Department on the northern portion of a rock $2\frac{3}{4}$ cables east of Gibson's Landing, Shoal channel, Howe Sound. Lat. N. $49^{\circ} 24' 10''$; Long. W. $123^{\circ} 31' 2''$. This beacon replaces the buoy described in part 3 of Notice to Mariners no. 28 of 1898. This affects Admiralty charts 579 & 585, & B.C. Pilot, 1888, pg. 169.

2.—Rock in Shoal Channel.—An uncharted danger in Shoal Channel, entrance to Howe

Sound, near the conspicuous cone shown on plan 585, has been located by J. T. Walbran, Master of the D.G.S. Quadra. The danger is a narrow shoal running S.S.E. from a point on the west shore where a slate spit extends 160 ft. south from high water mark. No depth of more than 2 fathoms is found on the shoalest spot, a rock awash, at a distance of 1 cable from the shore. A depth of 4 fathoms is found $\frac{1}{2}$ cable south of this spot, outside of which the water rapidly deepens. From the rock awash Gibson's Landing wharf bears S.S.W. (S. $45^{\circ} 45'$ W. true) distant $1\frac{1}{8}$ miles; the north Shelter Island, S. E. (S. $21^{\circ} 45'$ E. true) distant 7 cables, & the trend of the shore northwards bears N. $\frac{1}{4}$ E. (N. 26° E. true.) This affects Admiralty charts 579 & 585, & B.C. Pilot, 1888, pg. 169.

3.—Rocky Patch off Cole Bay.—Notice has been received from the Commander-in-Chief of the Pacific station of the location by the officers of H.M.S. Pheasant of a rocky patch off White Rocks, Cole Bay, Saanich Inlet. Lat. N. $48^{\circ} 37' 47''$; Long. W. $123^{\circ} 29' 40''$. The patch lies in a N.E. by S.W. direction with the westernmost of the White Rocks bearing N. 57° E. magnetic, distant 2 cables. It is about $\frac{1}{2}$ cable in extent & has at least a depth of 8 ft. The following sextant angles will locate the position of least depth: Village Point, 0° ; Hatch Point, $87\frac{1}{2}^{\circ}$; Coal Point, $22\frac{1}{2}^{\circ}$; Western White Rocks, 76° ; Senanus Island, $109\frac{1}{2}^{\circ}$; Village Point, $64\frac{1}{2}^{\circ}$. This affects Admiralty charts 1917, 2689 & 2840, & B.C. Pilot, 1888, pg. 72.

4.—Shoal Southeastward of Mitlenatch Island.—Information, dated April 21 last, was received by the British Admiralty from Commander M. H. Smith, H. M. surveying vessel Egeria, of the existence of a shoal, now named Sentry Shoal, lying to the southeastward of Mitlenatch Island. The shoal within the limits of the 10-fathom line runs N.W. & S.E. $1\frac{1}{2}$ miles, the least depth found being 5 fathoms, from which the summit of Mitlenatch Island bears N. 30° W., distant $2\frac{1}{8}$ miles. Shoal water also appears to extend $\frac{1}{2}$ mile from the north side of Mitlenatch Island. Approximate position of 5-fathom patch: Lat. N. $49^{\circ} 55' 0''$; Long. W. $125^{\circ} 1' 30''$. This affects Admiralty charts 580 & 1917, & B.C. Pilot, 1888, pg. 182.

5.—Rock in Schooner Passage.—Capt. Roberts, of the steamer Princess Louise, has reported that his vessel struck on an unknown rock in Schooner Passage, Rivers Inlet. The rock is about 70 yards from the western shore & is awash at extreme low tide. A mid-channel course will clear the danger. Approximate position on Admiralty chart 1923b: Lat. N. $51^{\circ} 33' 17''$; Long. W. $127^{\circ} 36' 30''$. Capt. Roberts also reports that the rock shown on the chart on the eastern side of the southern entrance to Schooner Passage dries at an extreme low tide. This affects Admiralty chart 1923b, & B. C. Pilot, 1888, pg. 360.

6.—General Information Respecting Work Channel.—The following summary of a report by Capt. Walbran has been published in U.S. Notice to Mariners, no. 24 of 1898: Work Channel, the entrance to which lies close northward of Point Maskelyne, is a nearly straight arm stretching about 30 miles to the southeastward, the head reaching within 2 or 3 miles of the Skeena River. There is good anchorage in 9 fathoms in a small cove, known as Trail Bay Cove, situated on the west side of Trail Bay. Trail Bay is situated on the western shore of the inlet & $\frac{5}{2}$ miles from the entrance. Two miles eastward of Grace Point, the entrance to Trail Bay, is a dangerous pinnacle rock situated nearly in the middle of the inlet. The rock just dries at an extreme low tide. It is surrounded by deep water, there being a depth of 130 fathoms close to it. The shores of this inlet are bold & compact & the whole of this channel is surrounded by high & precipitous

mountains. About 8 miles from the head a narrow arm branches off to the northward for about 3 miles & then turns to the southeast & eastward for 8 miles. Indifferent anchorage may be found at the head of the main inlet, between the 2 small streams in the southwestern bight, in 35 fathoms, 400 yards from low water mark. There is also anchorage, for a small vessel, in 9 fathoms in the cove to the northward of the bight & off the entrance to the salt water lake, steadying her with a hawser to the trees. The tidal stream in the entrance of Work Channel runs about 3 knots per hour. This affects Admiralty charts 1923a & 2430, & B.C. Pilot, 1888, pg. 428.

No. 34, June 30.—Ontario—I. Private Lights in River St. Mary.—A fixed white light has been established by Jos. Rouleau, pilot, to mark the southern edge of the dredged curve opposite the beacon in the upper entrance to the Canadian Canal, at Sault Ste. Marie, Ont. The light is shown from a buoy or float moored near the black spar buoy maintained by the Government. Two range lights have been established by Mr. Rouleau on Big Point, on the U.S. side of the river, in the same alignment as the lights on the Canadian side, to show the axis of the dredged channel above the canal from the U.S. side to the turning point at the beacon. These lights will be maintained by the pilots & the Canadian Government assumes no responsibility in connection with them. This affects Admiralty charts 320 & 324, & the substance of it should be entered in the Canadian List of Lights after no. 1115.

2.—Shoal off Gros Cap.—The Department of Marine is advised that several vessels, drawing 17 ft. or more, have struck an uncharted shoal in the upper or Lake Superior entrance to River St. Mary, between Gros Cap & Point Iroquois. One master states that the shoal is about $1\frac{1}{2}$ mile above Point Iroquois. The shoal is on, or a little to the eastward of, the alignment of the private lights known as Bernard's Range. Masters are advised to keep the range open a little to the westward until abreast of Point Iroquois. This notice affects Admiralty charts 320 & 324.

By the U.S. Hydrographic Office.

Lake Huron Georgian Bay Entrance Current off Cove Island Light.—Capt. McAllister, of the C.P.R. steamer Alberta, furnishes the following information (Capt. McAllister has had 12 years' experience on the one route between Owen Sound & Fort William):

After passing Grand Manitoulin Island, bound to the southward & eastward, opening up the entrance to Georgian Bay, between Hungerford Point & Cape Hurd, the effects of a current are immediately felt. This current is variable in both force & direction, setting from Georgian Bay into Lake Huron & vice versa with great irregularity. At times this current is so strong that in thick weather it would be hazardous to attempt an entrance into Georgian Bay unless the fog horn could first be heard & its direction established.

Ottawa River Navigation.

A correspondent writes: "Not many years ago the C.P.R. project was regarded as chimerical. But, where its opponents claimed the railway would never earn axle-grease, it is now paying dividends. The system comprises to-day over 7,500 miles of railway, & steamship lines on the Great Lakes & the Pacific, & last year its earnings were \$24,000,000. And now the great development of the Northwest due to it is enlarging its sphere of action daily. Lately it has been found necessary to add to the facilities for handling grain at Fort

William by the erection of a steel elevator. It is safe to say that, even with this addition, the existing capacity will soon have to be again increased.

"Just as the C.P.R. has made this western expansion possible there seems reason to believe that, on the opening of the Ottawa River to through navigation, history will repeat itself, & a new era of development in Central Canada will follow. Railways are imperfect colonizers where not aided by waterways. Had the C.P.R. been all along paralleled by a cheap water route from Lake Superior westward, the Northwest would have to-day five times its present population & the railway more & better paying business. And cheap water carriage will do even more for Northern Ontario than it could for the prairies. To the grain traffic it would be a great advantage, to lumber & minerals it is an absolute necessity.

"The Ottawa route will do for this part of Canada what no other waterway project can—open new territory for occupation. In the Nipissing & Temiscaming districts in Ontario & the Upper Ottawa agencies of Quebec are several million acres of lands, equal to any in Ontario, awaiting settlers. The increase in value of these alone, owing to their being brought on a main line of traffic, should repay the entire cost of opening navigation, lands now held at 50c. an acre becoming immediately worth at least 10 times that sum. Sturgeon Falls alone is said to be the shipping point for forests estimated to contain about 2,000,000 cords of spruce. On every cord of this from \$1 to \$2 would be saved to the producers as the direct result of the opening of the waterway. About the head of Temiscaming & northward is an inexhaustible supply of the same material, tributary to the Ottawa River. The manufacture of this should employ numerous mills. Water-power is abundant. Mr. Clarke, past President of the American Society of Civil Engineers, says: 'I can unreservedly state that I know of no other place in any manufacturing country, Niagara Falls not excepted, where there is such an amount of water-power as this scheme can make available.' The amount incidentally to be developed he places at upward of 500,000 h.p. This should be worth at least from \$2,000,000 to \$3,000,000 a year when fully taken up.

"As a through route it has the advantage of directness. From the Sault to Montreal is practically an air line. The Ottawa route must undoubtedly share in the enormous through traffic to the coast & Atlantic states, which is growing with wonderful rapidity. Mr. Clarke estimates that grain can be carried from Chicago to Montreal via the Ottawa at $2\frac{1}{4}$ c. a bushel. Provided the questions of feasibility & cost can be satisfactorily settled, the Ottawa waterway should be a success, & do for Ontario's 'New North' what the C.P.R. has done & is doing for the Northwest. It is a matter of provincial & national importance that the resources of that part of the Province which has contributed in the past so large a share of the provincial revenues should be developed. As to the feasibility of the project in question there seems no difficulty. If further steps are necessary to ascertain its cost these should be taken. If not too costly, the commerce created, the water-power utilized, the through traffic carried, & the general increase in land, timber & mineral values in the vicinity of the route should soon repay the outlay for construction of all necessary works."

Stikine River Navigation.

L. La Coste, engineer of the Public Works Department, who has been despatched for movements of the snag boat Sampson on the Stikine River, says, he found the Stikine a better navigable river than he had expected from report, & that the currents are not as

difficult nor is the current as rapid as those of many mountain rivers. The sandbars are the worst phase of the navigation, since by virtue of the kind of soil these are constantly shifting. Dredging would be of no use, & it is almost necessary for pilots to learn the channel fresh each year.

He states that one of the difficulties of the present season has been that the river boats, save in one or two instances, have not had sufficient power. All Stikine River vessels should develop 500 h.p. or 200 lbs. steam in order to make the up trip with a full cargo. Coal must be burned instead of wood. With plenty of power, & a captain who has thorough knowledge of the river, there should be no difficulty in making the trip on schedule time, except during the spring freshet, when the driftwood coming rapidly through the canyon is dangerous. The current, Mr. Coste asserts, occasionally reaches to miles an hour, but the average is little over half that. The rise and fall of the river reaches as high as 10 ft. On May 26 the water rose 7 ft. in one night at Glenora.

The Sampson has cleared the snags from two of the worst bends in the river. The snag boat not having power to stem the current above the 75-mile canyon, a crew was forwarded in small boats with 500 lbs. of dynamite to blow out the snags further up the river. On the road down the men cut off all dead cottonwood trees upon the banks. These trees are in abundance in this region. They grow to good height and girth, but they are surface rooted, die quickly, & when dead fall under slight pressure, adding largely to the floating driftwood.

B.C. Freight & Shipping Report.

R. P. Rithet & Co. say, under date of June 30:—It is reported from San Francisco that no spot grain charter has been effected there for more than 2 months & in the north matters have been but little more lively. There has also been very little forward business & that too confined to northern ports. The war has indirectly given something of a flip to coast freights in consequence of the U.S. Government withdrawing a number of steamers to act as transports. From the same cause a very animated demand has arisen for coal, both at San Francisco & the Hawaiian Islands, & the vessels in these trades are getting considerably higher rates. In the lumber market the tonnage offering is still limited, but the enquiry also is light, so that freights are steadied & changes during the month have been unimportant.

We quote freights as follows:—GRAIN: San Francisco to Cork f. o. nominal; Portland to Cork f. o., 38s. 9d.; Tacoma to Cork f. o., 31s. 3d. LUMBER: British Columbia or Puget Sound to Sydney, 42s. 6d. to 45s.; Melbourne or Adelaide, 52s. 6d. to 55s.; Port Pirie, 50s.; Freemantle, 57s. 6d. to 60s.; Yokohama, 43s. 9d. to 45s.; Shanghai, 45s. to 50s.; Tientsin, 57s. 6d. to 60s.; Valparaiso f. o., 47s. 6d. to 50s.; U. K. or Continent, 65s. to 67s. 6d. Rates for lumber are more or less nominal owing to the scarcity of tonnage.

The Trade & Commerce Department is informed that the present season's shipping totals are the highest in Canada's history. The Montreal lines, including both the passenger & freight lines; & at St. John, N. B., & Halifax the summer trade is very heavy. From the Maritime ports this is especially true of the West India trade. Shipments from the West Indies this season that a new boat had to be put on a short time ago, in addition to the regular service. The summer season is also unusually successful in the West Indies, & it is evident Canadians can capture the trade with a chance of returning.

ELECTRIC RAILWAYS.

British Columbia Lines.

B. C. Electric Ry.—D. A. Shiles, the Co.'s general manager at New Westminster, has been appointed traffic manager to succeed C. Aird, resigned. The Co. has issued a guide for visitors & tourists to Vancouver and New Westminster. It contains a colored map of the entire electric car system & views of many places of interest in & around the twin cities.

The Mount In Tramway & Electric Co. was incorporated at the last session of the B.C. Legislature.

Nelson.—C. S. Drummond, who is said to represent the British Electric Traction Co., of London, Eng., has applied to the Nelson town council for a 30 year charter for an electric street railway. The corporation clerk was instructed to reply that the council was favorably disposed towards the application, which would likely be granted if terms could be agreed on.

The Maritime Provinces.

The Charlottetown, P. E. I., Light & Power Co. held its first general meeting recently. L. L. Beer was chosen President; W. A. Weeks, Vice-President; & A. E. Ings, Secretary; the other directors being B. Hertz & W. C. Pitfield. H. R. Lordly, C.E., was appointed Engineer & Manager. After he has completed the surveys & the remodelling of the gas plant, it is said he will be sent to England to consult with parties who control a new electric motor, to be used for street cars.

Halifax Electric Tramway Co.—R. C. Brown recently resigned his position as Superintendent to become Assistant Chief Engineer of the Metropolitan Traction Co. of New York, & has been succeeded by F. A. Huntress, who was his assistant. When Mr. Brown's resignation was accepted the directors adopted a resolution reciting that his management had "resulted in the installation of a system of electric lighting & tramway service in the highest degree efficient, which efficiency is due in a very large measure to the ability & competency of Mr. Brown," & the President & Secretary were appointed to present him with a testimonial on behalf of the Co.

It is said this Co.'s stock, Halifax Tram, as it is known in speculative circles, is to be listed on Toronto Stock Exchange. It is listed on the Montreal Exchange, & has been an active speculative stock. It was listed in Montreal at par, & has since touched 142¾. It pays 4 quarterly dividends of 1¼%, so that it is a 5% stock. There is a rumor that a bonus of 1% will be paid with the next quarterly dividend, payable Oct. 1. The statement of earnings given out by the Co. for the first 4 months of the present year shows gross earnings of \$58,388.15, against \$55,646.38, an increase of \$2,741.77 for this year. The capital stock is \$800,000, & \$600,000 of bonds have been issued. The last annual statement shows its assets to be \$1,492,958.88, including cash on hand of \$76,845.10. After paying dividends of \$32,500 & all fixed charges last year, there was a surplus on hand of \$27,308.77, & \$20,000 was placed to the credit of the reserve fund. The directors are: Hon. D. MacKeen, President; J. Y. Payzant & W. B. Ross, Vice-Presidents; B. F. Pearson, Secretary; & A. Haley, J. Ross & A. Kingman.

St. John Ry—One of the St. John, N.B., city councillors wants the city to apply to the Provincial Legislature for power to expropriate the property, privileges & franchises of the Co., "with a view of running the same in the interests of the citizens & taxpayers."

Ontario Lines.

Berlin and Waterloo St. Ry.—There is no truth in the report that the G.T.R. has secured an option on this line, & G. T. officials deny any knowledge of the rumored extension to Preston. (Official.)

Guelph St. Ry.—The ladies of Guelph are to be permitted to "man" the street cars for one day, the proceeds to go towards the funds of the Guelph General Hospital, the railway only deducting the average day's receipts.

Hamilton Radial.—A writ has been issued on behalf of the Township of Saltfleet against this Co. to compel it to carry out the provisions of a by-law passed by the Township Council, requiring the Co. to water the road along the Beach.

Hamilton St. Ry.—Hamilton ratepayers will, on July 27, vote on these questions:—Shall the city now purchase and operate the Hamilton St. Ry? "If the city do not now purchase the Hamilton St. Ry., should the Council extend the franchise of the company for 15 years, that is, until 1928, when the other existing franchises of the local city electric railways expire?"

The Niagara Falls Park & River Ry. having completed laying its tracks on the upper steel arch bridge, the first car was run over it July 1. During the summer cars will run over the bridge every 5 minutes.

Ottawa Electric Ry.—The conductors recently demanded \$1.50 a day, for 9 hours' work. The Co. refused the demand & compromised on \$1.35, or 15 cts. an hour for a 9 hour day.

A movement is on foot in Ottawa to secure a citizens' vote on the question of operating the street railway on Sundays.

St. Thomas Electric Ry.—A. Bingham, Manager of the Bell Telephone Co. at St. Thomas, has resigned, to take the management of the electric railway.

Toronto & Mimico.—This Co. recently appealed to the Toronto City Court of Revision against the assessment of its wires, poles, rails, & buildings. J. Bicknell, for the Co., based his appeal mainly upon the contention that the properties were not assessable. The court could not see things from this point of view, & Mr. Bicknell consented to a confirmation of the assessment, & will appeal to the County Judge. The assessments disputed are as follows: \$103,005 on poles, wires & rails in the city, \$18,000 on buildings in the city, \$8,070 on poles, etc., of the Mimico line, \$1,350 on buildings of the Mimico line.

Our June issue, pg. 108, contained an extended report of the Sunday car case, which was decided by County Judge McDougall, of Toronto, in favor of this Co., a motion for a reserved case being afterwards granted. The terms of the reserved case have since been settled, the question which is reserved by Judge McDougall being: "Was I right in deciding that the conviction should be quashed?" The appeal will come on for hearing before the Divisional Court of the High Court of Justice at its next sittings, in September.

Toronto Ry. Co.—The gross earnings of this Co. are as follows:—

	1897	1898	Increase.
Jan.....	\$74,545.55	\$80,502.30	\$12,016.81
Feb.....	69,744.61	82,402.19	12,657.58
Mar.....	78,891.45	92,818.12	13,426.67
April.....	73,756.38	86,898.83	13,142.45
May.....	82,461.51	92,670.35	10,208.84
June.....	91,533.44	94,119.32	2,585.88

The T. Ry. Co. declared a dividend of 1% for the quarter ending June 30.

An office for the transfer & registration of the stock of the T. Ry. Co.'s stock has been opened at the office of the Montreal Trust & Deposit Co., Montreal.

The appeal of the T. Ry. Co. against the assessment on its poles, wires, etc., was dismissed by the County Judge. The decision was agreeable to both parties, the Co. having no objections to offer. A reduction of \$7,000 in the assessment was formally ratified.

Regarding the resolution of Toronto City Council calling upon the T. Ry. Co. to provide vestibules on the rear end of motor cars, Manager Keating has written the City Engineer expressing doubt whether the act requires the Co. to do so. He claims that these vestibules would interfere seriously with the proper control & management of the trolley rope, & could not fail to be a hindrance to the proper operation of the service; would also prevent ready access from motor to trailer & be sure to increase liability to danger & accidents. He adds he has not heard of any public demand for them, nor does he believe that such has ever been made or that there is any necessity for them, & the conductors have not made any request for them. It would be a mistake & source of danger to provide them.

Province of Quebec.

Chateauguay & Northern Ry.—At the recent annual meeting of shareholders the old directors were re-elected with W. D. Harris as President; J. J. Butterworth, Vice-President, J. P. Mullarkay, Managing Director.

Montreal's Electric Railways.—Electrically, Montreal is beyond doubt the most attractive city in the Dominion. There are 3 distinct systems of electric railways, the Montreal S. Ry., Montreal Park & Island Ry., & Montreal Belt Line Ry. Six years ago the M. St. Ry. was changed to electric traction, & the Co. has now in operation over 80 miles of road. The rolling stock consists of nearly 300 motors & trailers. The power house on William St. is 290 x 233 ft. In the engine & dynamo room are located 12 Edison generators of 200 k. w. capacity each; 6 multipolar generators of 300 k. w. capacity, & a 4,500 h.p. engine installed last summer. This engine replaced 6 compound engines of 600 h.p. each. An interesting feature of this installation is the switchboard, which is 60 ft. long & 11 ft. high, constructed of terra cotta lumber. The entire equipment is very complete & interesting. F. L. Wanklyn is general manager.

The Montreal Park & Island Ry. affords the means of visiting the many beautiful suburbs of Montreal, passing through a most picturesque country. The power station is located at Mile End, but it is intended to build a larger generating station when all the proposed lines of the Co. have been completed. C. A. E. Carr is general manager.

The system of the Montreal Belt Line Ry. comprises 13 miles of track. It is intended to serve the lower part of Montreal Island. The line leaves the C.P.R. at Hochelaga, passes through the municipalities of Maisonneuve, Longue Pointe, & Point aux Trembles, & following the course of the St. Lawrence River, reaches Bout d'Isle, where the cars are connected by a steam ferry with the town of Charlemagne & other points. The power-house is built near the centre of the line, & contains 2 generators of 200 to 325 kilowatt, 3 compound condensing engines, aggregating 700 h.p., with necessary boilers & other equipment. The cars comprise 9 open & 4 closed, in addition to an electric freight locomotive. The manager of the road is J. P. Mullarkay; J. Rowley is superintendent, R. Welsford, engineer; & C. H. Wright, electrician.—Electrical News.

Montreal Park & Island Ry. Co. To satisfy a claim of \$711, costs taxed against this Co., in its suit against C. C. McArthur, in which it was unsuccessful, it is probable that the entire property of the Co., plant, lines &

rolling stock, will come under the hammer. The line will continue to run as usual. A writ of execution was recently issued & placed in the hands of the bailiff, who immediately commenced the work of taking an inventory of the Co's belongings. These include a number of fine cars, lines to St. Laurent, Cartierville, Sault au Recollet, Cote des Neiges, & Lachine, etc. It is the present intention of the directors to allow the sale to proceed, as a judicial sale will free the line of many incumbrances. The public will not be in any way inconvenienced by these proceedings.

The M. P. & I. R. is issuing tickets, giving 3 hours continuous ride on any of its lines. These are specially intended for those wishing to take an enjoyable airing, and are just the thing for nurses with children. Good only up to 6.30 p.m.

As some confusion has arisen respecting the Montreal Island Belt Line Ry. Co. & the Chateauguay & Northern Ry. Co., it may be stated that they are two separate & independent corporations, though the capital stock of both companies is owned by the same parties. The C. & N. Co. built the section of the line between Montreal & the end of the Island & sold it to the M.I.B.L.R. Co. It is said that certain extensions are contemplated, but no information can be given in regard to them at present. The Co's stock is not yet listed.

Montreal St. Ry.—The gross earnings are as follows:

	1897.	1896.	Increase.
Oct.	\$110,202.00	\$109,110.48	\$7,091.52
Nov.	110,026.00	108,818.37	1,207.63
Dec.	113,128.91	103,116.02	10,012.89
	1898.	1897.	
Jan.	110,110.83	89,051.68	21,059.15
Feb.	102,625.49	89,051.68	13,573.81
Mar.	114,077.01	90,110.27	23,966.74
April.	100,819.37	89,051.68	11,767.69
May.	113,828.39	110,827.13	3,001.26
June.	133,164.61	130,676.78	2,487.83
	\$1,035,287.90	\$952,118.81	\$83,169.09

The M. St. Ry. has opened a cross town route to be known as the Park Avenue to River Front line. It traverses Park Avenue, Bleury, Craig, McGill & Commissioners St. to junction of Commissioners & Youville streets, then return by Youville, McGill, etc., giving a direct cross town line from Pine Avenue to the river side every 5 minutes.

The M. S. Ry. Co. has appealed to the Supreme Court from the judgment of the Court of Appeal in its dispute with the M. P. & I. Ry. Co., concerning the destruction of some cars at the Exhibition grounds fire.

At the Montreal City Council's last meeting Ald. Martineau drew attention to the matter of the taxation of the poles, wires, rails, etc., of the M. St. Ry. Co., which have hitherto gone unassessed.

The inhabitants of Longueuil are expecting to have an electric car service connecting with Montreal as soon as the Victoria Jubilee bridge is finished.

The Quebec, Montmorency & Charlevoix Ry. Co. has taken over the electric railway system of the Quebec District Ry. Co. The bonds of the amalgamated concerns, amounting to \$1,500,000, were sold to Hanson Bros., of Montreal, who have paid for some \$1,150,000 of the issue. The remaining \$350,000 of the bonds have been lodged with the trustees, the Montreal Trust & Deposit Co., & the proceeds of the sale of these are to be used for further extending the present city electrical system, & electrifying the steam system of the Q., M. & C. Ry. Co., so that in the near future pilgrims & others will be able to visit the shrine at St Anne de Beaupre by electric cars. A cheque for the \$1,150,000 of bonds was handed over by Hanson Bros. to Mr. Strathy, representing the Trust Co., which undertook to see to its proper disbursement to the old bondholders, creditors, etc., of the two concerns.

Investigation by the Rapid Transit Commission in New York has revealed some interesting facts as to the revenue & taxation of street railways. For the year ended June 30, 1897, it appears that the Metropolitan Co. paid in percentage & license fees about \$266,000, & for taxes on real estate \$384,000, a total of about \$650,000. During that time it carried about 178,000,000 passengers, & its gross earnings were \$8,888,000. Thus it paid about 7 1/3% of its gross earnings in taxes, or about 1/3c. for each passenger. The taxation of the Manhattan Co. was about \$609,000, its gross receipts were \$9,163,000, & it carried 183,000,000 passengers. The taxation thus was about 6 2/3% of its gross earnings, & 1/2c. per passenger. On a much smaller business the Third Avenue road paid about 28-10% of its gross earnings, or 1/2c. per passenger.

TELEGRAPHS & CABLES.

The Pacific Cable.

The Hong-Kong Press says: The development of events in the Far East & the addition of We-hai-wei to the list of British posts on the Pacific lend special interest to the renewal of activity with regard to the construction of swifter means of communication between the scattered British communities. The Australian premiers in conference have agreed that if Great Britain & Canada will contribute two-thirds of the cost of a Pacific cable, Australia should contribute one-third. In Canada an influential deputation has waited on the Premier & laid before him a proposal that a Pacific cable trust should be created under authority of the parliaments interested in the scheme, with power to raise the necessary funds & proceed to the construction of the cable. In this country it is understood that as soon as the Australasian & Canadian colonies shall agree in manifesting a strong desire for the construction of the line, any proposal which they may make to that effect will receive at least favorable consideration. The question with which the Imperial & Colonial Governments are playing is whether that Pacific cable shall be in British or in foreign hands. Japan has passed through an industrial second birth. Russia is pushing industrial enterprise on the northern Asiatic coast. France has not shrunk from heavy cost to establish a commercial footing on the south. Germany has made her latest move in the interests, we are asked to believe, of the protection of her commerce. Thus, north & south & east & west, the ocean is surrounded by rival nationalities. In presence of these waiting powers indications are given that the immense commercial field of China is about to be thrown open. Instantly the waters of the Pacific are alive. The military & political movements which have taken place are but the forerunner of intercourse. The trunk line of cable once established branch lines can easily be constructed to connect it with important points. One terminus under British protection in Australasia & another in Canada, one branch, if necessary, to join the San Francisco connection with Hawaii & another to Japan & the China ports would create a British network of cable communication which would for a long time to come meet the principal commercial needs of the Pacific. The matter might, indeed, be safely left to the operation of private interest but for the fact that in the present somewhat exceptional condition of affairs, when all eyes are turned to the Far East, time may become a question of importance.

Both the C.P.R. & the Western Union telegraphs now have call boxes in the hotels & business houses of Victoria, B.C. The C.P.R. use the messenger service boxes, while the Western Union has put in boxes of its own.

G.N.W. Telegraph Changes.

OPENED.—Ampersand, N. Y.; Ausable Chasm, N.Y.; Bluevale, Ont.; Cacouna, Que.; Caledonia Springs, Ont.; Childwold Station, N.Y.; Frontenac, N.Y.; Grand View House, Lake Placid, N.Y.; Grimsby Park, Ont.; Hotel Champlain, N.Y.; Hotel Childwold, N.Y.; Hotel Douglas, N.Y.; Hotel Ruisseau-mont, Lake Placid, N.Y.; Kushaqua Lodge, N.Y.; Lake Side Rest, Saranac Junction; Loon Lake House, N.Y.; Mountain View, N.Y.; Murray Isle, N.Y.; Pond View House, Gale, N.Y.; Port Sandfield Ont.; Roberval Hotel, Que.; Sandy Creek, N.Y.; Stevens House, Lake Placid, N.Y.; St. Lawrence Park, N.Y.; St. Placide, Que.; Thousand Island Park, N.Y.; Whiteface Inn, Lake Placid, N.Y.

CLOSED.—Chesterville, Ont.; Dunham, Que.; Etchenin Mills, Que.; St. Lin, Que.

Telegraph & Cable Items.

The directors of the Commercial Cable Co. recently declared the usual quarterly dividend of 1 1/4% payable July 1.

The largest telegraph office in the world is in the general post office building in London, Eng., over 3,000 operators being employed.

There are 41 ships engaged in the ocean cable telegraph service. The total capital invested in the submarine lines is estimated at \$200,000,000, & the number of lines is 1,305, of which 37 are over 1,000 miles long & 93 over 500 miles.

The C.P.R. Co. is building a telegraph line from Nelson, B.C., to Kuskonook, the point at which the Crow's Nest Pass Railway reaches the Kootenay Lake, & which will be the western terminus of the railway pending its completion to Nelson.

The total length of the world's telegraph system is not much under 5,000,000 miles. This is exclusive of 1,814,000 miles of submarine cables. This mileage is apportioned as follows: America, 2,500,000; Europe, 1,765,000; Asia, 311,000; Africa, 100,000; Australia, 218,000.

The new copper wire of the C.P.R.'s telegraph line from the coast to Vancouver was completed between Montreal & Winnipeg June 17, the first message over the new wire being from Mr. Hosmer, manager of telegraphs, to Mr. Shaugnessy, Vice-President of the Co., who was then in Winnipeg.

Hon. Dr. Lacot, of St. Henri, Que., & others give notice that they will apply for incorporation under the name of 'La Compagnie d'Electricite de Soulanges,' to operate telegraph & telephone lines in the County of Soulanges, with a capital stock of \$10,000, & principal place of business at Coteau Landing.

At the annual general meeting of shareholders of the Dominion Telegraph Co. in Toronto, July 6, the directors were re-elected as follows: T. Swinyard, President; Sir F. Smith, Vice-president; T. T. Eckert, C. A. Tinker, A. G. Ramsay, H. Pollatt, H. MacKenzie, T. F. Clark, T. R. Wood & F. Roper, Secretary & Treasurer.

The committee representing the C.P.R. dispatchers, agents & operators on lines west of Fort William concluded their deliberations with the management in Winnipeg early in July. They report having secured a liberal set of rules & regulations governing their branch of the service, in addition to an advance in wages. The committee speak very highly of the courteous & fair treatment shown by the management.

A firm of timber contractors in New Westminster has received an order for poles for the telegraph line to be built between Vancouver & New Westminster, B.C., by the Western Union Co. Work will be pushed simultaneously.

ously between New Westminster & Blaine, along the line of the Great Northern Ry. From Blaine the line will run via Fairhaven to Woolly, Wash., where connection will be made with existing Western Union lines. See this issue, pg. 110.

The Minister of Public Works, Mr. Tarte, recently visited Father Point, Que., & promised to have the signal station placed in direct telegraphic communication with all the lower signal stations, & thus remove the grievance that is so loudly complained of by steamship owners, captains & pilots, & which is the cause of so much detention to steamers. Father Point, though the most important station of the system, is cut off from direct telegraphic communication with the other stations, an anomalous & absurd state of things, & no news is obtainable there for passing vessels. The Minister expressed surprise at the existing state of affairs & promised immediate action that would place Father Point station in a position to be able to obtain & supply mariners with all the latest necessary information regarding shipping.

EXPRESS.

Dominion Company's Notices.

W. A. Whitaker represents this Co. at Liverpool, Eng., vice T. B. Evans, deceased.

W. J. Kirby has been appointed Route Agent, with headquarters removed to Vancouver, B.C., & will have charge of all territory west of Revelstoke, B.C., including State of Washington, vice A. W. Lee, transferred to agency at Seattle, Wash.

A. Devitt, Route Agent, with headquarters at Revelstoke, B.C., has charge of the following territory: All offices on main line of C.P.R., west of Moose Jaw, Assa., to & including Revelstoke, B.C., Edmonton branch, Lethbridge branch, McLeod branch, & all offices in Kootenay District.

H. F. Maley has been appointed Acting Route Agent, with headquarters at Winnipeg, Man., & will have charge of all territory between Moose Jaw, Assa., & Fort William, Ont., inclusive, & all branch intermediate lines.

Agents at exclusive offices of this Co. will Way-bill all matter for Pacific Express offices in Canada, also matter for Buffalo, N.Y., & Niagara Falls, N.Y., to St. Thomas, Ont., for transfer to Pacific Express.

Rates To Alaska:

Following are the rates between Seattle, Wash., & Dawson City, via Alaska Pacific Express Co. On merchandise when valued \$50 or under:

2 lbs. & under	Minimum charge, \$2.00
Over 2 lbs. not over 4 lbs.	2.25
4 " " " 6 "	2.50
6 " " " 8 "	2.75
8 " " " 10 "	3.00
10 " " " 12 "	3.25
12 " " " 14 "	3.50
14 " " " 16 "	3.75
16 " " " 18 "	4.00
18 " " " 20 "	4.25
20 " " " 25 "	4.50
25 " " " 30 "	4.75
30 " " " 35 "	5.00
35 " " " 40 "	5.25
40 " " " 45 "	5.50
45 " " " 50 "	5.75
Over 50 lbs. 2 cts. per pound, or 50 cts. per cwt.	

When value of shipments is over \$50, charge in addition to the above, 2% for valuation. Marine insurance cannot be effected beyond St. Michael's, & the present rate is 1½%, which is subject to change at any time. All charges must be prepaid.

General Manager Stout, of the Dominion Express Co., has been making an extended inspection trip extending as far west as the Pacific Coast.

The express companies have established an uptown office in St. Catherine's Street, Mon-

treid, for the accommodation of residents & shopkeepers in that part of the city.

The management & accommodation of the B.C. Express Co., one of the longest stage lines in America, has always kept up prompt connections with Cariboo & Lillooet, & often under great disadvantages. To make a 280-mile trip, regardless of weather or roads, in 4 days, is good work. The stage leaves regularly on Monday mornings, & but few times since the railway was built has it failed to bring in Cariboo mail, express, & passengers by 6 on Tuesday evenings.—Ashcroft Journal.

On June 6 the Pacific Express Co. opened offices at the following points in Ontario, reached over the Detroit-Buffalo line of the Wabash Railroad, operating over the Southern Division of the G.T.R.: Aylmer, Belle River, Bothwell, Canfield, Cayuga, Chatham, Corinth, Courtland, Delhi, Fort Erie, Glencoe, Jarvis, Jennett's Creek, Lawrence, Lewisville, Middlemiss, Nelles Corners, Newbury, Nixon, Port Robinson, St. Thomas, Simcoe, Stoney Point, Tecumseh, Thamesville, Tilsonburg, Walkerville, Welland, Windsor.

TELEPHONES.

London People's Telephone Co.

The People's Telephone Co., of London, Ont., has been incorporated under the Ontario Joint Stock Companies' Act, with a capital stock of \$100,000, to carry on in London & the County of Middlesex a general telephone business. The incorporators are R. H. Evans & H. Walters, of Detroit, Mich., & R. A. Bayly, T. H. Purdon, M. Masuret, R. Fox, F. B. Leys, T. H. Smallman, J. Milne & J. R. Minhinick, of London. The Company made application to the city council for a franchise, offering to provide a day & night service & a Sunday service, with modern appliances, including metallic circuits & double-battery, long-distance instruments, the whole system to be in operation by Jan. 1, next. The rates offered are these: For unlimited services under 5-year contracts for offices or business houses, \$26 a year; for unlimited services under 5-year contracts for private dwellings, \$18 a year, & \$42 a year for offices & residences combined. In the case of very large users, whose calls exceed 10,000 conversations a year on the average, the Co. reserves the right to make an extra charge or to compel the subscribers to use & pay for 2 or more lines in the place of one. The Co. agrees to keep the top cross-arm of all poles for the use of the city fire alarm wires, & to make no claim against the city for damages on account of the interference with the service or property (unless caused by an agent or servant of the city), or by reason of the wires being injured by firemen while working at fires. It is also stipulated that if the Co. fails to supply an efficient service, the city may, at its option, put an end to the agreement, by giving a month's notice, all rights & privileges then ceasing. The council has given the Co. a 15 years' franchise to operate in the city.

Bell Telephone Co.'s Assessment.

Last year the plant of the Bell Telephone Company in Hamilton was assessed by that city. The assessment was disputed on various grounds, among others, that a wrong principle of valuation had been adopted. It was contended by the city that the poles & wires in a certain ward should be valued as part of the plant as a whole, considered as a going concern. The Co. contended that the plant in a certain ward should be valued for what it was worth as material to be used by a purchaser in any way he thought fit, but must be valued without regard to whether it belonged to the Bell Telephone Co. or not, or

whether it was part of a going concern or not. The assessable value would be what the plant would bring when sold in the open market, without regard to whom its present owner happened to be, or for what purpose it was at present used. The case was carried to the Court of Appeal by the Telephone Co. In Toronto an agreement was arranged this year between the Co. & the Assessment Department whereby, in view of this pending case, the assessment against the Co. should be held over until the latest date, in the hope that in the meanwhile the Court of Appeal would render judgment, which would be of value in making the assessment upon the proper principle. The Court of Appeal recently gave judgment in favor of the Bell Co.'s contention, reducing the Hamilton assessment to the amount admitted by the Co. there as proper & reasonable.

Telephone Items.

At the recent annual meeting of the St. Martins, N.B., Telephone Co., the former board of directors & officers were re-elected.

It is said at Vancouver, B.C., that English capitalists have secured the controlling interest in the New Westminster & Burrard Telephone Co.

The Central Electric Light Co., Portage la Prairie, Man., is said to have under consideration the equipment of a telephone exchange, in opposition to the present company.

The People's Telephone Co., of Windsor, Ont., the incorporation of which was reported in our June issue, pg. 112, has been granted a 20-year franchise by the Windsor City Council.

The Spokane Falls & Northern Telephone Co. expects to have its line completed to the International Boundary Line almost immediately. At that point the line will be connected with that of the Nelson & Vernon Co., which has consented to construct a line from the Boundary Line through Cascade City, Grand Forks & Greenwood to Midway, B.C.

The New Brunswick Telephone Co. recently elected the following directors: Hon. A. G. Blair, President; F. P. Thompson, Managing Director; J. L. Black, Vice-President; W. E. Smith, Secretary-Treasurer; Dr. A. A. Stockton, Chas. Fawcett, C. F. Sise, W. T. Whitehead. The directors have decided to replace the wire on the trunk system between Fredericton & St. John & Amherst, N.S., with copper wire.

Some experiments were recently made with the telephone circuit between Manchester, Eng., & Brussels, by putting the operators at the two cities in direct communication with each other. Additional interest attaches to the experiments from the fact that land & sea wires had to be utilized, the wires running from Brussels through Coutrai & Lille to Calais, where they were connected with the London-Paris telephone cable under the Straits of Dover. The experiments were successful, the conversations being distinctly heard.

At the annual meeting of the Canadian Telephone Co. at Sawyerville, Que., June 27, the following were elected directors: J. Laroche, Sawyerville; A. Adam, Paquetteville; J. Lemieux, St. Malo; P. A. Barbeau, Cookshire; J. Hunt, M.L.A., Bury; F. F. Willard, Angus; E. Roberge, Notre Dame des Bois; N. P. Tanguay, Weedon; & M. Matheson, Lake Megantic. H. Laroche was re-elected President, J. Lemieux General Manager, & J. Fournier Secretary-Treasurer. A dividend of 5% for the past year was declared. The report stated that the Co. had built during the past year 60 miles of poles, with 114 miles of wire, & owned 220 miles of poles & 347 miles of wire. The Co. has 12 exchanges, with 322 subscribers.

The Grand Trunk President.

Sir Charles Rivers-Wilson, C.B., K.C.M.G., is the son of the late Melville Wilson & was born in London, Eng., 1831. He was educated at Eton & at Balliol college, Oxford, where he took his B.A. degree. He entered the British Civil Service as a clerk of the Treasury in 1856; was Private Secretary to the Earl of Beaconsfield from 1868 to 1873; a Royal Commissioner to the Paris Exposition in 1878; & Finance Minister of Egypt, 1878 to 1879. He has been Comptroller General of the Office for the Reduction of the National Debt since 1874 & was appointed President of the G.T.R. of Canada in 1895. He holds the Medjidie order of the 1st class. He was created a C.B. in 1876 & a K.C.M.G. in 1880. He married 1st, in 1860, Caroline, daughter of R. Cook, who died; & 2nd, in 1895, the Hon. Beatrice Violet Mary Mostyn, sister of the 7th Baron Vaux of Harrowden. His principal residence is 71 Pont street, London, S.W. Eng., & he is a member of the St. James, Marlborough, Arthurs and Garrick clubs.

A U. S. View of Canadian Lines.

Lucius Tuttle, President of the Boston & Maine Ry., was recently interviewed in regard to the relations of the C.P.R. to New England interests, & said:—

"When you come to analyze this hue & cry against the C.P.R., it will be found that selfishness, pure & simple, is at the bottom of the whole business. All this talk about the Canadian Pacific having extraordinary opportunities to prey upon its American competitors, & that it is guilty of demoralizing rates, is the dust that is thrown into the eyes of our people to blind them to the motive that lies beyond.

"The assertion constantly made by the northwestern lines & those in the central & trunk line territories, to the effect that the Canadian Pacific is the only sinning party in the matter of rate reductions to the Pacific coast & intermediate points, is puerile & with no justification whatever. What have we seen within the past 20 years or more in the relation of these American lines to one another? Is it not a fact that they have come together on innumerable occasions, after rates have been whittled to the line of bankruptcy, & entered into the most solemn pledges to go back to established tariffs, only to break their word before the ink on the signatures to the agreements had had time to dry? They cannot live in peace together. This has been demonstrated time & time again, & I, therefore, reiterate that it is unjust & misleading to attempt to throw all the blame for the present rate trouble between the Canadian property & its competitors on our side of the line upon it.

"Another thing that appears to have been lost sight of is that whatever comment is

directed toward the Canadian Pacific applies with equal force to the Grand Trunk, but it is rarely the latter road is mentioned when this matter of foreign competition is discussed. There appears to be a special antagonism for the Canadian Pacific on the part of many who profess to understand the traffic relations of our railway systems & are privileged to spread their views before the public, as they rarely, if ever, admit that the Grand Trunk is a considerable factor in a competitive sense. I can see no justification on the part of certain American roads & the editors of technical railroad journals to make the Canadian Pacific the scapegoat. Nor am I so dull as not to see that the Northwestern roads are using the Canadian Pacific to pull chestnuts out of the

concerned. It will, therefore, be seen that these New England railroad properties, together with Boston's export interests, are vitally concerned in whatever affects the Canadian Pacific or the Grand Trunk railways.

"I have seen it stated that the Government should interfere in behalf of our American roads, & afford them the same measure of protection against this 'foreign' rail competition as it accords the merchant marine. This is urged by certain New York interests, but it is evident that those who take this position forget that the New York Central operates largely through Canadian territory, & that any curtailment of the privileges that the Canadian road enjoys in the handling of American products would also operate to the disadvantage of New York. I look upon the Canadian Pacific as essentially an American line. Much of its tracking runs through our territory, & it is within the jurisdiction of the Interstate Commerce Commission."

Mr. Hays Endorsed.

In a recent interview in Montreal, Vice-President Jos. Price, of the G.T.R., said: "I have no hesitation in saying that Mr. Hays enjoys the fullest confidence of every member of the board of directors, all of whom appreciate the services which he has rendered & is rendering, services which have resulted already in a wonderful increase of material value. It is felt on all hands that Mr. Hays is the right man in the right place. From the start his work has been appreciated by the board. Now that he has been in office for some time his value is thoroughly understood. This is a specially pleasing feature of the present regime, that there should be such a perfect understanding between the Manager & the board in London. He has shown since his advent to office that he understands how to employ those powers in the best possible way so as to ensure the highest results. I am especially anxious that it should be known that in Mr. Hays the board is convinced they have a man who is bringing at once much experience & ability to bear upon the duties of the responsible position he occupies, with results which are already seen in the appreciation of Grand Trunk values."

A telephone line has been erected at Dawson City, Yukon, by the Klondike Telegraph & Telephone Co., which is said to have 40 miles of wire on the ground, & expects 20 miles more at once. The Co. is putting in the plant under the charter of the Canada Western Co. At first the line will be strung to the forks of Ft. Porcupine & Bonanza creeks, with the intention of later on running it up to Dominion, Silver & Hunker creeks, & eventually to connect with the parent line, the Canada Western. The Co. is essentially a mining one. A. McDonald is General Manager.

SIR CHARLES RIVERS-WILSON, C.B., K.C.M.G.

fire of demoralized rates, & thereby escape the responsibility that justly belong to them.

"The great importance of these Canadian lines to the commercial existence of New England can hardly be measured. They afford us the only direct connection with the great northwest & many of the gateways in the middle west. We can operate over them entirely independent of the Vanderbilt interests, or any of the other great systems that work to the advantage of the seaboard points where they have their terminus. Without these Canadian connections the Boston & Maine & the Fitchburg would be practically bottled up, so far as our relations to the agricultural sections of Canada & our country are

PASSENGER MATTERS.

The Interstate Commerce Commission Inquiry.

In view of the importance of the recent enquiry into passenger rate matters by the Interstate Commerce Commission we devote considerable space in this issue to the proceedings at Chicago. The papers of that city published very imperfect reports. Not one of them gave even a complete summary of the evidence, confining themselves to scrappy extracts, evidently selected to make the most of the case for the U.S. lines & to the disadvantage of the Canadian Pacific, "the foreign road."

As Sir Rivers-Wilson says, in an interview published elsewhere in this issue, the fight is really one between the transcontinental roads, & we will narrow this down still further by localizing it as between the Canadian Pacific & Great Northern (U.S.), with President Hill, of the latter, as the aggressor. It has been pretty well understood in railway circles for a good many years that there is no love lost between the managements of these two systems. When Mr. Van Horne made his first trip to Manitoba at the end of 1881, just prior to assuming the General Managership of the Canadian Pacific, it was in company with Mr. Hill, on whose recommendation, it was said, Mr. Van Horne, then the successful General Superintendent of the Chicago, Milwaukee & St. Paul, was selected for the position. Mr. Hill was then a director of the C.P.R. as well as of the St. Paul, Minneapolis & Manitoba, Mr. Geo. Stephen being President of both lines.

It is said, & pretty generally believed, in well-informed quarters, that very soon after Mr. Van Horne got to work at Winnipeg, Mr. Hill tried to use him to carry out schemes for the advancement of the St. P., M. & M. at the expense of the C.P.R. But the man from Milwaukee was not to be handled in that way. He had thrown his whole energy into the C. P.R.; he realized the magnificent opportunities before it, & with him its interests were paramount. Then came a struggle in which Mr. Hill came out second best, & in the course of which he is said to have resorted to methods which revived the story told in his flat-boat days on the Red River, when it was said there were three notorious prevaricators in St. Paul, — was one & "Jim" Hill was the other two; but "prevaricators" was not the exact word that was used. We have digressed somewhat, but it has been for the purpose of showing that Mr. Hill's policy is one of revenge & uncompromising hostility towards the Canadian Pacific, from the councils of which he retired years ago, foiled.

Vice-President Clough's speech before the Commission, reported further on in this issue, clearly shows that what the Great Northern wants is not a settlement of the rate question, but the absolute exclusion of Canadian lines from participation in U.S. traffic, & particularly to keep out Canadian Pacific competition. As a matter of fact, the speech did not deal at all with passenger matters, but was a

talk to the gallery, a deliberate attempt to arouse national feeling. But Mr. Clough will undoubtedly find that public opinion is not with him. It certainly is not in Minnesota or Dakota, which have benefited to a great extent by Canadian Pacific competition, as is shown by the article from a leading Minneapolis paper, published elsewhere in this issue. President Tuttle, of the Boston & Maine, has, in a recent interview, shown what the feeling of the New England railway managements is, & the Railway World, of Philadelphia, denounces Mr. Clough's proposal as "sheer nonsense."

The Chicago Times-Herald, in its issue of Aug. 3, said: "Before the Interstate Commerce Commission, in the Federal court-rooms in this city, the Canadian Pacific Railway is fighting against being barred from carrying a pound of American freight or a single passenger from American soil. Arrayed against it are the most prominent railroad men of the West, each of whom hammers home vigorous arguments against the continuance of a system that, it is alleged, diverts annually millions of dollars from American workmen, & many millions more from America's taxpaying railroads. Begun only with an idea of bringing to an end a disastrous & costly passenger rate war, the inquiry of the Commerce Commission has proceeded to a stage in which the expulsion of the foreign road from participation in strictly American traffic is practically demanded."

Legislation such as is indicated could not be directed against the C.P.R. alone. It would have to strike at all Canadian lines running into the U.S., & it would hit the Grand Trunk & Michigan Central more seriously than the Canadian Pacific. In view of this we cannot help thinking that the Grand Trunk management would do well to consider whether it may not carry its U.S. alliances too far for the shareholders' interests. It is undoubtedly suffering a very considerable diminution of revenue at present in consequence of having allied itself with the U.S. transcontinental lines, & there is no reason to doubt that if, by its so doing, the rate cutting is perpetuated, the showing for the current half-year will be a very unsatisfactory one.

General Passenger Agent Davis, of the Grand Trunk, in a recent interview, said: "Mr. Clough's proposal had not the support even of the U.S. railway men, & there is no danger of Congress adopting any such adverse legislation." As shown by President Tuttle, it has not the support of eastern lines, but what of the west? Mr. Clough's speech was delivered in the presence of dozens of representatives of U.S. lines, & it seems strange, if they did not agree with it, that they did not promptly repudiate the proposal.

If this was simply a rate fight between the Grand Trunk & Canadian Pacific, we should occupy a neutral position, but it is far more; it is an unconcealed attempt to exclude Canadian railways by unfriendly legislation in the interest primarily of the Great Northern, & secondly of other transcontinental lines. Our deep regret is that in such an issue there should be even the suspicion of a single Canadian line siding with the U.S. conspirators against Canadian interests.

The Call for an Enquiry.

At a session of the U. S. Interstate Commerce Commission in Washington, July 14, the following order was made:

In the matter of the alleged disturbance in passenger rates by the Canadian Pacific Railway Co.:

Whereas, it has come to the attention of the Commission that there exists at the present time a contest in passenger rates between the Canadian Pacific Ry. Co., a corpora-

tion of the Dominion of Canada, upon the one hand, & certain American lines & their connections, including the Grand Trunk Ry. Co. of Canada, upon the other; & whereas, it is charged by the American lines that the C.P.R. Co. has been & still is, in open violation of the Act to Regulate Commerce, making unreasonably low rates between various points in the U.S., not as a measure of legitimate competition, but as a means of retaliation for the purpose of exacting certain unreasonable demands upon its part, & that such illegal conduct on the part of the C.P.R. will result, if persisted in, in the utter demoralization of passenger rates over a large portion of the U. S. & in incalculable damage to the interests of the American lines, all of which is either denied or justified by said Canadian Pacific Railway Company; & whereas, it seems advisable that the Commission should be fully informed of the whole situation in respect to passenger rates as induced or affected by the competition of the C.P.R., as above set forth, with a view to determining what, if any, relief can or ought to be applied or suggested, or what action should be taken in the premises; now, therefore, it is ordered, that an investigation into the above matters be made, & that this cause be set down for hearing at the Federal Court Room in Chicago, Ill., on Aug. 1, at 10 a.m., at which time & place all parties interested in the matters under investigation will be heard, & at which time & place the following named companies are directed to appear by their general passenger agents or those persons having in charge the passenger traffic of the respective lines.

Following is a list of the lines included in the notice:—Atchison, Topeka & Santa Fe, Burlington & Missouri River Railroad in Nebraska, Burlington, Cedar Rapids & Northern, Chicago & Alton, Chicago & Northwestern, Chicago, Burlington & Northern, Chicago, Burlington & Quincy, Chicago Great Western, Chicago, Milwaukee & St. Paul, Chicago, Rock Island & Pacific, Chicago, St. Paul, Minneapolis & Omaha, Colorado Midland, Denver & Rio Grande, Fremont, Elkhorn & Missouri Valley, Sioux City & Pacific, Hannibal & St. Joseph, St. Louis, Kansas City & Northwestern, Kansas City, St. Joseph & Council Bluffs, Illinois Central, Iowa Central, Jacksonville & St. Louis, Missouri Pacific, Minneapolis & St. Louis, Michigan Central, Oregon Railway & Navigation Co., Oregon Short Line, Rio Grande Western, Rock Island & Peoria, St. Joseph & Grand Island, St. Louis, Iron Mountain & Southern, St. Louis & San Francisco, Southern Pacific, Southern California, Santa Fe Pacific, Texas & Pacific, Union Pacific, Wabash, Wisconsin Central, Great Northern, Northern Pacific, Boston & Albany, Fitchburg, Toronto, Hamilton & Buffalo, Chicago & Grand Trunk, Grand Trunk & the Canadian Pacific.

The Proceedings at Chicago.

The Commission opened its session in the Federal court rooms, Monadnock Building, Chicago, Aug. 1, the whole of the members being present as follows: M. A. Knapp, Chairman; J. C. Clements, J. D. Yoemens, C. A. Prouty & W. J. Calhoun.

The Canadian Pacific was represented by Passenger Traffic Manager D. McNicoll & Attorney H. R. Raymond. There were also present General Passenger Agent Davis, of the Grand Trunk, & representatives of a large number of western U. S. lines.

At the outset Mr. Raymond desired it to be distinctly understood that the C. P. R. was not present as a defendant, or to officially answer to any complaint which might have been filed by the U. S. interests. The C. P. R. had violated no law of the U. S., & had uniformly obeyed the requirements of the

Interstate Commerce Law as well as any of the lines in the U. S. President Knapp replied that the C. P. R. could not be regarded as formally on trial.

THE U. S. CASE.

The whole of the day was occupied by P. S. Eustis, General Passenger Agent of the Chicago, Burlington & Quincy Ry., who presented the case of the U. S. lines. He reviewed the history of C. P. R. influence upon U. S. business, from the opening of the transcontinental line in 1886 to the present. He asserted that at no time since the C. P. R. entered the field as a competitor for transcontinental business had it been disposed to treat fairly with U. S. lines, & it had secured what concessions had been granted it by mere force & threats of retaliation if what it asked was not granted. Early in its career the C. P. R. began cutting rates and continued that policy for two years, when the Transcontinental Passenger Association agreed to allow it a differential on the traffic to the Pacific coast, simply because the U. S. lines could by no other method prevent a demoralization of rates by the C. P. R. He claimed that this agreement became void when the U. S. Court ruled a few months ago that all such compacts were contrary to the anti-trust law. The Transcontinental Passenger Association died in 1895, and the U. S. lines claim that with it ended all its agreements, including that of a differential to the C. P. R. Since that time no U. S. railway or association of railways has agreed to allow the C. P. R. a differential rate. When it was originally granted a differential the rate did not apply to any business, but to lower Pacific coast points. When the Klondike gold discoveries started travel in that direction the C. P. R. demanded a differential rate to North Pacific coast points & Alaska. At first the U. S. lines only reduced their rates to those of the C. P. R. on Alaskan travel. Further rate cutting by the C. P. R., ostensibly to maintain its differentials, induced the U. S. roads to reduce theirs to meet reductions to all points. Authority to do so was granted the U. S. lines by the Interstate Commerce Commission last February, & extended on July 12 last.

In reply to Mr. Raymond, Mr. Eustis said he did not claim that the U. S. railways had always acted harmoniously, & admitted they had engaged in rate wars in which the C. P. R. had no interest. He said in effect that the U. S. railways were tired of being practically forced to subsidize the C. P. R., a foreign institution, in order to get a partial share of their rights.

Against the protest of the C. P. R. representatives, Mr. Eustis was permitted to put in as evidence a letter written by Sir Wm. Van Horne to the press, in March last, in connection with the application for a charter for the Kettle River Valley railway, in which he argued against the proposed line, on the ground that it would divert Canadian trade into U. S. channels.

TRANSCONTINENTAL ROADS HEARD FROM.

At the second day's session General Passenger Agent Whitney, of the Great Northern (U. S.), gave evidence. He declared, among other things that, figuratively speaking, the C. P. R. always went to conferences on rate matters with a shotgun & persisted in holding up the U. S. roads under threat of annihilation if they did not accede to its demands. It was in pursuance of such a plan, Mr. Whitney stated, that the C. P. R. first secured a differential from the U. S. lines, which had been compelled to grant it as the price of maintenance of rates. Asked regarding the extent to which U. S. roads had suffered on account of the rate war precipitated by the C. P. R., the witness stated that it was incalculable, mounting up into millions of dollars. The rate war, which began last December, had cost the Great Northern from

\$500,000 to \$750,000, assuming that they could have obtained regular tariff rates for the business which they carried at the cut rates forced on them. He gave a history of the relations between his road & the C. P. R. prior to the completion of the G. N. to the Pacific Coast. Then the C. P. R. controlled the transcontinental business over the two roads & dictated the policy to be pursued. The C. P. R. then made up four-fifths of the route & therefore had by far the larger interest in the business. He produced telegrams to show that the C. P. R., at the outset of the trouble, had declined to discuss the question of differentials. In explaining why his line refused to arbitrate, he said that experience had shown that the result of arbitration was always a compromise, which satisfied none of the interested parties.

As a final statement Mr. Whitney said: "The C. P. R. asks us to put a perpetual mortgage on American roads; to give to it a perpetual subsidy by granting to it a differential, because it would argue forever after that it was given by agreement."

GENERAL PASSENGER AGENT FEE, of the Northern Pacific, followed, practically reiterating all the charges previously made against the C. P. R. He produced statistics which he claimed showed that after the C. P. R. had forced the U. S. lines to give it a differential, its traffic from & to points in the U. S. increased to a wonderful degree.

T. H. GOODMAN, General Passenger Agent of the Pacific Division of the Southern Pacific, claimed that his line had been obliged to reduce passenger rates eastbound from San Francisco on account of unwarranted C. P. R. competition. He stated that some years ago, on account of the conduct of the C. P. R., his line suspended all traffic arrangements with it.

THE C. P. R. SIDE OF THE CASE.

Passenger Traffic Manager McNicoll followed, his evidence occupying the balance of the day, as well as considerable of the next. After declaring that the C. P. R. was as close an observer of the Interstate Commerce Law as any of the U. S. roads, he began his statement from the time the Klondike business first appeared & told how, finding his road was getting little business to Alaska, he made an investigation, which showed conclusively that the Great Northern & Northern Pacific roads were cutting rates to Alaska, not only from points within the U. S., but also from Canada & Europe. These rates, he said, were \$20 below these lines' published tariffs & \$15 below the C. P. R. tariff. The cut was not made by the payment of an excessive commission to ticket agents, but openly across the counters of these roads' ticket offices. He presented a batch of evidence of this secret rate-cutting by U. S. lines, & declared he could produce many times as much if it were necessary. An agreement which prevailed prior to 1897 had been deliberately violated by U. S. roads. The C. P. R. had two courses open, either to ignore the Interstate Commerce Act & meet these rates illegally, or do so openly by published tariffs. Knowing that it was useless to ask assistance from the eastern roads, the C. P. R. published its tariffs & took the fight upon its own shoulders. Mr. McNicoll proceeded to argue that the eastern lines had stubbornly kept out of the present fight, with one or two exceptions, & that at a conference at Montreal a committee of the trunk lines had suggested that the matter in dispute between the C. P. R. & the western lines should be arbitrated. This Mr. McNicoll said his road had been perfectly willing to do, but the western roads had persistently refused to acknowledge that there was anything to arbitrate. He said the Great Northern & Grand Trunk had been permitted to dominate the conferences held in New York & Chicago, & that but for their obstructive attitude the fight might have been ended. He further

charged that the U. S. lines did not really desire to settle, having an ulterior motive in allowing the present demoralization to continue. Mr. McNicoll said he was still willing to arbitrate the question of differentials at any time, & that General Passenger Agent Eustis, of the Burlington, had admitted to him that the refusal of the U. S. lines to arbitrate was based on their belief that the Canadian road would surely get some differential.

Dealing with the statements that the C. P. R. had been taking an immense amount of revenue from U. S. lines, Mr. McNicoll said that out of \$20,000,000 gross earnings of his road for 1897 the revenue derived from business originating at or destined to points in the U. S. was about \$1,300,000. These figures referred to the C. P. R. system proper, and not to the "Soo" line, which Mr. McNicoll claimed was a U. S. road, a statement from which the U. S. roads represented at the meeting strongly dissented. Against this revenue of \$1,300,000 Mr. McNicoll said that his road spent more than \$3,500,000 in the U. S. last year for supplies, & added that he would willingly trade his business from the U. S. for the business which the U. S. lines derived from the C. P. R. Asked as to the business his road had carried to the Pacific coast since the rate war began, Mr. McNicoll said he was satisfied with it & believed the road had received its share. Mr. Eustis thereupon tried to make him admit that since these rates were the same on both the U. S. & Canadian roads there could be no good reason why the C. P. R. should have any differentials on this business. Mr. McNicoll declined to admit anything of the kind, saying his line was selling tickets at first rates, whereas the U. S. roads were using the rebate plan, which gave the Canadian road an advantage. He also said the superior steamship facilities enjoyed by the C. P. R. drew a good deal of business. Throughout his examination he strenuously denied that the question of differentials had anything at all to do with the present rate war, which was caused solely by the quarrels among the U. S. lines. He charged these roads with attempting to rob the present investigation of its business features in order to introduce sentimental matters dealing with the question of international privileges.

Mr. McNicoll having stated that B. D. Caldwell, Chairman of the Western Passenger Association, had changed the official record of the proceedings of the Association's Immigrant Bureau in New York, so as to make it appear that all transcontinental lines, including the C. P. R., had agreed to ask no differentials on immigrant traffic, Mr. Caldwell was sworn at his own request & declared that the charge was absolutely false.

"I never agreed to such a proposition as you incorporated in the record of the proceedings," said Mr. McNicoll. "No such proposition was offered in my presence & I never even heard of it."

"It was made in your presence," replied Mr. Caldwell; "I can even tell you just where you sat in the room at the time, & I can prove by a host of witnesses that you were there, & made no objection to the proposition."

"That," says the Chicago Inter-Ocean, "closed the incident. At the same time ended a strong personal friendship which has existed for many years between Mr. Caldwell & Mr. McNicoll."

WHAT THE U. S. LINES REALLY WANT.

W. P. Clough, Vice-President of the Great Northern (U. S.), presented the political & economic side of the case for the U. S. lines. He insisted that the position which the U. S. Government suffers the C. P. R. to occupy, with regard to the domestic carrying trade of the U. S., is altogether exceptional, illogical & unjust to the U. S. people. From its very birth the U. S. Congress followed the settled policy of Great Britain by declaring that no foreign vessels should ever trade between one

U.S. port & another. For years this policy was followed, even on the great lakes. Then it was relaxed for a time until experience showed its wisdom & fairness, & it was restored by order of the President. If sound policy demanded the exclusion of Canadian vessels from the trade, no good reason could be advanced for admitting Canadian railroads to a share in that trade. Nevertheless, the U.S. Government had said, for the advantage of the Canadian railway owner solely, that the protection & encouragement invariably afforded by it to U.S. vessel property shall not be afforded to U.S. railroad property. In working out the U.S. protective tariff system it always had been the rule that to every industry the expenses of which are enhanced by the need of using the protected products of some other U.S. industry a corresponding & indemnifying protection against the foreign competitor should in turn be given. Yet this had been abandoned in respect to one solitary U.S. industry, & one having vastly more capital invested in it, having a vastly larger pay roll & of vastly more importance to the common welfare, in peace or in war, than any other—the railway carrying trade. All materials used by U.S. railways are of the highly protected class; but the Canadian railways had long been able to buy their track metal from U.S. makers at a price less than demanded of the U.S. roads by an amount practically equalling the tariff duty.

On account of this protective system, Mr. Clough argued, U.S. railways were compelled to pay the highest wages in the world, the tariff making living so high that corresponding wages must be paid. The railway must bear a full share of the burden incident to the protection of the other industries, it must stand the direct & large increase in the cost of materials, supplies & wages, which it is the very end of the protective system to accomplish, & after all this it must stand alone in naked exposure to the unlimited & unconditioned competition of the foreigner. He contended that the amount of the discrimination against U.S. railways was stupendous & constantly growing. The statistics of the Customs Department showed that the freight traffic diverted to the Canadian roads already amounted to nearly or quite 10,000,000 tons a year, & represented a loss to the U.S. lines of not less than from \$20,000,000 to \$25,000,000 in money every 12 months. Statistics of passenger traffic were not so complete, but its volume was likewise known to be large. The U.S. lines had not lost a pound of traffic on account of want of facilities for handling it.

It had not been lost to them because of unwillingness to handle it at fair rates. In the U.S. nearly two-thirds of the gross earnings were paid out in operating expenses. Practically, the whole of this expense was for wages in some department. It was obvious therefore that every time foreign lines diverted from the U.S. lines \$21,000,000 of traffic they took \$14,000,000 directly out of the pockets of U.S. workmen. Mr. Clough contended that the C.P.R. did not fit into the system which U.S. national legislation had devised for preventing the use of unjust discriminations between persons & places in the conduct of the railway transportation business. Congress might prevent the C.P.R. from discriminating between points wholly in the U.S., but it could not prevent a rebate being given for the haul on Canadian soil before re-entry into U.S. territory. If such discrimination was discovered Congress was unable to punish the offense. To work out a fair indemnification to the U.S. lines for the burdens of the protective tariff system put upon them Mr. Clough suggested several ways. The simplest & most practical way would be to put transportation by rail on the same footing as transportation by water. There was no good reason why both kinds of transportation should not be upon the same basis & every reason why both should. Another method, which he urged as perfectly fair, would be the imposition of a duty upon goods passing across Canadian territory, in transit, at a scale sufficient to equalise the condition made by the U.S. tariff. It would not be difficult to fix such a scale. It might be on the ad valorem basis or according to quantity. Either would be perfectly practicable & would abolish the unjust discrimination against the rail transportation business now exercised by the U.S. Government. Mr. Clough did not expect that the privilege of competing for the U.S. trade would be wholly withdrawn from the Canadian roads at once. A little notice in advance of a proposed change of policy in this regard might well be given. But the early withdrawal of the privilege should be notified without delay. In the meantime there were some details of this competition as now carried on which ought to have immediate attention. There was no reason why railway equipment, liable to very substantial customs duties, should be suffered to enter U.S. territory free. Yet outside of law, or even of departmental regulation, the practice had crept in of suffering cars, both freight & passenger, to cross the frontier without the slightest question being raised. This practice, plainly illegal, had had the effect of

putting into regular service over thousands of miles of lines in the U.S. freight & passenger cars used in foreign countries, & which had never paid a dollar of duty. The law making power of the Government had never consented to such a practice. It should be stopped immediately. No freight or passenger car should be permitted to enter U.S. territory without payment of the duties which the tariff imposed on imported articles. The U.S. roads were forbidden to bring into the country either cars or the materials from which cars were made, without paying duties. Why should the Canadian roads be allowed to bring their equipment across the boundary free? The laws had not provided for any such additional favor to the foreigner. The practice had grown up in the face of the law. Foreign railways should ultimately be prohibited from carrying U.S. traffic, freight or passenger, if reasonable experiments, under more restrictive laws, demonstrate that they cannot be compelled to do business on terms of strict equality with the U.S. lines. For purposes of this experiment new legislation that will give the Commerce Commission control over the Canadian lines must be enacted. If the Commission could not then control the foreign roads it should have the authority to at once bar them from handling U.S. freight & passengers. Mr. Clough stated further that he would at once prepare the draft of a bill embodying his ideas, & file it with the Commission.

THE COMMISSION'S POWERS.

Before the adjournment of the session, President Knapp said it was not within the power of the Commission to issue any order, or to compel any certain course on the part of any of the lines represented, because of the fact that the hearing was not in any sense a court proceeding, but only an informal one. It was, however, the desire of the Commission to make an early report, in the hope that it might have some influence in bringing to an end the disastrous rate war. He asked, therefore, that if either side desired to submit written briefs, they should be presented within 10 days. The Commission would then make some recommendation. For purposes of the annual report and recommendations to Congress the lines were given 50 days in which to submit briefs.

CLOSING PROCEEDINGS.

At the 4th day's session, Attorney Raymond, for the C.P.R., declared that differences such as exist between the U.S. lines & the C.P.R. can be settled only by arbitration, &

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

if necessary, continued arbitration. No other method, he insisted, could be a fair one to all interests. The C.P.R. stood ready to arbitrate.

In closing the case for the U.S. lines Mr. Eustis outlined the position of the roads he represented as follows:

U.S. lines do not ask that Canadian lines be barred from a share of U.S. traffic.

Differentials have been failures wherever used.

The C.P.R. can set up no fair claim to a differential.

If the C.P.R. is entitled to a differential, many U.S. roads are more entitled to like concessions.

According to the argument of the C.P.R. respecting the participation of U.S. roads in Canadian business the C.P.R. has no right to do business in San Francisco at all.

U.S. lines do not ask any advantage where the C.P.R. can fairly compete with them, but deny that the C.P.R. is entitled to any advantage over U.S. roads.

They believe that the burden of proof is upon the C.P.R. to show that it is entitled to a differential, & that unless a clear case has been made by it no differentials should be allowed.

"I can guarantee for the west that if the C.P.R. will stop its shotgun policy we can get along together & it will secure a fair share of any business to which it is entitled. If it does not Congress is going to interfere."

This last statement was made by Mr. Eustis because of Mr. McNicoll's testimony that Mr. Eustis had threatened the C.P.R. unless it would settle its difficulties with the U.S. roads. "I told Mr. McNicoll," said Mr. Eustis, "that if the C.P.R. would stop making unreasonable demands & be fair it will have no trouble in getting along in this country, but that if it persisted in its unreasonable demands the U.S. would probably pass laws that would tend to control seriously the extent to which all Canadian railroads may do business in this country."

Mr. McNicoll states that the C.P.R. handed in its brief to the I.C. Commission on Aug. 13 along with the other railways interested in the investigation.

Mr. Clough Repudiated.

The Minneapolis Journal says: "Ever since the controversy concerning who ate the first apple, it seems to have been human nature to shirk responsibility for questionable transactions. Whenever a railway cuts rates & is taken to task by its associates for having violated its agreements, it falls back on the excuse that some other road has previously cut the rate. The standing argument of the railways, when they do something which they recognize as improper, is to charge the blame to the Canadian Pacific. They must have some scapegoat, & to save trouble with some home competitor they charge it up to the Canadian Pacific."

"It was not surprising, therefore, because it was according to custom, when a prominent road cut the rates from the twin cities to Chicago, a few days ago, to see an authorized interview appear simultaneously in all the papers announcing that the cut was made to meet the rates of the Canadian Pacific. The Canadian Pacific has no road from the twin cities to Chicago, but that makes no difference in the accusation. If the Czar of Russia should appoint an American railroad manager to take charge of the Siberian railway, the manager would undoubtedly, from mere force of habit, cut the rates in order to compete with himself, & charge it up to the nefarious conduct of the Canadian Pacific, because it runs a steamship line from Vancouver to Hong Kong. This would be as sensible & as brilliant a display of common sense as holding

the Canadian Pacific responsible for the cut between the twin cities & Chicago.

"The Soo, which is one of the United States connections of the Canadian Pacific, has always maintained an independent position, refusing to be bound by combinations & the pools, & has thus proved a thorn in the flesh. This policy has proved of great advantage to the public, & in reverse ratio to the public advantages obtained through the Soo the hostility of the other lines has been incurred. Consequently, no matter what comes up, they see only the ghost of the Canadian Pacific & the Soo."

"The jobbers & manufacturers of the twin cities, & the farmers of the Northwest, know & appreciate the services which the Soo has rendered them, both directly by carrying their freight, & indirectly as a leverage which has prevented combinations & extortions they would otherwise have had to endure. No higher compliment could be paid to the Soo & Canadian Pacific for what they have accomplished on behalf of the public, than the universal & unanimous effort to hold them responsible for everything which occurs in the railway world. If the Soo could only be dragooned into coming into the combination to fleece the public there would be no further outcry concerning the Canadian Pacific. The public is to be congratulated upon the situation, & will consider itself protected so long as the Soo & Canadian Pacific continue in their present independent position."

A Western Rate War.

A passenger rate war that will affect directly every fare in the western states & indirectly half of the tariffs of eastern & southern U.S. lines, was started Aug 8, when the Chicago Milwaukee & St. Paul reduced the rate between Chicago & St. Paul & Minneapolis from \$11.50 to \$8. The rate between Chicago & Omaha was cut from \$12.75 to \$9.25, & between Chicago & Kansas City from \$12.50 to \$10.50. Of course other lines met the rates of the C. M. & St. P., which charges the C. P.R. as the cause of making the cuts necessary. In its notice the C. M. & St. P. says the C.P.R. brought about a war of rates to Alaska points. The application of these low rates—about 60% below authorized tariffs—affected the Chicago-St. Paul situation to such an extent that Chicago brokers have had no difficulty in selling tickets for either St. Paul or Minneapolis for \$8: & \$8.50, & the same rates have been made by brokers from St. Paul to Chicago. The same war of Alaska rates has affected regular fares between Chicago & Omaha because the trans-Missouri lines also quoted low rates to Alaska. Brokers were, therefore, able to greatly undersell the railways between Chicago & Omaha. To a limited extent the same is true as regards the Chicago-Kansas City traffic, though that is affected most seriously by a form of round trip ticket in use, which permits of a natural scalp of \$5. The C. M. & St. P. says it is weary of having the brokers doing its business, & that for this reason it makes the open reductions quoted.

"Sheer Nonsense."

Under the above heading the Railway World, Philadelphia, says in its issue of Aug. 13: "Railway officials are discussing the probable effects of the Interstate Commerce meeting at Chicago last week. They, as a rule, are anxious to have not only the Canadian Pacific, but all foreign roads, shut out of American territory, except where they can compete with them on equal terms. They are in favor of the highest tariff to prevent foreign cars coming into America & taking business from one point to another. They be-

lieve that the same rule that applies to foreign ships plying between American ports should work in the case of the railways. Some pretend to think that the exclusion of Canadian lines would enable Americans to maintain rates. Before the Canadian lines were constructed the American lines could not maintain rates, & are unable to do so in territory where there is no foreign competition. They have been at war with each other for months on packing-house-product rates from Kansas City, & are constantly cutting rates between Chicago & the seaboard. Tariffs are made only to be cut within a short time; in many instances before they are in print."

The Grand Trunk View.

Interviewed at Montreal, Aug. 3, Sir Rivers Wilson, President of the G.T.R., said:—"The rate war is of great concern to us, & our earnest hope is wiser counsel will prevail & a settlement be reached at an early date. I deny the charge that we are responsible for the trouble. We are all desirous of being on good terms with the C.P.R. The fight is really one between the trans-continental roads, & I am sure I have no influence with Mr. J. J. Hill, of the Great Northern. There is no justification for the C.P.R. demand for differentials. There may have been at one period, but the C.P.R. is now more than able to compete on equal terms. In regard to the trouble between the G.T.R. & C.P.R., respecting the North Bay line, the explanation is simple. The arrangement between the roads was liable to modification. We simply gave notice of its discontinuation in order to make a new arrangement with the C.P.R., but our proposals were not met."

One on Mr. McNicoll.

At the recent session of the Inter-State Commerce Commission in Chicago, General Passenger Agent Fee, of the Northern Pacific, produced some statistics about C.P.R. passenger traffic, based on reports from his agents, who he said had counted the passengers at Winnipeg & Pacific Coast points.

"How could your agents tell whether our passengers came from the U.S., or from our local points in the Northwest?" said Mr. McNicoll, of the C.P.R.

Before Mr. Fee could reply, General Passenger Agent Eustis, of the Burlington System, answered:—"Because you have no local business in the Northwest, Mac!"

Of course, as everyone knows, the answer was ridiculous, but it brought down the house.

A Railway Accident Case.

In the Divisional Court at Toronto, July 26, in the case of Chandler vs. Mich. Cen. Ry. Co., Judges Falconbridge & Street gave judgment on motion by plaintiff to set aside nonsuit entered by Meredith, J., at the trial at St. Thomas, & for a new trial. The action was brought by W. Chandler, a youth, who was severely injured by being run into by a train of defendant's while crossing a railway track near Tilsonburg late at night, & whose vehicle was also broken, for damages for his injuries & loss. The plaintiff contended that there was no evidence of negligence to go to the jury & nothing to show contributory negligence. Held, that every element of negligence of any statutory duty on the part of defendants was absent, & the nonsuit was properly entered. Wakelin v. London & Southwestern Ry. Co., 12 App. Cas. 41, followed. Motion dismissed with costs. J. A. Robinson (St. Thomas) for plaintiff. D. W. Saunders for defendant.

FINANCE, MEETINGS, &c.

Six Months Railway Increases.

The following table gives the percentage of increase in gross earnings of a number of the principal American railways for the 6 months to June 30 last :

Oregon Railroad & Navigation Co.	64
Northern Pacific.....	35
Rio Grande Western.....	32½
Chicago, Rock Island & Pacific.....	24

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases over 1897 from Jan. 1, 1898, are as under :

Earnings.	Expenses.	Net Profits.	Increase.
Jan. \$1,072,372.04	\$1,139,744.45	\$515,627.59	\$142,284.49
Feb. 1,494,596.98	1,070,929.62	423,667.36	38,844.28
Mar. 2,079,479.06	1,326,245.55	753,233.51	233,020.67
April 1,058,361.88	1,241,371.19	717,090.69	89,073.35
May 2,252,999.16	1,326,336.85	926,662.31	51,092.47
June 2,138,110.04	1,320,714.67	817,395.37	68,731.93
\$11,596,019.16	\$7,442,342.33	\$4,102,584.36	\$623,947.19

The approximate traffic earnings for July 1898, were \$2,024,000, against \$2,106,000 in July, 1897, a decrease of \$82,000.

AUXILIARY LINES.

MINNEAPOLIS, ST. PAUL & SAULT STE MARIE.—The approximate earnings for July were \$290,743, as compared with \$324,271 in July, 1897, a decrease of \$33,528.

DULUTH, SOUTH SHORE & ATLANTIC.—The approximate earnings for July were \$173,925, as compared with \$169,411 in July, 1897, an increase of \$4,514.

MINERAL RANGE & HANCOCK & CALUMET.—The approximate earnings for July were \$35,056, compared with \$27,383 in July, 1897, an increase of \$7,673.

Grand Trunk Earnings.

These figures include the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys.

	1898	1897	Increase.	Decrease.
Jan.....	\$1,916,332	\$1,639,614	\$276,718
Feb.....	1,674,453	1,522,246	152,207
Mar.....	2,048,970	1,803,279	245,691
April.....	1,918,477	1,776,840	141,637
May.....	1,940,980	1,774,802	166,178
June.....	1,880,402	1,912,185	\$31,783
July.....	1,860,884	1,992,628	131,744
	\$13,240,498	\$12,421,594	\$818,904	\$163,527

Financial Notes, &c.

Buffalo & Lake Huron.—The report for the half-year ended June 30 states, that after meeting interest on the bonded debt, the balance of revenue of £14,145 os. 5d. for the half-year will allow of a dividend of 5s. 3d. a share, carrying £360 7s. 2d. to the current account. The dividend will be payable early in September. The dividends for the past 31 half-years have been at the same rate. The line is leased in perpetuity to the G.T.R., for a rental of £70,000 a year. The Co.'s office has been removed to 3 Great Winchester Street, London, Eng., & the English Asso-

have been appointed London agents of the Co. ciation of American Bond & Shareholders

Calgary & Edmonton.—The net earnings for June were \$5434.20, against \$1555.98 in June, '97.

Canadian Pacific.—At a meeting of the Board, Aug 8, dividends of 2% on the preference stock & 2% on the common stock for the half-year ended June 30 last were declared, payable Oct. 1. Last year the dividends paid Oct 1 were, on preference stock 2%, on common stock 1½%. The dividends paid April 1 were, preference 2%, common 2½%.

Cobourg, Northumberland & Pacific.—The final instalment of £37 on each perpetual 1st mortgage debenture is due at Barclay & Co.'s bank, London, Eng., August 20. (See June issue, pg. 100; July, pg. 126.)

Elgin & Havelock.—The annual shareholders' meeting will be held in London, Eng., Sept. 7.

Grand Trunk.—A London cable dated Aug. 12 says:—The accounts of the G.T.R. for the half-year ended June, which have just been issued, show the balance available for dividend to be £106,900 sterling, admitting the payment of a full dividend for the ½ year of 2% on the 4% guaranteed stock, leaving about £2,500 to be carried forward.

Several of the English papers comment on the report:—The Financial News says it is disappointing. Relatively it is much worse than the most cautious expected, & creates grave suspicions as to managerial methods. The statement, however, shows improvement over the statement of 1897, which was better than that of 1896, & encouraging to General Manager Hays, who has reduced expenditure without impairing efficiency. Unless he is going to reverse his reputation for able, economical management, the future ought to give better results. The Manager's statement is extremely disappointing to those who made optimistic calculations.

The Statist says the report is an unpleasant surprise. But the general opinion is that Mr. Hays' management is excellent, & the best that can be done for the road.

ROOF YOUR BUILDINGS

with the genuine All Wool Mica Roofing offered the public. Not affected by heat or cold being wool it is pliable and yields to the frost strain. Is perfectly water, wind and fire proof : 7 years' experience has proved that fact. Samples and testimonials sent on application to

W. G. FONSECA,
705 Main St., Winnipeg.

ALL OF THE LEADING

Railroads, and most of the best farmers of this country, now use Page Coiled Spring Woven Wire Fencing. It is THE fence, because it is proof against all animals large or small; it will not sag because of snowdrifts, or from contraction and expansion; it is everlasting, as it is made of hard spring steel wire; and it is as cheap or cheaper than the inferior make-shift would-be competitors. Further information gladly furnished to interested parties. The Page Wire Fence Co., Limited, Walkerville, Ont.

Grand Trunk & Wabash.—The visit of a number of Wabash officials to Montreal recently gave rise to a report that a rearrangement of the running privileges over the Southern Division of the G. T. was being effected. This is incorrect, as the Co.'s are operating under the contract originally entered into for the use of the line between Detroit & Suspension Bridge. (Official.)

Great Northwest Central.—J. B. Delap has obtained a judgment in Manitoba against this Co. for \$243,986.

Intercolonial.—An Ottawa dispatch says: "An estimate of the financial result of the operations of the Intercolonial Ry. for the past year places the probable deficit at \$250,000. The loss last year was \$59,940, & for the previous year \$55,187. There has therefore been an increased deficiency, if the reported estimate is well founded, of \$200,000. It is attributed to the failure of the business of the Montreal extension to come up to the expectations of the Government. When the year ended, the line from Levis to Montreal had only been in operation four months. The rental accruing in that period would be \$70,000. The loss is equal to three times the rental of the line. On this basis, if operated for a whole year, a very substantial deficit would be built up. In the face of the loss this year the Government will, it is probable, not ask next session, as was intended, for the ratification of the permanent contract. It will operate the extension for another year, & if the results are no better may abandon the project altogether." In reference to the foregoing, it is only fair to add that the dispatch was to an Opposition paper & may not have been free of political bias.

Kaslo & Duncan.—The 1st annual meeting of shareholders will be held at Kaslo, B.C., Sept. 6, to elect 5 directors & transact other business.

Kaslo & Slocan.—Kaslo papers think a change in the ownership of this line is imminent & it is also rumored that the C.P.R. has purchased it, which is doubtful, as the ownership has always been looked upon as very closely allied to the Great Northern (U.S.) The President is D. J. Munn, New Westminster, B.C., & the Vice-President, A. Guthrie, St. Paul, Minn.

A prominent official of the K. & S., who certainly should be in a position to speak with authority, assures us he has absolutely no knowledge of any change in the ownership of the line, & that he does not anticipate any at the present time.

The line runs from Kaslo to Slocan, B.C., 28 miles, with a branch from Junction to Cody, 3 miles. The share capital is \$1,000,000, of which \$600,000 is subscribed & paid up. Its authorized bonded debt is \$954,000, of which \$600,000, bearing 6% interest, is issued & sold. Its capital from other sources is \$279,805 paid up, making a total capital subscribed & paid up of \$1,479,805. It had a floating debt of \$279,805.92. The total cost of the railway & rolling stock was \$778,816.49. These figures are up to June 30, 1897. It received a land grant from the B.C. Government. The gross earnings for the year ended June 30, 1897, were \$117,488.22 & net earnings, \$66,093.04.

Lake Manitoba Ry. & Canal Co.—The annual shareholders' meeting will be held at Portage la Prairie Sept. 1.

New Brunswick. Coupons due Aug. 1, on N.B.R. 5% 1st mortgage bonds, have been paid by Melville, Fickus & Co., London, Eng.

Pontiac & Pacific Jet.—In our July issue, pg. 118, it was stated that the Quebec Government has issued executions against this & the Gatineau Valley roads in connection with a judgment secured in the Superior Court in 1884 for taxes. An Ottawa dispatch of Aug. 11 said P. W. Resseman, who is Superinten-

dent of both lines, had received a communication from the government's solicitor settling the matter, that all proceedings had been withdrawn, the papers being cancelled on July 30, & that the sales advertised would not take place.

Port Arthur, Duluth & Western.—The annual meeting announced for Aug. 2, to be held in Toronto, was adjourned for 30 days.

Qu'Appelle, Long Lake & Saskatchewan.—The net loss in operating for June was \$6,689.33, as against a net loss of \$714.48 in June, '97. About \$5,000 had to be expended on account of damage by freshets, part of the bridge over the South Saskatchewan, at Saskatoon, having been swept away. A considerable further amount will have to be expended in repairing this bridge. (Official.)

Quebec Central.—The net earnings for the 6 months to June were \$57,102, against \$19,615 for corresponding period.

Quebec, Montmorency & Charlevoix.—The annual shareholders' meeting will be held at Quebec Sept. 30.

St. Lawrence & Adirondack.—The annual shareholders' meeting will be held in Montreal Sept. 7.

Spokane Falls & Northern.—The Spokane Falls & Northern Ry. & its allied roads, the Columbia & Red Mountain & the Nelson & Fort Sheppard, were formally turned over to the Great Northern, (U.S.) at Spokane, Wash., Aug. 8. President Hill, of the latter road, was present at the transfer. The new officers of the Spokane & Northern are: J. J. Hill President, & Cornelius Shields, Vice-President, & General Manager. (See July issue, pg. 117.)

Tilsonburg, Lake Erie & Pacific.—The annual meeting of shareholders will be held at Tilsonburg, Ont., Sept. 13.

Toronto, Hamilton & Buffalo.—The Co. recently took up the award in the arbitration between H. J. Gonder & E. W. Fares & the Co., over a dispute as to the value of a little over 5 acres of land expropriated by the Co. for freight yards at Welland, Ont. The T., H. & B. offered \$390 for the land, but \$3,000 was claimed as a fair price therefor. The arbitrators decided the property was worth only \$389, a dollar less than the company offered in the first place. The arbitrators' fees amount to \$623, & the costs of the case, which go to the T., H. & B., amount to \$500 more.

Vanderbilt Lines.—The Railway World, Philadelphia, says:—"Before the end of this year—much earlier perhaps—we are likely to have announcements of certain corporation consolidations of far greater consequence than any recently printed. We have it, on the authority of a member of the foremost banking house of this country, that the return of W. K. Vanderbilt to this country will probably be the signal for extraordinary developments. Wall Street used to have a notion that W. K. Vanderbilt was at odds with J. Pierpont Morgan, but that idea has gone glimmering. These two are not only enjoying fuller satisfactory understanding, but it can be relied upon that between them there is now a relationship of greater consequence than any similar alliance known in American financial history."

Westinghouse Air Brake Co.—At a meeting of directors, July 12, it was voted to increase the capital stock from \$5,000,000 to \$11,000,000, of which increase \$1,000,000 will be retained in the treasury for the purchase of property or other uses as may be deemed best by the board. The action was taken in the form of the adoption of the following resolution: "Resolved, That of the 120,000 shares (\$6,000,000) of new capital stock authorized by this meeting, the stockholders recommend that the directors should distri-

bute 100,000 shares, that is \$5,000,000 at par, to the stockholders as a stock dividend out of the surplus earnings of the company not heretofore divided among the stockholders, & that the remaining 20,000 shares (\$1,000,000) remain in the treasury & be issued by the board of directors from time to time for the purchase of property upon such terms & in such manner as they shall deem for the best interest of the Co.

RAILWAY APPOINTMENTS, &c.

Brockville, Westport & Sault Ste. Marie.—At the annual meeting July 12, R. G. Murphy, Elgin, Ont., was elected a director, vice W. G. Parish, Athens, Ont. The officers were re-elected.

Canadian Government System.—It has recently been announced in a number of papers that J. E. Price, Superintendent of the Intercolonial at Truro, has been appointed Assistant General Manager of the system, & that W. Rennels, Superintendent at Campbellton, has succeeded him at Truro. The Deputy Minister and the General Manager advises us that these changes have not taken place. Later Maritime Province exchanges say the changes are to be made & that Train Dispatcher Jarvis at Moncton will succeed Mr. Rennels at Campbellton.

Grand Trunk.—F. T. Byrne has been appointed Commercial Agent at St. Louis, Mo., & H. A. Richards has been appointed Traveling Freight Agent there. These appointments, with headquarters at that point, are due to the fact that the National Dispatch & Great Eastern lines have withdrawn their agencies from St. Louis.

J. H. Burgis has been appointed Acting City Passenger & Ticket Agent, Chicago City Office, vice L. R. Morrow, resigned.

Northern Pacific.—W. L. Darling, heretofore Division Engineer, with headquarters at St. Paul, Minn., has been appointed Assistant Chief Engineer.

Ottawa & New York.—It is officially announced that the general offices of this Co. & of the New York & Ottawa Ry. Co. have been removed from Moira, N.Y., to Ottawa, Ont., & that the following appointments have been made:—Auditor, G. B. Colpas; Treasurer, W. Chance; General Freight & Passenger Agent, G. H. Watson; Trainmaster & Chief Dispatcher, S. W. Derrick; Roadmaster, M. Keefe; General Agent, J. O. Hibbard; Freight Soliciting Agent, C. Haggarty; Passenger Agent, J. W. Boyd. A. W. Flack has been appointed Travelling Agent, with headquarters at Cornwall, Ont.

Spokane Falls & Northern.—The new organization is as follows:—President, J. J. Hill; Vice-President & General Manager, C. Shields; General Freight Agent, C. G. Dixon.

Personal Mention.

Grant Hall, recently removed from the Mechanical Foremanship of the I. C. R. at Moncton, N.B., has removed to Montreal.

On Aug. 12 Traffic Manager Reeve, of the G. T. R. received a cablegram announcing the death of his mother in London, Eng., at the age of 93.

Robt. McGuire, Foreman in the G. T. R. Bridge & Building Department at Windsor, Ont., with territory extending to St. Thomas, died recently.

Wm. Mackenzie, President of the Toronto Street Ry. Co., left Toronto early in August for the Pacific coast, in connection with his various railway enterprises.

W. H. Price, formerly Travelling Passenger Agent of the Intercolonial & now chief clerk in the Passenger Department at Mon-

ton, was married at Richmond, Que., Aug. 10, to Miss A. E. Smith.

P. G. Denison, Freight Agent for the C.P. R. at Rosslund, B.C., has been appointed Station Agent & Contracting Freight Agent, C. W. Mount, who has been Station Agent for the Columbia & Western for the past 2 years, has gone to Butte, Montana. The Rosslund ticket office will be maintained in charge of A. B. Mackenzie.

H. Tandy has resigned the superintendency of the Brooks Locomotive Works, Dunkirk, N.Y., to accept the managership of the Canadian Locomotive Engine Co., at Kingston, Ont., with which he was formerly connected. The foremen of the Brooks Works presented him with a gold-headed ebony cane.

H. G. Gorman, late locomotive foreman in the C.P.R. shops at Winnipeg, has been transferred to Field, B.C., where he takes the place of R. Inches. M. J. Collins, of Broadview, Assa., has been appointed in charge of the Winnipeg shops.

J. W. Kimball has been appointed Auditor of the Construction Department of the Columbia & Western Railroad, from Robson to Midway, B.C., under W. F. Tye's management. Mr. Kimball was Secretary & Auditor of the C. & W. under the Heinze management.

C. Shields has been appointed Vice-President & General Manager of the Spokane Falls & Northern & other lines of the Corbin System, recently acquired by the Great Northern (U.S.). Mr. Shields was one of the first C.P.R. dispatchers at Winnipeg, & was afterwards Superintendent at Moose Jaw. He followed J. M. Egan from the C.P.R. to the Great Northern as Superintendent of Construction, again following Mr. Egan to the Chicago Great Western, of which he became Asst. Gen. Supt. in 1888, resigning in 1891 to take the General Superintendency of the Great Northern in 1891 & returning to the Chicago Great Western in 1893, & remaining with it till a few months ago, when he resigned the General Superintendency.

On removing from Toronto to London, Ont., recently, Superintendent Williams of the C.P. R. took with him as dispatchers, A. L. Smith, W. Killingsworth & J. K. Savage. Superintendent Price has as his dispatchers at Toronto, W. H. Allison, S. Robins & J. S. Duff.

Vice-President Shaughnessy.

"The Auditor" writes in the Railway Age as follows:—"At the recent investigation before the Interstate Commerce Commission in Chicago, more than one representative of American lines testified sincerely, but regretfully, to the fact that the Canadian Pacific was managed by discouragingly able men. In the issue of Mar. 4, 1898, an admirable portrait of Sir Wm. Van Horne, with some remarks upon his personality, was published in The Railway Age. Next to Sir William, the railway man in Canada who is of most interest to us over here is T. G. Shaughnessy, the Canadian Pacific's Vice-President. Like Sir William, Mr. Shaughnessy was born in the U.S., having seen the light in Milwaukee 45 years ago, & it was in the purchasing department of the Chicago, Milwaukee & St. Paul that he began his railway career, when 16 years of age. He was storekeeper on the Milwaukee & St. Paul when Sir William (then Mr. Van Horne) persuaded him to go to the C.P. when that Co. was struggling with the difficulties of construction. Those difficulties were at times considerable, & on more than one occasion it looked to the men on the inside as if the Co. would have to throw up its hands. It is said to have been in one of these crises that Mr. Shaughnessy finally demonstrated the ability which was in him. Debts had accumulated, creditors were vociferous, & it looked as if construction would have to stop, when, so

the story goes, Mr. George Stephen (now Lord Mount Stephen) succeeded in getting a temporary loan of a million dollars from the Government at Ottawa, & Mr. Shaughnessy was told that he would have to make that million pay five millions of debt. He is said to have done it, or at least to have so impressed creditors with the immense resources of the C.P. that few of them cared to accept any payment on their accounts from a company so ostentatiously solvent, & those that did took only a small instalment. The whole story may be purely mythical, but it is current among C.P. officials, & it is said to have been the ability which Mr. Shaughnessy showed in that emergency that created his career. Whatever truth there may be in it, it is certain that if the opportunity had not come then of demonstrating his capacity, it must have come in some other way, for no man could come in contact with him without recognizing that he was a man of unusual ability & force, & a man for whom, sooner or later, success & conspicuous position were inevitable. He has now been Vice-President & a Director of the C.P. since 1891. Whenever rumors of Sir William's retirement become current it is always accepted as a matter of course that Mr. Shaughnessy will succeed him. This will doubtless be so, & there is no human doubt that Mr. Shaughnessy is going to be (if he is not already) one of the most powerful & most honored men in Canada.

Port Arthur, Duluth & Western.

The Toronto General Trusts Co., representing the estate of the late Jno. Leys, and other Toronto interests, has sold the P.A.D. & W. Ry. to Mackenzie, Mann & Co. (W. & R. J. Mackenzie & D. D. Mann), for about \$250,000. The sale includes nearly the whole of the shares & bonds of the Ry. Co., with the exception of a few small holdings.

The P.A.D. & W. R. (first known as the Thunder Bay Colonization Ry.), which was completed in 1894, runs from Port Arthur, via Fort William, connecting at both places with the C.P.R. southwesterly to Gunflint Lake, on the Minnesota Boundary, 85.50 miles, with an extension of about 6 miles to Gunflint Mines, on the U.S. side of the line. The contractors were Connec & Middleton. When the road was constructed it was intended to operate it in connection with the iron mines of that region of the country, & large contracts for the haulage of ore were entered into with the original owners of the road. But unfortunately owing to a general collapse of the iron mining interests & the failure of the parties with whom the contracts were made the road has proved a costly failure. In view

of the facts that the road ended practically nowhere, had no connection for traffic at its southern end, & was of no use without the expenditure of considerable money to extend it, we think the Toronto General Trusts Co. made an excellent sale of the interests of its clients, who are no doubt glad to be rid of the burden on their hands. Mackenzie, Mann & Co. ought to be able to run it to advantage. They will use the first 16 miles from Port Arthur to Stanley as part of the Ontario & Rainy River Ry., the construction of which has just been commenced from the latter point westward, & it is said they are likely to extend the P.A.D. & W. from its present terminus at Gunflint Mines to Ely, Minn., 114 miles from Duluth, where connection will be made with the Duluth & Iron Range Ry., thus affording a through line from Port Arthur to Duluth.

The following statistics of the P.A.D. & W. Ry. Co. are up to June 30, 1897: Ordinary share capital subscribed and paid up \$1,200,000; bonded debt authorized, issued & sold, \$1,392,000 at 5%; Dominion Government Aid \$271,200; Ontario Government Aid \$255,571; Municipal Aid \$40,000; total capital paid up \$3,158,771; floating debt \$43,771.71 at 6 & 7%. Total cost of railway & rolling stock \$2,910,879.75. This is the theoretical cost, the actual cost having been about \$1,400,000. The total gross earnings for the year ended June 30, 1897, were \$9,313.61, & the expenses \$14,042.87, a loss of \$4,729.26. We are informed that there was an improvement for the year ended June 30, 1898, earnings having about met working expenses. The line is laid with 56 lb. steel rails. The radius of the sharpest curve is 573', & the heaviest grade is 95 ft. per mile. It has 4 locomotives, 2 passenger coaches, 2 baggage cars, 10 freight cars, 4 conductors' vans, 80 flats & 1 flanger.

The present Superintendent of the line is Ross Thompson, Port Arthur.

The Arctic Express Co., of Seattle, Wash., has been registered in British Columbia as an extra-provincial company, with F. M. Rattenbury, architect, Victoria, as its attorney. The capital is \$100,000, the time of the existence of the Co. is 50 years. The objects of the Co., besides doing an express business, include acquiring estates, franchises & privileges of every denomination, to acquire & operate vessels, & to carry on a general transportation business of freight & passengers upon the navigable waters of the State of Washington, Province of British Columbia, Territory of Alaska, & the Canadian North-West Territories, & the Pacific Ocean; to build & operate railways, street railways & tramways, & to acquire & operate telegraph & telephone lines.

Bearing Wheels. ❖ ❖

Car Wheels, Castings, Forgings, &c. AMHERST, NOVA SCOTIA.

Lake Erie & Detroit River Ry.

It has been known for some months that this Co. was negotiating for the purchase of the Erie & Huron Ry., & it was also said that the Michigan Central had similar views. However, the L. E. & D. R. was successful & has made a straight purchase of the property, the transfer having been made on Aug. 19. The parties to the transfer have not made the price public, but it is rumored at Chatham, the E. & H. headquarters, that it was in the neighborhood of \$750,000.

The E. & H. line runs from Rondeau, Ont., to Sarnia, 76 miles, connecting with the L. E. & D. R. at Blenheim, 8 miles from Rondeau; at Fargo & Courtright with the Michigan Central & at Chatham with the C. P. R. & G. T. R. The following statistics of the E. & H. are up to June 30, 1897: Ordinary share capital, authorized, \$150,000; paid up, \$109,000. Bonded debt, \$740,000 at 5%. Dominion Government aid, \$96,000; Ontario Government aid, \$83,000; municipal aid, \$257,500; capital from other sources, \$61,028.75; total capital subscribed and paid up, \$1,346,528.75; floating debt, \$61,028.75; total theoretical cost of railway & rolling stock, \$1,346,528.75. The gross earnings for the year ended June 30, '97, were \$107,891.19, & the net earnings, \$25,408.44. The line is laid with 54 & 56 lb. steel rails, & the radius of the sharpest curve is 661 ft., & the heaviest grade is 52 ft. to the mile. It has 5 locomotives, 8 first-class coaches, 5 baggage, mail & express cars, 25 cattle & box cars & 17 flat cars.

The directors of the E. & H., of which E. H. Bickford, Toronto, was President, & J. G. Ross, Chatham, Managing Director, resigned, & a new board was elected with the following officers: E. C. Walker, President & Managing Director; Dr. S. A. King, Vice-President; J. H. Walker, Treasurer; J. H. Coburn, Solicitor; W. Woollatt, General Superintendent & Traffic Manager. These gentlemen all hold precisely similar positions on the L. E. & D. R. The Secretary of the E. & H., J. E. Foreman, Toronto, was re-elected. The officials of the L. E. & D. R. have been placed in charge of the E. & H. & are operating it. In addition to Messrs. Bickford & Ross, above mentioned, who retire, the other officials of the E. & H. under the old management were: E. H. Edwards, Freight & Passenger Agent; C. H. Crofts, Storekeeper; F. Stamelen, Master Mechanic, & J. G. Entwistle, Roadmaster.

A new time-table will probably be put in effect about the middle of September, when some changes will be made in operating, & trains will run between Walkerville & Chatham & between Ridgetown & Sarnia. The L. E. & D. R. now connects with the E. & H. at Blenheim Jct., & that will be the junction used to & from Chatham.

In addition to the E. & H. just acquired, the L. E. & D. R. consists of its main line from Walkerville, Ont., to Ridgetown, 84 miles, the line following the Lake Erie shore line a few miles back from it. The Co. also operates the London & Port Stanley line between those towns, under lease.

A rumor has been current that the L. E. & D. R. has purchased the London & Port Stanley Ry. We are authorized to say that this is absolutely foundationless. The lease has yet 15 years to run & nothing further has been considered.

There is nothing definite as to the proposed extension of the L. E. & D. R. from Ridgetown to St. Thomas. The management hopes to secure a subsidy next session, in which event construction will go on without delay.

The new slip docks at Port Stanley, the contracts for which were awarded by the L. E. & D. R. Co. late in May, will be completed & ready for use early in September. The contracts called for their completion on Aug. 1, but unavoidable delays prevented their being finished in that time. The docks are

being constructed immediately to the west of the lighthouse piers, & with the tracks & grading of the approaches will cost in the neighborhood of \$55,000, the estimated cost of the docks alone being \$45,000 & of the approaches \$10,000.

The main objects of the Co. in having the slip docks built are to get a good connecting link between the coal & iron regions of Ohio & Pittsburg respectively, & the West, by means of a car ferry service & the Port Stanley line to London. During the past 2 years the Co. has handled a large quantity of coal & iron for London by the lake route, but the greatest drawback, especially in the coal trade, was experienced in the trouble of having to remove it from the schooners & on to the cars. This meant a heavy expense for labor & also a loss of time, & to remove these obstacles the L. E. & D. R. decided to build the docks & operate the car ferry Shenango no. 1, which for 3 years has run between Conneaut, Ohio, & Port Dover, Ont. The Shenango is a very large vessel, costing \$150,000, & has a capacity of 26 cars, having 4 tracks, the 2 centre tracks holding 7 cars each, & the 2 outside ones 6 cars each. In addition to this she can carry on her upper deck 1,200 excursionists & she is fitted for regular passenger business with staterooms. The Shenango made her first run from Conneaut to Port Stanley Aug. 18.

The distance from Conneaut to Port Stanley is 58 miles, Port Stanley to St. Thomas 9 miles, & Port Stanley to London 24 miles. It will thus be seen by this new route Western Ontario is practically placed in direct connection with Pittsburg & the central States, from which a large amount of business comes into Canada. The L. E. & D. R.'s direct connection at Conneaut is the Pittsburg, Bessemer & Lake Erie Ry. (largely owned by the Carnegie Co.), which works direct with the Baltimore & Ohio, the Pennsylvania & other railways running out of Pittsburg. The L. E. & D. R. has already completed traffic arrangements with the C. P. R., & similar arrangements are pending with the G. T. R., M. C. R., & Wabash. (Official.)

The principal owners of the L. E. & D. R. are Hiram Walker & Sons, the millionaire distillers of Walkerville, so that the Co. will not want for capital to work its property to the fullest advantage.

The Quebec Conference.

Several questions of special importance to the interests represented by THE RAILWAY & SHIPPING WORLD will come before the representatives of Great Britain, Canada & the U. S. sitting at Quebec. These are referred to by the Toronto Globe as follows:

"While it is a large question, there should be no great obstacle in the way of coming to an understanding in regard to the bonding privilege, the continuance of which is recognized as an advantage both to the U. S. & Canada, & it would seem that all that is called for in this matter would be the careful drafting by experts of a series of clauses covering all possible conditions of transportation for incorporation in the treaty.

"The proposed revision of the treaty stipulation in regard to the maintenance of war vessels upon the great lakes seems to prevent no time-consuming difficulty. It is the wish of the U. S. merely to be allowed to construct war vessels on the upper lakes for ocean service, & not to maintain a fleet in the inland waters, it is probable that no serious objection will be offered.

"The alien labor question, which has been the cause of so much irritation, will, doubtless, find an easy solution.

"The anomalies of the wrecking laws of both countries have long been felt by the shipping trade & recognized by public men, & there

being a manifest disposition to wipe out small causes of difference, this one will be removed with the rest. In short, if the three questions of prime importance relating to reciprocity in trade, the Bering Sea seal fishery & the Atlantic fisheries are disposed of, there can be little doubt that the solution of the other differences will follow."

A few days later the Globe said in reference to the question of war vessels on the lakes: "The crucial question will be one of transit, rather than construction. The vessels contemplated are, we suppose, destroyers, and other small but deadly craft, capable of passing through the Canadian canals. The Globe said when this subject was first broached (July 25) that it was opposed to the maintenance of armed fleets on these waters & to giving the Americans any territorial rights in our canals, for that or any other purpose, & it adheres to that view."

A correspondent of the Globe, writing from Quebec, Aug. 22, says: "A city which is early in the field is Ogdensburg, represented here by State Senator Malby, of the New York Legislature. Ogdensburg wants to see the Welland canal thrown open free to all vessels, a tonnage fee of 2½ cents a ton being at present collected on all vessels, Canadian or U. S., passing through. With this tax removed he thinks Ogdensburg would get a lot of the grain that now goes over the Erie Canal to eastern points by way of Buffalo. He admits that Buffalo & New York will object to free canal navigation into Lake Ontario but thinks the grain-shippers of the west & the grain-users of New England will support his position. Canada, he thinks, would gain heavily also by the diversion of grain bound for Europe from the Erie route to the St. Lawrence. The benefit to Montreal, however, is not what Senator Malby is here to put to the front. Buffalo & the Erie are what Ogdensburg is out after."

Toronto Street Railway Taxation.

The application of the Toronto Ry. Co. for leave to appeal from the decision of the Court of Appeal of Ontario, holding that the rails, poles & wires of street railway companies were land, & assessable as realty, came on to be heard before the Privy Council in London, Eng., Aug. 2. Hon. E. Blake, Q. C., appeared for the T. Ry. Co., & C. Robinson, Q. C., for the City of Toronto. The position taken by the city was that leave to appeal should not be granted, because the legislature of this country & its courts should have the right to settle their own domestic questions of taxation, & that no broad general question of general law was therefore involved. The Privy Council gave effect to this contention, & refused the leave to appeal. The refusal of the leave does not settle the question as to whether rails, poles & wires are assessable as land. The Toronto Ry. Co. intends to further contest the question by paying its taxes under protest, & then suing the city to recover back the same. It will then be entitled to the decision of the Privy Council upon the assessability, as a matter of right, without special leave.

Smoke, Noise, Vibration & Bustle.

In Toronto, Aug. 22, Judge Rose gave judgment in the appeal of the T. H. & B. Ry. against the award of \$5,000 made by Arbitrators Judge C. J. Snyder & W. Bell, of Hamilton, in favor of the trustees of the McNab Street Presbyterian Church, Hamilton, for damages to land & for "the smoke, noise, vibration & bustle" consequent upon the running of the railway past the church. The judgment confirmed the \$500 land damages, but referred back to the arbitrators the balance of the award, \$4,500, to eliminate "any amount allowed for smoke, noise or bustle."

Then there are few sensible people in Canada. O. O. O.; Oh! Oh! Oh!

A Canadian Case at Duluth.

U. S. District Judge Lachlan of Minnesota has just decided a somewhat peculiar case. In Oct., 1892, the Canadian steamer Arabian carried away a lock in the Welland canal & the escaping water broke the lines of the Canadian schooner Minnedosa below & jammed the schooner against the lock wall. The Minnedosa was damaged something like \$15,000, & claim was made on her underwriters for about that sum. In the fall of 1895 one of the underwriters on the Minnedosa, the Marine Insurance Co., which had paid \$8,000 on account of this damage, libeled the Arabian in the district court at Duluth, claiming of the Arabian \$8,051.20, under the subrogation clause in its policy. The repairs actually made to the Minnedosa were trifling in amount, nearly all of the damage claimed being on account of a disalignment in her side & keel, & which was not repaired. Both vessels were Canadian; the damage occurred in Canadian waters & the Insurance Company libeling was a foreign company. Objection was made to the court entertaining jurisdiction & was overruled, a court of admiralty being one open to all the world & having the right to exercise jurisdiction in such cases or not at its discretion. The case was heard; the court fixed the damage at \$8,000 & decreed that amount to the Insurance Company. The case will doubtless be appealed.—Marine Review.

Spokane & Northern Organization.

The Great Northern has now completed the formal taking over of the Spokane & N. Ry. & the other lines of the Corbin System. The directors chosen were: J. J. Hill, C. Shields, J. D. Farrell, W. H. Thompson, F. H. Mason & T. G. Thompson. The directors immediately elected officers as follows: President, J. J. Hill; Vice-President & General Manager, C. Shields; General Freight Agent, C. G. Dixon. Columbia & Red Mountain Ry.: President, C. Shields; Vice-President, W. H. Thompson; Directors, C. Shields,

J. D. Farrell & W. H. Thompson. New officers for the Nelson & Fort Sheppard Railroad will be chosen at once. The men who are now in the management of the tributary lines are nearly all well-known Great Northern men. C. Shields is an old Great Northern man & is well-known on the coast in the operating department. C. G. Dixon, who is made General Freight Agent, is well known on the Western Division. He went to Seattle several years ago, but was, after a stay of a few months, transferred to Spokane, where he has been nearly ever since in the employ of the Co. as General Agent. J. D. Farrell is well known as a skilful & genial Superintendent. W. H. Thompson is a Seattle man, in the law department, & has charge of much of the G.N.'s legal business on the Pacific coast.

A New York Passenger Meeting.

Passenger Traffic Manager McNicoll, of the C.P.R., & General Passenger Agent Davis, of the G.T.R., attended in New York Aug. 19 a meeting of passenger officials of lines east of Chicago, held for the purpose of trying to restore rates, which are in a somewhat demoralized condition at present. The gathering did not represent any particular association, but was a special gathering of all lines interested. It had no satisfactory result, however, & the gathering broke up, the subject to be continued at their next meeting.

Speaking of the condition of things in the West, Mr. McNicoll stated that the rate from Chicago to St. Paul was now practically \$5 for a ride of nearly 400 miles. It is a secret rate, but it shows how the Western lines are fighting among themselves. Shortly after the recent meeting of the Inter-State Commerce Commission an open rate of \$8 was announced, but now it is down to the first-named figure. Mr. McNicoll considers the existing state of affairs an evidence of the hollowness of the claim that the C.P.R. was the cause of the passenger rate cutting.

Express Rates in the West.

With a view to encouraging the growing of fruit in British Columbia, & to supplying the demand for fruit at points west of Winnipeg, which could not be met satisfactorily from the present fruit shipping centre, the Dominion Express Co. has put in force very low rates on fruit from the Pacific Coast to points as far east as Winnipeg; the maximum rate on the main line being \$2.40 per 100 lbs to Winnipeg; with the result that the growers in British Columbia have marketed all the fruit they could produce this season in excellent condition, realizing prices that were highly satisfactory to them. The growers state that on the results of this year's business they will increase their orchards as rapidly as possible, & it is expected that in the course of a few years they will supply the demand for fruit in

the Northwest, & that the arrangement will be a mutual advantage to the grower, the Express Company & the consumer.

Aliens on the Canada Atlantic.

An Ottawa dispatch says: "The locomotive engineers of the Canada Atlantic & Ottawa, Arnprior & Parry Sound railways are waging a war against aliens. Some time ago these companies leased a number of locomotives from the Central Vermont Ry. for aiding in the hauling of the extensive lake grain trade from Parry Sound. At the same time a number of men were imported to run the locomotives, thus giving to aliens the work which should have belonged to Canadians. At present the engineers are provided with pilots, but these will shortly be removed, & with their removal the old employees of the lines state they will insist on the new men being sent back. It is stated the C.V. Ry. refused to lease the engines to the C.A. unless C.V. men were employed."

Two trains a day each way are being run on the Ottawa & New York, between Ottawa & Cornwall, Ont.

The general traffic agent of the Northern Pacific Ry. states that the excursion on that road from Dakota towns to the Winnipeg Industrial Exhibition this year carried 3,000 people, as against 1,600 in 1897. On the first section of the train alone 225 went from Pembina, 239 from Grafton, 69 from Cashel, 306 from the little town of Drayton, 23 from Pittsburg, 64 from Bowsement, & 31 from Joliet. These are Dakota towns & villages from 10 to 50 miles south of the Canadian boundary; & these people travelled, therefore, from 70 to 120 miles to get to Winnipeg.

The new freight tariff of the C. P. R. on grain, from the west to Lake Superior points, issued in connection with the Government agreement on the Crow's Nest Pass Ry., has been officially promulgated. The reduction on the former rate is 1½c. per 100 lbs. The tariff also contains the storage charges of the elevators at Fort William, which have a capacity for 5,250,000 bushels, effective Sept. 1, as follows: elevating (including 20 days storage) per bushel ¾c, storage for each succeeding 30 days, or part thereof, per bushel ½c., cleaning & blowing, per bushel, ¼c.

CONSTRUCTION & BETTERMENT.

Work on Various Lines.

The Canada Eastern has built an up-to-date station at Fredericton, N.B.

Coast Ry. of Nova Scotia.—The U.S.-Spanish war seriously interfered with negotiations which were about completed in connection with this line when war was declared. Surveys have been completed for the entire line to Halifax, which satisfies the Chief Engineer that his Co. has the shortest rail line between Yarmouth & Halifax, & that it will be the most attractive tourist route in the Maritime Provinces. A person directly interested in hotels & transportation in the Southern States is interesting himself in the matter of summer hotels along the route of the line, & it is hoped some favorable action on his part may result. (Official.) (April, pg. 40; May, pg. 66.)

East Richelieu Valley.—This line, which was built last year from Iberville, P.Q., to Henryville, 12 miles, is being extended a similar distance to a connection with the Canada Atlantic Ry., on the east side of the Richelieu river, near Lacolle. P. H. Roy, of St. Johns, P.Q., is the President. It is said this line is really an extension of the United Counties Ry., which runs from Iberville by way of St. Hyacinthe to Sorel. (Unofficial.)

Edmonton Bridge.—Tenders will be received by the Department of Railways up to Sep. 13, for the construction of the superstructure of a railway & traffic bridge over the North Saskatchewan River at Edmonton, Alberta. The piers are already in.

Irondale, Bancroft & Ottawa.—It is said this line has been extended this season from Baptiste to Bancroft, 5 miles, but up to the time of going to press we had no official information. (June, pg. 99.)

Lake Manitoba Ry. & Canal Co. When in Winnipeg recently W. Mackenzie said the extension will be pushed on this year as far as Swan River, a distance of 40 or 50 miles, the stations being placed 18 or 20 miles apart. Next spring construction will be rapidly pushed on to the Saskatchewan, & if the necessary aid can be got to finance the scheme, the road will be constructed to Hudson's Bay. No doubt steamboat companies can be induced to run to the Bay now, just as they were prepared to do at the time of the projected Winnipeg & Hudson's Bay Ry. scheme. He is fully satisfied navigation is perfectly open for a good part of the year in the Bay, quite so long as navigation to Montreal. The work on the extension is progressing rapidly, & track laying has commenced.

Manitoba & Southeastern. When in Winnipeg recently, W. Mackenzie said that 40 or 50 miles would be completed this year, & if the traffic seemed to warrant it, the road would be put into operation so far as built. Just where the Winnipeg terminal was to be, he could not yet say, as he would have to look over the ground, nor could he say whether the terminal when fixed would be reached via the C.P.R. or N.P.R., or if an independent bridge would be built over the Red River. He could not tell anything about a possible connection between this road & the Dauphin road, as nothing had ever been said about it. At the eastern end it would connect with the Ontario & Rainy River Ry., which has already been commenced 16 miles west of Port Arthur on the P. A., D. & W. Ry., & he expected fully 20 miles to be graded this year. He did not know at what point the connection between the O. & R. R. & the M. & S. E. would be made, that not having been decided on. He was not aware that engineers were now at work on the Lake of the Woods to find out the best & easiest place to bridge the narrows. As for the report that the G. T. would use the

Mackenzie, Mann & Co.'s lines to reach Manitoba, there was absolutely nothing in it."

Midland.—The contractors are advertising for 500 men, 50 heavy double teams & 50 light carts. (April, pg. 40. June, pg. 99.)

Montford Colonisation.—The gauge of this line from Montford Jct. to Arundle, Que., has been changed from 3 ft. to standard, 56 lb. rails being used. (Official.)

Nelson & Reddington.—This line from Bonner's Ferry, Idaho, to Kuskanook, B.C., will be 51 1/2 miles long. We are officially informed that it will be owned & operated by English capital, & that the Great Northern Ry. (U.S.A.) is not interested in it.

The Rossland, B.C., Miner, says:—"It is now stated that the N. & B. Ry. will be constructed within a few months. It was presumed when the Great Northern acquired the Corbin system that this road would not be built. It is now learned that while the interests of the G. N. in this road are large they are secondary to those of Geo. Alexander, H. Foster, a member of the British parliament, & their associates. The N. & B. R. Co. has a trackage agreement with the G. N. by which it can reach Spokane. Bids for the construction of the line will be opened at Bonner's Ferry. The line is to be about 53 miles in length, running from Bonner's Ferry along the banks of the Kootenay River, crossing the boundary line & striking lower Kootenay Lake at a point somewhere south of Pilot Bay. It will cross the C.P.R. Crow's Nest Pass line, & will be through a rich country. It is expected boats will be run on the lake & a connection made with the Kaslo & Slocan Railway for reaching the richer portions of the heart of Kootenay. The intention is to make connections so as to enable passengers leaving Spokane in the morning to be landed in Sandon & other Kootenay points the same night. While there are no hard grades on the line, there is considerable rock & bridge work, which will make the construction expensive. In building the bridges required, over 4,000,000 ft. of lumber will be used."

Ontario & Rainy River.—A contract for clearing & grading the first 20 miles from Stanley, on the Port Arthur, Duluth & Western Ry., 19 miles from Port Arthur, following up the Kaministiquia & Matawin Rivers, has been let to E. Fauquier, of Toronto, who has sublet the first 10 miles to W. Heald, of Toronto. Work began on Aug. 10, & it is expected the 20 miles will be completed this year. Surveys are being carried on under T. H. White, C.E., & will be continued until the line is located to some point on Rainy Lake not yet selected. (Official.) (May, pg. 71; July, pg. 129.)

When at Fort Frances recently, D. D. Mann, speaking of the O. & R. R. & its western connection, the Manitoba & Southeastern, is reported to have said: "The surveyors are out now along the whole line, & while I do not care to say much as to the future construction work, I think it is altogether likely it will go on without interruption, which, if the route is feasible, will be within a short distance of Fort Frances." When asked if the line would come into the town Mr. Mann said: "It is impossible to say until Mr. McCarthy, our engineer, who is now taking soundings across the north arm of Rainy Lake, makes his report. My own impression, however, is that the country & road would be better served by running the road from Fort Frances parallel to the river, as far as the mouth, thence across into Minnesota & around the southwest end of the Lake of the Woods to Winnipeg. This would open up a valuable agricultural land & timber belt & would give the settlers what they have been clamoring for, markets for their produce & means of communication with the outside world."

Ottawa & New York.—This line having been completed between Cornwall, Ont., & Ottawa, trains were run over it both ways July 29. The completion of the O. & N.Y. Ry. marks the realization in a slightly altered form of a scheme originated by the late Dr. Bergin, M.P., nearly 20 years ago, & in the furthering of which he spent many years of his life. The original scheme when it first came before the public was for the building of a line with the aid of Jay Cooke, of Philadelphia, & others from Cornwall, to Sault Ste. Marie, & thence to the Pacific Coast on pretty nearly the same route as is followed by the Northern Pacific. This scheme met with strenuous opposition, & was never carried out. Then for years Dr. Bergin strove against various obstacles, & on Aug. 14, 1896, a few months before his death, he had the satisfaction of seeing the contract signed with the representatives of the New York & Ottawa Co., who have since built the road. This Co. sub-let the grading of the road to Balch & Peppard, of Minneapolis, Minn., & the first sod was turned Aug. 23, 1897, by J. Bergin, Q.C., brother of Dr. Bergin, & President of the Ontario Pacific Railway Co. The grading was sub-let to numerous contractors, & with the exception of a few small sections was finished last fall.

Following is a list of stations with distances from Ottawa: Edwards 13.4, Russell 20.1, Embrun 23.6, Chrysler 31.4, Berwick 34.7, Finch 37.1, Newington 41.3, Black River 48.6, Grand Trunk Jct. 55.9, Cornwall 57.0. It is expected the bridge across the St. Lawrence River at Cornwall will be completed about Oct. 1. Interlocking plants are being put in at the crossing by the O. & N.Y. Ry. of the G.T.R. tracks at Cornwall, Ont., & also at the crossing by the New York & Ottawa Ry. of the G.T. tracks at Helena, N.Y., on the Rouse's Point branch. (Official.) (April, pg. 38; June, pg. 99; July, pg. 122.)

On Aug. 5 this Co. applied to the Railway Committee of the Privy Council for entrance to its Ottawa freight terminals at the canal basin over the tracks of the Ottawa, Arnprior & Parry Sound. The Committee reserved its decision.

Pontiac Pacific Junction.—It is the intention of this company to build an extension from the present southern terminus of its line at Aylmer, Que. to Hull, this year, a distance of 10 miles. The contract had not been let up to Aug. 3. (Official.)

This Co., jointly with the Ottawa & Gatineau Ry. Co., is going on with the substructure for the interprovincial bridge between Ottawa & Hull, 2 piers of which are finished, a 3rd one-half finished & the excavation of sawdust being done for a 4th. Rock excavation is also going on on the approach to the bridge on the Ottawa side. The acting chief engineer is G. C. Dunn. (Official.)

Quebec Bridge.—This bridge, as projected, is to be a cantilever, about 3,300 ft. long, 150 ft. above high water, with a span of 1,600 ft. It is said tenders will be asked for shortly, on plans & specifications prepared by E. A. Hoare, C.E.

Restigouche & Western. The first sod was turned Aug. 12 by Chief Engineer C. L. B. Miles, about 3 miles from Campbellton, N.B. The contractors, Malcolm & Ross, have about 300 men at work, & this force will soon be increased. The first 15 miles of the survey has been revised & 10 miles will soon have been located. Another 10 miles will then be located. (Official.) (July, pg. 122.)

Vancouver Victoria & Eastern. In connection with the construction of the portion of the line between Victoria & the Pacific coast, part of a bill introduced for which we gave in June, it may be added that one of the conditions imposed by the Provincial Government is that the Co. shall equip & maintain a ferry steamer, suitable for freight & passenger cars,

between the mainland & Vancouver Island. When in B.C., recently, Vice-President Straightnessy stated that although the C.P.R. had nothing to do with the building of the line between Midway & Penticton it would probably be operated by that Co. (May, pg. 100. June, pg. 100. July, pg. 122.)

A Vancouver dispatch of Aug. 10 says: "All work has been ordered stopped on the survey for the V.V. & E.R., which has been in progress for some weeks under the direction of A. Hill, C.E. He completed the survey from Abbotsford to a height of land on the route towards the coast, & had made good progress towards Chilliwack, when orders came to discontinue the work, but for what reason is not yet made known."

The Rossland, B.C., Miner says Hugh Sutherland, of Winnipeg, who it speaks of as "a partner of Mackenzie & Mann," the owners of the V.V. & E. charter, is reported as saying that the construction of the Penticton-Boundary Creek branch will not be commenced until next year, & that it has good reason to believe Mr. Sutherland has spoken with definite knowledge. The B.C. Legislature voted a cash bonus of \$4,000 a mile for this line, & construction was to have been commenced by Aug. 8, but it is said the time has been extended, as the projectors want to obtain a Dominion subsidy in addition.

White Pass & Yukon Railway.

As previously described by us, this line is being built from Skaguay, Alaska, via the White Pass & Lake Bennett, the objective point being Fort Selkirk, Yukon. The line on the U.S. side of the line, or rather within the disputed territory, as it may turn out to be British, is owned by a U.S. Co., the Pacific & Arctic Railway & Navigation Co. The line within the limits of British Columbia is owned by the B.C. Yukon Ry. Co. & the line in Canadian territory, outside of B.C., is owned by the British Yukon Co. These three different lines will be operated by a company called the White Pass & Yukon Ry. Co., of London, Eng. Close Bros. & Co., of London, Eng., & Chicago, are the financial agents of the Co., & S. H. Graves, of that firm, is the representative on this side of the Atlantic. The Chief Engineer is E. C. Hawkins.

The distance from Skaguay to the Summit is about 20 miles, & from the Summit to Lake Bennett about 25 miles. The Pacific & Arctic Co. has about 1,500 men employed on construction, & would be glad to have double the number, & expects to get them as soon as the pressure of harvest work is over. Trains are now running to about half-way to the summit of the White Pass, & it is expected to reach the summit early in September & the Lakes about a month later. A heavy rock cut on Porcupine Hill, which has been such an obstacle to rapid progress, is finished,

& trains are running through it. The heavy rock cut at the summit of the Pass is also about completed & ready for track, & much of the heavy work on the line at intermediate points is in such a forward condition that track-laying will from now on be much more rapid than it has been. It is practically all heavy rock work to the summit of the Pass from Skaguay. There are 2 or 3 long, heavy rock cuts & 2 short tunnels. The maximum grade is 3.9 ft. per hundred. The maximum curvature is a 6 degree curve, of which there is only one. There are several bridges, but none of them involving any difficult or unusual construction. The larger bridges will be of iron & the smaller ones trestle. The only other structures in connection with the first section of the line are the large wharf & customs warehouses, etc., which are being erected at the port of Skaguay, & alongside of which there will be 30 ft. of water at low tide. The gauge of the line is 3 ft., & it is being laid with 56-lb. steel rails.

The rolling stock is the best modern equipment for that class of work, & the line is specially constructed for winter operation, so as to avoid snow blockades, etc. Early in August the Chief Engineer wired the Manager in Chicago: "More business is in sight than we can handle. Urgent need more equipment quick." In reply he was wired to procure immediately all the extra equipment needed.

The steamers plying on the Upper Yukon have proved so successful this season as to completely demonstrate its advantages over the Lower Yukon for safe & regular steamboat navigation. Several syndicates have already been organized for the purpose of running freight & stage lines during the coming winter between the end of the constructed railway & the interior. (Official.)

The Manager writes us from Chicago: "As regards continuing the line from Lake Bennett to Ft. Selkirk, the intention is to push on as fast as possible. It will not be possible to work during the winter on account of the shortness of the days & the severity of the weather in that northern latitude, but it is intended to commence work as soon as possible in the spring & to push it with the utmost possible speed. I hope that by having everything ready before-hand it may be possible to reach Ft. Selkirk before the end of next year, but this is a matter which, of course, one cannot speak with any certainty about; much will depend upon the nature of the line. We have survey parties running lines between the lakes & Ft. Selkirk, & the actual location of the road between those points will be decided after the survey parties come in this fall. You understand, of course, that running a railway survey in that country is an extreme-

ly different thing to running one down here. You will be better able to judge of this when I tell you that it took us 4 days to move one survey camp 4 miles, & that I have just received a letter from our Chief Engineer, who had returned from a 'flying' trip over one of the lines, in which he says that it took him over 2 hours to go half a mile, unimpeded by instruments or baggage of any sort." (June, pg. 98. July, pg. 123.)

Canadian Government Railway System.

The new I.C.R. station at Moncton, built by Rhodes, Curry & Co., of Amherst, N.S., was opened Aug. 1. The ground floor is used for purely station work. On the 1st floor are the dispatchers' & the Western Union Telegraph offices.

Rhodes, Curry & Co., of Amherst, N.S., have been awarded the contract for building the Intercolonial pier & sheds in Halifax. The contract calls for a pier 600 ft. long & 120 ft. wide, with a shed 80 ft. wide on it, having tracks through the centre. The contractors have started work. Tenders have also been asked for erecting a grain elevator, towards which the city of Halifax contributes \$50,000.

Mr. Fielding, acting Minister of Railways, has been in St. John, N.B., with General Manager Pottinger & Chief Engineer McKenzie about the proposed I.C.R. terminal facilities. He said the engineers were preparing the plans as rapidly as possible, & the work, when commenced, will be pushed to completion. He could not say whether the elevator would be built on the Long wharf or on the Harris property. Nor was he certain that the improvements could be completed in time for this winter's trade. Mr. McKenzie said the intention was to build berths, one at either side of the Long wharf. There would be some difficulties in connection with dredging, because of rock, & possibly, it might be necessary to acquire more property. That in the neighborhood is all held at a very high figure, & just what course will be pursued has not been determined on. It is thought that not a great deal will be done until the Minister, Mr. Blair, arrives. He will leave England Aug. 25.

J. M. LYON, General Passenger & Ticket Agent, Intercolonial Ry., Moncton, N.B., writes: "In enclosing my subscription I wish to say that THE RAILWAY & SHIPPING WORLD is worth looking forward for. I think the busy ones among its readers, which I trust are many, will find the time given to its perusal well invested."

THE CANADIAN PACIFIC RAILWAY COMPANY.

The undermentioned dividends have been declared for the half-year ended June 30th, 1898:

On the Preference Stock, two per cent.

On the Common Stock, two per cent.

The Common Stock transfer books will close in London at 3 p.m. on Friday, 10th August, and in Montreal and New York on Friday, 10th September.

The Preference Stock books will close at 3 p.m. on Friday, 10th September.

All cheques are to be remitted on Monday, 13rd October.

Whereas the Common Stock dividend will be mailed on the 1st October to shareholders of record at the closing of the books in New York and London respectively.

The Preference Stock dividend will be paid on Saturday, 1st October, to shareholders of record at the closing of the books, and the warrants will be posted from the Company's London Office.

By order of the Board,

CHARLES DRINKWATER, Secretary.

Montreal 30th August 1898.

TORONTO, ONT.

Work on the Canadian Pacific.

West St. John, N.B., Terminals.—The Co. is doing a large amount of work at its deep-water terminus at West St. John, formerly known as Carleton, on the west side of St. John Harbor, & which is reached by a branch line of 4 miles from Fairville, the 1st station west of St. John, & in fact, the 1st station on the eastern end of the system, as the Co. uses the I.C.R. station in St. John. Over \$600,000 is being expended in the extension of wharves, warehouses, &c. The city of St. John joined the Co. in the work & retains the ownership, leasing to the Co. for 999 years. To show the extent of the work, it may be stated that 14 acres are occupied by wharves & docks, of which $2\frac{1}{2}$ acres is warehouse floor space. The wharf frontage extends 2,100 ft., forming 5 distinct steamship berths of over 400 ft. each, all of which will accommodate at the low state of the tide vessels drawing 28 ft. of water. There is one stretch of wharf 870 ft. long, with 28 ft. of water at low tide, that will easily accommodate the largest vessel afloat. Each of these wharves will be provided with conveyors that will enable vessels to take on grain & cargo without moving from the original position & will permit them at the same time to receive from & dispatch into the sheds their package freight without intermission or delay. The elevator, which has a capacity of 250,000 bushels, is being increased to 1,000,000 bushels capacity, at a cost of \$150,000 for the elevator & conveyors, there being 2,500 ft. of the latter. There are 4 conveyors, 1 being double decked. They have a loading capacity of 6,400 bushels an hour & can load 4 steamers simultaneously. Stock yards are being built to accommodate 1,000 cattle. The warehouse accommodation is of the most extensive & substantial character, & in viewing, as the writer did recently, these terminal improvements at West St. John, which, as before mentioned, cover an area of 14 acres, every portion of which is utilized to the fullest advantage, those interested in the steamship traffic & its development will heartily appreciate the efforts made by the Co., with the generous aid of the City, in affording so inexpensive & efficient means of accommodating it.

Atlantic Division Bridges.—In our June issue, pg. 97, we referred to the improvements being made on this division. It may be added that a considerable amount of bridge work is being done in Maine, between Megantic & Mattawamkeag. During construction the bridges were built with stone piers, steel superstructures & short wooden approaches. The piers are being made into abutments & the wooden approaches are being filled. Wooden structures are being replaced by stone abutments with steel superstructures. Two steel viaducts that had wooden approaches are having stone abutments put in & the approaches are being filled. Nine wooden trestles are having box culverts put in, & the whole structures are being filled in. One wooden trestle is being replaced by a 14 ft. stone arch, with filling.

Place Viger Station.—This station & terminal hotel in the east end of Montreal was opened Aug. 13. The building was erected in consequence of an agreement entered into between the Co. & the City Council. Rather than return to the C.P.R. some property that has long been used as a park, the City offered to buy a site for a new building & exchange it with the Co. for the park. The offer was accepted & the City purchased the site upon which the building now stands. The Co. faithfully carried out its part of the agreement by erecting one of the handsomest buildings in Montreal at the cost of \$350,000, & producing at the same time the finest & most modern hotel in Canada. It has been furnished with a regard only to good taste & not

expense, & is a credit to the city. The station occupies a whole block, & is situated on Craig St., facing the Viger Gardens; it is bounded on the west by Berri, south by Notre Dame, & east by Lacroix St. The Craig St. frontage is 300 ft., & the depth, measured along one of the wings, is 116 ft.; the depth of the main portion of the building is 50 ft. The tower rises 138 ft. above the curb, the whole structure forming a grand aggregate of 1,750,000 cubic feet.

The building is arranged after the idea so prevalent in England, with the hotel above the station proper, making it at once a haven of rest & comfort for the travelling public. The architecture is of the French Renaissance, partaking of the type of the old chateau found on the banks of the Loire. The general outline & effect of the building is one of great solidity combined with gracefulness, & with its numerous towers, turrets & quaint gables it forms altogether a most pleasing sky line. The situation, in fact, is of the very best, as it commands a splendid view of the Gardens & that portion of the city. The C.P.R. evidently does not agree with those people who think that the west end is the only place for a first-class hotel. The Co. has faith in the east & has built an hotel whose magnificence would command liberal patronage wherever the building was situated. The lower portion of the building is of Montreal gray limestone & the upper portion of Scotch buff fire brick with stone trimmings, all in complete harmony, & emphasizing the beauties of the noble & graceful style. The Craig Street facade is composed of the grand portico, with 21 elliptical arches, the portico being 228 ft. long by 16 ft. wide. It is crowned on the top by a beautiful balustrade, behind which can be seen the spacious balcony. The tower, raising from a graceful sweep into a great circle, is the central point of interest & with its numerous turrets & gables makes a telling picture. The arcade is lighted from the balcony with prismatic lights. This arcade is one of the most pleasing features of the building. It runs along the front of the hotel & has 21 arches. Broad granolithic steps lead up to it from the sidewalk. The arcade will be a delightful place for the guests to sit out the pleasant hours of a summer evening, &, facing the Gardens, will command a pretty view. The 2nd storey comes out over the arcade. The building is 5 storeys high. The slate roofs are very steep, being at an angle of 50°, studied by copper & stone dormers & airy turrets, the whole mass making an unexcelled sky line. In the centre of the arcade large doors afford admittance to the general waiting room, which is circular in form & is in the centre of the whole building. It is 55 ft. in diameter. To the left, arranged along either side of a main corridor, are the offices of the executive officers, smoking rooms, ladies' waiting rooms, & lavatories, while farther along is the baggage room, & to the rear of the baggage room, occupying a whole wing of the building, is the express room. To the right of the main waiting room is the hotel department. All the upper floors are devoted to hotel purposes on plans arranged according to the most modern & up-to-date ideas. Passing out through the main waiting room the car tracks are found. The passenger platforms are covered over with roofs which run up to the rear of the building, thus putting the passengers to no inconvenience or discomfort during unfavorable weather. The station is one of the most completely equipped buildings of the kind on the continent. In the hotel portion, west of the central tower, are the reception room & offices just off the corridor, & off the same corridor are the smoking rooms, cafe, bar, billiard room & barber shop, parcel & cloak rooms. From the centre of the rotunda a grand marble staircase leads to the 1st floor, which is of Mosaic, with a Greek fret border round each room & the corridor. The build-

ing is wainscotted & trimmed with oak throughout. On the second floor are the dining rooms, breakfast room, writing rooms, parlors, etc., all finished in oak, besides the extensive corridor running the whole length of the building 10 ft. wide. Throughout the rest of the building are found ample sized parlors & bedrooms, making a total number of 150 bedrooms. These bedrooms are arranged to rent en suite or single, as required by guests. In this hotel will be found all the accommodation necessary, everything being modern & up-to-date, electric light wiring, wired throughout in iron-armored conduit, steam heating, electric elevators, & bells, & a kitchen service unsurpassed. An illustration of this hotel appeared in our June no., pg. 97.

Montreal & Ottawa Ry.—This line, having been completed, will be opened for passenger traffic Aug. 28, by 3 hours' service between the 2 cities, 2 trains a day each way. The rumor is revived that the Co. intends building a passenger station in Ottawa on the east side of Sapper's Bridge.

Point Fortune to Hawkesbury.—A number of daily papers have recently been asserting that the Co. had decided to extend the Point Fortune branch, from that place, 24 miles from Vaudreuil on the Montreal-Toronto line & 47 miles from Montreal, to Hawkesbury, Ont., on the Ottawa River. We are officially informed that there is no truth in the statement.

Eastern Division.—In our July issue, pg. 123, we give a summary of work being done on this division. It is said \$80,000 are being spent between Cartier & Port Arthur in cleaning out old cuts & reballasting. In fact, more work is being done than in any one year for the past 10 years. The few remaining trestles are mostly being filled, wooden bridges are being replaced by iron, & heavier rails are being laid.

Fort William to Winnipeg.—The work of replacing the few remaining old rails with new heavier ones is proceeding rapidly. The wooden bridge across the Kaministiquia River is being replaced by a massive stone arch similar to the one illustrated in our May issue, pg. 63. The long trestle near Finmark is being filled. A large number of additional side tracks are being put in & others are being changed; so that the distance between any 2 will not be more than 7 miles.

The Stonewall Branch, which runs from Winnipeg north to Stonewall, 19 miles, is being extended to Foxton some 18 miles further north. Neil Keith has the contract. G. H. Garden, C.E., is in charge of the surveys, &c., for the C.P.R. (Official.)

The Pipestone Branch, which runs from Menteith Jct., on the Souris Branch, to Reston, 31 miles, is to be extended west 25 miles this year. Neil Keith has the contract. It is the intention to build a further 40 or 50 miles next year, which will carry the line to about Carlyle, Assa. (Official.)

Branch from Hartney. This is a sort of Will-o'-the-wisp that up to date we have been unable to locate. In our June issue, pg. 97, we stated a branch of 20 miles would likely be built from Hartney east, which would for that distance parallel the Belmont—Hartney branch now building by the Northern Pacific. Then it was announced in a contemporary officially that a branch would be built west from Hartney 20 miles, instead of east. So far work has not been started from Hartney in either direction. We understand the original proposition was for a spur from Hartney 20 miles eastward & a little south, with the idea that it might ultimately be connected with the Pembina mountain branch at Killarney. Winnipeg papers announced that Neil Keith had moved his outfit to Killarney to start work on this spur, but he afterwards moved it to Reston & put it at work on the extension of

the Paystone branch. We have been unable to ascertain anything definite as to whether any work will be done either east or west with the above as a starting point.

Mountain Yards, Shops, &c.—A large roundhouse is to be built at Field, B.C. M. Carlin has the contract for the excavation, which calls for the removal of some 25,000 yards of earth. The tracks at Field will be increased to the extent of some 4,000 yards, the rails being taken up at Donald to be re-laid at Field. Most of the plant at the Donald repair shop will be moved to Field. The new workshops at Revelstoke will be equipped with new plant. About 3,000 ft. of additional tracks will be put in at Laggan. Some of the railway buildings at Donald will be removed & re-erected at Field & Laggan. (Unofficial.)

Crow's Nest Railway.—Up to Aug. 22, rails had been laid 20½ miles west of Lethbridge, Alberta. (Official.)

From Magleod to Bull Head a regular train is run 3 times a week, & passengers can travel in comparative comfort that far. To Bull Head the track is in good shape, & the trains invariably make their time. From Bull Head to Coal Creek, now called Fernie, where the extensive coal mines are located, is probably the most interesting part of the trip. It is between these points that the celebrated loop is located. This is a nice piece of engineering, the line dropping several hundred feet from the mountain side into the valley in the form of a letter S. The track around the loop is not in extra good shape yet, though large gangs of men are constantly employed lifting, surfacing, etc., & every day sees a marked improvement. The contractors on the Moyie portion of the road have practically finished their work, & are turning off their men & preparing to leave. J. Haskins has left for the lower end of the road to finish his contract near there. McBeath & Peters are practically through with their work & will soon be pulling out. Cowan & O'Neil, who have had the tunnel contract, have moved their outfit & left for Vancouver. R. Balfour's bridge gang has completed the bridge crossing the Moyie River at the foot of the lake, & is working on the bridge at the head of the lake. (Unofficial.)

A branch line of about 16 miles is being built to the North Star & Sunderland group of mines north of Cranbrook, from which big ore shipments are expected. (Unofficial.)

It is said the Dominion Government has notified the C.P.R. Co. that in cases on the Crow's Nest construction where contractors failed to meet their obligations to workmen regarding wages, the Co. will be held liable.

(Mar., pg. 15; Apl., pg. 39; May, pg. 67; June, pg. 97; July, pg. 123.)

Robson to Boundary Creek.—It is said there is a scarcity of men on this work. J. E. Stevens, Chief Engineer for the contractors, has stated that until they could have some assurance that the supply of men could be increased, no effort would be made to scatter the work, but that it would be concentrated on the worst portions of the road during the good weather. He expected to have about 2,000 men at work at the summit near the North Fork during August, & possibly at other points on the Boundary side of the divide. Mr. Stevens was Chief Engineer for the Great Northern Ry., but resigned to go into this contract with Mann, Foley Bros., & Larsen. McLean Bros. have the contract to bore the big tunnel, & also for the several miles of approaches to it. The tunnel is 3,100 ft. It is expected that over 100 men will be employed for a year in the boring of this tunnel. Besides this, McLean Bros. have the contract for constructing the several miles of track that will constitute the switch & over the summit, which will be used until the tunnel is finished. P. Genelle & J. Poupore have the contract for timber work. (Unofficial.) (July, pg. 124.)

Nakusp & Slocan Extension.—We mentioned last month that H. B. Walkem, C.E., was making a final location of this proposed line in the direction of the Whitewater Basin. We have since been informed that the line had previously been located, & that Mr. Walkem was simply sent over it to see if it could be improved. The Nakusp & Slocan branch runs from Nakusp, on the east side of Upper Arrow Lake, southeasterly to Sandon, 40 miles. The proposed extension would start from Three Forks, the next station to Sandon & 36 miles from Nakusp, going up Carpenter Creek past Bear Lake, then following the north fork of Kaslo River to Whitewater, a distance of about 9 miles. This extension would help the McGuigan, Bear Lake & Whitewater districts, which are now entirely tributary to the Kaslo & Slocan Railway. No definite decision as to construction has been announced, but it is expected it will be gone on with at an early date. (Official.)

Grand Trunk Work.

The Co. will erect a 100 x 50 ft. building on car shop property at London, Ont. Mr. Mills, Hamilton, Ont., has the contract. (Unofficial.)

Tenders have been asked for the erection of the round-house & other improvements at Sarnia, & it is expected to have the work well in hand by the beginning of September. The cost will be in the neighborhood of \$70,000. Improvements at Port Huron will be deferred till a little later on. (Official.) (July, pg. 123.)

VICTORIA JUBILEE BRIDGE.

The work of connecting the two portions of the temporary erection truss for the centre span was completed Aug. 7, & the last pin was put in its place Aug. 19, practically completing the work on the superstructure proper of the bridge. The work on the new bridge was started in the summer of 1897 with the widening of the piers, so as to admit of the placing of the new structure, which, in addition to the two railway tracks, also provides sufficient space for roadway & a footwalk on each side. Each pier was widened to the extent of about 7 ft. The construction of the superstructure was commenced in Nov., 1897, with the erection of the 1st span at the west end, which was completed on Nov. 27. The delay to traffic during the construction of the first span was but 25 minutes. The winter weather interfered with further construction operations, & the 2nd span was not commenced until Mar. 23, when the temporary erection truss (around which the new superstructure was built) was moved out to the 2nd span, occupying but 7½ minutes, & closing the bridge to traffic but 1 hour & 52 minutes. During April 3 spans were completed, during which the traffic was interfered with but 3 hours & 50 minutes. In May 3 more spans were completed, causing a delay to traffic of but 2 hours & 25 minutes. During June 4 spans were completed, including the last span from the west end, delaying traffic but 2 hours and 20 minutes. At the east end the construction of the 1st span was commenced April 24. During May 3 spans were constructed. During June 5 spans were constructed, & by July 15 the 3 remaining spans were completed; the total delay being but 9 hours & 21 minutes during the entire work of constructing the east end, & the total delay to traffic on account of the construction of the east & west ends, excepting the middle span, being but 20 hours & 13 minutes. The entire time occupied in moving the temporary erection trusses from span to span, referred to above, was but 3 hours; the average time for each span being about 7 minutes.

The construction of the center span, on account of the different character of the work, was carried on upon the cantilever principle.

A very complete description of the bridge

appeared in our Mar. issue, pg. 7. Some statistics regarding the new & old structures may be of interest.

	New Bridge	Old Bridge
Number of spans.....	25	25
Length of ironwork.....	6,592	6,592
Weight of ironwork.....	22,000 tons	9,044 tons
Covering area one inch thick of.....	25 acres	11½ acres
Masonry in piers & abutments.....	97,983 cub. yds.	
Covering an area one foot thick of.....	61 acres.	

Work will be at once commenced on the placing of the roadways at the side, but the most important part of the business is to get the double tracks down before the heavy travel commences in the autumn. In order to do that it will be necessary to rush with all possible speed the work of removing the old tube. Pneumatic machines are being made to expedite the work, which would otherwise have to be done by hand, which naturally would consume a lot of time. Night & day gangs of men will be kept at work on the drilling out of the thousands of rivets in the old structure, & it is hoped to have the double tracks in operation by the middle of October.

At the Point St. Charles Yard & on the St. Lambert end of the bridge the roadbed is being lowered & widened to suit the level & increased facilities of the new bridge. The Victoria Park Station, near the bank of the river in St. Lambert, has been removed to permit of the widening of the roadbed.

THE MONTREAL HEAD OFFICES.

Plans prepared by R. A. Waite, of Buffalo, N.Y., for the head office building to be erected on the property given the Co. by the City of Montreal, & the principal frontage of which is on McGill St., have been accepted by the management. The building will be 5 unusually high stories, covering a 200 ft. frontage. It will present a most imposing & effective appearance. It will be larger than the Montreal Board of Trade building. The windows will be as large as most store windows. The vital lines of the frontage are carried upward—that is, instead of producing a belittling, horizontal effect they are all vertical. They carry the eye upward. This will add greatly to the impressiveness of the general effect. The extent of the frontage would have a certain dwarfing effect were it not for the provision which gives an added height to the general appreciation through the vertical lines. Each floor of the 5 stories will be devoted to a separate department of work. That is to say, the 1st will be devoted to the audit department & all co-related work, & will contain 20,000 ft. of space. The 2nd floor will be given to the General Manager's offices & all the officials who have immediately to do with the supreme direction of the G.T.R. system. The rooms are so arranged upon each floor that each will be in plain view from the elevator. The corridors will be wide & light; the central authority in each department will, so to say, be able to have all his subordinates immediately under his direction, the idea being to realize concentration, & obviate all cause of delay. The head officials will thus be in touch with all the men with whom they sustain official relations, & in this regard the department will be most economical & efficient. This idea is wrought out upon the 5 floors, & the result will be a smooth running of the great official machine, impossible under less favorable conditions. Some beautiful frieze work has been provided for along the top storey, while above the colonades along the tops of the windows in each storey there will be also embellishments of a highly artistic character.

The contracts for the carcass of the building will be let & the architect expects the foundation will be complete before bad weather sets in. The building is to be completed in 1900. These figures will appear upon the front of the building, as well as the date of the inception of the G.T.R. system in Canada, while the seal of the Co. will be set forth over

the main entrance opposite the 2nd story, as well as the words "Grand Trunk Railway," cut in the stone. The building will be fireproof throughout, & all the material, external & internal, will be of the best & most modern character. The original estimate of cost was \$250,000, but it is expected this will be at least doubled. It is said the building will be the 2nd largest railway office building in the world, the largest being the Philadelphia & Reading offices in Philadelphia.

EQUIPMENT.

Ottawa, Arnprior & Parry Sound Ry.

The illustration on this page shows one of the locomotives recently built at the Baldwin Locomotive Works, Philadelphia, Pa, for this line. The following are the general dimensions:

CYLINDERS.

Diameter, high pressure, 14 ins.
" low " 24 ins.
Stroke, 26 ins.
Valve, Balanced piston.

BOILER.

Diameter, 60 ins.
Thickness of sheets, $\frac{5}{8}$ & $\frac{11}{16}$ ins.
Working pressure, 180 lbs.
Fuel, soft coal.

Total engine, 24 ft. 9 ins.
" & tender, 51 ft. $3\frac{1}{2}$ ins.

WEIGHT IN WORKING ORDER.

On drivers, 117,000 lbs.
On truck, 34,000 lbs.
Total engine, 151,000 lbs.
" & tender, 239,000 lbs.

TENDER.

Tender wheels, diameter, 33 ins.
Journals, 5 x 9 ins.
Tank capacity, 4,000 gals.
Weight, empty, 40,500 lbs.

SERVICE.

Freight. Guaranteed to haul a load of 750 to 800 tons (2,000 lbs) of cars & lading on a grade of 1% combined with curves of $4\frac{1}{2}$ degrees, track & cars being in good condition.

Another Westinghouse Victory.

In addition to the decisions of the U.S. courts, requiring the removal of about 1,100 infringing New York air brakes from the Buffalo, Rochester & Pittsburg Ry., & of 3,200 such brakes from the cars of the Great Northern Ry., the U.S. Circuit Court for the district of New Jersey has rendered its decision in the case of the Westinghouse Air Brake Co. vs. the Central Car Trust Co. & the Commerce Despatch Co. By this latter

ped with the brake of the New York Air Brake Co., with notice that it was an infringement on the claims of the patent in suit. . . . If they now suffer inconvenience through being obliged to discontinue the use upon their cars of the complainant's patented device, it will not be greater than they might have anticipated."

Equipment Notes.

The Intercolonial Ry. has invited tenders for 400 box cars, 60,000 lbs. capacity, & 100 flat cars.

The C.P.R. is building 2 dining cars in the Montreal shops, which will be unique in design & finish & will contain several new features.

The Northern Pacific has recently sent 1,000 new grain cars, of 70,000 lbs. capacity, on to the Manitoba division. A number of new locomotives have also arrived at Winnipeg. They can each haul 1,300 tons from Winnipeg to Grand Forks, Dakota.

In the recapitalization of the Westinghouse Air Brake Co. it is understood that the 20,000 shares set aside in the treasury are to be used for the acquirement of the Boyden & American Brake Co., the former a Baltimore & the latter a St. Louis company. Six thousand of the 20,000 shares will, according to the arrangement, be given to the Boyden people.

Ref to Burnham, Wallace & Co. Oct 17/94

OTTAWA, ARNPRIOR AND PARRY SOUND RY'S COMPOUND TEN-WHEELED LOCOMOTIVE.

FIRE BOX.

Material, steel.
Length, 102 $\frac{1}{2}$ ins.
Width, 42 ins.
Depth, front, 69 $\frac{1}{2}$ ins.
" back, 58 $\frac{1}{2}$ ins.
Thickness of sheets, sides, $\frac{3}{8}$ in.
" " back, $\frac{3}{8}$ in.
" " crown, $\frac{1}{2}$ in.
" " tube, $\frac{1}{2}$ in.

TUBES.

Number 280.
Diameter, 2 ins.
Length, 14 ft. $4\frac{1}{2}$ ins.

HEATING SURFACE.

Fire box, 154.0 sq. ft.
Tubes, 2,108.0 sq. ft.
Total, 2,262.0 sq. ft.
Grate area, 29.75 sq. ft.

Diameter, 30 ins.
Journals, 6 x 10 ins.

WHEEL BASE.

Driving, 13 ft. 0 ins.

decision New York air brakes are required to be removed from 1,400 cars controlled by defendants. The Circuit Court of Appeals of the second circuit, in affirming the decision of the Circuit Court against the Great Northern Ry., says, in conclusion: "In Oct., 1894, the attention of the defendant was called by a general circular to the decision of the Circuit Court of Appeals; & in May, 1895, its attention was particularly called to the infringement by a written proposition from the complainant for a purchase of its valves & an indemnity against claims for infringement. It has paid no attention to the subject for about 3 $\frac{1}{2}$ years, & it now thinks that it is a hardship to be prohibited from further infringement. It has been a deliberate user of a large number of valves, & has preferred to run the risk of an injunction than to displace its present equipment." The Circuit Court in New Jersey, in enjoining the Central Car Trust Co., says: "There does not appear upon the record in this case any special matter which commends the defendants to the special consideration of the court. . . . The complainants requested them to remove these brakes, & offered to supply their own device upon reasonable terms; but both the request & offer were declined. . . . For purposes of economy, as charged in the bill & not denied, they purchased these cars equip-

The Ottawa & New York Ry. recently received from the Pullman Co. 2 passenger trains, each consisting of 2 passenger coaches & a baggage, mail & express car. The Co. has a number of other passenger train cars. The locomotive equipment consists of three 10 wheelers, recently built by the Baldwin Locomotive works, & 3 other engines which have been used during construction.

The Baltimore & Ohio Southwestern Ry. has solved the problem of cooling sleeping cars in stations at night. At Cincinnati, Louisville & St. Louis this line has sleeping cars placed in the stations at 10 p.m., which do not depart until after midnight, & in order to make them comfortable & cool 16-inch rotary electric fans have been placed in each end of the sleepers, thus removing the heated & impure air from all parts of the car.

In our July issue, pg. 120, we gave some information about the Cleveland cylinder which has been in use on an I.C.R. locomotive between Moncton & St. John for some months. We have since been informed by the Department of Railways that arrangements have been made for the trial of some of these cylinders. This is just about what we expected, as we hardly thought it likely that any arrangement would be made for their general use without tests first being made in an exhaustive manner.

The Country, the 1st of the new C.P.R. sleepers, was turned out about the end of July. It is decorated, as will be the others, from the designs of the French artist, Theodore Jongey, & the beauty of its fittings certainly suggests the hand of a master. It contains 8 sections, 2 drawing-rooms, & at one end a large smoking & tea room. The smoking room & the main body of the car are finished in mahogany & gold, the ceiling being of stamped leather, & the panels of the upper berth are of the same material. The upholstery is of terra cotta & green brocaded plush, imported from France. The 2 drawing-rooms are most artistic. The seats & ceilings are covered with brocaded plush of old ivory & green, & the furnishing is a beautiful white wood, known as primavera, or white mahogany. The toilet-rooms are arranged after the latest designs.

APPLICATIONS FOR INCORPORATION.

Kettle River, B.C.—Bodwell & Duff, Solicitors, Victoria, B.C., give notice of application to the Dominion Parliament for the incorporation of a company to build a railway from a point on the International Boundary Line, at or near Cascade City, B.C., thence westerly, following the valley of the Kettle River to a point on the boundary line, at or near Carson, also from another point on the boundary line, at or near Midway, northerly following the valley of Boundary Creek to a point about 20 miles north of Midway, with power to construct & maintain branch lines, & at the Boundary Line to connect with, & to operate the whole in conjunction with the railway line of the Spokane Falls & Northern R. Co., with power to construct telegraph & telephone lines for commercial purposes, as for the business of the railway, & for all other necessary & usual powers.

Ottawa River Bridge.—Perkins & Fraser, solicitors, give notice of application to the Dominion Parliament for the incorporation of a company to construct & operate a railway & general traffic bridge across the Ottawa River between the cities of Ottawa & Hull, with the necessary approaches from any station which the Co. may erect in those cities to the bridge for railway, street railway, tramway, carriage, foot & passenger traffic purposes, with power to expropriate lands; to amalgamate with or enter into arrangements with railway, street railway or any other corporation for the use of the bridge; & to charge toll, subject to the approval of the Governor-in-Council. The height of the arches of the bridge to be not less than 35 ft., & the interval between the abutments or piers to be not less than 150 ft., & for other purposes.

West Coast of Vancouver Island.—S. P. Mills, solicitor, Victoria, gives notice of application to the B. C. Legislature for the incorporation of a Co. to construct a railway from Victoria, via Sooke, San Juan & Alberni, along the west coast of Vancouver Island, to the vicinity of Hardy or Nahwitti Bays, on the extreme north end of the Island.

The Ottawa & Gatineau Valley Ry. has a party of photographers going over the line taking views of the beautiful scenery which will be distributed to advertise the summer resorts along the line.

FOR SALE

Relaying Steel Rails.

About 1,500 tons, 65 pound, with splices, for delivery in Canada. Reply to **R. L. Ginsburg & Sons, Detroit, Mich., or Buffalo, New York.**

RAILWAY PROJECTS.

Amherst & Eastern.—In our July issue, pg. 129, it was stated that the surveying of a route for the proposed line from Amherst, N.S., to the North Shore via Truemanville & Chapman Settlement, had been decided on by this Co. Nothing definite has yet been done, & it is by no means certain that the survey will be started this year. (Official.)

Brandon & Southwestern.—It is said this charter is now controlled by D. H. Purdon, of Toronto, who was at one time Chief Despatcher of the C.P.R. at Winnipeg, afterwards Assistant to General Superintendent Whyte, of the Western Division, & still later Despatcher at Moose Jaw. Mr. Purdon is said to have been between Brandon & the International Boundary recently with a survey party, & is said to have stated that work will be gone on with at once. This line, if built, would compete with both the C.P.R. & Northern Pacific, & unless it made connection with the Great Northern (U.S.) south of the Boundary Line, would have no outlet for its wheat traffic. It has a land grant of \$6,400 a mile for 17 miles, but, of course, could not be financed on that, & we do not see how it is going to be built unless the promoter has got the Great Northern interested in it. (July, pg. 129.)

Cobourg, Northumberland & Pacific.—We are officially informed that the final location for this line is being completed & amended, & that it is expected grading will be completed very soon.

Musquodoboit.—A director of this company wrote us under date of Aug. 1:—"A survey is now being conducted jointly by the Nova Scotia Government & the Co, & it is expected the report of the Engineer will be handed in within the next fortnight. As everything depends on this report it is impossible to make any definite statement as to the future until it is fully discussed. I may, however, say that from what I hear there is every prospect of the road being constructed." (See our July issue, pg. 129.)

Spokane Falls & Northern.—It is very probable that the Corbin system, now that it has fallen under the control of the Great Northern (U.S.) will be extended at the

earliest possible date to Republic Camp, on the Colville Indian reservation, via Bossburg & the Kettle River valley & it is not improbable that it may be continued southward from Republic down the San Poil River, & across the Columbia to connect with the main line of the Great Northern in the Big Bend country, Washington. The completion of such a line would form a loop of railway that would monopolize the traffic of the northern portion of the State of Washington, a region as rich in agricultural, mineral & other resources as any tributary to the Great Northern east or west. —Rossland Miner.

Toronto & Hudson's Bay.—W. T. Jennings, C.E., who left Toronto July 7 on behalf of this Co. to examine the country to the north of the C.P.R. main line, returned to Toronto Aug. 10, after travelling some 700 miles by canoe. From North Bay he examined the country some 15 miles north, & then went via Mattawa to the head of Lake Temiscamingue, examining the district northward about 40 miles nearly to the watershed, after which he went along the Wabigoon River as far as possible. From Hailebury, on the west of the lake, he went on to Shark Lake, & reached Montreal River. From Bay Lake, an expansion of the rivers, he turned southward again, & followed in a general way the projected line of the old James' Bay Ry. to Lake Temogami, then on to Lakes Wickstrad & Morten, & got into a surveyed district. Then, directing his course westward, he reached the south shore of Lake Temogami. This district, about 25 miles north of the C.P.R., was examined for terminal purposes. Bending his way north, he reached the Montreal River again, passed the great Northwest bend, & crossed the height of land, arriving at the waters that empty into James' Bay. On the return journey he took in as much of the country as possible, & came out at Wahnapiatae on the C.P.R. Mr. Sankey, C.E., who accompanied him from Toronto, went on to James' Bay, by way of Lake Abitibi, to look over the ground for harbor purposes.

Woodstock & Brantford.—This "project," briefly mentioned in our July issue, has turned out to be a huge fake. R. L. Middleton, the self-appointed Chief Engineer, is under arrest, & the dailies are full of the details, which we need not repeat.

Established 1831.

Annual Capacity 1,000.

Baldwin Locomotive Works.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

Electric Locomotives and Electric Car Trucks with Approved Motors.

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

FREIGHT MATTERS.

Vanderbilt Fast Freight Lines.

Another important step in the general scheme of consolidation of the Vanderbilt railroad interests was determined upon at a meeting recently held of the presidents & managers of the several railways & fast freight lines. President Callaway of the New York Central Railroad announced on Aug. 6 that the 8 fast freight lines, which operate over the railways comprising the Vanderbilt system, will also be consolidated into 2 divisions with a general headquarters in Buffalo. This step, it is expected, will result in a large saving of expenses. It will reduce the working forces now employed by these freight lines more than one-half. The 8 fast freight lines connected with the Vanderbilt roads are now under the supervision of 5 managers as follows: The Red, White & Midland lines are managed by F. L. Pomeroy with headquarters at Buffalo, the Blue & Canada Southern lines by G. G. Street from Rochester, the West Shore line by W. F. Wilson from Buffalo, the North Shore Despatch by W. J. Mann from Detroit, & the Nickel Plate by D. F. Jennings from Chicago. These lines are to be so consolidated that all operating over the N.Y.C. Ry. & its connections will constitute one system, & all operating over the West Shore Ry. & its connections the other system. It is likely that each individual freight line will retain its name for the sake of convenience. The N.Y.C. system will include the Red, White, Midland, Blue & Canada Southern lines. The West Shore system will include the North Shore Despatch & the West Shore & Nickel Plate lines. The N.Y.C. system will be in charge of H. L. Pomeroy as General Manager & the West Shore System's General Manager will be W. F. Wilson. A reorganization of the accounting departments of the lines will also be made at the same time. A clearing house will be established at Buffalo, in charge of G. G. Street, now General Manager of the Blue Line, with the title of General Accountant, where the accounting of all the lines, which is now done separately, will be consolidated. Consolidations in the traveling & other outside agencies will also be made wherever it is found practicable to do so. Just how radical this will be will not be determined until after the managers of the roads have had a meeting & canvassed the situation. No official estimate of the saving to be effected is given, but the Railroad Gazette thinks it safe to say that the present force can be reduced one-third, effecting a saving of at least \$250,000 a year. At all events there is not a particle of doubt that the business could be just as efficiently conducted with two-thirds the present force of men.

Montreal's Elevator Facilities.

The elevator question is one that is now engaging the attention of the shipping interest of the port of Montreal & from the experience already this season of the shippers & the transportation companies ranks as one of the most important problems confronting those who have the interests of the port in their keeping. The G.T.R. has felt the need of greater accommodation for handling the large amount of business coming over its line, there having been considerable delay at times owing to the failure of the elevating facilities to keep up with the shipments as they arrive. From the General Manager's office it is learned that the facilities of the G.T.R. as at present constituted, consist of elevators of the Montreal Warehousing Co., which are in reality G. T. institutions. They are 2 in number, elevator A being situated on Wellington street, with a capacity of 400,000 bus. of grain & 60,000 barrels of flour, & C, located on Mill St., with a capacity of 600,000 bus. of grain.

The quantities handled through these elevators during 1897, was 6,374,204 bus. of grain, & 96,000 barrels of flour. Up to the end of June this year the following quantities have been handled: Grain, 3,579,735 bus.; flour 43,129 barrels. It will be seen that already this season more than half the quantity shipped last year has been handled, & the heaviest portion of the season—the harvest part—is yet to come. Matters at Windmill Point have been facilitated this year by the putting in of a carrier which can deliver grain direct from the elevator into the ocean steamers at that point. General Manager Hays says: "I believe that one or more large elevators of a capacity of at least 1,500,000 bus., should be constructed at Windmill Point, but the basin, of course, should be extended, & the depth of water made sufficient for ocean vessels, to come up right alongside the elevator. It is only by handling grain at a minimum cost that the port of Montreal can expect to hold its own. That alone increases its importance as an export grain port, as everything is now down to such a close margin that even one-eighth of a cent per bushel is many times looked upon as quite a profit."

C.P.R. Freight Differentials.

The C.P.R. was recently notified of a meeting of the executive officers of all railways doing a trans-continental freight business to be held in Denver, August 22. The C.P.R. was requested to send a representative to this convention, & R. Kerr, traffic manager of the C.P.R. lines west of Fort William, will represent it. It is generally understood that the officials of the western railways are preparing to register a formal protest against the continuance of the C.P.R. differential on freight business. The management of the Southern Pacific Ry., from whose offices the call for the Denver meeting was issued, states that the time has arrived when the different U. S. lines either should agree to allow the C.P.R. to do all the trans-continental freight business that is offering, or should deprive that line of the advantage it possesses in its present differentials on freight business across the continent. This is practically an extension of the much-discussed C.P.R. differential problem, in order to make the fight include both the freight & the passenger departments. The C.P.R., on account of its longer haul between U.S. cities in the east & U.S. cities in the west, has always been conceded a differential on transcontinental freight business. The U.S. lines claim that this existing concession permits the C.P.R. to name a rate at least 10% lower than rates over U.S. lines. Now that interlinear competition has led to a demoralization of tariffs, the U.S. lines, as usual, are attempting to shift the blame of that demoralization upon the shoulders of the C.P.R. It is not likely, however, that the C.P.R. will relinquish its claim to its authorized differential, whatever far-fetched charges may be brought against it by its disconcerted U.S. rivals.

Elevators in the Northwest.

From all indications 1898 will be the banner elevator building year in the history of the Northwest. There is not an elevator company in Manitoba that will not add to its storage facilities along every branch line in the province. Prominent among the new elevators will be those erected by the Northern Elevator Co. Already 10 are under construction at the following points: Oak River, Varcoc, Petty-piece, Cypress River, La Salle, Starbuck, Elm Creek, Somerset, Swan Lake & Union Point. Each of these will have a capacity of 30,000 bushels, & a few others will be erected later on in the season. When those mentioned are completed the Northern

Elevator Co. will have 102 elevators in Manitoba & the Territories. Besides the 5 to be built for the Lake of the Woods Milling Co., there is about completed an elevator for the Richardson Grain Co., of Kingston, Ont., at Sydney, to replace the one destroyed last winter. The Manitoba Grain Co. will also erect a number, & it is understood the Dominion Elevator Co. will add to its storage capacity. Bready, Love & Tyron will spend about \$50,000 in erecting elevators at 13 or 14 Manitoba & Territorial points.

Transcontinental Freight Rates.

A conference of considerable importance was held at the Great Northern headquarters in St. Paul, in July, at which were present traffic officials of the 4 great trans-continental lines. Freight rates to the Kootenay country, to Washington & the entire north Pacific coast & Puget sound country were discussed, & what is understood to be an amicable agreement was reached. The matter chiefly discussed was freight rates to Kootenay points. Those at the conference were Traffic Manager Kerr & Kootenay Agent Peters of the C.P.R.; Assistant General Freight Agent Garrett, of the Union Pacific; General Traffic Manager Clarke, & General Freight Agent Somers, of the Great Northern; General Traffic Manager Hannaford & General Freight Agent Moore, of the Northern Pacific. The St. Paul Pioneer Press says in speaking of the objects of the meeting: "There have been no material reductions requiring advances, but in many cases the rates have fallen down, & in many other cases they have become ill-proportioned. It was necessary to check them up & re-adjust them."

The Ottawa & New York has given its freight cartage at Ottawa to A. Thoburn, treasurer of the Russell Theatre.

A joint through tariff, C.P.R., New York & Ottawa Ry., & Ottawa & New York Ry has been issued between Cornwall & stations on the C.P.R., Smith's Falls & east to Montreal via Finch Jet.

An immense business is being done by the Ottawa, Arnprior & Parry Sound Ry. this season in grain & lumber. The activity is from the west, Arnprior, Whitney, Gilmour's Mills & Parry Sound. All the lumber is for Montreal for export.

The G.T.R. has decided to make a bid for a share of the oat carrying trade, & for that purpose has arranged for the erection of an oat clipping elevator in Chicago. Such a building is a necessary part of the business. Hitherto the G.T.R. has not handled any of that class of business for the reason that it had not the necessary facilities. That deficiency will soon be removed, & the road hopes to participate in the carrying of the immense quantities of oats which are shipped every year from western points to the east, for export as well as for local consumption.

All freight rates were restored to a normal tariff July 25 on the Western roads. In this way was brought to a close a long-continued & disastrous rate war. While it was in progress many millions of dollars were recklessly thrown away. For twelve months rates in all parts of the territory west of Chicago have been badly demoralized. No section escaped. It is difficult to determine where the ill results were most severely felt. From St. Paul to the Gulf, & from Chicago to the Pacific Coast, the ravages of the war were experienced. But for it earnings of the roads would have shown phenomenal & unprecedented increases, & stockholders would have been enriched by the enlargement of dividend payments. Railway World, Philadelphia.

THE DEVELOPMENT OF THE RAILWAYS OF CANADA.

By Walter E. Wier.

Much of the acrimonious discussion over the question of state versus private ownership of railroads might be averted, did the advocates of either system recognize the limitations of their own arguments. It is characteristic of such dialecticians that they apply the results of one nation's experience to the problems confronting another, without considering the modified circumstances by which such experience is conditioned.

It is especially necessary to take this national equation into account in comparing the railways of Canada with those of the United States. The experience of these nations presents a series of parallels & contrasts directly traceable to the similar or to the diverse conditions existing in the two countries. Both in Canada & in the U.S. railways have grown more rapidly than population; in both countries they have often preceded roads, & even settlement itself; in both, the lines have been cheaply & rapidly constructed, & have been extended into the most sparsely-settled districts. In Canada as well as in the U.S. the main arteries of railway communication run east & west; in both countries the policy of private construction, ownership, & management has prevailed; & generosity towards the railways, as exemplified by large grants of land or money, has been common to the governments of both. The contrasts in the policy adopted on either side of the boundary line are equally striking, if less important; but the underlying similarity in the railway history of the two countries can be shown to have its cause in the like economic conditions & tendencies prevailing.

The English, on the whole, have favored a policy of private ownership of home, & of governmental ownership of colonial railways, but to this rule the case of Canada furnishes an exception. While the railways of India, of Australia, of the Cape, of Natal, etc., have been largely constructed or managed by government, the development of the railways of Canada was at first left to individual initiative. This laissez-faire policy of the government may be attributed in part to the economic doctrine then supreme in England, but it was no less due to the discouraging outlook for railway enterprises in Canada. At the beginning of the railway era the total population of British North America scarcely exceeded half-a-million, & these were mainly clustered in what are now the provinces of Quebec & Ontario & within easy reach of the great lakes & the St. Lawrence. Separated from the unknown territories of the west & from the Maritime Provinces of the east, even these tracts were too thinly peopled to invite large outlays for railways, particularly in view of the exceptional advantages presented by cheap inland navigation.

These adverse conditions were as potent in checking private enterprise, however, as in discouraging governmental activity, & the result was that, for a considerable period, the development of Canadian railways was exceedingly slow. As late as 1845 an insignificant 16-mile road from La Prairie to Quebec was the only railway within British America. During the fifties, however, the construction of the Grand Trunk, the Great Western, the Northern, & other lines was begun, & the mileage quickly grew from 71, in 1850, to 2,087, in 1860. The increasing population, the expansion of the settled area, the opening up of new lands to agriculture, & the steady increase in wealth & industry were causes, as well as effects, of improved means of land transportation, & after Confederation in 1867, economic, political, & military considerations united to increase the extent of the railroad net. The Grand Trunk continued to grow in

length, the Intercolonial & Prince Edward Island railways were constructed, the Canadian Pacific was pushed forward to a speedy completion, & branch lines were everywhere thrust out to the margin of settlement. The length of the railways increased from 2,150 miles, in 1866, to 5,157, in 1876; to 10,697, in 1886; & to 16,270, in 1896, the length of road in operation during 1897 amounting to 16,550 miles. The present extent of Canadian railways is thus only one-eleventh of that of American lines, but, with an approximately equal area, Canada's population bears a still smaller proportion to that of the U.S., & despite the fact that the Dominion contains less than five million inhabitants, there are but 7 countries in the world that can boast of a railway mileage greater than that of Canada.

This rapid development is to be attributed, in no small degree, to the financial aid of the state. Grants of land & money have been made by the Dominion, by the several provincial governments, & by municipalities, & of a total paid-up capital of \$920,000,000, no less than \$197,000,000, or 21.4%, was thus contributed, the average subsidy amounting to about \$12,000 a mile.

Of the total amount thus granted, the Dominion contributed more than three-fourths, or about 76%, the municipalities 8%, & the provincial governments 16%. Among the latter the government of Quebec has been unusually lavish, furnishing almost half of the total provincial contributions, & with a railway mileage not half so great as that of Ontario, more than doubling the donation of that province.

This policy of fostering the growth of railways by government subsidies has been subjected in Canada to considerable adverse criticism. It has been argued that the taxpayers have made immense sacrifices; that the lavish donations of the state have resulted either in the destruction of national wealth, or in its conversion to the uses of private persons; that this generosity has had a demoralizing effect upon the railways themselves; & that it has tempted them to convert Ottawa into one great lobby. These views, however, are far too pessimistic. A government subsidy should always be in the nature of a sacrifice. The policy has its *raison d'être* in the desire to combine the advantages of private & of state construction of railways, to encourage the growth of useful, but unprofitable, lines, without sacrificing the impetus derived from individual initiative. In populous and highly-developed countries, such as France, this assistance of the state has been principally required for the construction of local lines (*réseau nouveau*), but in Canada the government subsidies have aided the extension of the net by the construction of long through lines.

The favorite child of the Dominion has been the Canadian Pacific. That Company has received a grant of \$25,000,000 in cash, 25,000,000 acres of land, & about 640 miles of completed track, the last item, including preliminary surveys, costing the government some \$33,000,000. The advantages accruing to the Dominion from these sacrifices have been very great. Canada, east of Lake Superior, has always had the advantage of water connection with the Atlantic ocean from the end of March until the end of November, but west of the lakes communication was almost nonexistent. Between Port Arthur & Winnipeg there was only "the old canoe route," which, moreover, could not be used to transport immigrants, & there was no connection at all with British Columbia. Half a century ago the necessity of an inter-oceanic line had already been felt, & in an open letter, in 1847, Major Carmichael Smith wrote as follows: "This great national highway from the Atlantic to the Pacific is the great link which is required to unite in one powerful chain the whole English race." But, while the U.S. rapidly completed several of these "great

links," the Canadians, with their smaller population, lagged behind. After Confederation, however, an extension of the railways towards the west became a necessity. At this time there were no railroads in Manitoba, in British Columbia, or in the northwest, & even ten years later the conditions were hardly changed. Without the iron road the consolidated was a union in name only, & therefore in 1871 the government commenced the extensive survey of the territory through which the Canadian Pacific was destined to pass. In 1877 the Dominion began the construction, but by 1881 it was decided to hand the enterprise over to a private company, on the condition that the road should be finished by 1891. This condition was more than fulfilled. By 1886 the railway was completed, with a mileage of 4,533, & since then it has rapidly grown by new construction & by buying, leasing, or operating other roads, until at present it represents the consolidation of 21 Canadian lines, & owns or operates about 7,251 miles, about a seventh of which is situated within the U.S.

The Canadian Pacific is neither the first nor the only railway in Canada which has grown by the absorption of other lines. Amalgamation has taken place much the same as in England, France & the U.S. Of the 144 railway companies in Canada in 1896 (including 8 electric railways & bridge & tunnel companies) 21 have been amalgamated into the Canadian Pacific system & 25 into the Grand Trunk system; the remainder are more or less combined. The public has frequently recommended the Sisyphean labor of forcing railroads to compete. The Ontario & Quebec was constructed at great expense to compete with the Grand Trunk, & the province of Manitoba spent fully \$600,000 to make the Northern Pacific enter into a competition with its northern rival. But war has ended in peace, competition has been short-lived, & the truce that invariably ensued led to an agreement of some sort, if not to actual consolidation.

The Grand Trunk is a notable example of this process of amalgamation. Lying within the fertile peninsula bounded by Georgian Bay & Lakes Huron, Erie & Ontario, it has successfully acquired, by lease or purchase, property after property, until its length has increased to 4,186 miles. It is becoming increasingly an American line, obtaining foothold in Michigan, Indiana, Illinois, Maine, Vermont, etc., & having recently obtained complete control of the ill-starred Vermont Central.

What the Canadian Pacific is to the western provinces & the Grand Trunk to Quebec & Ontario the government railways are to the Maritime Provinces, New Brunswick, Nova Scotia & Prince Edward Island. As political & military exigencies dictated its futile policy of building the Canadian Pacific, so the government ownership of the Intercolonial & Prince Edward Island railways was determined by similar conditions. As early as 1832 it had been proposed to build a line connecting Quebec with the sea-coast towns of Nova Scotia & New Brunswick, & after a survey in 1835-37, the opportunity of constructing this important line seemed to have come. But the course of the proposed railway would have led directly across territory then claimed by, & subsequently awarded to, the U.S., & the railways, as finally constructed in 1876, followed a circuitous route, in order to skirt the northern boundary of Maine.

In consequence of this wide detour, which was justified on military grounds, the Intercolonial Railway is a needlessly long & uselessly expensive line. Its present length is 1,189 miles, including a short line (Windsor Branch), which is operated, but not owned, by the government. While the government has already expended more than sixty millions of dollars upon this unfortunate railway, the road, since 1872, has been operated at an annual loss ranging from \$26,000 to \$954,000. The

financial failure of the Prince Edward Island Railway, the only remaining government railroad enterprise, has been perhaps even more disastrous, this road having been operated at a deficit from the beginning. These results, however, may not be used as arguments either for or against governmental management of railroads. Though financially a failure, the state railways of Canada have been in many ways a success. They have helped to join the eastern provinces in a strong political union, to create a traffic with Quebec & Ontario, to foster a feeling of solidarity, & to be serviceable to the country in the deplorable event of an American or Oriental war. The nation stepped into the breach where private capital hesitated, & the millions that have been spent have not necessarily been wasted.

The financial success of a railway, or of a system of railways, depends upon the relation that the excess of revenue over operating expenses bears to the total cost of the line. A railway may be successful because its gross receipts are large, or because its working expenses are small, or because its capitalization is low, or through a combination of some or all of these circumstances. The net income of a railway may be large, but where, as in the United Kingdom, the capitalization is very heavy, the net revenue per dollar of invested wealth is small.

In new & sparsely-settled countries, the railways are usually capitalized at a low figure. In the U.S. the capitalization is considerably heavier in the east than in the less populous west, & the same relation obtains between Western Europe & the more sparsely-settled countries of the east. The capitalization of Canadian railways is \$52,000 a mile, which is less than that of U.S. roads (\$9,610) & considerably less than that of roads in many European States. The capital account per mile of railway in England is about 5 times, in Scotland more than 3 times, in France & Belgium more than twice, & in Germany, Switzerland, Holland & Italy from once & a half to twice as great as in Canada. This low capitalization is due not only to the sparseness of the population, but to the comparative youth of the Canadian railways. The capital account of British railways increased from £24,630 in 1838 to more than £47,200 (\$235,000) in 1895, but this has been largely due, as in other countries, to the tendency of the railways to branch out into industries other than that of transportation.

The chief cause of the low capitalization of Canadian railways is the obvious one of low cost of construction, but cost & capitalization are not quite identical. In Canada, as elsewhere, the capital account has been swelled to larger proportions by the facile expedient of stock-working. When the Manitoba & North-Western went into receivership, it was bonded to from 50 to 100% above its cost of construction. The second issue of Canadian Pacific bonds was made at 25%, & a subsequent & still larger block was sold at 52. There is a natural tendency for the capital account of all corporations to approach, not the actual investment of capital, but the real value of franchise & other property; thus the inflation of railway property for the purpose of concealing profits, or from less laudable motives, has obscured the actual cost of constructing the railroads. In the absence of trustworthy statistics, however, we may still infer that the cost was not excessive. The right of way, which in thickly-settled districts is costly, & on which the English railways, according to a moderate estimate (that of Jean's), expended fully one-tenth of their total capital, was obtained in Canada cheaply, if not gratis. The vast sums often expended on palatial stations, on terminal facilities in great cities, in avoiding grade-crossings, etc., were not demanded by Canadian conditions. In the United Kingdom immense sums have been spent in promoting & combating parliamen-

tary legislation, & drains have been made upon the resources of the railways by all forms of legal & extra-legal extortion. On the other hand, many of the raw materials of construction have been dearer than in Europe, & the Canadians have only partially pursued the policy of substituting cheap alien for the dearer native labor.

A final cause of the low construction cost of Canadian railways is found in the character of the lines. In Canada, as in the U.S., there has been in the character of construction a wise adaption of means to ends, & cheap, light, single-track lines have been built, instead of the heavier & more durable track, in more populous districts. As traffic increased, the light structures have been perfected & supplemented; steel has taken the place of iron & even of wooden rails, & the permanent way & rolling stock have been generally improved. But the railways of Canada are still far more lightly constructed than those of the United Kingdom, or France or Belgium, owing to the smaller amount of traffic.

The bulk of this traffic is freight, the receipts from this source, amounting to 64 % of the total income in 1897, while only 9.4 % were derived from mail, express & miscellaneous sources, & but 26.6 % from the passenger business. The preponderance of the freight traffic, achieved in spite of water competition, is due to the sparse population & the large area, distance acting considerably less as a deterrent to freight transmission than to travel. The passenger traffic of Canada has grown very slowly. While the tonnage moved, per head of population, increased 194 % (from 1.60 to 4.73 tons) from 1876 to 1896, the number of travellers increased only 106 % (1.40 to 2.88) during the same period. While the Canadian thus averages only 2.9 trips a year, the average in the United States is 8.2, in France 9.1, in Germany 10.4, in Belgium 14.7, in the United Kingdom 24.4 (excluding season tickets), & an almost equal number in the New England States. If the length of the trip is taken into account, the statistics of travel are not so unfavorable to Canada, since in all rural, & particularly in thinly-settled, districts (Russia, Norway, Hungary, Roumania & the Western States) the average distance covered by a traveller is generally great. Like the English railways, those of Canada do not, as a rule, give statistics of passenger-mileage, but a rough calculation gives the average trip as about 40 miles. On the Canadian Pacific each traveller is carried 46.5 miles, & the rate per mile is 2.74c. If this fare obtained throughout the whole of Canada, the average distance travelled would not be far from 33 miles, but, despite the high fares in Manitoba & the Northwest, where 4c. & 5c. a mile are not unusual, the average receipts per passenger mile are probably less. On the assumption of forty miles per passenger, the average yearly travel per capita equals only 116 miles in Canada, as compared with 153 in Germany, 170 in France, 208 in the United States, & about 250 miles est.) in the British Isles. With three-fourths of Belgium's population, 300 times its area, and 6 times its railway mileage, Canada carries but fifteen million (14,810,407) passengers compared to little Belgium's hundred million—a difference only partially compensated for by the smaller parcours (about 13 miles) on the Belgian railroads.

Since 1885 the passenger traffic has increased more slowly than the railway mileage, & from 1890 to 1895 it has remained almost at a standstill, but an increase of 15.6 % in the traffic from 1895 to 1897 indicates a coming revival in the passenger business. The freight traffic has also recovered from the ill-effects of the business depression of recent years; but, despite the recent increase in traffic, the total earnings per mile of road have steadily declined. In 1875 the receipts per mile of road were \$4.033; in 1880 they had sunk to

\$3.418; in 1885, to \$3.175; in 1895, to less than \$3.000. This decline, which may be paralleled elsewhere, is due partly to the construction of new & temporarily unremunerative railways, & partly to the great decline in freight charges, which has been so striking a feature of American railway history. The receipts per ton-mile on the Canadian Pacific declined from 1.50 to 1.17c. from 1880 to 1896, & numerous other instances of cheapened transportation might be cited.

The result of comparatively low rates & sparse population has been diminished receipts per mile, the statistics for Canadian railways showing but \$3.107 in 1896, compared to about \$7.000 in the United States, \$11,000 in France & Germany, \$12,000 in Belgium, & almost \$24,000 in England & Wales.

Fortunately the operating expenses have declined still more rapidly. During the 20 years ending with 1895, the operating expenses declined from \$3,268 to \$2,049, & while the working expenses formed 82% of the total revenue in 1876, the proportion had sunk to 69 % in 1896. Despite this decline in the coefficient of exploitation, however, the net earnings \$15,500,000, furnish but a very moderate return, 1.72 % upon the total paid-up capital, including the government subsidies.

The Canadian railways have passed through a storm-&-stress period that has been accentuated & aggravated during the last few years. The slowly returning prosperity of both Canada & the U. S. promises to aid the railroads of Canada, & railway securities have risen, with increase in railroad profits. The suspicious decline in operating expenses within the last few years has occasioned a slight scepticism as to the actual extent of the increasing prosperity of the railways, & pessimistic views are held in London & elsewhere concerning the ability of such roads as the Grand Trunk to weather future storms. It seems probable, however, that the future progress of the Canadian railways will be continuous, if not rapid. The bright promises of 20 years ago have not been realized; population has increased slowly, & the great country to the south has robbed Canada of its immigrants. But the Canadians have built for the future, & the development of Manitoba & the west, & the increase of manufacturing in Quebec & Ontario, coupled with a conservative railway policy, doubtless will improve the railway conditions in Canada.—*Engineering Magazine.*

[In stating that the U.S. has robbed Canada of its immigrants, Mr. Weyl has, probably, spoken on hearsay. Of immigrants who came across the Atlantic, intending to settle in Canada, & then changed their minds & went to the U. S., the total number is very small. At one time there was a considerable movement from Quebec to the factory towns of the New England States, but the tide is now running the other way, & repatriation is the order of the day. From Ontario considerable numbers, principally farmers' sons, went to Minnesota, Dakota & other Northwestern States while those districts were being opened up by railways & before there was through-all-rail communication with Manitoba & the Northwest Territories by the north shore of Lake Superior. But that also is a matter of ancient history, & to-day there is a considerable movement of settlers from nearly every Western State into the Canadian Northwest. EDITOR RAILWAY & SHIPPING WORLD.]

At a meeting of the Ontario Lumbermen's Association in Toronto Aug. 2, it was agreed that the Board of the Association should see the G.T.R. & C.P.R. officials & endeavor to induce them to equalize the freight rates on soft & hard wood. To Toronto the rates now are 6½c. for soft wood & 7½ for hardwood; to Montreal 12½c. for soft wood & 15 for hard wood.

The St. Clair Tunnel.

The American Society of Civil Engineers met at Detroit, Mich., during the last week in July, & during the meeting paid a visit to the St. Clair Tunnel. The Grand Trunk provided a special train which took members to Port Huron, & there they were taken on a train of new gondola cars & pushed through the tunnel by one of the famous engines used for working the tunnel. Considering the stories that have recently gone about concerning the destructive action of engine gases, this visit to the tunnel was of special interest to some members of the party. It was learned from Chief Engineer Hobson, of the G. T. R., that the only corrosion that has been serious enough to be considered at all was that of the steel bolts through the flanges of the cast iron segments making up the tube. The tube itself has not been appreciably affected. These bolts have been renewed where corroded & the bolt heads & nuts covered by concrete, which has been put in to fill the angle made by the flange with the cylindrical surface of the tube. It will be remembered, doubtless, that the lower half of the tube was bricked up at the outset & faced with concrete, flush with the flanges. The return trip through the tunnel was made within 5 minutes or less after the first trip, & there was very little gas or smoke in the tunnel; it could not have been disagreeable except to an unusually sensitive nose. The engines burn anthracite. The scheme of working requires a minimum interval of 10 minutes between the passage of engines. There is no doubt that the loss of the lives of 2 men a year ago or so, because of the breaking-in-two of a freight train in the tunnel, was due to the carelessness of the engineman & his disregard of the definite instructions for working in the tunnel. Nevertheless, the consequences of an accident of any sort which should keep a trainload of passengers & an engine or two in the tunnel would be so terrible that some other motive power will probably be adopted, if it can be done with reasonable cost & efficiency of working. The Co. is now considering compressed air motors. Obviously, the problem is novel in some particulars, as there is no precedent for motors of the powers which must be used in this tunnel.—Railroad Gazette.

A Candid Railway President.

J. J. Hill, President of the Great Northern (U.S.), which recently acquired the Corbin system of lines running north from Spokane Falls, Wash., has no use for that city, if newspaper reports of a recent interview with him are to be depended on. This is what he is credited with saying: "As far as I am concerned, I do not care whether the road ever builds through Spokane or not. We come into the city now all right & get out all right. We have all the depot facilities in the city that we want, & we always expect to have all we want. The Great Northern cares nothing for Spokane. It handles the business it gets from here, but if Spokane did not exist the road would be just as well off. Spokane does not appreciate a railroad & never did. Spokane is the worst hole from the Atlantic to the Pacific. I would not care if the Great Northern did not come within 50 miles of Spokane. The road would be just as well off. When I come to the city I keep away from the business men. I have no desire to see them."

Collingwood Schreiber, Deputy Minister of Railways & Canals, will be the host next month to a party of pleasant people who will accompany him to the Pacific coast. Hon. Mr. Dobell, Mrs. Dobell, E. L. & Mrs. Newcombe, & L. K. & Mrs. Jones, of Ottawa, will be of the party,

SHIPPING.

Thousand Island Steamboat War.

The latest move on the part of the R. & O. Co. has been to put on the steamer Richelieu between Kingston & Cape Vincent, N.Y., & to reduce the fare to 25c. for the round trip, against \$1, which has been charged by the American Line. A Kingston correspondent says: The citizens have never had such cheap outings. They can have a 60-mile ride for 25c. & the distance covered in less than 5 hours. They can have an all-day sail to Ogdensburg for 50c. The R. & O. Co. has the steamers Caspian & Columbian on the Thousand Island route, & they secure great patronage. "I never had such terms," said an excursion manager, "as I have had this year. I can get half the receipts on the Columbian any time I want to put on an excursion. I have, of course, to pay for the advertising. Heretofore I got one-fifth the receipts. The opposition is a good thing for me." The boats have handled large crowds, & promise to do so as long as hot weather lasts. The American Line people are satisfied, so they say. Their business is not disturbed. What the R. & O. people do is an extra, & above their service. Meantime the people get better river opportunities than they have enjoyed for years. The schemes to secure passengers for the boats are novel & numerous. The American line has offered, in addition to a ride of 60 miles for 25c., to give its patrons a free ride on the electric belt line about Kingston, giving a view of the chief interesting points in the city. The R. & O. Co. will, it is expected, meet the new feature by giving free cab service.

At Cape Vincent, Aug. 16, the New York Central Ry. refused to allow the R. & O. steamer Richelieu to land at the railway dock. A person interested says this is the same kind of treatment accorded to it by the G. T. R., & the N.Y.C. is only giving tit for tat.

Hudson's Bay Company's Steamers.

On the Stikine River the Co. has 2 stern-wheel steamers of modern type, the Strathcona & the Caledonia, built at Vancouver this year. They are each 140 ft. long, & 34 ft. wide, with accommodation for 60 to 100 first-class passengers. They are lighted by electricity. Weekly trips are made between Wrangell & Glenora. During the season of navigation one of these boats is taken over to the Skeena River & several trips are made as far as Hazelton, the head of navigation, & the point where the pack-trails to the Stuart's Lake & Omenica countries start.

Upon the Athabasca River the Co. has 2 well-equipped stern-wheel steamers, somewhat similar to the above-mentioned. The one on the upper part of the river, the Athabasca, runs as far as the Grand Rapids, & the other, the Grahame, from below that point to Fort Smith on the Slave River, where connection with the Co.'s screw steamer, the Wrigley, is made. This boat runs as far as the mouth of the McKenzie River. These latter boats are intended for the service of the Co. only, but outside freight & passengers are taken as far as possible.

The Co.'s vessels going from London, Eng., to Hudson's Bay are the Erik & the Lady Head. These are both barque rigged, the former having auxiliary steam power, & both are specially built to contend with the difficulties of navigation through the ice in Hudson's Straits. The Erik goes to Ungava, Churchill & York Factory, & the Lady Head to Moose Factory, both vessels being fully required by the Co.'s own shipments. They leave London in the early part of June each year, returning there in September or October.

Realizing the Facts.

The American Elevator & Grain Trade, Chicago, says: "Buffalo, as the gateway of the grain movement from the Northwest, is no longer without rivals. The Canadian routes are numerous, & during thus far this season have not been without their share of patronage. From Duluth & Chicago, the Chicago, Duluth & Parry Sound line of boats are carrying corn & wheat to the elevator at Parry Sound. The upper lake boats running in connection with the G. T. Ry. carry wheat & corn to the elevator at Midland. By the C. P. Ry. Co.'s vessels grain is carried to Owen Sound. Other lake carriers, as the Georgian Bay & Lake Superior Steamboat Line, bring down wheat & corn from the Western ports to the various terminal elevators on Georgian & Lake Huron. But the three Georgian Bay ports—Midland, Parry Sound & Owen Sound—are the main gateways. From the first the G. T. Ry., from the second the O., A. & P. S. Ry., & from the third the C. P. Ry., carry the grain onward across Ontario to tidewater & the ocean steamers at Montreal, where, within a month after the opening of navigation this year, 8,000,000 bushels of grain had been loaded at her wharves."

The Galops Canal.

This canal extends from Iroquois, Ont., to the head of the Galops Rapids, a distance of about 6 miles. The work of enlargement now in progress is designed to raise the normal level of the existing canal 6 ft.—that is, to the height of the lowest known stage of water in the St. Lawrence River, above the guard lock at the head of the Galops Rapids. The prism of canal will have a width of 80 ft. on bottom, with slopes of 2 to 1 throughout, & a depth of 15 ft. at lowest water.

A lock will be built at Iroquois about 200 ft. south of the present one. The masonry will be of the best class of limestone, peck faced, laid in cement, & in courses varying from 18 to 30 ins. in height. The lock will have two chambers, the lower to be 530 ft. in the clear & the upper 270 ft. by 50 ft. in width, with a lift of 11½ ft. at normal water, which, at the lowest stage of the river, is increased to 17 ft. It is expected that one-half of the prism will be completed so that vessels with a draft of 15 ft. may pass through with the opening of navigation in 1899. About 1,200 men are now engaged in this work. This enlargement will cost the Government at least \$2,000,000.

Maritime Province Ports.

Wm. Thomson & Co., steamship brokers, St. John, N.B., supply the following information about ports in New Brunswick & Nova Scotia:

Loading Port.	Depth Water on Bar at High Tide.	Depth Water in Harbor.	How Cargo Delivered to Vessels.	Cost of Stowing per Standard in 1896.

Pontooning on the St. Lawrence.

The operation of cutting in two large steel vessels like the U.S. revenue cutters Gresham & Algonquin, in order to permit of their passage through the St. Lawrence canals to the Atlantic seaboard, & the announcement that a similar method of procedure will be necessary in the case of the revenue cutter Onondaga, building at Cleveland, which will also be taken over by the U.S. Navy Department on reaching the Atlantic, has again directed attention to this class of work, & has emphasized the skill & care necessary for its satisfactory performance. When the steel steamers Mackinaw & Keweenaw, built at West Bay City, Mich., were taken through the St. Lawrence in this way, a few years ago, the success of the work & the simple manner in which it was performed, was surprising to some vessel men. Since that time a large number of vessels—whalebacks, light-ships, tugs built for ocean service, oil barges, etc.—all of them of greater draught than is found in 2 or 3 of the canals at present, & some of them of larger dimensions than the canal locks, have been successfully moved to the seaboard. In the case of vessels of dimensions larger than the locks, it has been necessary, of course, to cut them in two, but where depth of water was all that was to be taken into consideration, the vessels have been raised on pontoons.

There are 3 or 4 concerns that are equipped for this kind of work, & that undertake contracts in which they agree to deliver the vessels safely through the canals & below the shallow parts of the river. They usually act jointly with the ship builders when it is necessary to cut a vessel in two. The accompanying illustration shows the sea-going tug W. H. Brown while being pontooned through the canals from the lakes to the seaboard. She was built at West Bay City, & is now one of the auxiliary naval fleet. Another tug built at West Bay City, the Wilmot, was taken through the St. Lawrence in the same way. The same contractors also successfully conducted the work of cutting in two, pontooning through the canals & erecting at Montreal the steamer Campana, as well as a light-ship for the U.S. Government that was built on the lakes, but intended for Atlantic coast service. Few vessel men perhaps realize the extent of equipment necessary to cope with the various lines of work that may be required in undertaking contracts of this kind.—Marine Review.

When coming up the St. Lawrence Aug. 8 the steamer Myles took a sheer in the current at Farren's Point near Cornwall, & knocked her forefoot off. She was drydocked at Kingston.

In British Columbia Waters.

The Puget Sound steamer North Pacific has been fined \$100 for infringing the custom law by allowing smuggled cigars to be brought into B.C. by members of her crew.

The C.P.R. Co's. steamer Trail, which was laid up at Nakusp for repairs during June & July, was put in commission again early in August. She is plying between Arrowhead & the Trail smelter & tows car barges.

The B.C. Iron Works, Vancouver, closed down in July on account of financial embarrassment & the Co. is being wound up. It is said the Co. lost heavily on building steamboats for the Yukon trade. It is expected a new company will be organized to carry on the business.

In reference to what we said in our July issue, pg. 134, the Canadian Pacific Navigation Co. informs us that it is its intention to put on a new steamer for the Victoria-Vancouver route, & that it hopes to have her running next season. The Co. has received a num-

As mentioned in our July issue, pg. 130, two out of the 3 steel-hull steamers built in Toronto for the C.P.R., & sent to Vancouver to be put together there for the Stikine trade, were sent back to the interior & are now being completed, one at Nakusp, for service on the Arrow Lakes, the other at Nelson, to ply between Lake Arrowhead & the Arrow Lakes, & Kuskanook, the temporary western terminus of the Crow's Nest Line. It is expected they will be finished by the end of September.

Several changes have been made in the officials of the C.P.R. inland steamer fleet. When Capt. Fraser was taken from the tug Columbia, & promoted to the steamer Trail, Capt. Estabrook, of the Hunter, on Slocan Lake, was given charge of the tug Columbia. Mate Griswold, of the Nelson, was given the same position on the Rossland. Mate Sutor, of the Slocan, has been transferred to a similar position on the Trail. Mate Allison, of the Rossland, has been promoted to be pilot of the Kootenay. Pilot McClellan of the Kootenay has been promoted to be Captain of the Hunter, on Slocan Lake. All these changes & trans-

fers are in the line of promotion.

A menace to navigation is drifting about the coast waters of the Pacific in the direct course of coasters. Last March the bark Forest Queen sailed from Puget Sound for San Pedro with lumber & has never since been heard of. The supposition is that she capsized in a gale, & is floating around somewhere buoyed up by her load of lumber. Recently a derelict that somewhat resembled the missing bark was sighted bottom up at lat. 43.19° N., long. 129° W., & a few days later the same derelict was sighted off Point

PONTOONS UNDER A LAKE-BUILT TUG IN THE ST. LAWRENCE.

ber of tenders, but at the date of our last advices on the subject (Aug. 1) neither of them had been accepted.

The plant & shipbuilding business of the Esquimalt Marine Ry. has been sold out to the British Columbia Marine Ry. Co., which assumed control July 27. Its intention is to enlarge the business & to supplement the large docking & repairing plant at Esquimalt with a smaller plant in Victoria Harbor, & also to equip a site in Vancouver already secured, with facilities for repairing & building craft of all sizes.

Nearly every C.P.R. inland steamer is doing a big business this summer in carrying the immense amount of railway construction now going on in the Kootenays, on both the Crow's Nest Pass Ry. & the Robson-Midway branch. This necessitates the transfer of great quantities of merchandise, grading outfits & supplies of all kinds, & the carrying of large numbers of passenger traffic, including the railway laborers constantly going in to work on the lines.

Reyes. The underwriters & insurance men of the Sound are indignant that the U. S. Government, notwithstanding that a number of their vessels are lying idle at San Francisco, has taken no steps to destroy this danger to coasting vessels.

Lake Superior to the Rockies.

The steamer D. L. Mather, owned by the Keewatin Lumber Co., & plying on the Lake of the Woods, was burned to the water's edge July 26. Loss, \$8,000; covered by insurance.

The Rainy River Navigation Co. has secured the rights to the City of Lake Superior, & is plying on Rainy Lake, & she will be taken into Rainy Lake service when the Keewatin in her Rat Portage trade & in running on the Rainy Lake line.

The steamer Mather, while running on the Lake of the Woods, was captured by the U. S. S. Albatross Aug. 9, got out of the channel & was crowded up on the shore & burned to the water's edge, & going for passenger & cargo.

light. Among those on board was D. D. Mann.

An impressive idea of Canada's greatness is afforded by an advertisement in a Winnipeg paper, illustrated by a picture of the 2 propellers of almost sea-going size which carry passengers from Selkirk to the mouth of the Saskatchewan & return, a distance of 700 miles. Quite a country Canada is, when almost hidden in its vast expanse is an inland lake on which propellers can steam for 350 miles straightaway. *Toronto Telegram.*

The Maritime Provinces.

The keel of a steam ferry boat to ply on the harbor of St. John, N.B., was laid in Carleton, Dec. 8, 1838.

One thousand & eighty-one vessels of all kinds entered the customs at Sydney harbor from the opening of navigation to July 31.

The view on pg. 163 shows the marine railway recently built at Lunenburg, N.S., a description of which appeared in our June issue, pg. 102. We are indebted to the publishers of Seaboard, New York, for the use of the cut.

In our July issue, pg. 131, we gave pretty full particulars of the specifications of the winter steamer for service between P. E. Island & the mainland, which is about to be built for the Dominion Government. We have since been informed that some alterations are being made in the details of the specifications, to secure more strength where it is considered necessary.

The steamer Express on a trip to Yarmouth from Halifax about the middle of August touched & met with a slight accident going through the Tusquets. She would have gone in dry dock or Dartmouth Marine Ry., but both were occupied. A survey showed she had not been damaged; the surveyors recommended that she be continued on her route, & she left as usual.

In recent issues (June, pg. 107, July, pg. 134) we have given particulars of a considerable number of vessel companies which have been incorporated, with G. W. Churchill & other members of the Churchill family of Hantsport, N.S., as shareholders. The firm of E. Churchill & Sons, the members of which are the principal parties interested, are wealthy vessel owners. They have been incorporating a separate joint stock company for each of their vessels, so that, it is said, in case of any one of their vessels getting involved by any cause, such as collision, etc., only the vessel implicated, or its value, would be liable.

The launch of the Dominion Atlantic Ry's. steamer Prince Arthur took place at Hull, Eng., July 19, W. R. Campbell, the Co's. General Manager being present. The launch was, as on the occasion of launching the Prince George, a perfect success. Crowds attended the event, which passed off without a hitch. She is 290 ft. in length & 38 ft. breadth of beam. The work of installing her boilers & engines & furnishing her interior will be hurried forward, & it is expected she will be in readiness to leave Hull by Sept. 1. The Co's. magnificent liner, Prince George, shortly to take her departure for her Boston & Maritime Province service, was dressed with all possible bunting, rainbow fashion, & presented a fine spectacle.

The graving dock at Halifax, owned by the Halifax Graving Dock Co., with headquarters in London, Eng., is excavated out of the solid rock & is built of granite & concrete. It is 601 ft. long, 102 ft. wide at coping & 70 ft. wide at bottom, with 30 ft. of water on sill. Width of entrance 85 ft. The dock can take any warship built with all guns and armament. The property is provided with machines, workshops, etc., so that any cargo can be handled & repairs effected. The Co. also

owns the property of the late Chebucto Marine Railway at Dartmouth, N.S., consisting of no. 1 railway 2700 tons capacity; no. 2 railway 900 tons capacity; no. 3 railway 2 cradles 250 & 150 tons capacity; no. 4 railway 2 cradles 200 & 100 tons capacity.

Ontario & the Great Lakes.

Lakes Superior, Huron, Erie, Ontario & Michigan have an aggregate area of 94,750 square miles, which is larger than the area of Great Britain.

The largest whaleback steamer ever built, the Alexander McDougall, recently left the barge works at West Superior, Wis., & went to the Mesabic ore docks to load with 6,000 tons of ore for her maiden trip down the Great Lakes.

While on her way from Toronto to Alexandria Bay Aug. 10, the steamer Cambria ran ashore opposite Presque Isle light. She had 300 or 400 passengers on board, all of whom were taken off safely. She was pulled off without much damage.

As a specimen of freight-carrying capacity in lake steamers, it may be mentioned that the John Fritz took a cargo of ore out of Duluth recently, which weighed 6,959 gross tons. Her draft of water was 17 ft., 1 in. Her consort, the S. F. B. Morse, launched at West Bay City, July 31, will probably carry 7,200 tons.

The Northern Transit Co., which is handling passengers twice a week from Toronto & transferring them to the American line for Montreal, is not the Canadian line of that name, but the line from Cleveland to Ogdensburg. The steamers employed are the Empire State & Badger State. They make weekly trips.

It is said a scheme is on foot to place a complete line of steamers on the chain of waters from Lindsay to Peterborough & from Cobocok to Peterborough. The project as put forth has been received with approval by the owners of the boats on Stony Lake. The object is to incorporate into a company the owners of all steamers now on the waters in order that a much better service may be arranged.

It is said the Hamilton Steamboat Co. has done very well this season, & that the receipts are ahead of last year, although the fare is much lower. It is considered unlikely that the Co. will go back to the old tariff even if the railways restore rates. It will probably advance fares something above the present price, but will not restore them to the old figures. The Co. has found that cheap fares by water attract business, & in future will make its own rates independently of what the other railways may do.

The surface level of Lake Superior at Duluth is a foot lower than at this date a year ago. This low water is a disadvantage to the big boats & helps the smaller ones, which are really out of the competition during high water. The two classes of boats are now about on an equality. An old vesselman says there is no way of explaining positively the variations in lake levels, but he believes they are lowering, though almost imperceptibly. This record is corroborated by G. K. Gilbert in the forthcoming report of the U. S. Geological Survey.

On Aug. 6 the C.P.R. began lake steamship service on Georgian Bay & Lake Huron. The new steamer City of Windsor was put on this service, & left Owen Sound for the following ports of call on the Bay & Lake Huron—Salt Ste Marie, Ont., Shequandiah, Blind River, Hanova Bay, Algoma Mills & other intermediate points. A tariff has been issued by the freight department of the C.P.R. governing business on this route. This tariff establishes rates identical with those of the

Great Northern Transit Co. & the North Shore Navigation Co.

The Ottawa River Navigation Co.'s new steamer Island Queen arrived at Ottawa about the middle of August, & was put on the line between Ottawa & Wendover, leaving Wendover every week day at 6 a.m., arriving at Ottawa about 10 a.m., & leaving on the return trip at 5 p.m. from Queen's wharf for Wendover & all intermediate points. The Island Queen is a swift passenger propeller making 13 miles an hour, & has a passenger license for 250. She is neatly fitted up with upper & lower cabins & shade decks, & will be a great acquisition to the Co.'s fleet.

The Hilda, the first of 2 steel grain barges that are being built for the Prescott Elevator Co., was launched in Toronto Aug. 9. The barge is 180 ft. long, 30 ft. beam, & 14 ft. deep, having a canal draft of 40,000 bushels of wheat. She is built entirely of steel, even the decks, & the bottom is sheathed with rock elm plank 5 ins. thick to shield it from rocks in the canals. It has 5 hatchways on the deck, a cabin aft for the accommodation of the officers' quarters, & an excellent place is fitted up in the fore-castle for the deck hands. The second one will be launched this month.

Capt. McDougall, the inventor of the whaleback, says:—"Next year the new Canadian canal will be opened, & it will offer a broader field for lake carriers. Boats carrying 2,000 or 2,200 tons will be able to go direct from Duluth to Montreal & Quebec, & thence to England & European ports. The new canal will permit of the passage of boats 270 ft. long & drawing 14 ft. of water. Vessels of this type can sail on the lakes during the season of navigation, & can then go to sea & remain there in commission all winter, when freight rates on the ocean will demand it. Within the next five years I expect to see a fleet of at least 100 boats of this class trading between Duluth & European ports."

Official reports to the Department of Railways & Canals indicate a considerable diminution in the volume of trade passing through the "Soo" Canal during July. Up to the end of June the number of vessels locked through the canal this season was 1,506, an increase of 400 as compared with the season of 1897 to that date, while the amount of freight passed through was 1,419,197 tons, an increase of nearly 400,000 tons as compared with the corresponding period of last year. The falling off during July, however, has been such as to reduce the total traffic for the present season thus far considerably below the total for the corresponding period of last year. Up to July 31, 2,056 vessels were locked through, carrying 1,786,477 tons of freight, against 2,003 vessels & 2,205,822 tons of freight locked through last year up to July 31. Comparing the traffic in freight there was a falling off of nearly 600,000 tons during July. This year the canal opened April 11, & last year April 21.

Province of Quebec.

The R. & O. steamers are to call at Cap a l'Aigle on the up as well as down trip.

It is said arrangements have been made for the steamer Admiral, which runs between Montreal & Gaspé, to call at Matane, on both up & down trips.

Application for incorporation has been made by the Chateauguay & Beauharnois Navigation Co., with a capital stock of \$50,000, headquarters at Chateauguay Basin, to acquire & operate steamboats & other vessels. The applicants are:—Capt. C. B. Bouthillier, R. Lang, D. W. Tully, A. McRobert, St. Joachim de Chateauguay; J. Brault, of Sainte Philomene; J. H. Reay, of Saint Clement de Beauharnois, & P. Parent, of Beauharnois.

Water Routes to Yukon.

A reliable correspondent, writing from Dawson City, Yukon, about the end of June, said: "The water in the Yukon River is about 6 ft. less than this time last year, & some of the people anticipate that most of the St. Michael's fleet will not be able to come up, though trading companies say the water will be higher in July, & that all their boats will arrive, & the first boats are expected about July 15. Several boats have arrived from St. Michael's which left there last fall & wintered at Circle City & lower down. The following steamers left for down the river: The Hamilton June 25, the P. B. Weare June 26, & the Bella June 27—all of these boats carrying in the neighborhood of \$1,000,000 each in gold. The first steamer to reach Dawson from Lake Bennett was the Bellingham, which came down in 7 days, & the A. J. Goddard was the next. She came down in 5 days, & is now on her way back to the White Horse Rapids with government mail & passengers. Above the White Horse she has a sister boat plying to Bennett, & if the trip from here to White Horse can be made against the stream, we figure it will make a wonderful difference to this country, as it is less than 600 miles from here to Skagway, while it is 1,700 miles to St. Michael's alone. There are at present steamers running on all the waters between here & Bennett, & it is figured that a person can come from Seattle & Vancouver in 10 days of actual travel—say 4 days from Vancouver or Seattle to Skagway or Dyea, 1 day to cross the pass & 5 days on boat—and it is expected that as soon as the steamers get into running shape this time will be cut into considerably."

Another correspondent writing from Dawson City, July 23, says:—"The first steamer from St. Michael's of this season's crop arrived here during the past week. She was drawing only 3 ft., yet got stuck for 4 days near Circle City. The river is yet very low, though not quite so bad as was anticipated a month ago. Anxiety still is felt as to the getting in of food. One of the best of the river steamers—the Hamilton—was badly injured on her down trip by getting on bars, & may be knocked out for the rest of the season. We have now 3 little steamers between here & White Horse Rapids, by which passengers can reach salt water in 8 days, & can get into Dawson in 5."

Faith Fenton sent the following to the Globe, dated McDougall Camp, Teslin Trail, 50 miles beyond Telegraph Creek, Aug. 9:—Col. Evans, with 80 of the Yukon force, including artificers, surveyors, & 2 ladies of the Victoria Order of Nurses, left Teslin July 21 direct for Selkirk by the steamer Anglian,

Capt. McDonald, owned by the Canadian Development Co. This is the first trip & the first steamer on the lake. It was expected they would reach Selkirk about Aug. 1. The steamer will continue her course to Dawson, & expects to make her return trip in 2 or 3 weeks, when the remainder of the force will be taken forward. The Anglian is a substantially-built boat, & carries 100 passengers & about 300 tons of freight."

The success of the steamers Ora & Goddard in making the trip down White Horse rapids to Dawson & return will revolutionize Klondike travel, says the Victoria Colonist. The steamers had no difficulty whatsoever on the down trip, making the run from White Horse to Dawson in 3 days, so that now a man should be able to make the through trip from Victoria in less than 10 days & the return trip in very little more. Mr. Macaulay, who came up on the Ora, making the trip from Dawson to White Horse in 5½ days, says this time can be greatly lessened now

stern-wheel steamer Iskoot, referred to in our June issue, pg. 106, as having been wrecked at West Inlet while on her way to the Stikine have been taken to Vancouver, where they will be utilized, by Mr. Read in a stern-wheel steamer he is building there.

The steamer Manauzeuse has taken the place of the C.P.R. steamers Athenian & Tartar, between Vancouver & Wrangel, Dyea & Skagway.

F. M. Rattenbury, Manager of the Bennett Lake & Klondike Navigation Co., was a passenger from Skagway by the steamer Tees, arriving at Vancouver early in August. He brought down \$15,000 in paper & about \$9,000 in gold—he had 600 ounces—the proceeds of the first two trips of the steamer Ora to Dawson City. He is assured that his Co. will reap a large harvest, for he is satisfied that the line is the best on the upper Yukon. At present the Co. has 2 stern-wheelers, the Ora & the Flora, running to Dawson, & arrange-

ments have been made with the Willie Irving, which practically gives 3 steamers on the route. The other vessel, the Nora, is running from Bennett to the White Horse, connecting with the other steamers. Mr. Rattenbury says scow after scow has been wrecked on the way down, & boatload after boatload of provisions lost in the swift-running river & lakes. Next summer his Co. will, in all probability, build 2, it not 3, other steamers for this service.

It is said a contract has been made with the Bennett Lake Navigation Co., of Victoria, B.C., for the carrying of Canadian & U.S. mails between Bennett & Dawson, Yukon, & that all classes of matter will be handled.

The upper river steamer, Joseph W. Clossett, was wrecked while shooting White Horse Rapids, Aug. 3. She was completed at Lake Bennett July 27, & started down river July 30. While trying to shoot the rapids the engineer failed to shut off steam at a critical point, & the steamer went on a rock. A gaping hole was torn in her side, & she sank in 18 feet of water. The passengers escaped to shore. The boat & freight will probably prove a total loss. The steamer was to connect with the Goddard & Kilbourne in the run to Dawson.

A Seattle dispatch, dated July 24, says:—"The steamer Kalamazoo, built by a party from Michigan, on Lake Bennett, last winter, was totally wrecked on Thirty-Mile River. The pilot ran her on a rock, & a great hole was torn in her bottom. The steamer & outfit on board will prove a total loss. This is the second steamer to come to grief on Thirty-Mile River after successfully running the dangerous White Horse Rapids."

MARINE RAILWAY AT LUNENBURG, N.S.

that the men know the river & the company is getting a supply of wood. On their trip, from 3 to 4 hours had to be spent every day gathering wood for the steamer, a delay that will not occur now that the Co. has sent men down to cut a lot & pile it on the banks. The only difficult place to navigate is Five Finger Rapids, through which the steamer had to be drawn by ropes attached to trees. Otherwise the trip was a pleasant one, the steamer a comfortable one. Capt. Ritchie, an old Mississippi navigator, was in charge on the first trip, but has given way to Capt. Bragg of Victoria. On leaving Dawson there were 62 passengers on board, but of these only 27 came through to Victoria, the others dropping off along the river to go prospecting.

Commissioner Ogilvie is taking to the Yukon an alco-vapor launch, 27 ft. long, & drawing 27 ins. of water. The engine is 7 h.p., & the boat can carry enough oil for 30 hours run at full speed, & it carries 15 people.

The machinery, boiler & equipment of the

Admiral S. S. Collector of Customs at St. Michael & Alaska, reports that only 2 of the recently constructed river boats, the *Lucas* & the *Leah*, are likely to reach Alaska this year. Besides the vessels already reported wrecked on the way to St. Michael, the *Leah* & the *Lucas* lost her river steamer overboard, the old tug *Governor Sturges* lost a barge with a large quantity of freight when the river broke up, & the 12 steamers sent out from Seattle on June 2, by Martin Bros. were counted among the missing on July 7. These vessels were all built & cost \$50,000. In length they were 170 ft., beam 35 ft., & depth 6.5 ft. These boats were intended for passenger & freight purposes, having a capacity of 250 passengers & 400 tons of freight. Their ocean convoys were the *Lucas* & *Richard Holyoke*, & the *South Coast* schooner *South Coast*. The *Richard Holyoke* had in tow 3 big river barges, each of which had 150 tons of coal aboard. The *South Coast* was loaded. At Dutch Harbor it was the intention to pick up the 4 boats that the Morans built there for the North American Transportation & Trading Co.

Recent reports from Unalaska say Dutch Harbor is crowded with a forlorn lot of steamers. Of the fleet of 20 which left Seattle to ply on the Yukon, 12 were wrecked at or near Dutch Harbor. Four of these are on the rocks, 2 are ashore & 6 others are laid up with broken backs. In each case the machinery is practically all that can be utilized.

NOTICES TO MARINERS.

By the Dominion Department of Marine.

All bearings, unless otherwise noted, are magnetic & are given from seaward, miles are nautical miles, heights are above high water, & all depths are at mean low water.

No. 35. July 15. —1. Red Spar Buoy South of Duck Islands.—A red spar buoy has been moored by the Government of Canada in 6 fathoms water off the south end of the southern shoal (Jeannie Graham shoal) extending southerly from Duck Islands, Lake Huron, Lat. N. $45^{\circ} 35' 45''$. Long. W. $82^{\circ} 53' 15''$. The buoy is $3\frac{1}{2}$ cables south of the shoalest spot, with 8 ft. water on it, is situated S. by E. $\frac{3}{4}$ E. $2\frac{1}{2}$ miles from Duck Island light, & S.W. by S. $1\frac{1}{2}$ miles from the most southerly point of the outer Duck Island. Vessels approaching it from the westward should not bring it to bear south of S.E.; if from the eastward, nothing south of W.S.W. This notice affects Admiralty charts 519 & 678.

2. Gas Buoys in Lake Erie.—Notice is given by the U. S. Lighthouse Board that on July 2 the following gas lighted buoys were established in the westerly end of Lake Erie: SANDUSKY BAY, OUTSIDE GAS BUOY No 2, painted red, numbered 2, & showing a fixed white light during periods of 4 seconds duration, separated by eclipses of 10 seconds, on the northerly side of the entrance to the dredged channel across the bar, & about $\frac{3}{4}$ mile N.E. $\frac{1}{2}$ E. from Cedar Point range front lighthouse, in place of the former red second-class buoy numbered 2.

GULL ISLAND SHOAL GAS BUOY No. 3, painted black, numbered 3, & showing a fixed white light, on the north-easterly point of Gull Island shoal & about $1\frac{1}{2}$ miles S. $\frac{3}{4}$ E. from Middle Island lighthouse, in place of the former black third-class can buoy numbered 3.

NI-GARA REEF GAS BUOY No. 5, painted black, numbered 5, & showing a fixed white light during periods of 10 seconds duration, separated by eclipses of 10 seconds, on the northerly side of a small reef & about 5 miles W.N.W. $\frac{1}{2}$ W. from Green Island lighthouse, in place of the former black second-class can buoy numbered 5. This notice affects Admiralty charts 332, 490 & 678.

No. 36. July 18.—Dangerous Rock in Halibut Channel, B. C.—Information has been received from Capt. Walbran, Master of the Dominion steamer *Quadra*, of the existence of a rock with 8 ft. on it at extreme low water in the fairway of Halibut channel, Barrier Islands, near Clan-ninich harbor, west coast of Vancouver Island, Lat. N. $50^{\circ} 0' 41''$, Long. W. $127^{\circ} 26' 8''$. The rock is of small extent, is slightly marked by kelp, & has deep water all around it. The following angles fix the position of the rock: N.E. tangent, Table Island 0° , S.W. tangent Table Island 74° , W tangent Lookout Island 48° , W. tangent, Granite Island 136° . This affects Admiralty charts 583, 716 & 1917, & B. C. Pilot, 1888, pg. 328.

No. 37 July 19, 1.—New Front Range Light Building at Bathurst, N.B.—The open-framed white wooden building from which the front range light on Caron point, entrance to Bathurst harbor, Chaleur bay, on the east coast of N.B., was shown, has been taken down & replaced by a new lighthouse tower, Lat. N. $47^{\circ} 39' 20''$, Long. W. $65^{\circ} 36' 40''$. The new front range building is an enclosed wooden tower, square in plan, with sloping sides, surmounted by a square wooden lantern, the whole painted white. The height from the ground to the vane on the building is 33 ft. The new tower stands $21\frac{1}{2}$ ft. south-east of the old front range building & 360 ft. N. $51\frac{1}{2}^{\circ}$ E. from the back range tower. The light shown from the new building is, as previously fixed, white. It is elevated 31 ft. above high water mark, & should be visible 10 miles from all points of approach outside the harbor. The illuminating apparatus is dioptric of the 7th order. The two lights in one, bearing S. $51\frac{1}{2}^{\circ}$ W., lead vessels to the buoys on the bar at the entrance to Bathurst harbour. After passing the black buoy the lights must be left on the port hand. Local knowledge is required to enter the harbor. This affects Admiralty charts 1715 & 2516 & Canadian list of lights & fog signals 481 & 482.

2. New Buoy at Entrance to St. Andrews, N.B.—A black steel can buoy has been moored by the Government in Passamaquoddy Bay, in 6 fathoms of water, two cables length S.E. of the beacon on the eastern bar of Navy Island, at the entrance to St. Andrews harbor, Lat. N. $45^{\circ} 3' 25''$, Long. W. $67^{\circ} 1' 56''$. From the buoy St. Andrews light bears N.W. by N. $\frac{3}{4}$ N., 1 mile; S.E. end of Navy Island W. $\frac{1}{4}$ N., $\frac{1}{2}$ mile; St. Andrews outer light on Tongue shoal E. $\frac{1}{2}$ N., $\frac{2}{3}$ mile. This affects Admiralty charts 464, 1743 & 2013.

By the U. S. Hydrographic Office.

St. Marys River—Middle Neebish cut.—On July 2, 1898, the 4 black spar buoys & 2 white float lights in that part of Middle Neebish being deepened will be moved to the centre line of the channel. Until further notice the north half of the channel, 150 ft. in width, will alone be available for navigation. The upper & lower of the buoys that have been moved mark, respectively, the upper & lower limits of the part being dredged. To assist navigation 2 white float lights will be placed near the upper & lower black spar buoys. Masters of vessels are requested not to attempt to pass each other within these limits & to give the right of way to down-bound vessels.

St. Marys River.—Steamer City of Berlin aground Between Iroquois Point & Round Island.—Capt. Jos. Rouleau & the Thompson Towing & Wrecking Association furnish the following information: The steamer *City of Berlin*, drawing 17 ft. of water, went aground June 22, in St Marys River, between Iroquois Point & Round Island. At the time of

grounding she was on the St. Marys River (upper) range, nearly opposite the Mission, about $1\frac{1}{2}$ statute miles above the red can buoy on Mission shoal. The shoal, which has 15 ft. of water on it, has been marked by the U.S. Engineers with a floating staff carrying a red flag. The city of Berlin was towed off the same day. The steamer *Iron King* grounded on the same shoal during May.

St. Marys River.—St. Marys Falls Canal.—The (old) Weitzel lock, St Marys Falls Canal, was reopened for June 15. Boats intending to pass through the canals at Sault Ste Marie are loading 6 in. deeper, the rise giving that much greater depth of water on the sills.

St. Marys River—St. Marys Falls Canal.—W. H. Garvey, pilot, maintains a set of range lights for the use of vessels at Point aux Pins above the St. Marys Falls Canal. They are white lights, the rear one being 35 ft. above the river level, & the front one 15 ft. Triangular slat targets mark the range in daytime.

Richelieu & Ontario Navigation Co.

Authority has been given by Order-in-Council to change the name of the steamer *Passport* to *Caspian*.

It is rumored that the Co. will build a \$50,000 summer hotel at Kingston if sufficient encouragement is given, the hotel to be operated in connection with the Co's steamers.

On Aug. 2 the steamer *Columbian*, with a big excursion party on board made up at Morrisburg, Iroquois & Cardinal, arrived at Prescott & took on nearly 200 people, making her load about 1,000. The boat, which was under charter by private parties in Morrisburg & Cardinal, was bound for Kingston. After leaving Prescott, & when about 3 miles up stream, the inspirator, or air pump, gave out, so that there was nothing else for it but let the fires down & return for repairs. The Captain brought his boat about & again gained the dock at Prescott, where the passengers waited until the arrival of the *Caspian*, which had been telegraphed for, when as many as possible were transferred & returned to their homes.

The earnings of the Co. from the opening of navigation to Aug. 1 were \$323,512.05, against \$323,835.66 in the corresponding period of last year, a decrease of \$322.61. The receipts from Aug. 2 to 9 were \$44,772, against \$38,797 in the same week last year, an increase of \$5,975. The Co. this year has not only the cheap rates of the railways to contend with, but has also the opposition of the new American line. Despite this the receipts on the western section of the line, between Toronto & Montreal, are said to be considerably ahead of last year, there having been gains in every month since the opening of navigation. It is said the decreases in earnings have occurred below Montreal, principally in the Saguenay service, where the Co. is running only 4 boats weekly instead of 6 as in previous seasons. The want of the 2 new large boats that are building has been very much felt by the Co. this year, as the present boats leaving Toronto have not sufficient accommodation for the business offering. Many tourists have had to take sofa beds on the boats, the stateroom accommodation being entirely inadequate.

* The Great Northern Ry. (U.S.A.) has contracted with the Kanawha Coal Trust, of West Virginia, for 500,000 tons of coal, to be used for the road's next annual supply. This is a hard blow for the Pittsburgh coal district, which was unable to compete for the order owing to the cheapness of West Virginia production.

WIND-BAROMETER TABLE FOR THE GREAT LAKES.

By Prof. E. B. Garriott, U.S. Weather Bureau, Chicago.

Height of Barometer Lake Level.	Direction of Wind.	Character of Weather & Wind Indicated.
29.40 to 29.60, and steady.	West.	Fair, slight changes in temperature, gentle to fresh winds.
29.40 to 29.60, rising.	West.	Fair, cooler, fresh west to northwest winds.
29.40 to 29.60, falling.	South.	Warmer, increasing southerly winds.
29.60, or above, falling rapidly.	East to South.	Warmer, rain or snow within 36 hours, increasing east to southeast winds.
29.60, or above, rising rapidly.	West to North.	Cool & clear, quickly followed by warmer, variable winds.
29.60, or above, steady.	Variable.	No immediate change, but winds will go to south inside of 36 hours.
29.40, or below, falling slowly.	South to East.	Rain or snow, increasing easterly winds.
29.40, or below, falling rapidly.	South to West.	Rain or snow, high easterly winds, followed within 48 hours by clearing, cooler, west to northwest winds.
29.40, or below, rising slowly.	South to East.	Clearing, colder, fresh to brisk, west to northwest winds.
29.20, or below, falling rapidly.	South to East.	Severe storm of wind & rain, & wind shifting to northwest within 36 hours.
29.20, or below, falling rapidly.	East to North.	Severe northeaster, with heavy rain or snow, & winds backing to northwest.
29.20, or below, rising rapidly.	Going to West.	Clearing & cooler, probably cold wave in winter.

Application is to be made for the incorporation of the Roberval Que., Telephone Co.

The Hawaiian Government have given the Pacific Cable Co. the right to lay a cable between Hawaii, the U. S., Japan, & the Pacific Islands for 25 years. This Co. is incorporated under the laws of New York State, has a strong financial backing with ten million dollars capital. It is said work will begin at once; a bill is now before Congress asking for a \$100,000 a year contract between the Co. and the Postmaster-General for the transmission of official messages of the U. S. for 20 years.

ELECTRIC RAILWAYS.

Ontario Street Railway Taxes.

The question of the assessment of the rails, poles & wires of street railways as land is still before the Courts. It will be remembered that the Ontario Court of Appeal, a few months ago decided that the rails, poles & wires laid & erected upon the streets were assessable as land. The Privy Council has recently refused leave to appeal from this decision. The basis upon which the assessment is to be made is now the important question. The Assessment Act provides that an assessment should be made in each ward in the municipality, & that the property is to be valued at its actual cash value as it would be appraised in payment of a just debt from a solvent debtor.

A recent decision of the Court of Appeal on the method of assessing telephone wires & poles is of importance upon this point. It is therein held that the property in each ward must be valued as just so much dead material, & that the cost of construction or the value as part of the going concern is not the test. The assessment of the Toronto Ry. Co. was at the rate of \$6,300 a mile, such figures being based on the cost of construction, with an allowance for depreciation. The Co. appealed against this assessment, & the appeal came before County Judges Morgan, McGibbon & Dartnell, at Toronto, July 30. Only 2 witnesses were heard. K. W. Blackwell, of Montreal, valued the rails as scrap steel, at \$3.50 a ton. J. J. Gartshore, of Toronto, valued them at \$3. It was shown that the only market for the rails was at New Glasgow, N.S., where the rails would be worth \$10 a ton, but the freight & cost of taking up would reduce the value to the amount sworn to. The wires, etc., were valued by the witnesses at \$5.20 a mile. Ultimately the appeal was adjourned, to be taken up by the same Judges Sept. 6. The assessment of the power-house of the Co. was reduced from \$329,000 to \$300,000. Messrs. Fullerton & Drayton appeared for the City, & Messrs. Laidlaw & Bicknell for the Co.

The Maritime Provinces.

Halifax Electric Tramway.—In our July issue, pg. 138, this was spoken of as a 5% stock. It was last year, but this year the Co. has been paying 1½% quarterly, or at the rate of 6% per year.

Following is the Co.'s financial statement to Dec. 31, 1897, as presented at the last annual meeting:—

ASSETS.	
Property.....	\$1,377,039.82
Accounts receivable	16,830.83
Supplies on hand	8,129.77
Construction (in process).....	1,520.27
Suspense accounts (as insurance, etc.).....	3,993.09
Deposit with City on snow account.....	500.00
81 shares stock in treasury....	8,100.00
Cash on hand	76,845.10
	<u>\$1,492,958.88</u>
LIABILITIES.	
Bonds	\$ 600,000.00
Capital stock	800,000.00
Accounts payable.....	23,776.21
Suspense accounts as advertising.....	183.32
Bond interest due Jan. 1, 1898.	15,000.00
Quarterly dividend payable Jan. 1, 1898.....	10,000.00
Surplus Jan. 1, 1897.....	16 690.58
Surplus for 1897 after paying \$32,500.00 in dividends.....	27,308.77
	<u>\$1,492,958.88</u>

The stock was listed on the Toronto Stock Exchange July 23. There were no transactions in the stock, however, which was offered at 134, with 132 bid. The company has an exclusive franchise for 21 years, but at the expiration of the term it has the option of saying whether it desires to continue the exclusive privileges, & if so it may make a new arrangement. If it decides to forego exclusive privileges, the City cannot prevent the Co. from carrying on its business as at present. For exclusive privileges the Co. now pays \$1,000 a year & 4% of the gross receipts from the tramway department only. In 1895 the present Co. was incorporated to take over the business of the Halifax Street Ry. Co., the N. S. Power Co., the Halifax Illuminating & Motor Co., & the Chandler Electric Co. During 1897 the Co. purchased the electric plant of the Halifax Gas Light Co. The Co. now has exclusive rights in the tramway business, & also does a large business in furnishing incandescent & arc lighting, power, etc. It also has the contract for lighting the city streets.

Ontario Lines.

Ayr & Paris.—A Toronto deputation recently interviewed Paris Town Council respecting a proposal to build an electric line between there & Ayr. It is said a charter will be applied for.

Brantford & Port Dover.—From Brantford comes a report that a Co. is being formed to operate an electric line between that city & Port Dover. It is proposed to use the T.H. & B. Ry. tracks between Brantford & Waterford, making that portion of the line electric as well as steam, & to build an electric line from Waterford to Port Dover.

Cornwall.—On Sunday, Aug. 14, a large party of Roman Catholic Foresters went from Montreal by G.T.R. to Cornwall, where they were conveyed by the street railway, to St. Lawrence Park, where they spent the day. It is said the electric cars continued running through the day, & carried ordinary passengers as well. The Lord's Day Alliance is contemplating legal steps in the matter.

Hamilton, Grimsby & Beamsville.—At the quarterly meeting July 25 the statement presented is said to have been most satisfactory, the business being 12% greater than for the corresponding period of 1897. It was decided to abolish quarterly meetings & to hold an annual meeting on the 4th Monday in January.

Owing to the heavy fruit trade another freight car has been added to the equipment.

It is said there are not many transactions in the Co.'s stock. T. Carpenter, Winona, recently sold his holding to Dr. Woolverton.

The biggest Sunday business in the history of the line was done July 24, when about 1,500 people went from Hamilton to Grimsby Park to hear Evangelist Sam Jones.

Hamilton Radial.—The Co. began to run its cars on Birch avenue Aug. 6, & abandoned the Sherman avenue line. The new portion of track runs under the G.T. & Northern railway tracks, & thus dangerous level crossings have been done away with.

Hamilton Street.—On July 27 the Hamilton ratepayers voted on two questions. The 1st, "Shall the City purchase & operate the H. St. Ry.?" was answered in the negative by 1,867 to 263. The 2nd question, "If the City do not purchase the H. St. Ry. should the Council extend the franchise of the Co. for 15 years, that is until 1928?" was answered in the affirmative by 1,618 to 823. The Council has since been asked to extend the franchise for 15 years.

Lanark County.—Interest in this proposed electric line has been revived & the ratepayers of Perth are to vote on a bonus by-law.

London.—The Mayor has been notified that the London St. Ry. Co. will enter suit against the City to recover the amount of taxes, \$5,775, paid under protest. The taxes were levied on the Co.'s rails, poles, wires & rolling stock, according to the assessment as fixed last year by the Board of County Judges. By paying the taxes & bringing a suit to recover, the Co. will be in a position to appeal until it takes the matter to the Privy Council, if it chooses.

Metropolitan Street.—A special general meeting of shareholders was held in Toronto, July 28, to consider the issue of bonds to the extent authorized by the statutes relating to the Co. for each mile of single track of the railway, & authorizing the execution of a mortgage or mortgages upon all the property, tolls & income of the Co. for securing the payment of such bonds, such bonds to replace the existing issue of bonds, which are to be cancelled, & to authorize the increase of the capital stock of the Co. from \$100,000.00 to \$450,000.00. The meeting authorized the issue of 1st mortgage bonds to the extent of \$450,000.00, the capital stock to be increased to the same amount. (Official.)

Ottawa.—The City Council has decided to submit the Sunday street car question to the popular vote next January. There are two obstacles in the way of the operation of street cars in Ottawa on Sunday, the prohibitive act of the Ontario Legislature & a clause in the Street Railway Co.'s charter forbidding Sunday cars.

The men are asking for a 9 hour day at the present rate of pay, \$1.50. The Co. has offered \$1.43 for a 10 hours day, which the men refuse. It is not known whether they will strike or continue the 11 hour day.

Preston & Berlin.—A deputation recently waited upon the Ontario Government in the interests of this Co., & asked for a modification of the requirements of the statutory provisions respecting the granting of bonus by municipalities to railways. The law at present requires that the petition to a municipal council in favor of granting aid to any railway shall bear the signatures of a majority of the ratepayers & two-thirds of the real estate owners before the council can act upon it.

Toronto Ry. Co.—The gross earnings of this Co. are as follows:—

	1897	1898	Increase.	Decrease
Jan.	\$74,545.55	\$86,562.36	\$12,016.81	
Feb.	69,744.61	82,402.19	12,657.58	
Mar.	78,891.45	92,818.12	13,926.67	
April.	73,759.38	86,848.83	13,142.45	
May.	82,461.51	92,670.35	10,208.84	
June.	91,533.44	94,119.32	2,585.88	
July.	105,381.64	104,392.92		\$1,078.72

The decrease in July is explained by the Epworth League convention having been held in July, 1897, & the increase for that month was \$18,800 over July, 1896, or more than \$10,000 above the normal increase. July this year more than maintained the normal monthly increase.

Toronto Suburban.—Owing to a dispute between the Co. & the Weston village authorities, the Co has ceased to run into the village & now stops its cars at the eastern boundary. The contention between the Council & the Co. has been, according to the former, the neglect of the latter to build the track as agreed to, to the upper end of the village. When the line was first established, about 4 years ago, it ran only to the outside limits of the village. The Co. then obtained a franchise from the Council, one of the conditions of which was that it was to build its line as far as the Methodist church, & subsequently to the farther limits of the village. The Co. built its line to the Methodist church, but all proceedings on the part of the Council has failed to induce it to carry out the other part of the contract. The case came up at Osgoode

hall in March, when it was judicially stated that the Co. should carry out its agreement under the franchise, or suffer the consequences.

Manager Close, in an interview, said: "The village Council had the law on its side, but no common sense. Weston was one of those villages a few yards wide & 2 miles long. The cars stopping on the village limit, instead of running half-way to the other end, would be of great inconvenience to the citizens, & he thought that after they had been without the cars for a couple of weeks the Council would come to its senses. In the meantime, the Co. would regard the law."

Province of Quebec.

Montreal Belt.—The traffic in July was very heavy, no less than 92,000 passengers being carried. In July, 1897, 62,000 passengers were carried, an increase for July of the present year of 30,000.

It is expected that this Co's stock will be listed in the near future. Last year the Co. paid interest on its \$300,000 issue of bonds, & this year, with the constantly increasing traffic, it expects to pay a dividend on the ordinary shares, amounting to \$500,000. If it is able to do this, it will be the most eloquent testimony to the future success of the road. The Montreal Witness says there is a great sparsity of good investments on the local stock exchange at present, & the stock of an electric road so favorably placed as the Belt Line would be welcomed on the list. Of course the success or non-success of the issue will resolve itself into a question of earnings or expenses; if these are satisfactory success is assured.

Montreal Park & Island.—This Co. has been refused the right to appeal to the Privy Council from the judgment of the Quebec Court of Appeal confirming that of the Superior Court. The Co. entered into a contract with the town of St. Louis du Mile End some years ago, by which it was to supply the town with a first-class electric car service on the leading streets, with transfers to the Montreal St. Ry. & tickets at the same rates as prevail on the latter line. The Co. failed to carry out its contract, & the corporation took out an action against it. After considerable delay the case finally came up for hearing before Judge Charland, who held the action to be well taken, but granted the Co. a delay of 2 months in which to carry out its contract. This did not suit the Co., & it took the case to the Court of Appeal. The latter Court confirmed the first judgment. Then the Co. took the case to the Privy Council, where it was represented by E. Blake, Q.C. L. O. Taillon went over for the corporation, & succeeded in having the Co's application for appeal thrown out.

On Aug. 17 the safe & office furniture of the Co. was sold by bailiff's sale at the head office of the Co., Place d'Armes Hill, at the instance of the Collector of Provincial Revenue, for taxes due. The same day the bailiff went out to the office at St. Pierre aux Liens to sell the effects of the Co's office there. The furniture was purchased back by the trustees, Messrs. Thibadeau & Morrice.

Montreal Street.—The gross earnings are as follows:—

	1897.	1896.	Increase.
Oct.	\$116,292.09	\$109,110.38	\$7,182.71
Nov.	110,929.60	100,818.57	10,111.03
Dec.	113,128.91	103,116.02	10,012.89
	1898.		
Jan.	110,140.83	89,620.55	10,520.28
Feb.	102,625.49	89,051.68	12,673.81
Mar.	114,677.91	99,441.87	15,236.04
April.	110,819.37	103,045.93	7,773.44
May.	123,308.09	116,337.03	7,171.06
June.	133,164.61	130,076.78	2,487.83
July.	129,245.92	143,986.62	14,740.70
	\$1,164,533.82	\$1,096,105.43	\$6,790.979

The Montreal Star says:—"The average daily earnings of the road for the past 10 months were \$3,879.23, & the average daily increase over last year has been \$322.11. The excellent showing has, of late, created increased interest in the stock on the Exchange, & in the last couple of weeks it has advanced several points. The earnings have also led to talk of an increased dividend, but whether the directors will make the change remains to be seen. They will hold their annual meeting in a few weeks from now, & it is quite possible that the matter will be discussed. At present the stock pays 2½% quarterly, or 10% annually."

On Aug. 2 the Bank of Montreal paid in London, Eng., the coupons due Aug. 1 on the M. S. Ry.'s 4½% loan for £140,000.

The Co. is laying a 60 ft. rail along its whole route on Craig St. With the fewer points the cars will run much more smoothly than where rails are shorter.

Montreal to St. Bruno.—A number of Montrealers have purchased a mountain at St. Bruno, Chambly district, about 10 miles from Montreal, & purpose expending considerable in improvements. An electric railway from Montreal to St. Bruno is included in the scheme.

Quebec, Montmorency & Charlevoix.—It has been decided not to extend the electric railway system of Quebec to Montmorency this year by electrifying the Q. M. & C. Ry., but everything will be got in readiness during the winter to change the motive power of the entire railway from Quebec to Cap Tourment from steam to electricity next spring.

Rimouski & Gaspé.—The people of the parishes in Rimouski & Gaspé counties want Ahearn & Soper of Ottawa to establish an electric railway along the St. Lawrence in the districts named. Mr. Soper states that he has replied that his firm's interests in Ottawa preclude them from going into the proposed line.

Jurisdiction of Railway Committee.

In the case of the G.T.R. Co. v. Hamilton Radial Electric Ry. Co., Judge Street, Toronto, recently held that under certain sections of the Dominion Railway Act, enacting that the plaintiff's & other railways, & any railways whatever crossing them, are works for the general advantage of Canada, & are to be subject thereafter to the legislative authority of Parliament & the further enactment that no railway shall be crossed by any electric railway whatever, unless with the approval of the Railway Committee of the Privy Council, are within the powers of that Committee, & therefore the Committee could empower the defendant's railway, contrary to the provisions of its Provincial Act of Incorporation, to cross the plaintiff's railway at grade, against the will of the latter. (An appeal was entered in this case, but subsequently abandoned.)

The Ontario Divisional Court has held that it is the duty of a motorman in charge of an electric street railway car to specially see that the car is sufficiently under his control, so he may take special care to avoid collision with aged & infirm persons on foot whose ailments are plainly evident, & who cross the road at a street crossing.

Saturday Evening Bulletin. New Glasgow, N.S.: "THE RAILWAY AND SHIPPING WORLD is a publication of special interest to steam & electric railways, shipping, express, telegraph & telephone interests. Each issue generally has illustrations or maps. It is only \$1 a year. Published in Toronto."

TELEGRAPHS & CABLES.

The Telegraph in British Columbia.

At the recent meeting or the Canadian Electrical Association in Montreal the following paper was contributed by R. B. McMicking, Manager of the Victoria & Esquimalt Telephone Co.:

Since that excellent paper on the "Early Construction of Telegraph Lines in the Dominion" was submitted at the fifth convention by C. P. Dwight, I have had in mind the need of a supplementary clause concerning the introduction of the telegraph into British Columbia in the early sixties, & which was to constitute a section of the somewhat formidable undertaking of connecting the New with the Old World by means of about 18,000 miles of land line.

It may be—it doubtless is—within the recollection of some of our members that, on the failure of the first Atlantic cable in 1858, there was set in motion as a means of attaining the same end—i.e., telegraphic communication between the two hemispheres—a gigantic enterprise, known as the "Collins Overland Telegraph (Russian Extension) Co.," having in view the stretching of a wire from the telegraphic system of the Pacific States, through British Columbia, & via Behring Strait to Russia & Europe.

With marvellous energy & enterprise, the work of construction was commenced in 1863, the line entering B.C. from the south in longitude 122 W in 1864, being carried thence to New Westminster, from which point it followed the valley of the Fraser River & the Cariboo waggon road northward to Quesnelle, a distance of about 450 miles, which point was reached in 1865. Offices were established along the way, & from Quesnelle southward the line was soon opened for commercial business. The enterprise proved a great boon to the early colonists, both by reason of the large expenditure necessary in its construction & operation, as well as by the facilities offered thereby to the widely-separated settlements for speedy communication.

In 1865, also, a branch line was run across the San Juan Archipelago to Vancouver Island, connecting Victoria, the capital of B.C., with the main line at Swinomish, Washington Territory. This branch was about 74 miles long, including 5 submarine cables of a combined length of about 16 miles.

From Quesnelle the main line crossed the Fraser River to the westward, & following a north-westerly course, with Behring Strait as its next objective point, reached the Naas River about 400 miles distant from Quesnelle—when the second Atlantic cable was successfully laid, & operated July 29, 1866.

The construction party of about 250 men—and which included explorers, surveyors, choppers, line builders, operators & transport gangs—on receiving the news of the completion of the cable, remained in camp 2 or 3 days, awaiting developments. At the end of this time, finding the cable continued to work well, they set out for civilization, leaving their tools, stores & material to the tender mercies (in great part) of the Hudson's Bay trappers & the native red man, as their transport out would have cost more than the new article.

During the winter of 1866-7 a station was maintained at Fort Stager, on the Skeena River, where an operator named McCartney & a companion domiciled until the following spring, & where oftentimes during those—to him—dreary winter months, I held converse with him by wire from Yale.

In addition to the construction party the Co. owned & had in service a fleet of vessels, steam & sail, plying upon ocean & river, some in the transportation of material, supplies & line equipment, others in preparing for the placing of a cable across Behring Strait, a dis-

tance of about 60 miles—quite an undertaking at that date.

Of the fleet, I now recall the ocean steamer George S. Wright, the river steamer Mumford, barques Onward, Clara Bell, H. L. Rudgers; ship Nightingale, schooner Milton G. Badger. The Onward made a trip to Siberia with material and supplies, was caught in the ice—where she remained all winter—& became a wreck when the ice moved in the spring.

The Behring Strait cable was to stretch from Cape Prince of Wales, on this side, to Plover Bay, on the Siberian shore, from which latter point inland about 350 miles of line had been erected, while southward from Cape Prince of Wales, in Russian America, about 300 miles of land line had also been constructed.

The course of this contemplated line through the British possessions & down the great waterways of Russian America would doubtless have brought it into close proximity to the present Klondike gold fields, & near Dawson City, in which event it is not improbable that the hole-digging necessary would have developed the riches of that section at least 30 years earlier, & have given to the former generation an additional important mining epoch.

The history of the building of this line, & the causes which led to a work having for its object the encircling of the world by wire at so early a date, is likely always to be read with interest.

The Co.—which subsequently merged into the Western Union Telegraph Co.—maintained the line northward as far as Quesnelle until purchased in 1870 by the B.C. Government, which in turn handed it over to the Dominion Government on B.C. entering Confederation in 1871. Later still the C.P.R. assumed control south from Ashcroft. While under Government control, & previous to the influx of population consequent upon the building of the C.P.R., the revenue fell far short of the expenditure yearly.

In 1867, Buie Bros., merchants, built a branch line from Quesnelle to Barkerville, in the Cariboo gold region, a distance of 60 miles. This branch, together with the main line between Quesnelle & Ashcroft, is still operated by the Federal Government.

The original expenditure in the construction of the B.C. section of the Intercontinental line reached the large sum, roundly, of three million dollars.

I have written from memory, yet, doubtless, with comparative accuracy, through having been in the Co.'s service during construction & for some years afterward, & while in charge of Quesnelle office in 1866 becoming the medium by which the news of the successful laying of the Atlantic cable, July 29, 1866, reached the construction party 400 miles north-west of that point on July 30, 1866.

Canadian Pacific Telegraphs.

The Co. is stringing another wire between Canso, N.S., & Halifax, to provide the necessary facilities for the increased business between Europe & the West Indies consequent on the opening of the Halifax & Bermuda cable.

The land lines connecting with the cable across the Straits of San Juan de Fuca between Beecher Bay B.C. & Crescent Bay Wash., were completed July 28, giving the C.P.R. Telegraphs direct connection between Victoria B.C., Seattle, Port Townsend, Port Angeles, Wash., & other Puget Sound ports.

The C.P.R. has announced a large reduction in rates from the Kootenay District, taking effect August 1, the maximum rate now being \$1 from any point in the Kootenay to any telegraph office in North America. Local rates from the same district have been reduced from 25% to 50%. The Co. was able to

make these reductions on account of the advance made in the construction of its copper wire across the continent, & other local construction in British Columbia, which enables it to handle business with B.C. to better advantage.

The Co. has built a line between Nelson & Kuskanook B.C., 65 miles, which will form a part of the Crow's Nest line, & has been built ahead of construction so as to place Kuskanook, the supply depot on Kootenay Lake, in connection with telegraphic points in West Kootenay. For the present but one wire has been strung.

The Co. is repoling its line between Victoria & Nanaimo, B.C., along the Esquimalt & Nanaimo Ry., & stringing an additional wire through to Departure Bay, 82 miles, to connect with the new Gulf cable. This when completed, about Sep. 1, will give Victoria 3 direct wires to Vancouver.

Telegraph Office Changes.

GREAT NORTHWESTERN.

OPENED.—St. Leon Springs, Q.; Glanworth, Ont.; Bluevale, Ont.; Caledonia Springs, Ont.; Cacouna, Q.; Grimsby Park, Ont.; Port Sandfield, Ont.; St. Placode, Q.

CLOSED.—Lowville, Ont.; Odessa, Ont.; South Finch, Ont.; Cedars, Q.; Etchemin Mills, Q.

CANADIAN PACIFIC.

OPENED.—Departure Bay, B.C.; Amyot, Ont.; Brule Lake, Ont.; Grand Hotel, Caledonia Springs, Ont., summer office; Helderleigh, Ont.; Otter Lake, Ont.; Parry Wood, Ont.; Pembroke Station, Ont.; Pendleton, Ont.; Ray Side, Ont.; Rock Lake, Ont.; Ravensworth, Ont.; South March, Ont.; Seaguin Lake, Ont.; St. Lazare, Que.

CLOSED.—Claresholm, N.W.T.; Dereham Centre, Ont.; Sulford, Ont.

Telegraph and Cable Items.

The Western Union is putting in new poles between Frederickton Jct. & Fairville, N.B.

The Lake Manitoba Ry. & Canal Co. is stringing a wire between Winnipeg & Portage la Prairie, Man., to connect with the wires on its railway line.

The Western Union has its poles up to Vancouver, B.C., & it is said wire will be strung by the end of August. The line will run from Vancouver to New Westminster, thence by way of Blaine & Fairhaven, Wash., where connection will be made with existing W.U. lines. (See June issue, pg. 111, July, pg. 140.)

A 4-masted twin-screw steamship, said to be the largest cable steamer afloat, has been launched for an English telegraph construction company. The craft is 440 ft. long between perpendiculars, fitted with vertical cable drums, & in 4 of the holds are circular cable tanks about 45 ft. in diameter & from 17 to 32 ft. in depth.

On the Philadelphia, Wilmington & Baltimore Ry., 42 telegraph poles have been set for a test of the life of different woods. The poles are divided as follows: 6 chestnut poles, creosoted; 6 pine poles, creosoted; 6 chestnut poles, woodline; 6 set in broken rock, 6 in clay, 6 in the ordinary manner, & 6 to have a hole bored near the ground so they can be saturated with oil.

The Charlottetown Board of Trade has complained to the management of the Anglo-American Telegraph Co., in England, in reference to the rates charged on business to & from Prince Edward Island & in regard to the offices being closed at 8 p.m. It is said that unless the Board's representations are effective steps will be taken to secure competition, it being claimed that the Co. has no right to a monopoly of the Island business.

TELEPHONES.

The Maritime Province Companies.

The Nova Scotia Telephone Co. has an exchange in Halifax with about 1,200 subscribers and one in Dartmouth with about 100. Its trunk lines have between 50 & 90 offices, the rates for 5 minutes conversation being minimum 15c., maximum 30c. At Sackville, N.B. connection is made with the New Brunswick Telephone Co., & at various Nova Scotia points connections are made with local companies as follows:

At Windsor, with Cheverie Telephone Co.

At Hantsport, with The Valley Telephone Co., operating in Kings & Annapolis counties.

At Chelsea, with Queen's County Telephone Co., operating in Queens & Shelburne counties.

At Bridgewater, with the Central Telephone Co., operating in the New Germany district.

At Great Village, with the Union Furniture & Merchandise Co., operating in the Bass River district.

At Windsor, with the Rawdon Co's. lines, operating in the gold mining district, Hants county.

At Great Village, with the Economy Co's. lines, operating in the Economy & Five Island district.

At Maitland with the Noel Co's. lines, operating along the Noel & Walton shore.

At Elmsdale, with the West Gore & Nine Mile River Co's. line, operating in Hants.

This Co., as mentioned in our June issue, pg. 112, has been planning an extension between Pictou & Wallace, particularly to serve the lobster factory district. The matter is at present in abeyance; work may be gone on with this fall, but if not it is said that there is no doubt whatever the line will be built next season.

At the recent annual meeting the directors were re-elected as follows: President, B. W. Chipman; Vice-Presidents, R. Uniacke, C. F. Fraser, R. L. Borden, Dr. A. C. Cogswell, Dr. A. Haley, Windsor; C. F. Sise, Montreal; C. E. Harris, Secretary & General Manager. The accounts made up to Jan. 31 last were as follows:

ASSETS.

Balance forward.....	\$ 21,939 91

On Aug. 8 the usual 1/2-yearly dividend of 3% was declared.

In addition to the companies named above, the Yarmouth Amalgamated Telephone Co. operates in Yarmouth.

The New Brunswick Telephone Co., with headquarters at Fredericton, has an exchange

in St. John & 28 trunk line toll offices. In addition to the connection with the Nova Scotia Telephone Co. above mentioned, the N.B. connects as follows:

At St. John with the St. Martin's Telephone Co., of which the N. B. Co.'s Local Manager at St. John is Manager. This line has four offices, the furthest being some 50 miles from St. John.

At Norton with the Chipman Line, which is owned by the Central Ry. Co. This railway has no telegraph & operates its trains by telephone instead of telegraph orders.

The directors of the N. B. Co. are: Hon. A. G. Blair, President; A. A. Stockton, St. John; J. L. Black, Vice-President; C. Fawcett, Sackville; W. T. Whitehead, Fredericton; C. F. Sise, Montreal. The managing Director & Treasurer is F. A. Thompson, Fredericton.

On the trunk line between St. John & Moncton, 90 miles, iron wire is being replaced by copper, the intention being to extend the copper wire to Sackville, where connection is made with the Nova Scotia Telephone Co. In St. John the Co. uses silicium bronze wire, 17 gauge, entirely, finding the life of no. 12 iron for exchange work to be only about 4 or 5 years.

The Telephone Co. of Prince Edward Island, with headquarters at Charlottetown, has exchanges in Charlottetown & Summerside & pretty well covers the Island with its trunk lines, having 76 stations & about 200 miles of line outside the exchanges. Its charges for the trunk lines are: 5 miles for 5 minutes conversation, 10c.; 5 to 10 miles, 20c.; over 10 miles, 25c.; with 1/2 rates for each additional 5 minutes or fraction thereof.

Bell Telephone Co.

At a meeting of directors, July 29, acting upon the power conferred upon them by the shareholders at the annual meeting in Feb., 1892, it was decided to increase the capital of the Co. from \$3,168,000 to \$3,960,000. Each stockholder of record on July 29 is entitled to take, at par, shares of the new stock in the proportion of 1 share for every 4 shares then held. Subscriptions will only be accepted for full shares. Holdings that are not multiples of 4 shares can be adjusted by the purchase or sale of rights. The Co. will neither buy nor sell rights. The right to subscribe will expire on August 20, at 1 p.m. All stock not taken by subscriptions then on file at the Secretary-Treasurer's office will be disposed of as the directors shall determine. Stockholders who take new stock must file their subscriptions, & subscribers under purchased rights must file the assignment under which such rights are acquired with their subscriptions, at the Secretary-Treasurer's office, before August 20, at 1 p.m. Sellers of rights will not subscribe therefor. Payment at the rate of \$100 for each share must be made as follows: 50% on Sep. 1, 1898, 25% on Jan. 2, 1899, & 25% on April 1, 1899. Receipts for the amounts paid, bearing interest at the current rate of dividend, will be issued in exchange for each payment, & stock certificates will be issued at the date of the final payment.

After the publication of the notice there was an immediate demand for rights, which brought 60, while the regular stock ex-rights sold was bid 165. The price offered for rights shows the confidence which the public has in this security.

The Co.'s property in Barrie, Ont., was this year assessed for \$3,750. The Co. appealed against this decision to County Judge Ardagh, who gave judgment reducing the assessment to \$933.85, & stated that the property should have been assessed in the several wards & not in bulk. He held that telephone instruments & income are not accessible, but switchboards are.

In London, Ont., the Co. has lowered rates as follows: Telephones in residences from \$25 & \$30 to \$20 a year, unlimited, & for doctors' & dentists' offices from \$35 to \$25.

A new system of numbering telephones has been adopted in Montreal, under which it is necessary in all cases while asking for the number of the telephone required to add the exchange to which it belongs, that is, either main, east, up (uptown), Westmount or south, as the numbers are to run from 1 upwards on each exchange. This has necessitated re-numbering a large majority of the telephones. It is the custom in Montreal for operators to use the letter O instead of the word "naught," as, for example, in numbers like 2030, which is called "two-O-three-O," instead of "two-naught-three-naught," as this is thought, after years of experience in the U.S., to be less confusing & causes fewer mistakes.

The Co. met with a good deal of opposition in Quebec on Aug. 10, in regard to its scheme to put its wires underground. Local Manager Dauphin & Mr. Tower, of Montreal, appeared before the Civic Road Committee to explain their project, but as it did not provide for the removal of all street poles, a hot argument ensued. Mr. Tower claimed that it was necessary to leave some poles standing for distribution purposes. The committee wanted them all down. The Co. claims that by its charter it can put the wires underground, whether the corporation assents or not, & they propose to do so. Montreal had a similar case which the Privy Council decided against the city. The committee finally decided to send the City Engineer, with Mr. Tower, to look over the ground & report.

Telephone Items.

The Vancouver, B.C., Telephone Co. has started a nickel-in-the-slot machine at English Bay, which has been found a great convenience to business men & others camping out.

A telephone company has been established at St. Valier, P.Q., & is giving communication between the parishes of St. Raphael, St. Cay-jetan d'Armagh & St. Philemon de Belle-chasse.

Dr. Shaw, Lucan, Ont., is said to be making arrangements to construct telephone lines to some of the neighboring villages. It is said a line is to be built first to Southgate, in London township, & after to Saintbury & Mooresville.

The People's Telephone Co., of London, Ont., which recently secured a 15 years' franchise from the city, is said to be going to withdraw from the field, the City Council having declined to guarantee an extension of the franchise at the end of that term.

A telephone line has been completed by a private company to Welwood, Man., 15 miles north of Carberry, with an intermediate station at Petrel, 8 miles out. It is said the Bell Co. will put in a service between Carberry & Neepawa, 30 miles, with stations at Brookdale, Montrose & Petrel.

The Ontario Telephone & Switchboard Construction Co. has been incorporated by Ontario Letters Patent, with a capital of \$75,000. It is composed of R. Fox, T. H. Smallman, F. B. Leys, T. H. Purdon, R. A. Bayly, J. Labatt, M. Masuret, J. Milne, Dr. J. D. Wilson & J. R. Minihinnick of London, Ont., & R. H. Evans & H. C. Walters, of Detroit, Mich.

The New Westminster & Burrard Inlet Telephone Co. has toll lines in operation between Steveston, New Westminster, Vancouver, Port Moody, Ladner's Landing & Chilliwack, a total length of 106 miles of toll lines tributary to the cities of Vancouver & New Westminster. There are, also, 18 offices where the general public can communicate to or from, on payment of tolls. The Co. also operates the systems at Nanaimo, Kamloops, Vernon & Nelson.

The Canada Atlantic President.

John Rodolphus Booth was born at White Lake, Que., 1826. He settled in Ottawa in 1837, & seeing the great possibilities of the Chaudiere, with its vast water power, built a small shingle mill on the same site as was afterwards used for his mammoth lumber mill. In time he became one of the largest limit owners in Canada, as well as one of the most extensive manufacturers of lumber, controlling 640,000 acres of timber, & cutting annually at his mills from 25,000,000 to 30,000,000 ft. of lumber. It is mentioned as an illustration of his foresight that during the prevalence of hard times in 1874-76, when other lumber merchants, thinking the bottom had dropped out of the market, & that things were going to remain in that condition, were disposing of their limits by auction, Mr. Booth was always on hand to bid for them. As an Ottawa paper remarked:—"He had faith in the country, while they had not, & now these limits are worth 5 times the amount he paid for them, & this, too, after he has cut all the logs from them he required for his business." Owing to fires in his mills, Mr. Booth has now almost entirely closed his lumber business in Ottawa & is devoting much of his time to railway matters. One of his first works in this direction was the building of a short line in the Temiscamingue region, where he was also a promoter of the Temiscamingue Steamboat Co. In 1881 he threw himself into the work of building the Canada Atlantic Ry., connecting Ottawa directly with Montreal & the New England States. Later he took up the Ottawa, Arnprior & Parry Sound scheme & carried it to completion as far as Georgian Bay. Of this scheme a contemporary says:—"It is a part of one of the biggest enterprises which any private individual ever undertook on this continent. Mr. Booth aims at no less than making the O., A. & P. S. Ry. the greatest avenue to the sea, of the north-western states & northwestern Canada. To this end the mere laying of the iron between Ottawa & the Georgian Bay, gigantic as the task was, is but a beginning. There are elevators to be built, there are steamships to be put on the lakes, agencies have to be established to divert trade into the new route. In short, Mr. Booth has to reach out all over the great lakes to make their business tributary to the Parry Sound route. He is aiming at that & will accomplish it if he lives long enough."

Mr. Booth is President of both the C. A. & the O., A. & P. S. Ry. Co's. In Jan., 1897, he received from the Ottawa Board of Trade an expression of the appreciation & gratitude of his fellow townsmen for the enterprise & surprise displayed by him in the construction of the latter road. Mr. Booth is a Presbyterian & was formerly a trustee of the Ottawa Ladies College. He was one of the founders of St. Luke's Hospital, Ottawa, 1897, & has been

elected President of the Board of Governors. He has been opposed to free trade & favored the national policy. He married early in life Miss Rosalinda Cook, who died in 1886. He resides in Ottawa. We are indebted for the foregoing particulars to H. J. Morgan's "Canadian Men & Women of the Time."

Railway Rolling Stock Immovable.

An important decision was rendered by Judge Loranger in the Superior Court at Montreal Sept. 12, defining the class of property to which the rolling stock of a railway company belongs, whether movable or immov-

the property of the railway company, but of the Circuit Court of the district of Vermont, which tribunal had taken possession of the property & appointed Mr. Hays its receiver for the benefit of creditors; that Barker was only a prete nom for the Ducey Lumber Co., which had transferred to him its claim, based upon a note made & payable at St. Albans for no consideration.

The Court held that the locomotives & rolling stock formed a portion of the immovable property of the railway. It had been urged by counsel for contestant that the locomotives & cars when seized had not been on C. V. tracks, but that did not make any difference. They were being used for the service of the C. V., & that was sufficient. Another point raised by the opposants was also well founded. The property of the C.V.R. was now in the hands of the Vermont Court, & disposal of it could only be made through that tribunal. The last point was also held good & the seizure was quashed with costs.

Back Numbers Wanted.

We are anxious to obtain a few copies of the May & June issues of THE RAILWAY AND SHIPPING WORLD, the supply of both issues of which at our office has been exhausted, & through an oversight insufficient copies were retained for our files. If any of our readers who have copies of either or both of the numbers mentioned will mail them to the publication office, 33 Melinda St., Toronto, we shall esteem it a favor & will endeavor to return the obligation in some way.

Progress in the West.—Manitoba will have 32,000,000 bushels of wheat, & the Territories 6,000,000. Who was it that said it was folly to open up the West, & that a railway would not pay for the grease for its wheels? The yield is a splendid tribute to the statesmanship that added an Empire to Canada. — *Mail Empire.*

H. P. Dwight, President & General Manager, Great Northwestern Telegraph Co., Toronto, writes:—"You are making a very interesting paper of THE RAILWAY AND SHIPPING WORLD."

On Sept. 2, the New Brunswick Telephone Co. started stringing a copper wire between Moncton, N.B., & Amherst, N.S., to replace the iron wire. On the completion of this link the line will connect Moncton, N.B., with Fredericton, N.B., & Halifax, N.S.

The Irondale, Bancroft & Ottawa Ry. has established a telephone line connecting with the N.W. Telephone Co. at Bancroft, Ont. Telephone stations have been established at G.T.R. Jct., Irondale, Gooderham, Wilberforce, Deer Lake, Baptiste & Bancroft Station.

J. R. BOOTH

able. The importance of the point lies in the fact that whereas any quantity of movable property is subject to seizure for a debt, the immovable cannot be divided, but must be sold either altogether or not at all. The case was that of H. Barker against the Central Vermont Ry. Co., in which the seizure of 2 locomotives & 7 cars, the property of the C. V., had been made in execution of a judgment obtained by Barker against the railway company. C. M. Hays, Receiver of the C. V., filed an opposition to the seizure on the following principal grounds:—That the locomotives & cars formed a portion of the real & immovable property of the C. V. railway, with its equipment, was no longer

C.P.R. DIFFERENTIALS.

Decision of Interstate Commerce Commission.

Following is the full text of the report & opinion of the Commission in the matter of the alleged disturbance in passenger rates by the C.P.R. Co. heard at Chicago, Aug. 1, decided Aug. 31, the report & opinion being prepared by Commissioner Prouty:

Previous to Feb. 19, 1898, the published passenger rates via C.P.R. from Boston to Seattle & points upon the Pacific Coast taking the Seattle rate, & from St. Paul to the same points, had been: From Boston, 1st class, \$71.75, 2nd class, \$62.40; from St. Paul, 1st class, \$60, 2nd class, \$40. By tariffs effective Feb. 19 & 21, these rates were reduced as follows: From Boston, 1st class, \$40, 2nd class, \$30; from St. Paul, 1st class, \$25, 2nd class, \$20. The Boston rate was made applicable to all New England, the State of New York, & to certain portions of the States of Pennsylvania & New Jersey.

Upon the filing of this tariff various American lines interested in trans-continental business applied to this Commission for leave to meet the above rates of the C.P., & any other rates of the same kind, under the proviso of the 4th sec., & upon hearing such relief was granted. That proceeding is entitled, In the matter of the application of the Atchison, Topeka & Santa Fe Ry., et al., for a suspension of the 4th sec., 7 I.C.C. Rep. 593, & the report & opinion in that proceeding may be referred to for a statement of the situation in view of which, & the grounds upon which, that relief was granted.

Upon the issuance of the order in that case the American lines put in force tariffs which met the above rates of the C.P., & thereupon the latter Co., by a tariff effective Mar. 10, 1898, made a further reduction, so that the rates of that Company to Seattle & other points taking the same rate were: From Boston, \$35 1st class, \$25 2nd class; from St. Paul, \$20 1st class, \$10 2nd class. The Boston rate was made applicable to the territory previously described. The Seattle rate applied to all Pacific Coast points north of Portland. The Portland rate was \$5 higher on both 1st & 2nd class, & this rate was subsequently extended to San Francisco. At the same time large reductions were made in the rates between Eastern territory & St. Paul, & the same rates were established between the West & the East. These rates have continued in effect ever since, & are still in force.

The order of the Commission in the proceeding above referred to was made Feb. 24, 1898, & was to expire of its own limitation June 30 following. The petitioners at the hearing had represented, & without doubt had expected, that the difficulties which led to the reduction made by the C.P. would be adjusted, & the rates restored to a normal condition before the time limited for the expiration of the order. Such did not, however, prove to be the case, & on June 22, 1898, the same petitioners moved for an extension of that order. In pursuance of this application the Commis-

sion on that date granted a further suspension of the 4th sec. upon the terms of the original order until Jan. 1, 1899, unless sooner revoked.

At or about the time of the making of this last application, the passenger agents of the American lines interested requested a conference with the Commission in reference to this rate situation, & such a conference was had at Washington July 12 & 13. The committee which then appeared in behalf of the western roads stated that they represented more than 70,000 miles of American railway; that the present rate difficulties had already involved passenger rates over a considerable portion of the U.S., & that further, most serious disturbances must ensue unless some adjustment was agreed upon; that incalculable damage had already resulted to the revenues of the American lines, & that much greater damage was likely to result in addition to the many deplorable consequences which are involved in a long-continued contest of this kind. They stated that in this matter the C.P.R. was an unwarranted aggressor, & stood as a disturber of rates & rate conditions; & they insisted that it was the duty of the Commission to find some means, if possible, to compel that foreign corporation to desist from its unjustifiable attack upon American railroads. Among other things, it was suggested that we put in force that portion of the 6th sec. of the Act to Regulate Commerce, which refers to foreign carriers, & that we make such representations to Congress as might result in legislation to prevent in the future a repetition of similar conditions.

The C.P.R. Co. was also informally heard by us in this connection, & that Company earnestly insisted that the American lines had by their own unlawful conduct forced upon it its present course; & further alleged that in many instances the American lines had exceeded both in spirit & in fact the relief granted by the suspension of the 4th sec., in that they had not only met the rates made by the C.P., but had established lower rates than those of that Co.

It did not seem suitable to take any action in the premises without further investigation of the facts, & it was deemed best, for the purpose of obtaining authentic information in reference to the existing rate disturbances, to institute an inquiry into this whole subject. Such an investigation was accordingly ordered, & set for hearing at Chicago Aug. 1, 1898, & upon that day, & succeeding days, was had. The American lines were very generally represented by their passenger agents. Their case was presented by a committee selected for that purpose, for whom P. S. Eustis acted as spokesman. The C.P.R. Co. was represented by its Passenger Traffic Manager, D. McNicoll, & by its Attorney, A. C. Raymond. The parties were fully heard, the testimony being taken under oath. While many details were undoubtedly omitted, it seems probable that the general situation was fairly well developed. The record is voluminous, covering nearly 1,000 pages, but the essential facts can be briefly stated, & are these:

In 1886 the C.P.R. was completed from Montreal to Vancouver & opened as a trans-continental route. At that time the St. P., M. & M. R. extended from St. Paul to the International Boundary, where it connected with the C.P. for Winnipeg. In connection with this line the C.P. therefore had 2 routes between the East & the Pacific Coast, one by its main line, which runs along the northern shore of Lake Superior to Winnipeg, & the other by its American connection from St. Paul to Winnipeg, & so on to Vancouver. Traffic over the 1st line is said to pass through the Port Arthur gateway, that by the 2nd line through the St. Paul gateway. Through its Port Arthur gateway the C.P. competes for Pacific Coast traffic from the Provinces of

Quebec & Ontario in Canada, & from New England & New York in the U.S., while through the St. Paul gateway it is a competitor for the traffic from the middle west. The N.P. & the G. N. Rys. handle traffic both from the east & middle west through the St. Paul gateway.

It does not appear what rate was at first made by the C.P. through its Port Arthur gateway. It does appear from the testimony that the C.P. at first adopted from St. Paul via Winnipeg the rates then in force upon the American trans-continental lines. Within 30 days, however, from the opening of this route a rate was made \$10 below that established by such other through lines upon both 1st & 2nd class business. The American lines strenuously objected to this action upon the part of the C.P. & its connection; & the St. P., M. & M. road in consequence was expelled from the passenger association of which it had previously been a member. Nevertheless, the C. P. in connection with this line continued to make, against the protest of the American lines, a lower rate by about the amount above indicated, claiming that its line could obtain no part of the Pacific Coast business upon equal rates with the American lines.

The first Trans-Continental Association was formed in 1888. Although the evidence is not very clear, it seems probable that the C.P. was from the first a member of that Association. Mr. Eustis, who was at that time the General Passenger Agent of the C.B. & Q.R., & who in that capacity participated in the discussions which led to the formation of that Association, was of the opinion that the C.P. only came into it upon condition that it should be allowed the differential which it then had upon Pacific coast business. The parties who represented the C.P. in those negotiations were not before us, but we are inclined to think that the recollection of Mr. Eustis is substantially correct. The C.P. was insisting that it was entitled to this differential; it had apparently for 3 years actually enjoyed it; it may be doubted whether it could have obtained by that route & at that time any considerable part of the business without it; & it is hardly probable that it would consent to become a member of an association with power to fix its rates, every other member of which would be opposed to a differential, unless it was understood, either expressly or tacitly, that it should continue to enjoy one. This was, however, against the earnest protest of the American lines, which have always insisted that the differential was unjust, & have only consented to it as a matter of expediency.

The Trans-Continental Association seems to have continued in existence until 1892, when for some unexplained reason it was dissolved. In 1893 the G.N.R. was opened for business between St. Paul & Seattle, & became thereby a trans-continental line. Up to this time the C.P. seems to have enjoyed a differential of \$10 1st class, & \$5 2nd class upon business through both its Port Arthur & St. Paul gateways. The St. P.M. & M.R. had become a part of the G.N. System, & when that road became a trans-continental line upon its own account the C.P. of course lost that connection from St. Paul to Winnipeg. At present the Minneapolis, St. Paul & Sault Ste. Marie road, extending from St. Paul to the International Boundary at Portal, N.D., where it connects with a branch of the C.P. running from the main line at Moose Jaw, & which is controlled by the C.P., gives that Co. a line from St. Paul; but this road does not seem to have been completed when the G.N. was first opened for Pacific coast business.

One of the first acts of the G.N. was a reduction in trans-continental rates. Mr. Whitney, who was then & still is the General Passenger Agent of that Co., testified that the purpose of that reduction was to equalize cer-

tain rates, or, more properly, to abolish the wide difference between 1st & 2nd class fares. It was suggested by the C.P. that the real object was to advertise the new route. However that may have been, it is certain that the G.N. signaled its advent into the trans-continental family by a reduction of fares from St. Paul to Puget Sound points to \$25 1st class & \$18 2nd class, the regular tariff rates then being \$60 1st class & \$40 2nd class.

Just how long the condition of things thus induced continued & just how it was finally adjusted does not very clearly appear from the testimony. Up to this time the only connection of the C.P. to Seattle, Tacoma & points south had been by water from Vancouver. That Company was anxious to secure an all-rail connection to these points. By an agreement dated Feb. 1, 1894, between the G.N. & the C.P., it was stipulated, in consideration that the C.P. be given train service into Seattle & thence to Tacoma & Portland, that it should waive its claim to a differential as against the G.N. through the St. Paul gateway, & that it should also give the G.N. certain facilities in the way of train service to Vancouver. This agreement was to continue in force for a year & until 90 days' notice thereafter. It did not appear that either party had given the required notice. We were of the impression that a similar agreement was executed about the same time between the N.P. & the C.P., but a hurried examination of the record does not disclose this.

In the latter part of 1895, the 2nd Trans-Continental Association was formed, to which the 3 trans-continental lines above named were parties. In connection with this Association, carrying out the provision in the G.N. agreement, it was provided that the C.P. differential through the St. Paul gateway should be abolished, & that it should be allowed a differential only upon business through its Port Arthur gateway. The amount of this differential seems also to have been adjusted, being reduced from \$10 to \$7.50, 1st class, & continued at \$5, 2nd class.

In consequence of the decision of the Supreme Court of the U.S. in what is known as the Trans-Missouri case, the Trans-Continental Association was dissolved in 1897. At this time the differential rates of the C.P. were in force, as above stated, with the consent of the American lines. The American lines insist that with the dissolution of that Association all agreements growing out of it fell; & that the agreement granting the C.P. a differential thereby terminated. This is probably in no wise material. All these agreements may have been in violation of law from the first. However this may be, the published rates by the different lines allowed the C.P. this differential. The testimony before us showed that not long after the dissolution of the Trans-Continental Association the G.N. & N.P. companies determined that they would no longer submit to it. In this view they made some effort to induce their eastern connections to put in rates ignoring that differential. Those lines, fearing evidently the rate disturbances which would result, declined to do so. It is equally evident that the G.N. & N.P. did not care to assume the entire burden of the contest by openly reducing rates west from St. Paul themselves. Instead of making an open reduction in their published tariffs, therefore, they effected a reduction in their actual fares by selling tickets for less than the published rate. To use the phrase of the General Passenger Agent of the G.N., the rates of the C.P. were met "in our own office." The method by which it was done in the office seems to have been by the payment of excessive commissions. Trans-Continental tickets are largely sold by agents of the western lines in the East, the compensation of the agent being in the form of commission upon

the ticket sold. These commissions were very much increased with the expectation that the agent would divide his commission with the purchaser; that is, the railway expected & understood that this ticket would be sold by its agent for less than the published rate.

About this time, the latter part of 1897, mining operations in the Klondike began to attract a considerable volume of traffic to Puget Sound points. The C.P., claiming that it was not obtaining a fair share of this traffic, at once proceeded to inquire into the cause of it. It caused to be bought in various parts of the territory in question tickets via the American lines & their connection, the G.T.R. of Canada, not only of agents, but over the counters of some of the Eastern connections of these roads. These tickets were bought at from \$10 to \$15 below the tariff rate, & in some instances even more.

Mr. McNicoll testified that the C.P.R. in this contest for business did not depart from the published rate to his knowledge, & further testified that the reduction in the open rate by his Co. was induced solely by the secret acts of his competitors. Upon the other hand, the American lines, while claiming that the C.P. had not uniformly observed tariff rates, asserted that the insistence of that line upon the differential in question was the real cause of the controversy, & that specific instances of rate-cutting were immaterial for the purposes of this investigation.

This reduction was, of course, made with a view to finally obtaining a restoration of normal conditions, & efforts were at once begun, & seem to have been continued by all parties interested, to bring about some adjustment. The C.P. at first refused to consider the question with the American lines until rates had been restored to what they were before the reduction. This the American lines declined to do, for the reason that the C.P. would thereby enjoy the benefit of this differential, & would obtain an undue share of the heavy Klondike business which was then moving. Subsequently, the C.P. Co. expressed a willingness to submit to disinterested arbitration all matters at variance between the parties. To this all the American lines seem to have assented at first, except the G.N.R. Co. That Co. insists that the C.P. is not entitled to a differential, & declines to submit that question to arbitration or to consider any compromise of these differences which involve the granting of a differential. The other American lines seem for the most part to have come to the same way of thinking.

A good deal of bitterness was exhibited between the parties upon the hearing. The conduct of the C.P. was characterized by the American lines in the strongest terms as unreasonable & unjustifiable. It was alleged that this foreign road, having in its power to inflict almost untold damage upon its American rivals, had extorted without reason the allowance of this differential.

We are unable to find in the testimony anything outrageous in the conduct of the Canadian road in this matter. It may have originally used its power to inflict injury as a means of obtaining the allowance of this differential, & if it did, that is precisely what, in a greater or less degree, every road which obtains a differential, or an advantage in the shape of a differential, does. Possibly its power to inflict injury without corresponding injury to itself may have been exceptional.

(1) There may be reasons why this particular differential ought never to have been granted, but if the differential principle is to be admitted at all, it can hardly be said that the claim to one when originally made by the C.P. was utterly without foundation. In insisting upon it, that Company was simply claiming what numerous American lines had claimed, & what many of them were enjoying. We find nothing in the negotiations which led

to the re-adjustment of that differential in 1895, which savors of undue constraint upon the part of the C.P. Coming down to last Feb., whatever motive may have influenced this road in openly reducing its rates, it is difficult to see what better course it could take in view of existing conditions. The G.N. & N.P., its chief competitors, in wilful violation of the law which they are required to obey, had not only abolished the differential, but were taking, in some instances at least, a substantial differential for themselves. The C.P. claims that as a result of these practices, business was unduly diverted from its route. Ought that Co. to have indulged in similar practices? Obviously not. If the American lines deemed the differential unwarranted they should have published a rate which ignored it.

(2) Neither do we see anything radically unfair in the present attitude of the C. P. to this question. A recognized method of settling differences between competing lines is by arbitration, & the articles of many railway associations provide for such arbitration. When, therefore, the Canadian road proposes to submit to the final determination of one or more disinterested persons the adjustment of these matters in difference with its American competitors its position is instinctively felt to be a fair one. It may be wrong in its contention, but it can hardly be said to use the methods of the highwayman in enforcing that contention.

This is not intended & must not be taken as a criticism upon the attitude of the G.N. road in refusing to arbitrate. Whether a particular controversy shall or shall not be submitted to arbitration is a question for the parties interested. The G.N. Co. insists that there is at the bottom of this controversy a principle which, in justice, to itself, it ought not to sacrifice, & which it will not sacrifice. It declares that the granting of this differential to this foreign corporation under the circumstances is wrong, & it prefers to establish that principle once for all, no matter how great the cost may be.

The relation of the Commission to the controversy would seem, therefore, to be this: Since both parties refuse to yield the contest may be indefinitely prolonged. In this contest we were asked to render substantial aid to the American lines by granting a suspension of the 4th section. Whether such aid shall continue to be granted is an important question. Ordinarily a suspension of the 4th section applies to comparatively limited territory. In this case it of necessity covers a vast extent of country. By granting it we suspend as to a considerable portion of the U.S. an essential feature of the Interstate Commerce Law, & we permit the very discriminations which that law was intended to prevent. We have no hesitation as to the propriety of what has already been done, but when it becomes evident that this condition of things may be indefinitely prolonged, we feel that we ought to rest our action upon substantial ground. If we are of the opinion that the C.P. is wrong in its demand for a differential, however fair in its enforcement of that demand, it will probably be our duty to continue this relief to the American lines. Upon the other hand, if we believe that the G.N. and its American supporters are clearly wrong in their position, this will have an immediate bearing upon our action. We are brought, therefore, to consider this claim of the C.P. to the differential, & it should be observed that this is, & all along has been, the real source of contention between these parties. While it is probably true that a desire to obtain a share of the Klondike business may have led to much of the rate cutting, which in its turn produced the present demoralization, it is also true that the underlying question is the differential, & that if this were finally disposed of, there would be no serious difficulty in the immediate restoration of rates.

This question was referred to by the Com-

mission in stating its reasons for the suspension of the differential in the first instance, but was not formally considered at that time, since but one party was heard. Upon the present hearing the C.P. was asked to fully state the grounds upon which it based its claim, & it has presumably done so.

The American lines assert that no foreign railroad company should be allowed a differential as against its American competitor with respect to American business. This is affirmed not only as a matter of fact in this particular case, but, so to speak, as a general proposition applicable to every case.

To this contention we are not disposed to agree. It is open to grave doubt whether from the standpoint of the American railroad the position is a tenable one. The geographical relation of Canada to the U.S. is such that in several marked instances Canadian lines form a part of important through American lines. This is true of the G.T.R., which in the matter under advisement is the ally of the American roads. Many of these lines formed by a combination of American with Canadian roads enjoy differentials. To deny a differential might seriously cripple the entire line, & might injure American much more than Canadian interests.

But this question is to be disposed of not from the standpoint of the railway alone, but in the interest of the public as a whole, of which the railway is but a part. According to the present theory of interstate railway regulation the protection of the public lies in the competition of the carriers. That competition has unquestionably reduced rates enormously in the past, & many persons believe that the competition of Canadian roads, & especially of the C.P. road, has had an important influence in the reduction of rates in certain sections of the U.S. Now, to say that a Canadian road shall not under any circumstances enjoy a differential is to say in effect that it shall in no case charge less than the American line. It may carry traffic between points in the U.S., but it must do so at the rate fixed by the U.S. railroad. The application of such a rule might go far towards des-

troying the benefits of Canadian competition.

Whether or not Canadian roads should be allowed to participate at all in the carrying trade of the U.S. is a much broader & an altogether different question. The will of this nation as expressed in the acts of Congress does admit them to such participation, & whether or not this is wise or the reverse is for the consideration of Congress, or of the treaty making power. This is one of the subjects which come before the Commission already appointed & about to begin its sessions, for the purpose of considering various matters at issue between this country & Canada.

We are brought then to the question of fact whether at the present time the C.P. ought to enjoy a differential upon the business involved. It was stated upon the hearing that the purpose of a differential was to equalize disadvantages & the representative of the C.P. earnestly contended that what his Co. asked for was not an advantage over the American lines, but simply equality with those lines. However it may be expressed, the purpose of a differential is undoubtedly to enable a line to participate in traffic which it could not obtain if it were compelled to compete at the same rate as its rivals. It is in essence a device for the distribution of traffic. At the basis of every inquiry into the reasonableness of a differential lies, therefore, the question whether the line claiming it is "entitled" to participate in the traffic involved. To take an illustration from the present discussion: The C.P. claims & has been allowed a differential on passenger rates between New York & San Francisco. The passenger by that route must go from New York to Montreal, from Montreal to Vancouver, from Vancouver by boat to San Francisco, or from Mission Junction all rail to San Francisco. The distance, roughly speaking, is 4,000 miles by this route as against 3,000 miles by the ordinary direct routes. Now it does not seem to us that the C.P. has any business with that traffic, & its claim to a differential as between those points should be denied upon that ground. If it is allowed to make the same rate that is the limit to which it ought to go.

That inquiry, however, is not of much importance in the present instance. The C. P. itself does not seriously contend that this differential should now be extended to San Francisco. As we understand the claim of that Co. it is that the differential should be applied to Portland & points north upon the Pacific coast & upon the Atlantic coast to Eastern Canada, New England & the State of New York. A glance at the map or an examination of relative distances shows that the C.P. between these sections is a natural and feasible route, & that it should clearly be treated as a competing line. Should it be allowed a differential upon passenger traffic as claimed?

Assuming for a moment that if this Co. does in fact labor under disadvantages as compared with its competitors, those disadvantages should be equalized by the granting of a differential, let us inquire what these disadvantages are. Mr. McNicoll was asked precisely that question. In reply he pointed to several minor circumstances, but the principal consideration was that the time by his line was longer. The serious controversy in this case is mainly between the G. N. & the N. P. companies upon the one hand & the C. P. upon the other. Therefore, in considering the propriety of this differential it is sufficient to consider the time & distances by the St. Paul gateway alone as compared with those upon the C. P. So considered the time from Boston to Seattle is via the American lines 115 hours, via the C. P., Port Arthur gateway, 144 hours. From Boston to Vancouver, via American lines, 125 hours, via C. P., Port Arthur gateway, 140 hours.

From this it appears that the difference in time from Boston is 15 hours in favor of the American lines to Vancouver & 29 hours in their favor to Seattle. The time from New York would be still more in favor of the American routes, & from Montreal less. Boston may perhaps be fairly selected as representing the entire territory.

If we turn now to the distances by these various lines we do not find the same discrepancy. That from Boston to Seattle by the American lines is 3,240 miles, by the C. P.

IMITATIONS. PAGE FENCING HAS 'EM.

like every article of great merit. But none of the imitations equal the Page in quality of material and construction. Page fencing is made of coiled steel wire of highest grade. The cross wires are in one piece, and wrapped around the horizontals. Ours is the only fence that will not be injured or destroyed by snowbanks. If you want a cheap fence, buy barbed wire or one of the imitation woven fences. If you want a fence that is the best, and one that is much the cheapest in the end, buy the Page. 3,323 miles. From Boston to Vancouver via American lines 3,346 miles, via C. P. 2,935 miles. It appears therefore that the distance is not substantially against the Canadian line.

It is urged by the C. P. that relative distance is of no account. This is not exactly true. The public is apt to associate the quickest time with the shortest route & it is worth something to be able to advertise the advantage of distance. Still, what the passenger looks at most is the time occupied. Twenty-nine hours longer between Boston & Seattle means both the loss of an additional day & the expenditure of additional money. It cannot be denied that such a difference in time as that exhibited is a serious handicap.

A railroad must not, however, create a disability for the sake of obtaining a differential. If the C. P. fairly can & fairly ought to make substantially the same time as is made by the American lines, then the fact that it does elect at the present to use more time ought not to weigh so heavily in its favor. That Co. would not probably admit that its road-bed or equipment is inferior to that of any trans-continental line. Why is it then that the time occupied is so much longer? This inquiry was put to Mr. McNicoll, & his answer was: Owing to the fact that it has comparatively little intermediate business over the first half of the journey from the East to the Pacific Coast as against much intermediate business upon the American routes. For this reason it cannot, over the corresponding part of the journey, run trains with the same rapidity as do the American lines. Thus the passenger who starts from Boston to Seattle by way of Chicago & St. Paul, rides for the first 1,500 miles upon an express train which is provided not for him but for business independent of trans-continental business, while the passenger who sets out for the same destination by the C. P. passes for the first 1,500 miles through a country where there is for the most part little or no intermediate business, where a train must be run for through passenger mainly, where the travel during a considerable portion of the distance justifies the running of but a single train a day which must do a local as well as through business.

Just how far this may be justified by actual conditions we cannot accurately determine. The local business between Montreal & Winnipeg certainly does not much embarrass the speed of its trains. One circumstance may be here referred to which casts great doubt upon the validity of this claim.

As already said, the main line of the C. P. runs west from Montreal along the northern shore of Lake Superior through Port Arthur, Winnipeg, & so on to Vancouver. From Sudbury, distant from Montreal about 450 miles, a branch line runs down to Sault Ste. Marie, where it connects with the M., St. P. & S. Ste. M. R. This latter railroad, which is controlled & virtually operated by the C. P., extends from Sault Ste. Marie to St. Paul, & from St. Paul to the International Boundary line at Portal, where it connects with another branch of the C. P., joining the main line again at Pasqua Jet. The C. P. has therefore 2 lines from Montreal to the Pacific Coast, one by its main line through Port Arthur & the other by what is called the Soo line through St. Paul. By the latter route the passenger leaves the main line at Sudbury, passes through St. Paul, & returns to the main line again at Pasqua. The distance from Sudbury to Pasqua is a trifle greater by the Soo line than by the main line.

Now the actual running time from Boston to Vancouver by the way of the Soo line to-day is 1.7 hours, as against 140 hours by the main line; & the actual running time from Boston to Seattle by the Soo line is 131 hours, as against 141 hours by the main line. This makes the time from Boston to Vancouver but 2 hours longer & from Boston to Seattle

but 16 hours longer by the Soo line than by the shortest American line.

In making the foregoing comparisons of time & distance the American line selected has been the Boston & Albany, New York Central, & Lake Shore to Chicago. But this strictly ought not to be. As against that line the C. P. has enjoyed a differential of \$11.75 1st class, & \$7.35 2nd class. This arises from the differential between Boston & Chicago. The differential of \$7.50 1st class & \$5 2nd class which the C. P. demands is, from New England, as against the G. T. R. & its connections, & the comparison, in order to be of value in determining the justice of that claim, should be with the G. T. as the initial line between Boston & Chicago. This comparison would reduce the difference in time & give the C. P. an advantage in the matter of distance. Comparing the time by this route with the time actually made by the C. P. over its Soo Pacific route there would be but little if any difference against the latter Co.

Now it will hardly be claimed that the road-bed or equipment from Sudbury via St. Paul to Pasqua is better than via the main line between those points, nor that the intermediate business is materially greater, & if the C. P. is now actually running its trains upon this time by the Soo line, it is difficult to believe that it could not by a proper adjustment of its schedules & the reasonable operation of its trains make the same time by its main line; in other words, that it could, if it saw fit, do away with the greater part of the difference in time which now exists. Every other consideration except that of time is against the granting of this differential.

(3) This is clearly apparent by comparing conditions now with those when the differential was first allowed. In 1886 the C. P. R. was a newly-completed route. Its road-bed was imperfect; its name but little known. It had no communication with Seattle or Tacoma except by boat from Vancouver. Under these circumstances it might very well happen that it could not at the same rate obtain a fair portion of the business. To-day all this is reversed. Of all these competing lines the tracks of the C. P. alone extend from ocean to ocean. Its road-bed & equipment are equal to any. It has railroad connection with Seattle, Tacoma & Portland. It runs through cars on certain days each week from Boston to Seattle & from Boston to Vancouver, & through cars every day from Montreal to Vancouver. It has steamship connection with Asia by its own steamers. It may be doubted if the name of any of its rivals, perhaps of any American railroad, is more generally known throughout the civilized world than is that of the C. P.

Nor is this all. When this differential was first granted business to Pacific Coast points went largely to San Francisco; practically none of it went north of Vancouver. It was largely in consideration of that fact that the differential was then allowed. To-day this is not so. The great volume of traffic by these north trans-continental lines is to Puget Sound, or through Puget Sound to points beyond. Ten years ago the C. P. was out of the direct line of travel between the East & the Pacific Coast; to-day it is the direct line for a large portion of that traffic.

It has already been said that the real contest is between the N. P., the G. N. & the C. P., & it has been further said that for the purpose of a just comparison the G. T. & its connections should be treated as the initial line between Chicago & New England & between Chicago & Eastern Canada. If, upon this basis, these 3 lines are placed side by side as competing routes between the territory in question east & west what is the result? In location, distance, construction, equipment, through car service, reputation, facilities for obtaining business, secure attachments, the C. P. would not for a moment admit its inferiority to either

of the others. We do not think that the mere fact that that Co. elects to take more time than its competitors by its best line, while it actually makes substantially the same time by its inferior line, entitles it under all the circumstances to a differential.

There is still another consideration which is entitled to great weight. While the differential is firmly grounded in the railroad policy of certain portions of the U. S., & is approved by many of the greatest railroad authorities, its application is by no means universal. The testimony in this case shows that there are no differentials west of Chicago. It is understood that none prevail in the South. The use of the differential is almost exclusively confined to trunk line territory or to rates made by combinations of those in that territory which carry the trunk line differential. The conditions there are such perhaps as to emphasize more strongly than elsewhere the necessity for some expedient of this kind.

It is evident that in all the great extent of country where there is no differential there must be at many competitive points & between many competing lines disadvantages & disabilities which are not equalized. This must be true between the trans-continental lines themselves. Both the General Passenger Agent of the N. P. & Mr. McNicoll of the C. P. stated that in their opinion the G. N. could not, under present conditions, obtain an equal proportion of passenger travel with the N. P. at the same rate, & yet the G. N. asks for no differential. The same thing must be true of other lines at other points, yet all these lines have agreed not to ask a differential.

Now, under these circumstances, we do not think that a single line, whether it be American or Canadian, ought to insist upon the introduction of the differential into this territory, unless it plainly appears that under the application of the present rule that line is at a clear & manifest disadvantage.

This we think should be true of an American line, & all the more is it true of the C. P. That road is eminently a Canadian institution. It was built largely by government aid & for government purposes. It operates, to be sure, many hundreds of miles in the U. S., but the traffic in question passes throughout almost the entire distance over the Canadian line. We are satisfied that, if this Canadian corporation comes into the U. S. to compete for traffic between points in the U. S., it should be content to operate upon the same terms with its American competitors, unless those terms are clearly unjust & unreasonable. It ought not to come into this territory & insist upon a different order of things than it finds here, unless it makes its title to that demand clear beyond all question. By so doing it becomes a disturber of rates & of the railroad situation.

In considering this differential question we have necessarily relied upon the testimony, which is not altogether satisfactory. It is quite possible that some material fact may have been omitted from that testimony & not therefore considered by us. Once conceding the principle of the differential, probably the only satisfactory test of its justice is its actual results, & nothing material of that kind appeared in the present case. It seemed to us, however, upon the case as made, that no differential whatever ought to be introduced into this territory in favor of the C. P., & upon that point we have felt very fully satisfied.

It would seem, however, that it should be entitled to make as low a rate as is made by any American line, & that attention is called to the fact that under the operation of the trunk line differentials this would not be true of fares from New York to the coast & differential of the C. P. west of Chicago.

The New York Central is what is called a standard road, & under the rules of the Joint Traffic Association a standard rate is fixed between New York & Chicago \$10.00. This

certain other of the lines between those points. This enters into the rate beyond Chicago which is made by certain additions to the Chicago rate. No lower rate can be made than by the way of Chicago. The C.P. forms its connection between New York & Montreal via the N.Y.C., & while there are other possible routes by differential lines between these points, there is no other practical route. The result is that the fare by this line between New York & Seattle would apparently be \$3 more than by some other lines, although the passenger only passes over the N.Y.C. as far as Albany, & the fact that he leaves New York by that line would probably be of very little consequence in determining the trans-continental route. It seems to us that this apparent inequality should be corrected.

The idea above suggested that the Canadian road should not ask a differential in competing for traffic between points in the U.S. applies with equal force to the converse of the proposition.

On Feb. 16, 1898, upon the petition of the G.T.R. of Canada & certain of its American connections, we granted a suspension of the 4th sec. for the purpose of allowing these lines to meet the competition of the C.P. between the Provinces of Ontario & Quebec upon the one hand & Manitoba upon the other. The distance from Montreal to Winnipeg by the C.P. is more than 300 miles shorter than by the American lines & the business which moves between those points is almost wholly that originating & ending in Canada. While the American line should have the same right to compete for this business that the C.P. has to compete for American business, it is doubtful whether they should be granted anything in the way of an immunity to enable them to do so. The suspension of the 4th sec. would seem to be of this nature. The American lines allege that they have a large intermediate business, whereas the C.P. has very little. But the existence of this intermediate business can hardly be termed a disability. The reason for the slower time of the C.P. is alleged to be the want of intermediate business. If that Co. is denied any benefit in one case from the want of it, it certainly should be put under no disadvantage in the other case from the same source. It is perhaps fair, so long as the C.P. observes in the making of its rates the rules of the 4th sec., that its American competitors shall be obliged to do the same. This, of course, refers to a real observance of that rule, not to its observance in particular cases where circumstances render it desirable, & to normal conditions & compensation rates, not a state of warfare.

Substantially the same observation applies

to the suspension of the fourth section in respect to the Kootenay District. That traffic moves largely, although not entirely, between points in Canada, & if the American lines are to compete for it they should perhaps compete under whatever limitations the law imposes.

The order of Feb. 24, 1898, suspending the operation of the 4th sec. was put partly upon the ground that the C.P. was in violation of the provisions of the Interstate Commerce law in making rates without the consent of the initial line. The tariff then filed by the C.P. quoted rates from all New England, from New York & from some other territory in the U.S. The testimony before us then showed that the method of the C.P. was to purchase local tickets to junction points with its own line, as described in that opinion, & this was said to be illegal.

Upon the present hearing it developed that from New England points the rate is now quoted by the initial line so that the objection with reference to that section has been removed. The representative of the C.P. testified that his Co. handled practically no business in New York & contiguous territory save from points upon the N.Y.C. That line has declined to file a reduced tariff, but apparently the operations of the C.P. are conducted with its full knowledge & assent. Under the normal rate it appeared that the N.Y.C. received for its division a less sum than its full local fare from New York to Montreal. It now furnishes the C.P. with its local tickets to be used in ticketing passengers from New York to Montreal, & thence via the C.P. to destination. Upon this ticket & the ticket of the C.P. it checks baggage through from New York to destination. It does not receive for its local ticket the price of its full local fare between New York & Montreal, but receives now the same sum which it had formerly received by way of its division. This seems to constitute a joint arrangement between the 2 companies for transportation by that line. Just what the legal quality of that arrangement may be we do not attempt to decide, but clearly it is not a case where the C.P. invades the territory of the initial road without its consent & purchases business in the manner detailed in the original case.

The action of the C.P. in ticketing to & from Pacific Coast points appears to have been with the consent of the lines interested there, under the arrangements existing before the reduction in rates. It would seem, therefore, that at the present time the actual violations of law in that respect are very much less extensive than it was supposed they were then. While this does not lead to any reconsideration of the conclusions formerly reached, it

has an important bearing upon the suggestion of the American lines, that, in view of the contumacy of the Canadian road in this respect, certain retaliatory measures ought to be adopted.

Both the representatives of the American lines & of the C.P. have applied to this Commission with the request & in the hope that some measures might be taken by it which would relieve the unfortunate situation. Apparently the Commission has no power to afford such relief. It cannot allow or disallow the differential in dispute. It has investigated this question for the reasons indicated in the foregoing opinion, & would deem it extremely fortunate if the conclusions reached might be made the basis of an early adjustment of the matters in difference.

It must be distinctly understood, however, that we do not recommend the settlement of this controversy by the making of any agreement, involving arbitration or otherwise, which is in violation of the Anti-Trust Law, as interpreted by the Supreme Court of the U.S.

Such features of the past or future history of this controversy as may in our judgment render appropriate any statement or recommendation to Congress will be presented in our annual report to that body. So far as our official action can affect the matter, we conclude that we ought not at present to rescind the suspension orders heretofore made; but if the C.P. should waive its claim to the differential, in accordance with the views above expressed, it might become our duty to revoke the permission granted by those orders.

The Canadian Pacific's Prompt Action.

On Sept. 6, Vice-President Shaughnessy issued the following circular to the executive officers of competing & connecting lines:

The complete opinion of the Interstate Commerce Commission in the matter of certain differences about passenger rates between the C.P. & a number of railway companies in the U.S. has just come to hand.

The commissioners recite the circumstances under which the C.P. was, by agreement with the other lines, first accorded a differential, & in this connection they say:

(Here follow the paragraphs in the I.C.C. opinion given above to which the nos. 1 & 2 are prefixed.)

It was not understood by this Co. that the commissioners would express an opinion on the merits of the claim for a differential, & therefore, the Co. had no opportunity to submit in full its evidence & argument, but the commissioners have dealt with the subject in

their report, & they give it as their opinion that the C.P. is not now entitled to a differential on Pacific Coast passenger business. In giving their reasons, they say:

(Here follows the paragraph in the I.C.C. opinion given above to which the no. 3 is prefixed.)

With reference to passenger traffic between New York & San Francisco, the commissioners are of opinion that the C.P. has no right to that traffic because of the greater length of its route. In expressing this opinion the commissioners evidently lost sight of the fact that with nearly the same proportionate difference in distance between points in Eastern Canada & Manitoba, they had already suspended the operation of the 4th sec. of the Interstate Commerce Act, known as "The long & short haul clause," to enable the American lines via Chicago & St. Paul to compete with the C.P. for purely Canadian business to & from Manitoba, without disturbing their intermediate rates, but no doubt this will receive the further consideration of the commissioners.

The findings of the commissioners justify every step taken by the C.P. for the protection of its interests from the very beginning, & while we regret that an opportunity was not given us to fully present our case as regards the specific question of a differential, we cannot help recognizing the marked spirit of fairness with which the whole subject is handled, particularly in view of the fact that on the one side was the C.P.R. Co., "a foreign corporation," while on the other was a combination of companies in the U.S., representing 70,000 miles of railway, before an American tribunal.

Throughout their very able analysis of the question the commissioners seem to have entirely lost sight of the fact that while this Co. is competing with the U.S. railways for interstate traffic, several of the more important lines in the U.S. are active competitors of the C.P. for Canadian traffic, & it may not be out of place to say here that if such an arrangement were practicable, & in the public interest, the C.P. could very well afford, & would be glad to forego, all claims to interstate traffic of every description if its U.S. competitors made no inroads on the business tributary to its lines in Canada.

However, in this case, as in all previous cases involving U.S. traffic, the Co. accepts without question, & will be governed by the decision of the Commission, taking care, of course, that its rates will be on the basis of those which prevail by any other route, & tariffs covering traffic affected by the decision, to take effect on the 25th inst., restoring ante bellum rates as far as practicable in existing conditions will be filed by this Co. in accordance with the Interstate Commerce Law.

TRANSCONTINENTAL RATES RESTORED.

Following up Mr. Shaughnessy's announcement the C.P.R. gave notice that on Sep. 25 transcontinental rates would be restored as indicated. In illustration of the new rates effective Sep. 25, it may be stated that the ante bellum rate from Toronto to North Pacific Coast points via C.P.R., 1st class was \$61.80. The new rate is \$66.30. The 2nd class ante bellum rate was \$55.80. The new rate is \$56.30. The figures during the cutting period were, 1st class, \$35, 2nd, \$25. The Grand Trunk & its U.S. connections' ante bellum rates were, 1st class, \$73.90, 2nd class, \$62.50. Now it is presumed they are the same as the C.P.R. The western U.S. lines now have to maintain tariff rates, or run the risk of having the C.P.R. discover their cuts & adjust its tariff to suit them. To keep tariff rates is something the U.S. western lines have never been able to do for any considerable period.

There appears to have been a general impression that the restoration of transcontinent-

al rates would be accompanied by a restoration of local rates in Ontario & Quebec, but the cutting continues, with no present sign of a speedy cessation. Meanwhile the people are luxuriating in cheap travelling & the G.T.R. & C.P.R. are losing money that might just as well be going into their treasuries. It is a great pity the two managements cannot get together & settle their differences.

Country retailers would hail with delight a restoration of local rates, which have for many months been operating against the leading stores at country centres. Their customers, by reason of the low railway rates, are able to visit Toronto quite frequently & make purchases at the large stores, diverting the regular trade of the country establishments to the city. The restoration of railway rates would, it is thought, result in giving back much of this trade to country merchants. Quite a few cases have been reported of country merchants reducing their purchases on account of the loss of trade in the way stated, & a change in the policy of the railways would be a good thing for the wholesale trade, as it is confidently expected it would lead to larger buying for the country trade than if present conditions were to continue indefinitely.

U.S. Railway Papers' Opinions.

The Railway Age says:—"At the hearing before the Interstate Commerce Commission there was considerable sparring between the representatives of the Canadian Pacific & of the American lines, respectively, on the question as to whether or not the Canadian road was subject to the jurisdiction of the Commission. The C.P. challenged anybody to cite a case wherein it had failed to comply with the commission's rulings. It even went so far as to intimate that in this respect its example might be copied to advantage by companies on this side of the border. American railway men smiled at what was regarded—in language which may or may not be slang—as an admirable 'bluff' on the part of Mr. McNicoll. Whether it was a 'bluff' or not, the C.P. has made its protestations good in somewhat startling fashion by the promptitude with which it has deferred to the wishes of the commission in this particular case. The Commission says that if the C.P. comes into the U.S. to compete for traffic between U.S. points, it should be content to operate upon the same terms as its American competitors, unless those terms are clearly unjust & unreasonable. The C.P. immediately announces that tariffs covering all traffic affected by the decision will be filed with the Commission, to take effect Sep. 25, restoring rates to the ante-bellum basis 'as far as practicable in existing conditions.'

"This is admirable. The only question is as to how far it will be 'practicable under existing conditions.' The C.P., of course, reserves to itself the right to meet any rates made by any other transcontinental route. It may be said without much fear of contradiction that certain of the American transcontinental lines are feeling at the present moment very much more bitterly toward each other than any of them feels toward the C.P. There is a not remote possibility that some of the American lines may find it difficult to maintain rates with entire good faith among themselves, in which case the Canadian road will be in a position to say uncomfortable things.

"Moreover, the deference of the C.P. to the wishes of the Commission does not affect the Ontario-Manitoba-Kootenay business. This traffic is not 'between points in the U.S.' It has been understood for some time that the C.P. would gladly abandon coast differentials, if it could obtain a satisfactory settlement of the Ontario-Manitoba difficulty, or if the American lines would withdraw their support

from the G.T.R. The passenger business to the coast is, in the view of the C.P., a matter of comparative indifference as compared to the business from Ontario points & Eastern Canada to places along its own western lines. When the C.P. files its new tariffs, what position will the American lines be in toward the G.T.R.? We have no expectation that the C.P. is prepared to abandon its differentials to Pacific Coast points unless it is assured of retaining its Manitoba colonist business.

"We would not detract one iota from the admirable docility of spirit of the C.P. as shown by its complying with such alacrity with the views of the Commission. But when the smoke clears away we imagine that its complaisance will be found to have had diplomatic advantages. For the war is not over yet."

The Railroad Gazette says:—"Evidently the very lucid explanation of the facts underlying the controversy between the Canadian Pacific & its American competitors, which Commissioner Prouty gave in his report on the subject, convinced our Canadian friends that if their contention was to be based on grounds of reason, which would appeal to non-railroaders, it might as well be abandoned. So far as American traffic managers are concerned the C.P. might have kept up the contest forever; for, according to the barbarous philosophy prevailing among passenger men, a road which demands a differential need present no argument to justify itself, other than the facts that its cars are running and that it is willing to carry people at the rates which it gets. But Mr. Prouty's showing that the C.P. had no disadvantage but time, & probably could easily remedy that, really exposed the whole controversy as one of the old-fashioned, blood-letting kind, where the only principle is to carry for cost, or less, until the other fellow gives in—or until you become faint yourself. The showing that Vancouver is, for some traffic, as important as San Francisco, and that, therefore, the C.P. is not, as in former years, at a great disadvantage in the matter of distance, was the most important fact underlying Commissioner Prouty's argument.

"Mr. Shaughnessy asserts that 'the C.P. would be glad to forego all claims to interstate traffic of every description if its U.S. competitors made no inroads on the business tributary to its lines in Canada.' The precise meaning of these last half-dozen words is not exactly apparent, but the clause is, no doubt, sufficiently elastic to include cotton cloth from New England bound for Asia by the way of Vancouver, a kind of traffic which the American roads might not be willing to exclude from the term 'interstate traffic.'

"While it will be a decided relief to have this hitherto perennial quarrel out of the way, it is in order to remind our Wall Street friends who have been looking for great changes in earnings whenever peace should be declared, that the earnings on the traffic which has been affected by the low rates are but a trifling fraction of the total income of any or all of the roads. The space-writers have, indeed, had a very prolific controversy over an unimportant matter."

The West Shore Ry. dropped a bombshell in the railroad camp the 1st week in September in the shape of an announcement that thereafter its round trip rate from Buffalo to New York would be an even \$10. This cut of \$6 was immediately met by the Lehigh, Erie & Lackawanna, & it is said the New York Central will follow. The cut is the culmination of secret slashing that has been going on in Buffalo for months past. Ticket agents in New York have been on sale to brokers on some of the lines at as low a rate as \$4.

RAILWAY APPOINTMENTS, &c.

Central Ontario.—H. S. Johnson has been elected Vice-President, vice H. P. McIntosh, of Cleveland, O.

Erie & Huron. The following appointments have been made, with offices at Walkerville, Ont.: E. C. Walker, Managing Director; W. Woolfart, General Superintendent & Traffic Manager; A. Leslie, Accountant & Auditor; J. H. Coburn, Solicitor; Owen McKay, Engineer; S. Austin, Mechanical Superintendent; H. Morris, Roadmaster. All these officials occupy precisely similar positions on the Lake Erie & Detroit River Ry., to which the E. & H. has been sold. The only E. & H. official whose services have been retained, is the Secretary, J. E. Foreman.

Grand Trunk. The following changes & appointments took effect Sept. 1: J. Piper, Roadmaster, Toronto, transferred to 20th District (Brantford & Tilsonburg Branch), 21st District, & 22nd District Harrisburg to Guelph, vice P. Earle; headquarters at Brantford. Chas. O'Dell, appointed Roadmaster of 16th District & Toronto terminals, vice J. Piper, transferred; headquarters at Toronto.

The following changes & appointments are effective October 1st: H. E. Whittenberger, Trainmaster, 15th, 16th (Hamilton to Port Dover), 20th (Buffalo to Goderich) 21st Districts; vice A. S. Begg, transferred. Office at Stratford, Ont. P. J. Lynch, Trainmaster, 22nd, 23rd & 24th Districts. Office at Stratford, Ont.

Lake Manitoba Ry. & Canal Co.—The staff of this line, which is controlled by Mackenzie, Mann & Co., will also operate the Manitoba & Southeastern, now under construction from Winnipeg southeasterly. The head offices are in Winnipeg, the chief official being D. B. Hanna, who ranks as Superintendent.

Spokane Falls & Northern.—The following officials have been appointed, in addition to those mentioned in our July issue, pg. 147: Auditor, A. M. Thomas; Master Mechanic, C. H. Prescott.

White Pass & Yukon.—The Chief Engineer of this company is E. C. Hawkins. The officials of the operating department, with headquarters at Skagway, Alaska, are as follows: Division Engineer, F. H. Whiting; Master Mechanic, W. H. Garlock; Purchasing Agent, W. L. Wilson; General Storekeeper, J. W. Young; Freight & Passenger Agent, E. H. Birks.

The Late Sir Casimir Gzowski.

This distinguished man, who died at Toronto Aug. 24, occupied an important part in the railway & canal history of Canada. Passing over the details of his earlier life, which have been very fully referred to in the daily press, it may be mentioned that when he came to Canada in 1841, the project of deepening & widening the Welland Canal was on foot, & Sir Charles Bagot, who formed a very high regard for his abilities & character, very heartily sanctioned his appointment to an office in the Department of Public Works. For the next 6 years he was actively engaged in this Department, & his report of the works in connection with harbors, bridges & highways is voluminous. He supervised every important provincial improvement, & nearly every county in Upper Canada bears upon its surface the impress of his great industry & engineering skill. He became successively Superintending Engineer of Roads & Harbors in Western Ontario in 1842-48; Engineer of Harbor Works at Montreal, 1850-53; & Consulting Engineer, ship channel improvement between Montreal & Quebec, 1850-53. Later

he became Chief Engineer of the St. Lawrence & Atlantic Ry. Co.

In 1853 he formed a famous partnership with the late Sir A. T. Galt, L. H. Holton & Sir David Macpherson—the greatest firm Canada ever saw—formed of four of Canada's biggest men. For several years he devoted himself exclusively to railway construction. His firm had the contract for building the G. T. R. from Toronto to Sarnia. The firm was dissolved when this work was finished, & the partnership thereafter comprised only Gzowski & Macpherson, & did an extensive contracting business, including the G. T. R. from Port Huron to Detroit. In 1857 the firm established the Toronto Rolling Mills at the Don, for the purpose of producing iron rails & other railway materials. These mills ran for 12 years. Mr. Gzowski's Pittsfield friends were considerable shareholders in this venture. The firm also assisted in building the Toronto Esplanade.

Personal Mention.

H. B. Stuart has been appointed General Agent of the Erie & Huron Ry. at Sarnia.

Archer Baker, European Traffic Agent of the C.P.R., is visiting Canada with his family.

W. McKenzie, President of the Toronto Ry. Co., has been made an honorary lieutenant-colonel.

General Manager Frank Grundy, of the Quebec Central, returned about the latter end of Aug. from a visit to England.

Collingwood Schrieber, Deputy Minister of Railways, leaves Ottawa Sept. 27 for the Pacific Coast. He will inspect the Crow's Nest Ry.

W. H. Langridge, C. P. R. local auditor at St. John, N. B., has been promoted to the Pacific Division, with headquarters at Revelstoke, B. C.

Geo. Olds, C.P.R. representative on the Joint Traffic Association, recently returned to Montreal with Mrs. Olds, after a delightful holiday abroad.

The position of Canadian Passenger Agent of the Michigan Central, heretofore held by J. G. Laven, with headquarters at Toronto, has been abolished.

"Jimmy" French, for 16 years porter of Sir Wm. Van Horne's private car, has left the Co.'s service & gone to Chicago, to enter the employ of E. F. Austen.

Captain Cook, a graduate of Kingston Royal Military College, & son of W. Cook, of the I.C.R. service at Moncton, N.B., has been shot dead in South Africa.

The Duchess of Albany & her children, Princess Alice & the Duke of Albany, have been on a visit to Lord & Lady Mountstephen at Brockett Hall, Hatfield, Eng.

The title of H. B. Ledyard, President & General Manager of the Michigan Central, has been changed to President, the title of General Manager having been dropped.

G. H. Pick, formerly Assistant General Freight Agent I.C.R., has been appointed Weighing Inspector on the I.C.R. J. F. Nelles will be Assistant Weighing Inspector.

W. C. Tomkins, of the G. T. R. General Manager's office, Montreal, was recently presented with a clock and pair of statuettes, on the eve of his marriage to Miss F. Deverall.

The M.C.R. has made some changes at St. Thomas, doing away with the positions of day & night trainmaster. T. E. Scott, Trainmaster, has been given a position as passenger conductor.

Mrs. C. R. Hosmer, wife of the Manager of the C.P.R. Telegraphs, has returned to Montreal from a pleasant visit at St. Andrew's, N.B., where she has spent some weeks at the Algonquin.

Mrs. A. D. McTier, wife of the C.P.R. General Baggage Agent, has returned to Montreal with her youthful family from a very pleasant visit to England, accompanied by her mother, Mrs. Waddell.

W. Mackenzie, President of the Toronto Ry., F. Nicholls, of the General Electric Co., & H. M. Pellatt, have gone to B.C. They intend making a careful examination of Rossland & the surrounding country.

Alonzo Lucas, for 15 years Bridge-master for the G.T.R., & for 30 years in the employ of the road, died at London, Ont., Sep. 20, after a lingering illness. He retired from the service about a year ago owing to ill health.

G. R. Joughins, the recently appointed Mechanical Superintendent of the I. C. R., has removed his family from Roanoke, Va., to Moncton, N. B., where they occupy one of the official residences near the head offices.

Thos. Newman, senr., late C.P.R. Roadmaster at Schrieber, Ont., died in Montreal Sept. 13, aged 58. The body was taken to his daughter-in-law's residence in Toronto & was interred at Mount Pleasant Cemetery there.

Lord & Lady Strathcona recently left Knebworth, Herts, Eng., to spend a few weeks at Glencoe, Scotland, accompanied by Alex. Stewart of Montreal. The Hon. Mrs. Howard & family remain at Knebworth during their absence.

F. P. Macdonald, Assistant Superintendent of the C.S. division of the M.C.R. at St. Thomas, has been appointed Superintendent Middle Division, with headquarters at Jackson, Mich. The Assistant Superintendency at St. Thomas has been abolished.

Co-partnership of the firm of McDonald, Stewart & Ferguson, railway contractors, has been registered at Windsor, N.S. The members are J. K. McDonald, New Glasgow; W. C. McDonald, Halifax; J. Stewart, New Glasgow, & D. Ferguson, Londonderry.

H. K. Prior, for many years General Freight & Passenger Agent of the Esquimalt & Nanaimo Ry., has resigned, & is succeeded by G. L. Courtney, for sometime local agent for the C.P.R. in Victoria. G. W. Greer has taken Mr. Courtney's place in the C.P.R. service.

It is said that the G.T.R. directors have expressed their appreciation of General Manager Hays' service in an extremely practical way, by increasing his salary from \$25,000 to \$35,000 a year. It is said he also gets \$10,000 a year as Receiver of the Central Vermont.

President Callaway, of the New York Central, accompanied by President Beckley, Superintendent Fisher & General Passenger Agent Backus, of the T., H. & B., made an inspection of the latter line recently. It is officially denied that any change of management of the T., H. & B. is contemplated.

D. B. Worthington, Freight & Passenger Agent of the C. P. R. at Buffalo, has been appointed Travelling Passenger Agent of the C., M. & St. P., with headquarters in Buffalo, succeeding Wm. Kelley, Jr., promoted. Mr. Worthington is succeeded in the C. P. R. service by A. J. Shulman, heretofore his assistant.

G. F. Evans, Manager of the Westinghouse Mfg. Co., Hamilton, Ont., has been appointed Manager of the works which the parent U.S. Co. is establishing in Russia. P. J. Myler, Assistant Treasurer, who has been at Hamilton since the establishment of the works there, is Acting-Manager & will likely be appointed Manager.

G.T.R. Trainmaster Begg, of Stratford, has been transferred to Sarnia, where he will act as Trainmaster for the Chicago & Grand Trunk Ry. at Port Huron & for the G. T. at Sarnia. He will assume charge of his new duties

about Oct. 1. Mr. Whittenberger, of the Northern Division, will succeed Mr. Begg, & Conductor P. G. Lynch, of Toronto, has been appointed to Mr. Whittenberger's place.

The rumor that J. E. Price, Superintendent of the I.C.R. at Truro, is to be appointed Assistant General Manager of the line has been revived by Maritime Province papers. Mr. Price is undoubtedly a thoroughly competent man for the position & the appointment would be a good one. Mr. Pottinger certainly requires an assistant to relieve him of some of his detail work, & should the oft-repeated rumor turn out to be true we think it will be a good thing for the I.C.R. Another rumor says Mr. Price will be made General Superintendent of the line.

Jas. McQueen, jun., Manager of the Reading Despatch, Grand Trunk Freight Line, died of heart failure in Detroit recently. He was born in Dunfermline, Scotland, in 1854, coming out with his parents when a boy. His father, Jas. McQueen, was for many years Freight Agent of the G.T. in Detroit, & was retired a few years ago. Young McQueen followed in his father's footsteps & entered the employ of the old Great Western road as a clerk in the freight office. In time he became Chief Clerk, & was later appointed Assistant General Freight Agent of the Detroit & Milwaukee road. When the West Shore Freight Line was established in 1891 he was made Manager, & when this line was made the Reading Despatch he became Manager of the latter. He leaves a widow & 4 children.

E. M. Herr has resigned as Superintendent of Motive Power of the Northern Pacific to become Assistant General Manager of the Westinghouse Air Brake Co. He has had an unusually wide experience. He started as a messenger boy for the Western Union Telegraph Co., & entered railway work on the Kansas Pacific in 1878, since which he has been busy with promotions, but still has had time to secure a good technical education. He has devoted most of his attention to the mechanical department, & is specially well equipped for that work by intimate knowledge of operating matters obtained when he was Superintendent of Telegraph & Division Superintendent on the Burlington. The higher positions which he has held in mechanical departments are Master Mechanic of the Chicago, Milwaukee & St. Paul, Superintendent of the Grant Locomotive Works & Assistant Superintendent of Motive Power of the Chicago & Northwestern. By this change the railway service loses one of its best men, & the Westinghouse Air Brake Co. acquires one whose qualifications are altogether exceptional.—American Engineer.

Superintendent Price.

Alfred Price, recently appointed C. P. R. Superintendent at Toronto, with jurisdiction over the Toronto terminals, Hamilton & Owen Sound sections, & Orangeville, Teeswater & Elora branches, was born in Toronto in 1861. On Sept. 3, 1879, he entered the service of the Credit Valley Ry. at Toronto as operator & clerk. The line was then just about to be opened for passenger and freight traffic between Parkdale & Brock Road, now called Schaw. In 1881 he was given charge of the car records, which he kept until the absorption of the road by the C. P. R. At the same time he did more or less telegraphing & train dispatching. He was appointed C. P. R. Train Despatcher in 1883, Car Distributor of the Ontario Division in 1888, and Chief Dispatcher, in addition to Car Distributor, in 1896.

The branch stores department of the G.T.R. located at Port Huron, Mich., for several years, is being moved to Battle Creek.

FINANCE, MEETINGS, &c.

Salisbury & Harvey Railway.

The New Brunswick Equity Court recently granted an application of the People's Trust Co. & appointed J. R. Abney, a New York lawyer, as Receiver for this line, which was formerly known as the Albert Ry., the Ry. Co. consenting. The Receiver was ordered to file his accounts every 6 months, no security to be given.

This line runs from Salisbury, on the Moncton & St. John branch of the Intercolonial, 13 miles from Moncton, through the small fishing & ship-building villages of Albert County, a distance of 45 miles, to Albert, on Shepody Bay, an inlet of the Bay of Fundy. Hillsboro is an important village on the line, having a heavy plaster trade. At Albert Mines was once produced the most valuable species of coal which the world has known. This mineral, called Albertite, fetched enormous prices, but the supply is now exhausted & the village is falling to decay. The coast villages of Albert County are largely engrossed in the shad fisheries.

The following statistics of the line are up to June 30, 1897: Ordinary share capital author-

ALFRED PRICE.

ized & paid up, \$150,000; bonded debt authorized & issued \$250,000; Dominion Government aid authorized as loan, \$29,665.45; paid \$29,391.01; Provincial Government bonus authorized and paid \$455,000; municipal bonus paid \$70,000; total capital subscribed \$954,665.45; paid up \$704,391.01; floating debt \$3,000 at 7%; total theoretical cost of railway & rolling stock \$1,784,073.33. Forty miles of the line are laid with 60 lb. iron rails & 5 miles with 56 lb. steel. The radius of the sharpest curve is 717, & the number of feet per mile of the heaviest grade is 80. The equipment consists of 2 locomotives, 1 first-class car, 1 baggage, mail & express car, 7 freight cars & 22 flats. The total gross earnings for the year ended June 30, 1897, were \$3,485.53 & the operating expenses \$24,012.92. The foregoing figures are taken from the report of the Department of Railways. There is evidently a considerable error in the figures given as cost of road & rolling stock.

The officers of the line are: President, C. H. Hardman, New York; Secretary, F. B. Treiber, Charlottesville, Va.; Manager, A. Sherwood, Hillsboro, N.B. We are officially advised there will be no change in the management

of the road & that Mr. Sherwood will continue the management as heretofore.

Grand Trunk Finances.

In Aug. issue, pg. 146, we published a brief cable respecting the accounts for the 1st half of the year. The official notification issued by the Secretary says: "I am instructed to inform you that, subject to audit, the results of the accounts for the ½ year to June 30, 1898, are cabled as follows: Gross receipts £1,871,700; working expenses, £1,243,900; net receipts, £627,800; net revenue charges for the ½ year, less credits, £490,500—£137,300. Deduct Chicago & Grand Trunk deficiency for the ½ year payable by the G. T. Co. under traffic agreements, £8,400; Detroit, Grand Haven & Milwaukee deficiency for the ½ year, £22,300—£30,700; surplus for the ½ year, £106,600; revenue credit balance from previous ½ year £10,300, less appropriated as the contribution for the ½ year ending December 31, 1897, towards the revenue proportion of the expenditure for the reconstruction of the Victoria Jubilee Bridge, £10,000—£300; balance available for dividend, £106,900. The above balance admits of the payment of the full dividend for the ½ year of £2 per cent. on the 4% guaranteed stock, leaving an amount of about £2,500 to be carried forward."

Commenting on the foregoing, the Canadian Gazette, London, Eng., says: "In view of the great activity of the stocks during the last few months, more than usual interest attached to the statement of the G.T.R. Co. for the ½ year to June 30, &, although comparing very satisfactorily with the figures for the first ½ of 1897, the notification was received in the Stock Exchange with considerable disappointment. After meeting the fixed charges for the entire system, the surplus for the first half of 1897 was £2,700, while this year it was £106,600, & the payment of the full dividend at the rate of 4% per annum on the guaranteed stock is recommended, leaving about £2,500 (including £300 brought over) to be carried forward. As a surplus, after meeting the guaranteed dividend, of at least £25,000 had been looked for, there was on the publication of the figures a sharp drop in the prices of the stocks, but some portion of this has since been recovered."

The annual meeting will be held in London, Eng., Oct. 13.

The Spokane & Northern Purchase.

A Spokane, Wash., paper gives the following as the facts in connection with this recent transaction. The version may or not be correct, & we simply reproduce it for what it is worth:

Some time ago the Chemical National Bank of New York began buying in the stock of the Spokane & Northern, & this operation coming to the knowledge of President Mellen of the Northern Pacific he concluded that the real purchaser was the Canadian Pacific. Just before this Mr. Hill proposed to Mr. Mellen that the Great Northern & Northern Pacific should buy the Corbin roads jointly, & operate them for their joint account, but Mr. Mellen did not like the idea of owning the property in partnership with Mr. Hill, & declined to go into the deal. The buying of the stock by the Chemical National was brought to the notice of J. Pierpont Morgan, & he also was disposed to think it a C.P.R. move, & determined to checkmate it. He did not want to have another invasion of N.P. territory by the big Canadian corporation. So he gave orders that his own house should buy all the S. & N. stock offered on the market. Morgan's purchases soon exceeded those of the Chemical, & had amounted to a controlling interest, when it was discovered that the real buyer behind the Chemical was not the C.P.R., but

J. J. Hill, who made loud complaint when he discovered that he had been playing against the powerful trend Morgan. At about the same time reports came in from two prominent N.P. officials who had been sent out to inspect the Corbin system, & they threw cold water on it as a traffic proposition. They did not think the melon was a juicy one. Mr. Morgan concluded that he did not want the system for the N.P. & wired Mr. Hill in St. Paul that he could have it for just what it had cost Morgan & Co. Hill promptly replied he would take it, & in a few days the transfer of stock was made & the deal completed. And this is how the S. & N. becomes a branch of the G.N. instead of the N.P.

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan.	\$1,074,374.04	\$4,156,744.45	\$515,627.59	\$142,284.49+
Feb.	1,494,596.08	1,070,929.62	423,667.36	38,844.28+
Mar.	2,079,479.06	1,326,245.55	753,233.51	233,020.67+
April	1,558,461.88	1,041,371.19	517,090.69	89,973.35+
May	1,258,000.10	1,326,336.85	926,662.31	51,092.47+
June	2,138,110.04	1,320,714.67	817,395.37	68,731.93+
July	2,051,363.27	1,300,674.48	750,688.79	183,070.08+

\$1,347,382.43 \$8,763,016.81 \$4,392,996.23 \$440,276.92+
+ Increase. - Decrease.

The approximate traffic earnings for August, 1898, were \$2,161,000, against \$2,175,000 in August, 1897, a decrease of \$14,000.

AUXILIARY LINES.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—The approximate earnings for August were \$326,219, as compared with \$309,561 in August, 1897, an increase of \$16,658. For the 8 months ended Aug. 31, they were \$2,442,581.24, as compared with \$2,232,280.49 in 1897, an increase of \$210,300.75.

DULUTH, SOUTH SHORE & ATLANTIC RY.—The approximate earnings for Aug. were \$181,572, as compared with \$170,122 in Aug., 1897, an increase of \$11,450. For the 8 months ended Aug. 31 they were \$1,205,361.26, as compared with \$1,032,124.27 in 1897, an increase of \$173,236.99.

MINERAL RANGE, HANCOCK & CALUMET.—The approximate earnings for Aug. were \$37,076, as compared with \$28,796 in Aug., 1897, an increase of \$8,280. For the 8 months ended Aug. 31 they were \$229,637.57, as compared with \$186,398.05 in 1897, an increase of \$43,239.52.

Canadian Pacific Railway Land Sales.

	Acres.		Amount.

Financial Notes, &c.

Atlantic & Lake Superior.—A Montreal despatch of Aug. 24 said: "The promoters of the A. & L. S. Ry. scheme have met with success in the London market, & three-fourths of the entire issue, amounting to several million dollars, has been already underwritten. The immediate intentions of the Co. will be confined to completing the line of railway from Sorel, on the South Shore, to Point Levis, & extending the road already built to New Carlisle, to Paspébiac & Port Daniel. When the Company had been informed of C. N. Armstrong's success in London, Jas. Shanley, C.E., began at once the construction of deep water terminal facilities at Paspébiac, a port on the Baie des Chaleurs, which the promoters of the A. & L. S. contend will be open all the year round, & will thus contribute to the solution of the winter port question within the old provinces of Canada. The operations of the Co. are not, however, confined to the railway scheme, for word has been received here from London to the effect that steamers have been chartered to go on the route between Paspébiac & a British port, the service to be inaugurated in October. A gentleman interested in the Co. states that the boats in question will have a speed of 17 knots an hour."

In response to an enquiry as to the accuracy of the foregoing, the Acting-Secretary of the Co. writes us:—"I am pleased to be able to confirm the rumor that you spoke of with regard to the underwriting of our bonds, & the issue of the same, which will take place early in Oct., & of the success of which we have no doubt."

The Financial News, London, Eng., recently made a strong attack on these bonds.

Calgary & Edmonton.—The net loss in operating for July was \$1,190.06, as against net earnings of \$6,260.09 for the corresponding period. This decrease is caused by the large increase in expenses, \$17,144.59, being spent in maintenance of way & structure. The total expenses for July 1897, were \$11,704.91, as compared with \$22,683.45 for July, 1898.

The annual meeting of this Co. will be held in Toronto Oct. 5.

Canada Atlantic.—The annual meeting will be held in Ottawa Sep. 27. The annual meeting of the allied company, the Ottawa, Arnprior & Parry Sound, will be held at the same place an hour later.

Dominion Atlantic.—The receipts for the 7 months to July 31 were \$271,368, against \$255,399 for corresponding period.

Guelph Junction.—The earnings for April, May & June were \$3,652.43, of which the C.P.R. paid the city of Guelph \$1,460.98 under the terms of the lease.

Kaslo & Lardo-Duncan.—A meeting of shareholders was held at Kaslo early in Sep. It is said the charter has been sold to people in London, Eng.

Manitoba & Northwestern.—There is nothing to report in regard to the sale of this road in addition to what appeared in our July issue, pg. 126. W. Hendrie, of Hamilton, Ont., is in the syndicate headed by E. B. Osler, M.P., which bought the bonds & the Allan interests. At present there are 2 receivers for the road, H. M. Allan, of Montreal, for one portion, & Mr. Osler's partner, A. M. Nanton, of Winnipeg, for the other. It is expected Mr. Allan will soon retire, leaving Mr. Nanton sole Receiver. It is understood a financial scheme in connection with the road's future is now being prepared, but details are not obtainable. We adhere to the opinion expressed in our July issue, that the road will be either sold or leased to the C.P.R. Pending this there is not likely to be any change in the officials now in charge.

New York & Ottawa.—The State Board of Railway Commissioners at Albany, N.Y., has granted authority to this Co. to increase its capital stock from \$1,480,000 to \$3,000,000, to enable it to acquire the stock of the Ottawa & New York Ry. of Canada, & of the Cornwall Bridge Co. (See June issue, pg. 118.) The N.Y. & O. Ry. is said to be the link by which the Delaware & Hudson will find a new entrance into Canada by way of the Adirondack Ry., now operated by the Delaware & Hudson, as far as North Creek. The N.Y. & O. has the right to construct from the St. Lawrence river opposite Cornwall, Ont., to Moira, N.Y., & from there to Tupper Lake via the Northern New York, which the N.Y. & O. controls. From there to Long Lake connection will be made by the Racquette River & Long Lake Ry. The Adirondack Ry. runs from Saratoga to North Creek, and claims it has the right of way from there to Long Lake, which disputed question is now before the courts. A bridge company, the New York & Ottawa, has been incorporated to build a bridge over the St. Lawrence River at the terminus of the N.Y. & O.R., & on the Canadian side of the river connection will be made with the Ottawa & New York Ry. from Cornwall, Ont., to Ottawa. It is claimed that the route, if connection be made from North Creek to Tupper Lake, will shorten the distance between New York & Ottawa by 58 miles.

Ottawa & Gatineau Valley.—Early in August it was persistently rumored in Ottawa that the Street Ry. Co. of that city had bought this line, with the intention of converting it into an electric road & extending it into Ottawa by way of the Nepean Point bridge now being built. Genl. Supt. Resseman said there was no truth in the rumor. President MacRae, of the St. Ry. Co., would say nothing one way or the other, & this rather strengthened the rumor, but nothing has yet transpired to verify it. The O. & G. V. runs from Ottawa to Gracefield, 60 miles, through a very picturesque district, rich in fishing preserves. The summer travel is already good. On Sundays during the summer a train averaging 12 cars leaves Ottawa at 9.30 a. m., going the whole length of the line & returning in the evening.

Quebec Central.—The net earnings for the 7 months to July were \$76,594 as against \$100,365 for corresponding period. The falling off in earnings this year is entirely attributable to the duty of \$2 a thousand feet on lumber which the U. S. has levied since July 1, 1897, & which puts Canadian dealers out of the market. (Official.)

Quebec, Montmorency & Charlevoix.—The annual meeting was held Sept. 13. We are officially informed as follows: "The annual report of the steam railway from Quebec to Cap Tourmente, together with a report of the result of the operations of the electric railway system in Quebec City for the 2 months since its purchase from the Quebec District Ry. Co., were read & adopted, the result of the operations being very satisfactory. The shareholders ratified the arrangements which had been made for the purchase of the Montmorency Electric Power Co., & the purchase of that Co. has been completed. The amalgamation of the Quebec District Ry. Co. (electric system) & the Montmorency Electric Power Co., which has all the lighting contracts in the City of Quebec, with the existing steam railway company, will have the effect of considerably reducing the operating expenses & also of considerably improving the service. It is proposed next year to operate the steam railway electrically. The election of officers resulted as follows: H. J. Beemer, President; A. Thomson, Vice-President; E. E. Webb, F. Ross, W. Hanson, Hon. S. N. Parent, Judge E. Chauveau, Directors; E. A. Evans, Manager & Chief Engineer; E. F. Wurtele, Secretary-Treasurer; W. R. Russell, Superintendent.

*Both call del C. & Can. & Lee. Hunt
Screens by order of American Ry. Co.*

Qu'Appelle, Long Lake & Saskatchewan.—The net loss in operating for July was \$4,676.59, as compared with a net loss of \$2,704.74 for the corresponding period.

St. Catharines & Niagara Central.—This line, particulars of the troubles in connection with which will be found in our July issue (pg. 118), has been sold to Haines Bros., New York. Particulars of the purchasers' intentions to electrify the road will be found on pg. 193 of this issue. From the purchase money it is conceded that about \$11,000 may be controlled by the City Council, & this the Council is asked to forego. It is said G. M. Neelon was paid \$1,000 over his purchase price for the road, & that the purchasers have offered him a position.

White Pass & Yukon.—This Company recently asked the English public to subscribe for debentures amounting to \$750,000, for construction purposes. The American representative of the Co. informs us that the issue was quite successful.

EQUIPMENT.

Electrical Lighting of Cars.

Three methods of lighting cars by electricity have so far been adopted. The most extensively developed method heretofore employed is where a dynamo in the baggage car, run by steam from the locomotive, generates an electric current which is carried through the train by wires extending from car to car. This plan requires the constant attendance of an electrical engineer, & has been found so expensive as to be impracticable. Another method now in use is that of a simple storage battery in each car. This, however, is both expensive & unsatisfactory, because the batteries must be removed at each terminal & recharged from a central electric plant. The weight of the batteries, the fact that the light is likely to diminish as the storage is drawn on, the labor of changing & cost of charging them, together with the necessity of confining the runs of the cars to terminal points where there are charging stations, add to the cost & difficulties of this system.

At one time & another a number of inventors have given more or less attention to the possibility of utilizing the motion of the wheels of railroad cars for the generation of electricity for lighting the train to which such cars belong, but until recently it could not be said that any very satisfactory results had been attained, & even now it is doubtful if any system has been so perfected as to warrant its general adoption. Some months ago the C.P.R. Co. equipped its sleeping car, Winchester, with a system, & it has since been put in the 10 magnificent sleeping cars, of which the Chantilly was the first turned out.

This system consists of a dynamo mounted upon the truck of the car, one end of which is supported by a stirrup from the truck, & the other by the axle. It is driven by a direct gear which revolves usually at the rate of $2\frac{1}{2}$ to 1 revolution of the car wheel. The part resting on the axle rests on a split sleeve, supported by the axle. This split sleeve finds its bearings by means of adjustable jaws, so arranged as to take up any irregularity of the axle, & they engage close to the wheels, leaving the central parts of the axle free to spring round curves & going over irregularities in the road & centering the weight where it is least felt. A peculiar feature of this system is the regulating device. Although the speed of the train may reach great extremes of variations, & the dynamo being directly geared would generate great extremes of current, the regulator is so arranged by a system of resistance wires that the current is kept substantially uniform during all the variations of speed between 20 miles an hour & the maximum ability of the

*I cut Bel to Can. Elec News by order
American by Bel's order*

locomotive. In other words, although the dynamo at a speed of 60 miles an hour is revolving 3 times as fast as it does at a speed of 20 miles an hour, the amount of current generated is the same. In connection with this there is an automatic cut-out so adjusted as to throw the dynamo into circuit with the lamps upon its reaching a potential equal to that of a small storage battery supply, & throw it out of circuit upon its dropping below. The effect of this is that when the lamps are burning, & the train running at 20 miles an hour, the lamps are fed directly from the dynamo, & a small surplus of current goes through the batteries. When the speed falls below 20 miles an hour the cut-out works automatically, & as long as it continues at its low rate of speed, the lights are drawn direct from a small but powerful set of storage batteries supplied for the purpose. Any battery capacity is supplied to take care of the lights during all ordinary & reasonable delays, during stops, slow-downs or casualties. Any capacity can be supplied, but ordinarily & dependent upon the number of lights used there is enough for from five to fifteen hours lighting in the battery supply.

Everything connected with the system is entirely automatic. The porter is given no instructions, beyond being told to turn the lights on when he wants them & turn them off when they are no longer required. We give illustrations of the device as applied to the Winchester. The cuts are so clear that technicians should be able to understand them at once. Another feature of this system is that in running during the daytime when the batteries are full, the very act of turning off the lights cuts down the efficiency of the dynamo to a point where it generates only the normal current necessary to pass through the batteries, in order to keep them in the best of condition. Should it be desirable, as it very frequently is, to introduce electric fans into the sleeping car during the hot months, as soon as those fans were brought into play the current generated by the dynamo would be amply sufficient to keep a large number of them in operation, if required, while yet serving the batteries with all that they require.

The foregoing description is compiled from material supplied by the owners of the system, & we do not accept any responsibility for the claims therein made, or necessarily endorse them.

Of the illustrations accompanying this article the 1st shows the regulating device, the 2nd & 4th give different views of the axle device & the 3rd & 5th explain themselves.

Canadian Pacific Work.

Two dining cars are being built at the Montreal shops which are modeled very much after the Co's car Frogmore, which is said to be one of, if not the most modern dining cars running on any line in America. The decks will be coved & the cars will be equipped with wide end vestibules, so that passengers may enter under cover from adjoining cars.

The Co. will probably build 2 rotary snow ploughs at once. They will be similar to those now in use on the Co's western lines, with all improvements which have been made in rotary snow ploughs up to date. It is also likely that 2 C.P.R. standard wing ploughs will be built & that the nose & wings of each will be operated by compressed air, which is a novel feature.

A paragraph which appeared in a U.S. railway paper recently to the effect that the Co. intended to at once go on with the construction of another 1,000 freight cars as soon as those now being built are completed, is incorrect.

The Co. will probably build at its Perth works some hopper drop bottom ore cars for smelter work on the Pacific Division. They will have a capacity of 60,000 lbs. each.

Ten compound consolidation engines, with

57 in. wheels, are being completed at the Montreal shops for fast freight service. It is expected that 6 passenger engines will be put in hand shortly. The type has not yet been decided on. (Official.)

The official car Champion, used for many years by Vice-President Shaughnessy, has been sent to Winnipeg for the use of Manager Whyte, of the Western Lines, whose car no. 15, which as no. 10 was the General Manager's car when Sir Wm. Van Horne first occupied the position, has been sent to Vancouver for General Superintendent Marpole, of the Pacific Division. Mr. Shaughnessy will in future use the Metapedia, which was built for Lord Mountstephen when he was President. Sir Wm. Van Horne sticks to the Saskatchewan, of which so many railway men & others have pleasant recollections.

A Vancouver paper recently gave currency to a statement, which it attributed to a person connected with the C.P.R. Montreal shops, who, it said, was visiting Vancouver, to the effect that a large number of cars specially adapted for carrying troops were being built by the Co. in Montreal. We are officially informed that the statement, if made, had no foundation in fact. (Official.)

Intercolonial Railway Equipment.

Tenders were recently asked for 300 box cars & 100 platform cars. The box cars are to be of 60,000 lbs. capacity, the general dimensions being as follows:

	FT.	IN.
Length over end sills.....	35	0
Width over side sills.....	8	11
Height top of sills to underside of plates.....	7	3
Length inside.....	34	5½
Width inside.....	8	4½
Height inside top of floor to underside of carlin.....	7	3½
Height of Lining (to underside of top girth).....	5	0
Outside of end sill to centre of body bolster.....	5	3½
Centre to centre of cross frame tie timber.....	7	4
Height top of rail to centre of drawbar.....	2	10½
Wheel base of truck.....	5	2
Door opening.....	5	6
Distance of truck centres apart.....	24	5

The cars are to be fitted with Westinghouse automatic air brakes. Fifty trucks are to be of the 4 wheeled side bearing roller truck pattern, Barber's Patent 12 ins. channel steel, bolster truck, with malleable fittings as made by the Standard Car Truck Co., Montreal, & 250 of the 4 wheeled diamond pattern with rigid bolster, the design to be as shown in Car Builder's Dictionary, 1895 edition, pg. 332, figures 4644 to 4663, except that the steel bolster of truck is to be of a pattern to be approved & the centres of truck wheels are to be 5 ft. 2 ins. apart.

The platform cars are also to be of 60,000 lbs. capacity, the general dimensions being as follows:

	FT.	IN.
Length over end sills.....	35	0
Width over side sills.....	9	0
Length over floor.....	35	1½
Width over floor.....	9	3
Outside end sill to center of body bolster.....	5	4½
Center to center of cross-frame tie timber.....	7	4
Height top of rail to center of drawbar.....	2	10½
Wheel base of truck.....	5	2
Distance of truck centers apart.....	24	3½

These cars are also to be fitted with Westinghouse automatic air brakes. All the trucks are to be of the Standard Car Truck Co.'s make, as specified above for 50 of the box cars. Heretofore wooden trucks have been used on I.C.R. freight cars.

Contracts have been awarded as follows: Rhodes, Curry & Co., Amherst, N.S., 150 box, 100 platform; Crossen Car Mfg. Co., Cobourg, Ont., 100 box; Rathbun Co., Deseronto, Ont., 50 box. (Official.)

We have also been favored with copies of the specifications for 2nd class sleeping cars, 63 ft. 7 ins. body length, postal & baggage cars 60 ft. long, & baggage cars 60 ft. long. It is said tenders are also being asked for 1st class cars.

It was recently stated by Maritime Province papers that the Wagner Car Co. was building 4 solid vestibuled trains for the I.C.R. This is denied, but it is said tenders will shortly be asked for them.

Daily papers recently stated that a company being formed to utilize the power of the Chaudiere Falls, near Quebec, would supply the I.C.R. with electricity for car lighting. The management of the line knows nothing about the matter. (Official.)

Referring to what we said about the Cleveland cylinder in our July issue, pg. 120, & Aug. pg. 155. One of these has been on a locomotive running between Moncton & St. John for some months, and another locomotive is to be fitted with it as soon as possible, to give it a further trial, as the one already in use seems to be working satisfactorily. (Official.)

Grand Trunk Equipment.

The G.T.R. has recently made large expenditures in the renewal of rolling stock, which includes the purchase of locomotives, 1st-class cars & freight cars. It has been part of Mr. Hays' policy to place the rolling stock in the most efficient state, & for this purpose everything of an antiquated character in connection with the system has been eliminated. The equipment, in short, may be said to have been modernized since the advent of Mr. Hays. The 1st-class cars upon the G.T.R. are, for the most part, of the newest pattern, while the old ones which have been in service for many years & present an aspect of decay, are being steadily weeded out.

The workshops at Point St. Charles, Montreal, are engaged at present filling many orders for engines & cars. The engine department is specially active with repairing work. About 2 months ago contracts were signed for 24 engines, 12 passenger & 12 freight. It was decided later on, however, to construct the passenger engines first, leaving the building of the freight engines for a future order. The 12 passenger engines are now well under way, & it is expected will be finished for the New Year. They will be 10-wheelers, having 6 driving & 4 truck wheels. Several old Kingston engines are being rebuilt. These engines were bought up by the G.T.R. for special work, & are now, some of them, over 30 years old. They will receive new cylinders, new wagon top boilers, new motion work, & various other improvements that will enable them to carry twice as much as formerly.

The Co. has recently turned out of its Montreal shops 4 baggage cars, 60 ft. in length, of the full height of 14 ft. 2 ins. from top of rail, the width being 9 ft. 8 ins., with an elevated roof, & finished & painted with the new G.T. standard color. The cars are equipped with the Westinghouse air signals & brakes, & heated with steam. The total weight of car, including trucks, is 64,900 lbs., & the total carrying capacity 18,000 lbs.

The Co. is now turning out a number of refrigerator cars, designed especially to take care of the perishable shipments originating at points on their lines in Canada, the cars being about 35 ft. long, & 13 ft. high, with a carrying capacity of 60,000 lbs. each. These cars are equipped with ice boxes & attachments, 2 being at each end of the car, the ice being supplied through 4 trap doors in the roof, immediately over the ice boxes. They are also equipped with automatic draw-bars & Westinghouse air brakes, & designed to run at a high rate of speed. They are painted an orange color, the roof being white, with the roof edge being in black.

The Wells & French Car Co., Chicago, has just commenced the delivery to the G.T.R. of 500 30-ton capacity box cars, of the standard G.T. design & finish.

Rhodes, Curry & Co., Amherst, N.S., are doing a very satisfactory car building business. In addition to the 150 box & 100 flats for the I.C.R. mentioned elsewhere, they are building six 20 ton coal cars for the Crow's Nest Coal Co. in British Columbia.

White Pass & Yukon.—The manager informs us that so far the Co. has had to take whatever equipment it could get ready for use, & has picked it up wherever it could find what it wanted. It is having 20 flat & 30 box cars built at Seattle, Wash., under the direction of Master Mechanic Garlock. Five locomotives, 1 passenger car, 1 combination passenger & baggage car, 1 baggage car & 10 flats have already been shipped from Seattle to Skagway.

Kootenay Railway & Navigation Co.

In our Aug. issue, pg. 147, we gave some financial statistics of the Kaslo & Slocan Ry., & referred to the rumors respecting a change in the ownership of the line, expressing the opinion that the one attributing its purchase to the C.P.R. was unfounded. It turns out that we were correct. The line has been sold to the Kootenay Ry. & Navigation Co., an English Co. which has as directors H. W. Forster, M.P. (Chairman), a director of the London & B. C. Goldfields; F. Lubbock, a director of the Bank of B. N. A.; A. C. Mitchell Innes, a director of the B. C. Electric Ry. Co., & G. Alexander, of Kaslo, B. C., President of the International Navigation & Trading Co. The K. R. & N. Co. also contemplates other important work. Its prospectus was issued in London, Eng., in Aug. The capital is £500,000, & the Co. is issuing £480,000 of 5% debenture stock at par. Following are extracts from the prospectus:

"The debenture stock will be secured by trust deed, whereby the entire capital stock of the local companies hereinafter referred to, & all their mortgages, bonds & obligations, & the whole of the undertaking of the Co., will be assigned to trustees by way of 1st charge. It is intended that this charge shall be specific as far as regards the stocks & securities of the 4 local companies mentioned herein & the landed properties of the Co., & shall be a floating security so far as regards the Co's other assets. The trust deed will provide that out of the sales of the Co's lands, or, failing this, out of the net profits of the Co. a sinking fund shall be provided for the redemption of the debenture stock within a period of 30 years, by purchase if below, or drawings at 110. In case for any reason the debenture stock should become repayable, the holders thereof will be entitled to be repaid at not less than £110%.

"This Co. was incorporated to consolidate & control as one system the Kaslo & Slocan Ry. & the International Navigation & Trading Co., & to connect these directly with the Great Northern & Northern Pacific Railways by a line either owned or controlled by this Co.

"The Co. will, therefore, own or control:

"The whole of the undertaking of the Kaslo & Slocan Ry., incorporated in 1892, which runs from Sandon to Kaslo on Kootenay Lake.

"The whole of the undertaking of the International Navigation & Trading Co., incorporated in 1894, which owns the connecting steamers on the Kootenay Lake.

"The whole of the undertaking of the Bedlington & Nelson Ry. Co., incorporated in 1897, formed to construct & operate the railway from Kootenay Lake to the International Boundary; and

"The whole of the undertaking of the proposed American Co. now being formed to construct & operate the railway from the International Boundary to Bonner's Ferry, at which point it will connect with the Great Northern Ry.

"The whole of the stock & securities of the above-mentioned companies will be acquired by the Co. & vested in the trustees for this issue of their nominees.

"The Kaslo & Slocan Ry. (about 30 miles) serves the rapidly extending & important mining industry of the chief ore-producing area of the Slocan district, & was constructed at large cost so to do.

"It is now proposed to carry the traffic by the steamers to the southern end of Kootenay Lake, & thence to construct a railway 53½ miles in length along the valley of Kootenay River, connecting with the Great Northern & Northern Pacific Ry.'s at Bonner's Ferry & Sand Point, respectively.

"For 30 miles south of Kootenay Lake the new line will traverse a mineral country yielding gold, copper, silver & lead. The amount of work hitherto done on the claims in this belt has not been very considerable, owing to the difficulty of access; but as soon as the new line is opened work will, no doubt, be actively prosecuted, & the traffic on this part of the Co.'s system should be very remunerative.

"The fact that each half-year of the business of the Kaslo & Slocan Ry. shows an increase over the preceding half-year indicates the rapidity with which business, & consequently the profits earned, is increasing, & the examination of the books of the Co. for the first half-year of 1897 shows net profits \$34,000, & for the second half-year, \$59,000, a total of \$93,000.

"The accounts of the International Navigation & Trading Co. show more than a corresponding increase.

"Taking the two together, there appears for the second half-year a net profit of \$78,000, or at the rate of \$156,000 per annum, equal to £32,000. As the Co. will control & work an additional 53½ miles, it is estimated that the net receipts should be increased by at least £25,000, a total of £57,000.

"The foregoing figures are taken from returns sent from British Columbia, which have been submitted to C. F. Kemp, Ford & Co., whose certificate is as follows: We have carefully perused the revenue & expenses account of the Kaslo & Slocan Ry. Co. for 1897, as prepared & sent over from B.C. by W. R. Allen, Accountant, of Kaslo, who was employed for that purpose. The account shows that the net profits for the first half of 1897 amount to \$34,275.49. For the second half of 1897 amount to \$59,050.01. We have also carefully perused the balance-sheet & revenue account of the International Navigation & Trading Co., which were also prepared & sent over from B.C. by W. R. Allen, Accountant of the Co., & signed by G. Alexander, President of the Co. They show that the net profits for the 6 months ending June 1, 1897, amount to \$7,361.08. For the 6 months ending November 30, 1897, amount to \$18,952.40. In the case of both companies the profits have been arrived at after making charges for maintenance & repairs.

"The amount required to pay interest on the whole of the debenture stock is only £24,000, & will, on the basis of the above traffic, be more than secured by existing revenue; any increase in profits resulting from the operating of the system as a whole therefore goes to increase the balance available for dividend on shares.

The Co., in addition to the railroad & steamers owned or controlled by it, will, as the owner of the undertaking of the Kaslo & Slocan Ry., acquire a valuable land grant of 220,000 acres in the Kootenay District, granted in connection with the construction of its line.

"Arrangements to the satisfaction of the directors have been made with the Great Northern Ry. for the working of the traffic."

D. J. Munn, of New Westminster, B. C., President of the Kaslo & Slocan, confirms the report of the sale of his line, & states that he will retain his official connection with it until

the annual meeting on Oct. 12, when a new board will be elected. Mr. Munn further said in an interview: "The gentlemen who have taken over our interests are very strong financially, & will, I understand, embark in other enterprises of great importance to this section generally. Although the K. & S. is but a bantling, so to speak, it has passed through an experience worthy of a much greater undertaking. Some future time, perhaps, a review of all the circumstances attending its inception & management down to the present will make interesting reading. The general panic of 1893 would scarcely have been felt by this section if it had not been for the unprecedented slump in the price of silver. Although at that time the capital had been secured with which to complete the road, yet with the outlook it would have been unfair to the investors to place their money in what looked like a most dangerous investment. Hence the building was postponed until 1895. I am perfectly satisfied with our investment. It is a certain satisfaction to have brought the road to a successful point throughout all the trials & difficulties which beset it from every quarter, even to an assault on our works by the 'National Highway.'"

Freight Matters.

CANADIAN FREIGHT ASSOCIATION.—A meeting of the Tariff Committee was held at Toronto Sep. 7, when a number of rates and arrangements were agreed to; the meeting adjourning till Sep. 28, 29 & 30, then to consider special arrangements, &c., for next winter's business.

C. P. R. FREIGHT DIFFERENTIALS.—In our Aug. issue, pg. 157, we gave particulars of the calling of a meeting at Denver, Col., for Aug. 22, to discuss the question of the C.P.R. being allowed a 10% differential on transcontinental freight. The meeting decided to arbitrate the question; the C.P.R. to appoint one arbitrator, the U. S. lines to appoint another, & these two to select a third. The C.P.R. has appointed J. W. Midgeley, ex-Chairman of the Western Freight Association, & the U. S. lines have appointed W. R. Day, Special Counsel to the Interstate Commerce Commission. No announcement as to when the arbitration will take place, has yet been made, but Messrs. Midgeley & Day have selected E. S. Washburn, President & General Manager of the Kansas City, Fort Scott, & Memphis Ry., of Kansas City, as the third arbitrator.

INTERCOLONIAL.—It is said an arrangement has been made whereby the I.C.R., instead of handing over its freight for points west of St. John to the C.P.R., will in future hand it over to the G.T.R. or C.P.R. at Montreal for its western destination. The former agreement with the C.P.R. expired Aug. 30, & notice was given by the Government that it would not be renewed. Under the new arrangement the I.C.R. will have the long haul instead of the short one. It is also said the I.C.R. & C.P.R. have come to an arrangement on the question of freight for the east, & that they will exchange business at St. Rosalie Jct., the C.P.R. delivering to the I.C.R. there all goods for points north of Moncton. Freight for points south of Moncton will be delivered to the I.C.R. at St. John, N.B., as heretofore.

THE INTERSTATE LAW.—Col. Walker, Chairman of the Atchison, Topeka & Santa Fe Ry., & formerly a member of the Interstate Commerce Commission, has been in Quebec asking the U. S. commissioners at the International Conference to get Canadian railways brought under the operations of the Interstate Commerce law & to have it provided that in the event of a breach of its provisions the offending Canadian railway shall be excluded from participation in the carrying of U. S. goods from one point of the U. S. to another. Col. Walker has been strongly opposed at Quebec by A.

Clark, Secretary of the Home Market Club of the U. S., & C. S. Hamlin, formerly Assistant Secretary of the U. S. Treasury, who have forcibly urged that the present regulations relating to the transit of goods in bond across Canada between different portions of the U. S. should be continued. The present arrangement is regulated by Canadian & U. S. law, & the deputation maintains there is no dissatisfaction with it or opposition to it, except on the part of some of the U. S. lines. They furnished important statistical information to the commissioners showing the amount of traffic to & from different points of the U. S. over Canadian roads. This information indicates that nearly every State in the Union, even as far south as Louisiana & Alabama, benefits in this traffic. Goods go up the Mississippi to St. Louis & over the Illinois Central to Chicago, or by the Wabash to Detroit, where these roads connect with Canadian railway systems, & thence reach New England points. Although a somewhat round-about route, it is a natural one, & is a great advantage to the producers & consumers in the U. S., east & west. The deputation pointed out that the Canadian railways have admitted they are working under the Interstate Commerce law, & even if they were not, the connecting lines are certainly subject to it. Hence there is no necessity for a treaty, & no treaty would be asked for except with a view to securing some unfair advantage to one or two trunk lines to exclude the Canadian trunk lines from doing U. S. business.

Aliens on the Canada Atlantic.

Just before our August issue went to press, a press dispatch on this subject was sent out from Ottawa, & as there was no time to verify it, we gave it for what it was worth as follows: "The locomotive engineers of the Canada Atlantic & Ottawa, Arnprior & Parry Sound Railways are waging a war against aliens. Some time ago these companies leased a number of locomotives from the Central Vermont Ry. for aiding in the hauling of the extensive lake grain trade from Parry Sound. At the same time a number of men were imported to run the locomotives, thus giving to aliens the work which should have belonged to Canadians. At present the engineers are provided with pilots, but these will shortly be removed, & with their removal the old employees of the lines state they will insist on the new men being sent back. It is stated the C.V. Ry. refused to lease the engines to the C.A. unless C.V. men were employed."

We communicated on the subject with General Manager Chamberlin, who replied as follows: "We have not now, nor have we had at any time, any C.V. engines under lease. We have a large number of engines & cars running through to the U. S., & when business is heavy, more or less C.V. engines run over here as an offset. The statements in the despatch to which you refer were absolutely without foundation, as there has never been any complaint or cause for complaint on the part of our employees."

Canadian Ticket Agents' Association.

The 12th annual meeting will be held at the Russell House, Ottawa, Oct. 12. The present officers are:—President, W. E. Rispin, Chatham, Ont.; 1st Vice-Pres., S. Burrows, Belleville, Ont.; 2nd Vice-Pres., G. Duncan, Quebec; 3rd Vice-Pres., W. H. C. McKay, St. John, N.B.; Sec.-Treas., E. De La Hooke, London, Ont.; Auditor, S. H. Palmer, St. Thomas, Ont.; Executive Committee, J. McDonald, Arnprior, Ont.; W. H. Harper, Chatham, Ont.; C. E. Morgan, Hamilton, Ont.; T. Long, Port Hope, Ont. The Association has over 100 members.

CONSTRUCTION & BETTERMENT.**Work on the Canadian Pacific.**

West St. John, N.B., Terminals.—In the description of these in our Aug. issue, pg. 153, we spoke of the loading capacity of the conveyors from the elevator as being 6,400 bushels an hour. As a matter of fact the rate of discharge will be equal to 50,000 bushels an hour on occasions, which is probably about 3 times as fast as any single elevator now on tide water.

Windsor St. Station, Montreal.—The Co. has been empowered by the Dominion Government to expropriate the land necessary for the extension of this building.

Montreal to Toronto.—The work of double tracking authorized at the last annual meeting has commenced at the Montreal end. There is already a double track between both stations in Montreal & Montreal Jct., & grading is now going on west of the latter point. It

place. They will consist of a 12 stall round house, machine & car repair shops, storehouse, blacksmith shop, coal trucks, ash-pits & turntable; costing altogether about \$75,000. It is expected to have them ready early in the New year.

Pacific Division.—Most of the side tracks at Donald are being taken up to be relaid at Field. The Revelstoke repair shop will be open by November, when the Donald shop will be closed. The Columbia River bridge at Donald is being replaced, the masonry work is being raised 12 ft.

Crow's Nest Branch.—Track-laying has been completed to Kuskanook, Kootenay Lake, giving through rail connection to that point from Eastern Canada. Regular trains will start running over the branch at once.

Columbia & Kootenay.—About 3,000 men are at work on the line between Robson & Midway, & it is said it will be completed by June 1 next.

Columbia, & it is said they will be kept at work with a view to getting Dominion subsidy.

Coast Ry. of Nova Scotia.—About 100 men are employed on construction & it is expected the line will be completed to Barrington this season. (April pg. 40, May pg. 66, Aug. pg. 151.)

East Richelieu Valley.—We were informed by the Deputy Minister of Railways, under date of Aug. 29, that in Mar. last this Co. entered into a contract under the Railway Subsidy Act for the construction of a line from Iberville to St. Thomas, Que., a distance of about 24 miles, but up to the date of our information no portion of the line had been inspected by the Government Inspecting Engineer, nor was the Department officially aware of any portion of the railway having been completed.

The Vice-President of the United Counties Ry. informs us that the E. R. V. Co. built 12

CROW'S NEST RAILWAY. ST. MARY'S RIVER BRIDGE (LOOKING NORTHWEST) DURING CONSTRUCTION.

is expected the grade will be completed to St. Anne's, 20 miles west of Montreal, this season, so that track may be laid next spring. The work is being done by day labor, under R. W. Leonard, who was Manager of Construction of the Montreal & Ottawa short line. Some of the structures between Montreal & Ottawa were built to accommodate a second track, & it is a significant testimony to the progress of the country & to the prosperity of the Co. that the double tracking has been needed within so few years after the construction of the line.

Stonewall Branch.—Neil Keith, contractor, has started work on the extension of this branch from Stonewall, 19 miles from Winnipeg, to Foxton, some 18 miles further north. G. H. Garden is Engineer in Charge. (Aug. pg. 153.)

Calgary.—It is said work is to be started at once on the Co's improvements at this

Work on Various Lines.

Atlantic & Lake Superior.—The Co. is constructing 2 miles between New Carlisle & Paspebiac, Que., so as to reach the wharf at the latter place. Work is being pushed on the wharf so as to have it ready in October for the steamship line which it will run between Milford Haven & Paspebiac. The line between Paspebiac & Port Daniel, 21 miles, is being located, & it is the intention to build it this year. There is a possibility that the grading will be done between Port Daniel & Gaspé this year, so that track may be laid next spring, but the directors have not yet decided as to this. (Official.) (June pg. 98, July pg. 122.)

Canadian Yukon.—McKenzie, Mann & Co. are reported to be keeping 50 men at work between Glenora & Teslin Lake, in order to hold the subsidy of \$4,000 granted by British

miles last year from Iberville to Henryville, that the line has been extended this year from Henryville to Noyan, 11 miles, & that it is expected the work will be completed during September. The engineer is W. Phillips. (July, pg. 122, Aug., pg. 151.)

Ironbridge, Bancroft & Ottawa.—The line, which ran from the G.T.R. Jct. to Baptiste, Ont., has been extended this season 5 miles to a point 2¼ miles north of Bancroft, the station at the end of the extension being named Bancroft. (Official.) (June, pg. 99, Aug., pg. 151.)

Lake Manitoba Railway & Canal Co.—Grading & track-laying are proceeding satisfactorily on the extension from Sifton to the Saskatchewan River. It is expected about 60 miles will be completed this season, carrying the line into the heart of the Swift Current country, to which there has been a large inflow of settlers this year, as well as last.

(May, pg. 95; June pg. 90; July, pg. 122; Aug., pg. 151.)

Manitoba & Southeastern.—Tracklaying commenced Sep. 1, & it is expected from 30 to 40 miles will be laid this season, to the vicinity of St. Anne's. Grading will likely be done to a point about 60 miles southeast of Winnipeg. The season has been unusually wet, & a good deal of the land traversed is low-lying, which has delayed operations somewhat. (May, pg. 65; June, pg. 100; July, pg. 123; Aug., pg. 151.)

Midland of Nova Scotia.—It is expected grading from Windsor to the Shubenacadie River, 40 miles, will be completed by Nov. & that the bridge over the St. Croix River, a few miles from Windsor, will be completed this year. The bridge over the Shubenacadie River will not be completed till next summer. Grading from Truro to the bridge, 20 miles, will be well under way before the ground freezes up. Tracklaying will not be started till next spring & it is expected the line will be open for traffic next summer. The Five Mile division is somewhat expensive work, owing to the zig-zag course of the stream, which will be diverted to avoid a good deal of bridging. The filling of Burton's Lake, 400 ft., is tedious work, owing to the want of a bottom. The Five Mile River & Kennetcook valleys, through which the line is being built, are good agricultural districts, as well as the western portion of the line. The valleys are thickly inhabited on each side of the road, & thrift & comfort can be seen among the farmers. The Chief Engineer is C. J. Fowler. W. G. Reid, of Montreal, is the contractor, & has sublet the work.—(April, pg. 40; June, pg. 99; July, pg. 122; Aug., pg. 151.)

Ontario & Rainy River.—This line, 20 miles of which are under construction, leaves the P. A., D. & W. Ry. at Stanley, crosses the Kaministiquia at Kakabeka Falls, & will follow the south bank of the river to its junction with the Mattawan, then along the Mattawan valley, through the Mattawan iron range & south of the Shabendowan. (Aug., pg. 151.)

Pembroke Southern.—It is said that this line, which runs from Pembroke, Ont., to Golden Lake, on the O. A. & P. S., has been completed. (July, pg. 122.)

SHIPPING.

Richelieu & Ontario Navigation Co.

At a meeting of directors Sept 7, a contract was given for placing new boilers in the steamer Quebec during the winter. It is expected this will enable her to make better speed. President Forget reported on his recent trip to the Lower St. Lawrence, & the steps that should be taken to increase passenger travel in that direction. He said the volume of travel was simply limited by the hotel accommodation. The resident summer population could be increased a hundredfold if cottages were provided. The Board authorized the enlargement of the Co's hotel at Tadousac, work to be commenced forthwith. The rooms, at present numbering 140, will be increased to 250. The ball, smoking & dining-rooms will be doubled in size. It was decided to purchase 40 acres adjoining the hotel for golf-links. The Co. will co-operate with G. Warren in erecting a summer hotel at Murray Bay. It will contain 58 rooms, & will be ready next season. The Co. has been approached about building a summer hotel at Kingston, but is said to have refused to entertain the scheme.

Capt. T. Wilson, Managing-Owner of the Wilson Transit Line, Cleveland, Ohio, & an ex-President of the Lake Carrier's Association, early in September wrote a long letter to the Marine Record, of Cleveland, complaining of treatment he & a party of friends received on a recent trip from Montreal to Chicoutimi & return on the R. & O. Line. He travelled below Quebec on the steamer Caroline & speaks of the accommodation provided as miserable, and also makes charges against the Purser in regard to the state-room accommodation. If Capt. Wilson's statements are true he was compelled to pay a second time for the rooms. Thinking there might be another side to the case we communicated with the Traffic Manager, but have not been treated to the courtesy of a reply. In the absence of full & satisfactory explanations by the Co. Capt. Wilson's charges will be accepted as correct.

The steamer Toronto, now being built by the Co., had a narrow escape from destruction Sep. 2, owing to a serious fire at the foot of Bathurst St., Toronto, where she is moored. Practically no damage was done to her. It is

said her trial trip will be made in October.

The contract for the Kingston, which it is proposed to build as a sister boat to the Toronto, has not yet been awarded. The probability is that the matter will stand over until after the Toronto's trial trip.

A Toronto paper recently stated that this Company had decided to have 3 additional steamers built for next summer's business; 2 of them to be built in Montreal, for the Montreal & Quebec route, & a third in Toronto, for the western trade. President Forget informs us that there is no truth in the statement that 2 boats are to be built in Montreal.

On Sep. 12 the Co. put a cut-rate in effect by the steamer Hamilton, to meet the competition by the propeller service on the Ocean & Persia. The rates from Montreal to Toronto by the Hamilton were \$8 single and \$15 return. This has been changed to \$6 single & \$10 return, including meals & berths. This rate applies to the Hamilton only, and not to the mail boats & the western service.

The Co. withdrew its daily service between Montreal & Toronto Sep. 15, substituting a tri-weekly one. The double service to the Saguenay was discontinued Sep. 17, since which steamers have been leaving Quebec Tuesdays and Saturdays.

It is said the Co. will continue its service among the Thousand Islands next summer, & that it will purchase U.S. boats, so as to be able to parallel the American Line between Alexandria Bay & Cape Vincent, & the Fifty Mile Rambles. It is proposed to put a better boat than the Richelieu on the Cape Vincent route next year.

Office of the Quebec Bridge Company (Limited.)

QUEBEC, September 29th, 1898.

* Sealed proposals for the construction of a combined Railway and Highway bridge across the River St. Lawrence, near Quebec, will be received by the undersigned, until noon, Monday, January 2nd, 1899.

Forms of tender, with circular of conditions, specifications, &c., can be had on application to the undersigned.

The Company does not bind itself to accept the lowest or any tender.

ULRIC BARTHE,
Secretary.

Ontario & the Great Lakes.

Peat has been tried as fuel on the Toronto Ferry Co.'s steamer *Primrose*.

The steamer *Golden City* was burned to the water's edge at the Government dock at Lakefield, Aug. 22. Loss, \$5,000; partial insurance.

W. Askin, General Agent of the Northwest Transportation Co., with headquarters at Toronto, broke his leg recently at Centralia, Ont., while jumping from a buggy attached to a runaway horse.

The steamer *J. H. Jones*, of the Buffalo Fish Co., was sunk in a collision with the G. N. T. Co.'s steamer *Pacific* off Kagawong, Lake Huron, about midnight, Sep. 16. The crew were all taken off by the *Pacific*. The *Pacific*'s bows were slightly injured.

Dominion Letters Patent have been issued incorporating J. D. Reid & D. Gow, Cardinal, Ont.; G. F. Benson, Montreal; G. Hall, Ogdensburg N. Y.; & J. K. Dowsley, Prescott, Ont., as the Prescott & Lake Superior Navigation Co., with a capital of \$100,000.

The steel barge *Nadine* being built for the Prescott Elevator Co. was damaged by a fire at the foot of Bathurst St., Toronto, Sep. 2, & her completion will be somewhat delayed in consequence. A description of her & her sister barge, the *Hilda*, appeared in our Aug. issue, pg. 162.

Capt. Trowell, of the steamer *Ocean*, plying between St. Catharines & Montreal, having had his leg broken by the parting of a cable, his place has been taken for the balance of the season by Capt. McGiffin, of the Niagara Navigation Co.'s steamer *Chippewa*, which has gone into winter quarters.

The returns of traffic through the Canadian Sault Canal show that, up to the end of August, 2,661 vessels passed through the lock this season, carrying 2,189,964 tons of freight. This is a decrease compared with the traffic during the corresponding period last year of 209 vessels & nearly a million tons of freight.

The steamer *Arundel*, which took the place of the North King between Toronto & Rochester, made her last trip Sept. 10. She broke a crank pin, & her passengers, 150 in number, were obliged to go to Brighton by the G. T. R. to connect with the North King for Rochester at that point. The *Arundel* was taken to Toronto for repairs.

Algoma Harbor has been greatly improved by recent dredging. From the harbor entrance up to the steamboat docks there is at least 15 ft. of water. The channel here was 100 ft. wide & only 10 or 11 ft. deep in the shallowest spots. The width has been increased to 130 & 160 ft. From the steamboat landing to the bridge the width is 100 ft. & depth 10 ft.

In a prosecution instituted by the Lord's Day Alliance, the Captain of the small steamer *Jubilee*, plying between St. Catharines & Port Dalhousie, was fined \$20 & costs, & the Engineer \$1 for running on a Sunday. The magistrate expressed the opinion that the boat was running for mere gain, & not in conjunction with any other means of transportation, & he did not deem it a necessity.

Last month the Georgian Bay & Lake Superior Steamship Line's boat, *Majestic*, just after she left Algoma Mills, struck a rock, breaking her rudder shoe. The accident was not discovered until she reached Sault Ste. Marie. The *Pacific*, a steamer belonging to the same Co., was sent from Thessalon to the Sault & took on a portion of the *Majestic*'s cargo. The damage was quickly repaired & the *Majestic* took her next regular trip.

The tug *Ariadne*, towing the wood scow *Effort*, attempted to cross the tow line of the steamer *George Stephenson* & consort *Roebling* recently, when opposite Port Huron. The

tug cleared the line, but the scow was caught amidship, cut half in two by the *Roebling* & capsized as she slid upon the cable. The 3 men on the scow were hurled into the river, but were rescued. The Captain of the tug says he supposed both vessels were steamers, & attempted to cross the bow of the one astern.

Capt. O'Brien, of the steamer *Empress of India*, was recently summoned by the Toronto Harbor Master for running at too high a rate of speed in the bay & through the eastern gap. The by-law says 4 miles shall be the limit of speed, but 6 are allowed. The *Empress*, however, was making 11½. The Government engineer, who is superintending the work at the eastern gap, made complaint that the speed at which the vessel was run was injuring the crib work. The case was withdrawn upon the Captain promising not to do it again.

The navigation season of 1898 is nearing its close, said an old lake captain to a *Globe* reporter recently. It has been one of the most successful seasons in the history of lake navigation. All the large steamers have been kept busy carrying excursions, freight & fruit to & from different ports along the lake. It has been a very heavy excursion season, & not one has been disappointed, through rough weather or storms, as is customary 2 or 3 times during the season. Special boats had to be put into service to carry the large amount of fruit offering. The large schooners, which carry coal, have been kept on a continual run.

The pier in the Sault Ste. Marie Canal which has been such a hindrance to navigation is to be removed. Now only one vessel can pass the railway bridge at a time. Last year an up-bound & a down-bound vessel attempted to pass at this point, with the result that they became so tightly wedged that traffic was blocked for over 6 hours, & the boats were only released after the fender strakes had been sawed through. The change in the bridge will make the full width of the canal available. The work involves the building of a masonry abutment, the removal of one of the present abutments & the pier above referred to, the taking down of the superstructure & the erection of a steel bridge spanning the entire prism of the canal. Contracts for the work have been awarded.

The American Line of steamers between Kingston, Ont., Clayton, N. Y., & Montreal, ceased running Sep. 6, after 2 months' business. General Manager Folger says the line carried thousands of people this year, but the revenue would have been much larger had not competition with the R. & O. N. Co. brought on a rate war. Passenger rates this summer were ridiculously low on account of the spirited competition, but he says the American Line will continue the service in 1899, and be in a little better position to meet competition. An Oswego, N. Y., telegram says the Northern Transit Co., which served as the western connection of the American Line, is well pleased with the business of its 2 boats on the route between Detroit, Toledo, Cleveland, Toronto, Oswego & Ogdensburg, & is talking of putting on 2 more for next season's business.

Two gigantic wheat ships have recently been launched on the Great Lakes, which show not only the tremendous development of lake commerce, but the fact that the lake shipyards are capable of turning out ships as large as can be built anywhere on this continent. The S. F. B. Morse, recently completed at Bay City, Mich., is 476 ft. long & of 10,500 tons burden. The whaleback *Alexander McDougall*, recently launched at Superior, Wis., is twice as large as any boat of that unique pattern hitherto attempted. She is 460 ft. long with 10,000 tons displacement. She will carry a cargo of 250,000 bushels of wheat, the produce of from 16,000 to 18,000 acres of land. Few realize the tremendous bulk of our lake

commerce. More commerce passes the Soo Canal than the Suez, & the volume of freight passing through the St. Clair River is greater than the entire business of the port of New York.

On Sept. 1 the steamer *Ocean* was trying to get up the rapids at Point Iroquois with the assistance of a tug; the tow-line parted just as the *Ocean* was about half-way up the pitch, & she drifted broadside on the reef of rocks. There was about 3½ ft. of water on her starboard side & 10 on her port side. The rapids in this place are very swift, probably 10 miles an hour. The steamers *Reginald*, *Chieftain* & *Johnston* were secured as soon as possible. The *Johnston* has 2 very powerful steam winches. After the cargo from the *Ocean* had been unloaded the *Johnston* was securely fastened to a large pine tree on the bank, & her steel cables run to the *Ocean*, & a heavy strain put on them. Then the *Reginald* & *Chieftain*, with 11-in. wrecking hawsers, each 150 fathoms long, began jerking on the boat, & she came off 6 ins. to 2 ft. each jerk, the steel hawsers of the *Johnston* holding a strain & preventing the *Ocean* from being forced back again on the shoal by the heavy current. In this way the *Ocean* was released on Sep. 5, apparently without receiving much if any damage.

Vessel masters generally will be interested in changes in 2 aids to navigation on Lake Erie. It is proposed to erect a steam fog signal at Erie, Pa., at the northeast corner of the peninsula. The bell at the pierhead at the entrance to the harbor will, of course, still be kept in operation, & in all probability will be very much improved by being raised above its present level, it being now down very near the bottom of the light-house. There is a prevalent opinion, also, that the present main Erie light on the bluff to the east of the city is of practically no benefit to commerce, the Presque Isle Light, the pierhead lights & ranges, & the lights of the city rendering it entirely superfluous. There seems to be every likelihood of the fulfilment before long of the desire on the part of the shipping interests of Lake Erie, that the light-house on West Sister Island be changed in location. The light-house is located on low grounds at the southern end of the island, & is invisible through a large arc to the north & northeast. The vessel interests desire that the light-house be rebuilt on a higher point of the island, so that it can be seen from all directions. Officers of the Lake Carriers' Association have declared in favor of these changes.—*Marine Review*.

Dry Dock for St. John, N.B.

Ex-Mayor Robertson, of St. John, is endeavoring to secure the construction of a dry dock there. At a meeting of the Board of Trade there early in September he related what he had done in England recently in connection with the matter. He had interviews with Messrs. Chamberlain & Goschen, of the Imperial Government. The latter requested him to get plans & specifications for a dock capable of accommodating the largest vessels of the navy, as well as the largest merchant steamers, & asked him if he had seen during his trip such a dock as he thought suitable to St. John. Mr. Robertson said he at first spoke of no. 3 graving dock at Glasgow, one of the largest in the world, being 881 ft. long, also one of the most perfect.

Mr. Robertson thinks the Imperial Government would contribute £100,000 a year for 20 years. The Dominion Government under 45 Vic., Cap. 17, would give \$10,000 a year, & the Provincial Government \$2,500 a year for the same term. As to the desirability of having a dry dock, he mentioned that steamship people in England spoke of the necessity of it, as they do not have vessels twice as large as ours. Insurance and writers also emphasized

A port without a dry dock could not be considered as either 1st-class or a home port. The subsidies in sight are not sufficient, as in addition to the dock there is the necessary repair plant. The dock & plant would cost \$1,000,000. The dock at Esquimalt cost £180,000 without the repair plant. The Quebec & Halifax docks cost \$1,000,000 each. The dock he proposed for St. John would be 800 ft. long, sufficiently large to take in the largest vessel built & building, & to accommodate 2 average sized steamers at once. The matter might be taken up as a civic work by the city, the city taking the \$22,500 in subsidies. They might borrow the money at 3%, but as the subsidies are only for 20 years, where would they be after that? If it was decided that it was not advisable for the city to undertake the work, he believed he could, if given 9 or 12 months, form a company satisfactory to all concerned. He would ask of the city \$2,500 a year for 20 years, a free site & exemption from taxation. If he failed to form the Co. the city would incur no responsibility. The new Glasgow dock & plant took 7 years to build, but he thought the one he proposed at St. John could be finished in 5 years.

A resolution was adopted recommending the City Council to assist in promoting the project on the lines submitted by Mr. Robertson, which it decided to do by a vote of 12 to 20.

The Maritime Provinces.

The Kingsport Marine Slip Co. is having 40 feet built on to its slip.

Work on the new cradle for the Dartmouth Marine Railway is progressing rapidly.

The America, a vessel built for the Halifax Pilot Service, was launched Aug. 27. She is very staunchly built & gives promise of proving a fast sailer.

Capt. J. B. Sutherland has resigned his position as 1st officer of the Government steamer Lansdowne & has gone to St. Thomas, W. I., to take charge of the Halifax steamer Hazel-dene.

The Dominion Atlantic Ry. Co.'s steamer, Prince Rupert, collided with & sunk the Digby packet, Silver Cloud, in the Bay of Fundy, Aug. 24, during a thick fog. The crew was saved.

The contract for the steamer to succeed the Stanley in the winter service between P.E.I. & the Mainland had not been awarded up to Sept. 14. It is said the vessel will be built by Gourlay Bros. & Co., of Dundee, Scotland. (July, pg. 131; August, pg. 162.)

Notice is given of application for incorporation, under the New Brunswick Joint Stock Co.'s Act, of the Steamship Pharsalia Co., with a capital of \$200,000, for the purpose of owning & sailing a British steamer, the Pharsalia. The applicants are: R. & P. W. Thomson, Rothesay, N.B.; J. H. Thomson; W. W. Turnbull; J. K. Dunlop, St. John, N.B.; & C. De W. Smith, Windsor, N.S.

At the last session of the Dominion Parliament \$50,000 was voted as a subsidy to any Atlantic steamship company which would run a vessel to Charlottetown & have cold storage compartments for the carrying of perishable goods. Arrangements have been concluded with the Beaver Line, & the steamer Lake Winnipeg has been fitted up with mechanical cold storage, & now calls at Charlottetown on her way to and from Montreal.

The Steamship Leuctra Co. has been incorporated under the N.B. Joint Stock Co.'s Act,

Annapolis, which towed a scow load of excursionists to Digby recently, & the tug Marina of Yarmouth for carrying passengers on the harbor, are in trouble. The maximum fine is \$500 for both masters & owners, & 2 years' imprisonment for the master in the latter case & a maximum fine of \$200 for towing an unlicensed scow, barge or boat. It is said prosecutions will follow all over the Dominion where the law has been violated & the lives of passengers, ignorant of the danger they were running, jeopardized.

The Clyde-built ferry boat Chebucto, of which an illustration is given on this page, was put on the route between Halifax & Dartmouth Aug. 28. On Sept. 29 she crashed into her dock at Halifax with terrific force. She had been allowed to hold her headway too long, & when the propeller was started to work astern it was too late & she crashed into the wharf with great force, damaging it considerably. Some of the passengers were thrown violently to the deck. The Chebucto is very hard to dock & has to be stopped a great distance from the dock. The paddle boats, on the other hand, can be run at full speed to within a few yards of the dock & be easily stopped, as the large side wheels make sufficient drag to stop

the boat even without being turned astern. The Chebucto's propellers were not able to stop her for some time after being reversed. The ferry wharf is badly damaged.

The Yarmouth S. S. Co.'s steamer Express, running between Halifax & Yarmouth, N. S., struck on the rocks off Port Latour in a fog, Sep. 16. She soon filled & settled down. The passengers & crew were taken ashore in small boats. The Express was a steel paddle steamer of 88 tons net, 381 tons gross. She was built at King-

horn in 1892 & hailed from Lancaster. She was 202 ft. long, 24 ft. broad & 10 ft. deep. She had engines of 200 horse power. Her 1st owners were the Morecambe Steamboat Co. of Morecambe, Lancaster. She was purchased early this year by the Yarmouth Steamship Co., was brought across the Atlantic, & arrived at Yarmouth from the other side in June, taking the place of the City of St. John on the South Shore route. She was commanded by Capt. Harding & carried a crew of 32 men. A full description of her appeared in our July issue, pg. 135.

THE HALIFAX-DARTMOUTH FERRY BOAT CHEBUCTO.

with a capital of \$160,000, for the purpose of owning a British steamer, the Leuctra. The incorporators are: R. & P. W. Thomson, J. M. Robinson & W. M. McKay, Rothesay, N.B.; J. H. Thomson, W. W. Turnbull, W. H. Murray & R. T. Leavitt, St. John, N.B.; J. B. North, Hantsport, N.S.; J. M. Smith, Windsor, N.S.; & J. De W. Chipman, St. Stephen, N.B.

Steps are being taken to prevent unlicensed tugs carrying passenger, or towing unlicensed scows with passengers. The tug Pinafore, of

Yukon Navigation Matters.

The Bennett Lake & Klondike Navigation Co., which has its head office at 23 Leadenhall St., London, Eng., & has a capital of £75,000, has been licensed to carry on business in British Columbia, where F. M. Rattembury, of Victoria, is its Attorney. The principal objects of the Co. are to operate steamers, rail or tramways in Canada, to facilitate access to Dawson City or elsewhere in the Klondike, & to obtain parliamentary authority to build a railway from the north end of Marsh Lake to Hootalinqua River, & a railway or tramway on either side of the White Horse Rapids & Miles Canyon. The Co. possesses extensive powers, a recital of which would occupy more space than we could devote. Full particulars are contained in the B.C. Official Gazette of Sept. 8.

In our Aug. issue, pg. 163, we gave some particulars of the work of this Co., which is operating the steamer Nora between Bennett & White Horse, connecting with 3 other steamers, the Ora, Nora & Thorn, which run on the lake & river route for the balance of the way to Dawson City. The idea of entering the Yukon from the up river & running down to Dawson, in place of utilizing the Lower Yukon & traversing so many weary miles of uncertain water, originated with British Columbia people. The U.S. companies which have been running steamers on the Lower Yukon have, says the Vancouver World, several times sent men up the river to advise upon the possibility of running steamers in the upper reaches of the Yukon. All reported against the feasibility of it, & that boats could not be run through Miles Canyon & White Horse, to say nothing of the Five Fingers, while running them back again was entirely out of the question. Still, it has been done. The steamers were built, & carried in small sections, over the mountains of the Chilcot Pass, in thousands of small packages, amidst the storms & snows of last winter, when even ordinary travel was thought to be questionable. Incessant care had to be shown, so that no package was missing, as it was apparent that in a country where there was no possibility of duplicating any missing article, the loss of even one package might be a serious obstacle to the completion of the boats. Timber had to be secured, a saw-mill put in operation to cut the necessary timber, & a thousand details arranged in a part of the country, at that time a terra incognita. But amidst all the difficulties, the steamers were built & launched in time, & capital little steamers they are.

The wonderful journey through the rapids has often now been depicted, & a great surprise it was to the Dawsonites to see the trim little vessels coming into their city, from up the river, instead of from below. At one step the whole problem of how to reach Dawson had been solved. Vancouver and Victoria are now within 9 days' travel of Dawson. No longer will there be weary months of waiting for news of the outside world. Backwards & forwards the Ora, Nora & Thorn, have been travelling the whole of the summer, without the slightest mishap, bearing in tons of goods for the local merchants, who, by getting in ahead of the down river boats, have secured the first market, & the richest profits, & bringing out hundreds of miners & business men, delighted to reach civilization in a few days—when they were expecting to take weeks on the journey.

It has been a wonderful transformation scene. Already for next year enterprising merchants are booking freight room for the first steamer down to Dawson, as it is apparent to them that the first goods in next year will be of enormous value. Next year, as during this, the Canadian coast cities will retain the cream of the Klondike trade. Arrangements are being now made, for extend-

ing the operation of the fleet, & securing larger & even more powerful steamers so as to hold the route that has so courageously opened out. Astonishing as the success has been this summer, of this line of steamers, already the principal inaugurators of the Company are hard at work, perfecting arrangements to secure for B.C. the winter route to Dawson as well as the summer one. Particulars of what they are doing will be found on pg. 196 of this issue, under the heading, "The Arctic Express Co."

The Boston & Alaska Transportation Co. has passed into the hands of a receiver. This Company was given the contract by the Dominion Government for the transportation of militia & other supplies to the Klondike. The latest advices from St. Michael's, Alaska, stated that 300 tons of these supplies were lying there, the Co. being unable to get them up the river. The action of the Government in giving the contract to a shipping port in the U.S. over the tender of Canadian firms in Canadian Pacific coast cities aroused great indignation at the time, & British Columbians take a grim satisfaction in the result. The shipment of the supplies commenced early in June, the first instalment being taken from Seattle by the Hixham. This cargo & subsequent shipments were transferred to river steamers being built at the mouth of the Yukon. But the men engaged in building the steamers tied them up for their wages, & the Boston & Alaska people have been moving heaven & earth to get a river company which would take the supplies on to Dawson. This they had failed to do when the advices left St. Michael's, as the river companies say the Dominion Government has already paid the B. & A. Co. 75% of the contract price, & they express doubt as to the ability of the Co. to make good to them the transportation charges to Dawson. When the Danube left St. Michael's the Seattle people were making frantic efforts to close with the river companies, but with little prospect of success, although a large portion of the supplies were landed there early in July. In striking contrast to the above, & in vindication of the position taken by B.C. merchants at the time the contract was awarded, is the fact that 30 tons of supplies sent up in the Canadian steamer Danube for the N.W.M. police, & which were transferred to the C.P.N. Co.'s steamer Yukoner, have long since gone up the river, with every prospect of reaching Dawson safely.

The Canadian Development Co. is running its steamer Anglian between Teslin Lake & Fort Selkirk.

Two stern-wheel river boats, the Mono & the Stikine Chief, built for J. A. Mara for Stikine River traffic & subsequently destined for the Yukon River, have been wrecked while being towed from Wrangell to St. Michael's by the Fastnet.

Chief Engineer Coste, of the Dominion Public Works Department, who was sent to the Yukon last spring to look into the navigability of the route from Teslin Lake to Dawson, reports to the Department from Fort Selkirk that there is a free course for vessels drawing 3 ft. of water from the head of Teslin Lake down the Hootalinqua & Lewis Rivers to Fort Selkirk. From Fort Selkirk it is plain sailing to Dawson City.

The Canadian Pacific Navigation Co.'s river steamer Yukoner, built at St. Michael's, was given her trial trip Aug. 6. It proved satisfactory & the work of loading her with freight was at once started. She was to leave St. Michael's Aug. 7 for Dawson, Captain J. Irving, Manager of the Co., being in command. He did not doubt her ability to ascend the river, the lowest water reported by boats arriving about that time being $4\frac{1}{2}$ ft., so that unless it fell very rapidly it was expected that all the boats then at St. Michael's would be

able to make the round trip at least, if they did not get back to Dawson a second time.

The C.P.R. steamers Tartar & Athenian are lying at Vancouver open to engagements.

The Sydney-Newfoundland Service.

At night we were in Newfoundland. A 6 hours' run across Cabot Straits, in the steamer Bruce, brought us early next morning to the wharf at North Sydney, & again we stepped ashore on Canadian soil. What made the matter seem simpler was that we slept soundly all the 6 hours, in berths so commodious that the tallest member of our party—6 ft. 1 in. in his stockings—was able to stretch himself out to his full length. Tall men appreciate such a luxury at sea. How is it that the builders of berths so seldom think of it? But the Bruce is a model in every respect, & in its fittings equal to anything that a first-class Cunarder gives. As an ice-breaker she suggests wonderful possibilities. Every one admired Sydney Harbor before, but no one believed that it could be kept open all the year round. But last winter the Bruce steamed calmly, at the rate of 7 knots, through blue ice 20 ins. thick, & in the spring she pushed her way through the still more dreaded field ice with little trouble. If she did that last winter, when she had to make a 20 hours' run to Placentia, the trans-insular railway not being completed, how much easier to do it when she has only a 6 hours' run to Port-aux-Basques? The time of her arrival now can be calculated to a quarter of an hour.

It seems to me that this is the kind of boat with which to try the Hudson's Bay navigation before we can consider the question closed, or winter communication between Prince Edward Island & the Mainland, or navigation during the winter to Paspebiac or further up the Gulf or even the River St. Lawrence. The people of North Sydney, at any rate, believe that as an ice-breaker the Bruce can do anything. Doubters declared that when sent into dock the winter's work would show a great deal of damage to bow, keel & hull. She went into the big dock at St. John's in July in order to be inspected, & no damage was seen, further than might have happened with a winter's sailing anywhere.—Correspondence by Rev. D. M. Grant.

B.C. Freight & Shipping Report.

R. P. Rither & Co. say, under date of Aug. 31: Business in grain chartering both from San Francisco & the northern ports is very slow, & on the present basis of freights there is little to be done. It is a question, however, if even a substantial reduction in rates would mend matters, as foreign consuming markets are more or less demoralized. There is some demand for nitrate tonnage on the west coast of South America & more than one vessel has been fixed to proceed there from San Francisco in ballast.

In the lumber market rates continue nominal to some extent, but there has been a decided marking down of quotations in several directions. Tonnage is now offering more freely, but this is accompanied by a falling off in the demand for lumber, which tends to steady rates.

The salmon season has proved a great disappointment & in B.C. the pack up till now is only about 40% of last year's. Several of the fleet chartered will therefore not be required, & indeed already two vessels have been withdrawn.

The White Pass & Yukon Ry. Co. has contracted for 135 miles of telegraph wire & the necessary supplies for equipping its offices at stations along the road, running north from Skagway.

In British Columbia Waters.

It is said that more than 100 vessels have been added to the Pacific Coast fleet this season, B. C. getting more than its share.

The C. P. R. steamer Illicillwaet, heretofore running between Arrowhead & Thompson's Landing, has been withdrawn from that route, & now runs between Brooklyn & Robson, touching at all intermediate points. Capt. Hugues is now in command.

On Sept. 8 at 2 a.m., on Lower Arrow Lake, the C. P. R. steamer, Rossland, ran into P. Genelle & Co's tug Fawn. Both vessels had lights out & each had given signals, but the Fawn's pilot misunderstood the Rossland's whistle. The Fawn is about 70 ft. long & had been in commission 3 years. She was cut in 2 by the Rossland's prow. The 2 parts were towed to Shields' landing by the Illicillwaet, to be placed on the ways & repaired. Had the Rossland struck the Fawn in the middle instead of abaft the pilot house there would have been loss of life. Both engines were reversed when the boats collided.

A large steamer, with a pneumatic caisson & air lock elevator for gold dredging purposes on the Upper Fraser is likely to be built at Vancouver. A model has been tried & found to work satisfactorily to the inventors, Messrs. Garrison & Wood, of Los Angeles, Cal. The steamer will cost about \$20,000. It will be 120 ft. long & 28 ft. wide & will be fitted with steam appliances & machinery for heavy dredging work. The caisson is to be 10 by 20 ft. It is designed as a water-tight section in the boat that can be lowered to any reasonable depth so as to strike the bottom of the river. Then it will be pumped out so workmen can descend inside the caisson & dig out the bed of the river.

In our Aug. issue, pg. 161, we mentioned the sale of the Esquimalt Marine Ry. to the B. C. Marine Co., which intends to enlarge the plant, to erect a smaller plant in Victoria Harbor & to build another marine railway at Vancouver. There is evidently going to be competition. The Star Yard at the head of Victoria Harbor, which until recently was managed by T. Trahey, has been sold to a U. S. Co., of which J. Clarke, a Victoria shipbuilder & contractor is Manager. This Co. has com-

menced building a slip. A cradle will be built running from shore to mid-channel, or until 20 feet of water is struck. The grade of the ways will be 1 ft. in 20. It is intended to handle vessels up to 2,000 tons.

We have no advice as to what the Canadian Pacific Navigation Co. is doing in regard to a new steamer for the Vancouver-Victoria service, further than what we mentioned in our July issue, pg. 134, & Aug., pg. 161, except that the Assistant Manager of the Co. denies a rumor that a steamer has been bought from the London & Northwestern Ry. of Eng., & states that negotiations are being carried on with that & other companies for the purchase of a 1st-class steamer, it having been found that, owing to the rush in the British shipyards, too long a time would elapse before such a craft could be built to order. The Islander is now doing the Vancouver-Victoria service, the Charmer being laid up.

The Pacific Coast S. S. Co. has decided to increase its San Francisco-Puget Sound-British Columbia service from a weekly to a semi-weekly one. As soon as the Corona, which ran ashore between Dyea & Skagway, can be placed in commission again she will be put on the southern run, taking the place of the Santa Rosa, which will be put on the B. C. route, & will run in conjunction with the Umattilla, Walla Walla & Queen. Steamers will leave San Francisco each Wednesday & Saturday, arriving at Victoria, B. C., each Monday & Friday & Seattle each Tuesday & Saturday. Returning, they will leave Seattle every Sunday & Thursday, arriving at Victoria each Wednesday & Sunday. The return of the Senator and City of Puebla, which were withdrawn on the opening of the war, will make a change in the vessels of the Puget Sound fleet, but it will make no change in the sailing days.

The Ontario Court of Appeal recently reversed the decision of an assessment court & held that in assessing for purposes of taxation the poles, wires, conduits & cables of a telephone company, the cost of construction or the value as part of a going concern is not the test; they must be valued in the assessment division in which they happen to be, just as so much dead material to be taken in payment of a just debt from a solvent debtor.

THE ST. LAWRENCE ROUTE & THE MANITOBA GRAIN TRADE.

By Edward Farrer.

Copyrighted by the Canadian Magazine & reproduced by permission.

Sir Wilfrid Laurier has said that the question of the day in Canada is transportation. It is a question everywhere, owing mainly to the drop in prices during the last 20 years. When wheat was \$1.50 a bushel the cost of transportation was not the vital factor it is to-day, when the price is so much less. The general movement in behalf of lower transportation rates is caused, as economists put it, by the fact that whilst improved transportation has contributed greatly to the fall in prices, it has not similarly reduced its own price; in other words, while formerly 10 bushels of wheat would fetch enough to carry 100 bushels, say, 250 miles, it would now be necessary to sell 15 bushels to transport the same quantity the same distance, so that, to quote Professor Mavor, of the University of Toronto, "The transportation charge tends at present to form a progressively increasing proportion of the realized price of the article transported."

What Mr. Laurier had particularly in mind, however, was the question of transportation from the North-West. The Canadian route from the Sault to the Welland Canal, & from the Welland to Montreal & Quebec, has cost the people over \$50,000,000 for canals, besides a large sum for harbors & dredging; yet the bulk of the grain traffic of Manitoba is going to the Atlantic by way of Buffalo & New York. For every bushel of Manitoba wheat sent to Montreal for export in 1893, 2 bushels were sent to Buffalo & New York; in 1894 the proportion was 3 to 1 in favor of the American route; in 1895 as much as 8 to 1; in 1896 3 to 1; in 1897 5 to 1.

The export of grain from Manitoba is destined, we all believe, to become an immense traffic, & it is of importance, after all we have spent & are spending on the St. Lawrence route, that the trade should not be diverted in this fashion to the U. S.

The reasons why it seeks New York in preference to Montreal appear to be these: First of all, Montreal is handicapped by its remoteness from the ocean & by the freezing of the St. Lawrence so soon after the Manitoba harvest. It was cruel of nature, when she had built so majestic an outlet from the Great Lakes to the Atlantic, to place that heavy ban upon it. Wheat does not begin to reach Fort William in large quantities till the first of October. Ordinarily the last ocean vessels leave Montreal about Nov. 20. But as it takes on an average 10 to 12 days for a cargo to reach Montreal from Fort William, the Manitoba shippers do not care to ship to Montreal after Nov. 10. On the other hand, they can ship to Buffalo as late as the first week in December; it takes a week to send a cargo from Fort William through to New York, & their insurance runs to Dec. 10. Buffalo has thus an advantage of 30 days of shipping time at the busiest period of the year. Besides, when the wheat gets to Buffalo the owner has the choice of 4 ocean ports, New York, Boston, Baltimore & Philadelphia, open the year round—an important consideration.

Secondly, the speculative market of New York enables the Manitoba shipper to insure himself against a drop in price while the grain is in transit. For instance, when he has 100,000 bus. of no. 1 hard ready to ship from inland elevators to Fort William, he wires his New York agent to buy an option for the delivery of 100,000 bus. of no. 2 red, the standard grade there, a fortnight thereafter. The option, of course, goes up & down with the market while the no. 1 is on its journey, & protects the no. 1. Hence, as he says, the banks need not worry about his account. The option is bought in when the Manitoba

grain arrives. There is no speculative market at Montreal, so that the Manitoba shipper lacks this sort of protection at that port. Moreover, the longer duration of the voyage to Montreal increases the risk of a bad turn in the market; it also represents an extra loss of interest on the wheat while in transit.

In the next place, & this is perhaps the chief reason, it is usually cheaper to use the American route. The Manitoba shipper has no sentiment in his soul; the sole question with him is how to lay down grain at Liverpool at the lowest cost. There is not much difference between the cost of getting it to Montreal & the cost of getting it to New York, Boston or Baltimore. But the objective point is Liverpool, and it is almost always cheaper to get it to Liverpool via New York than via Montreal, because, as a rule, ocean rates from New York are lower. There are more steamship lines at New York & Boston than at Montreal, and greater competition among vessels of greater carrying capacity. At Montreal he is in danger of being "held up" by a sudden demand for increased rates, especially towards the close of the season; consequently it is difficult for him to know in advance at Winnipeg exactly what a shipment for Liverpool via Montreal is going to cost at its destination. Again, at Montreal the grain may have to wait 3 or 4 days till a vessel is ready to take it, & when a vessel does turn up, the facilities & appliances for loading it are not up to date; while if the shipment should miss the last vessel it costs money to store it or send it to Boston or St. John. In consequence of these drawbacks, Montreal is not regarded favorably by Manitoba shippers. There are only a few buyers in Montreal competent to handle the blocks of wheat now shipped from Manitoba, & the number is not likely to increase till the port has been modernized.

These, briefly stated, are the reasons why Montreal has lost the greater part of the Manitoba grain traffic. But it is necessary to a full understanding of the subject that we should look a little beyond immediate causes.

As most persons know, the shipping business on the Upper Lakes has undergone remarkable expansion since a 16-ft. channel between Buffalo & Duluth was obtained in 1882. Prior to 1882 the available depth was 9½ ft. At that depth the route could move only comparatively small shipments; indeed was little better than a local route. The Upper Lakes are now a great through route between East & West, carrying bulky commodities at a very low rate, & what is probably as important, tempering the rates of all the railways running from the agricultural States to the Atlantic seaboard. It is quite supposable that but for cheap lake rates and the effect of lake competition on rail rates, the Northwestern States might not have been able to make wheat-growing pay in the recent era of low prices; in other words, might have stood still instead of adding millions to their population; & that it would have been impossible to bring the iron ore of Lake Superior to the coal of Pennsylvania, Ohio & Illinois—that is, to have made the iron & steel industry of the United States what it is to-day. The old sailing vessel has gone, & along with it the iron steamer, once considered a leviathan. The present type is the steel steamer, with double bottom & triple expansion engines, capable of carrying 5,000 tons of cargo at a speed of 13 miles an hour. One of the steamers lately built for the Bessemer Steamship Company measures 475 ft. over all, & has a carrying capacity of 6,500 tons. The substitution of steam for sails, with the improved facilities for loading, unloading & fueling, has greatly augmented the working power of the fleet, a lake steamer being able to do something over twice the work of a sailing vessel of like tonnage. In a recent report to the Secretary of the Treasury, Mr. Tunell, of

Chicago, shows that in this way the carrying power has been increased 2½ times since 1885. Formerly 15 or 16 round trips were considered a good season's work in the ore business between Lake Superior & Lake Erie ports, whereas 22 round trips are now usually made. On June 30, 1897, the gross tonnage of the steel vessels on the lakes was 490,000 tons. The wooden tonnage was 885,000 tons. Steel was the material used in the construction of eight-ninths of all the tonnage built last year. In 1897 the freight received & shipped at Buffalo, the eastern terminus of deep-water navigation, exceeded 10,000,000 tons. The shipments of coal from Buffalo exceeded 2,400,000 tons, the receipts of grain & flour over 200,000,000 bus. The aggregate tonnage of freight carried on the upper lakes was 30,000,000 tons; the quantity going through the canals at Sault Ste. Marie in a season of 230 days being about twice the traffic of the Suez Canal in 365; while the traffic which passed up and down the Detroit River is said to have exceeded the foreign & coastwise traffic of London & Liverpool combined. It is hard to realize that it is only 69 years since the first American vessel was launched on Lake Superior, & since the first vessel arrived at Chicago from the Lower Lakes. "On that occasion all the male inhabitants of the village, including the boys, numbering nearly 100, assisted in dragging the craft across the bar." The village has now 1,500,000 inhabitants, & 30,000,000 people, about the population of England & Wales, dwell in the eight States bordering the Upper & Lower Lakes.

As said, the period of greatest expansion dates from 1882, when a 16 ft. channel was obtained. Since then the centralization of industries, with the concentration of population in large manufacturing centres, has been going on with considerable rapidity, & the process has undoubtedly been hastened in the watershed of the Upper Lakes by the ease & cheapness with which food & raw materials are carried long distances from the place of growth & extraction to the place of consumption & manufacture. The huge steamers bring down grain, flour, iron ore & lumber, & carry back coal, salt, building material, & heavy factory goods, thus effecting an exchange between East & West of the coarser staples which the railway could not effect at anything like so low a cost. Now, however, a 21 ft. channel is all but completed. Shortly before his death, General Poe, of the U.S. army engineers, who had charge of the St. Mary's Canal & other improvements, said, in a report: "The increase from 9½ to 16 ft. brought about a truly extraordinary development of lake commerce, the result being most notable, perhaps, in the character of the vessels employed. Give the commerce a channel from Buffalo to Duluth, that shall be navigable on a draft of 20 ft., & it needs no prophet to foretell a more wonderful growth still." I suppose it is safe to say that steamers carrying 7,000 tons of cargo, or more, may be looked for so soon as the harbors are made deep enough to accommodate them; that, low as they are, rates have not nearly touched bottom, nor can any limit be set as yet to the development of a commerce already of colossal proportions.

Unfortunately, the St. Lawrence route lies outside the deep-water area. There is only 14 ft. of water in the Welland Canal, & an available depth of only 9 ft. in the canals below Kingston. About all the U.S. Government has had to do is to improve the lakes themselves; whereas we have had to dig a series of canals aggregating 70 miles in length past the rapids of the St. Lawrence & round Niagara Falls, at a time when we have been building a trans-continental railway, & carrying on other burdensome enterprises. There is no prospect, at present, at any rate, of our being able to deepen the Welland to 21 ft.

That is a task we might, perhaps, have undertaken had it not been deemed advisable to deepen the canals below Kingston in order to obtain a uniform depth of 14 ft. from Lake Erie to Montreal; but to do the two works simultaneously would be a heavy strain. Sanguine persons believe the U.S. will sooner or later deepen the Canadian canals to 21 ft. in the interest, not of our trade, but of their own. Professor Emery R. Johnson, an authority on the subject of American waterways, says in a recent work:

"There has been a good deal of discussion whether the deep water channel to the sea should pass by way of the St. Lawrence, or from the lakes to New York city; but the question seems clearly to have but one answer so far as the U.S. is concerned. However desirable it may be for Canada to have deep-water communication between her western territory & Quebec, Montreal, & her other eastern cities, & however important it may be for Canada to have a water route from Canadian fields, forests, mines & shops to Liverpool & other markets of Europe, the case with us still remains different. Our concern is primarily to connect the Great Lakes with the great cities of the eastern states. These are our chief markets. Trade with England is desirable, but it has only a secondary importance. The traffic on the Welland Canal is comparatively light; in 1890 it was only about ¼ that on the smaller, essentially barge-traffic Erie Canal. The St. Lawrence route would not only have less commercial value for us, but it would increase rather than lessen our commercial & political independence. Our political relations with Canada & England would be injured by such a waterway. We should have about 1,400 miles of coast from which our ocean cruisers & men of war could be excluded. As long as Canada remains a dependency of Great Britain, our commercial & political interests will remain opposed to hers."

At all events, American co-operation is not in sight.

Vessels carrying 175,000 bus. of wheat, or 200,000 bus. of corn, sail into Buffalo from Fort William, Duluth & Chicago. Such cargoes cannot be taken through the Welland. At Port Colborne, the Lake Erie end of the Welland, connection between the Upper & Lower Lakes is broken as effectually as though it was the meeting place of a standard gauge railway with a narrow gauge. The largest cargo that has ever passed through the Welland was probably that of the Algonquin, belonging to Hagarty & Co., of Toronto, which took 67,000 bus. of wheat through last summer. Ordinarily, when a steamer reaches Port Colborne with more than 60,000 bus., she is obliged to lighten; then when she reaches Kingston or Prescott she has to transfer all she has on board to barges, which take it down the 9-ft. channel to Montreal. With 14 ft. of water all the way from Port Colborne to Montreal, rates to Montreal will certainly be reduced. Per contra, the deepening of the Erie Canal, now in progress, will have the effect of reducing water & rail rates between Buffalo & New York, while the rate from Fort William & Duluth to Buffalo is sure to be reduced when the 21 ft. channel is fairly going & the supplementary improvements finished. It is obvious that the advantage to Montreal in having 14 ft. of water from Lake Erie will not of itself enable her to recover the Manitoba tonnage lost to Buffalo & New York under the same conditions making for lower rates by the latter route.

My own notion is that it was a mistake for the Government to deepen the canals below Kingston. True, it had been decided by the former Government; nevertheless, I venture to think it would have been better to spend the money in deepening the Welland to 21 ft. The Chief Engineer of the Public Works Department tells me there was no engineering difficulty in the way. Nothing in

the economies of water transportation is much more established than that the modern lake vessel abhors canals. With her costly equipment she cannot afford to incur the delay & danger inseparable from passing through them. Between Kingston & Montreal there are 43 miles of canals, as against 27 on the Welland. I have not been able to find a practical man who believes that when those 43 miles are deepened to 14 ft., lake vessels will make use of them to get to Montreal; the vessels, it is universally thought, will, as now, tranship at Kingston or Prescott to barges. Had we deepened the Welland to 21 ft. & left the lower canals as they were, the position would have been this: Vessels could have carried cargo from Fort William or Duluth to Kingston for nearly as low a rate as to Buffalo. The 27 miles of canalling in the Welland, & the difficulty of procuring return cargoes at all times, would, of course, have militated against the route; still, the rate to Kingston would have been materially lower than now. Then from Kingston to Montreal, 178 miles, we should have had the present barge service of 9 ft. to compete with a barge service of 9 ft.—the depth the Erie will have when the projected improvements are finished—from Buffalo to Albany by canal & from Albany to New York by river, a total distance of 500 miles. Under such circumstances the rate from Lake Superior to Montreal would have been sufficiently low to recover for Montreal at least a portion of the Manitoba traffic, & to augment the export via Montreal of grain from Chicago & Duluth.

Let us return to the actual situation. There are already 300 steamers or more on the Upper Lakes which cannot pass through the Welland, & consequently cannot enter Lake Ontario. All of these, or nearly all, are U.S. vessels. I am sorry to say the Canadian fleet on the Upper Lakes is quite insignificant. Of the vast tonnage going through the Sault canals only 4% is Canadian. A Canadian steamer of the latest U.S. type would be hard set to earn expenses. She would be cut off from Montreal, Toronto, Hamilton, Kingston, etc., by the termination of deep-water navigation at Port Colborne. She might sail to places like Owen Sound, Parry Sound & Goderich; but, as everyone knows, there are no ports of any great account on the Canadian shores of Huron, Erie or Superior; whereas U.S. steamers do business with Chicago, Milwaukee, Cleveland, Detroit, Toledo & Buffalo, with an aggregate population of 3,000,000, as well as with many smaller cities & towns situated on the Upper Lakes, some, like Escanaba & Marquette, with a booming shipping trade. Furthermore, Canadian vessels, large or small, operate at a disadvantage in being excluded from the vast stream of U.S. lake commerce. Manifestly, if a vessel has a cargo both ways she can make more, & yet charge less, than if she has a cargo only one way. A Canadian vessel going to Duluth for a cargo of grain for Kingston is usually obliged to go light, because not allowed by U.S. law to carry from one U.S. port to another—as, for example, from Oswego or Buffalo to Duluth. Going to Duluth light she cannot afford to accept as low a rate to Kingston as a U.S. vessel which has reached Duluth with a full or partial load from Buffalo. That is to say, she not only suffers directly through being deprived of purely U.S. traffic, but the deprivation cripples her in the competition for traffic between U.S. ports & Canadian ports. This is why the Canadian fleet is insignificant by comparison with the U.S. fleet, & the largest Canadian vessels, with a few exceptions, mere tubs by the side of the largest U.S. vessels.

The larger the vessel the less the cost of carrying per bushel & the longer the time in which navigation is possible in the fall. The report for 1896 of the Buffalo Merchants' Exchange says, with a touch of Populism: "The

future of the business on the lakes seems to be most discouraging to the owners of small vessels; the business is apparently drifting into the hands of capitalists & corporations, one concern having built during 1895 16 large steel vessels, at an expense of \$3,000,000, & they are still building." "The vessels now being built," says an American expert, "can be navigated with safety in the fall, under conditions which would have been dangerous to the class of vessels prevailing 10 years ago."

For these reasons Canadian vessels are unable to make as low rates as U.S. vessels. This rule may admit of exceptions; all the same, it is the rule. Hence, in their anxiety to regain the Manitoba traffic, the Montreal Board of Trade has asked the Dominion Government to permit U.S. vessels to carry grain for export from one Canadian port to another. The theory is that if U.S. vessels were allowed to carry grain from Fort William to Port Colborne, Kingston, Owen Sound, Midland or Parry Sound it would be possible to lay it down at Montreal cheaper than it can be laid down for at New York. The fact that a good deal of export grain is carried in U.S. bottoms from Chicago & Duluth to Kingston for Montreal in preference to Buffalo is cited in support. There is no denying that U.S. competition between Fort William & Eastern Canadian ports would reduce the rate to Montreal. A U.S. vessel of the smaller class going to Kingston or Prescott with Manitoba wheat could return to Duluth, on the way back to Fort William, with a load of coal or something else from Oswego or Sodus Point—a traffic from which Canadian vessels are debarred. This of itself would be a consideration in favor of lower rates. Canadian vessel-owners protest that to allow the U.S. to participate in Canadian traffic while Canadians are rigorously excluded from U.S. traffic would be grossly unfair, and, as they put it, unpatriotic; and add that if U.S. vessels are going to carry the harvest of Manitoba to the St. Lawrence, the harvest might as well go to New York at once & be done with it so far as Canadian interests are concerned. The answer of Montreal is that it is a serious matter to contemplate the diversion of the export trade of the Canadian Northwest to U.S. seaports. It is so much lost to Canadian labor, steamships, railroads, banks, etc.; furthermore, if New York is to be the regular outlet for Manitoba, Manitoba may some day ask what there is left for her in the connection with Old Canada that she should prolong it.

Some maintain that the opening of the railway to Parry Sound will restore the traffic to Montreal. It is difficult to see how. The C.P.R., which in railroad parlance originates the traffic, has elevators at Owen Sound, to which port its passenger steamers run from Fort William, & rail connection from Owen Sound with Montreal. Yet, except in a year like 1897, when prices were higher than usual, it has not been able to carry much export grain from Owen Sound to Montreal in competition with the Buffalo route. It carries next to none all-rail from Fort William to Montreal; the all-rail traffic could not be made to pay & was abandoned years ago. The grain brought to Owen Sound by the C.P. steamers, which, however, are not grain-carriers in the proper sense, is mostly for Ontario millers, although last year, as just observed, a considerable quantity was for export from Montreal & St. John. The line from Parry Sound to Montreal will be a trifle shorter than the C.P. line from Owen Sound, but that will make no difference. Since, in ordinary seasons, the C.P. cannot make money by hauling Manitoba wheat for export from Owen Sound to Montreal & St. John in competition with the Buffalo route, notwithstanding that it has the haul from the place of growth to Owen Sound, I do not see how the Parry Sound road can cut much of a swath in the trade.

It is true that U.S. railways haul wheat from Buffalo to New York in competition with the Erie canal, indeed, get the lion's share of the traffic, & while it is 440 miles by rail from Buffalo to New York it is only 390 from Parry Sound to Montreal. But the conditions of transportation at Buffalo & Parry Sound & along the respective routes are so different that it does not follow that what the U.S. roads do the Parry Sound road can do. The U.S. roads start grain trains of 60 cars, each car containing 1,000 bus., from Buffalo. The grades on the Parry Sound road would not allow of a train of that weight being drawn by a single locomotive. Again, local traffic on the New York Central, Erie, West Shore & Lehigh is out of sight greater than on the Parry Sound line; & there is an indefinitely better chance of obtaining a return load to the point of departure. Besides, Manitoba wheat can be carried from Fort William to Buffalo in U.S. steamers at a lower rate than from Fort William to Parry Sound in Canadian. The ordinary quoted rail rate from Buffalo to New York, "alongside," i.e., alongside the ocean vessel, is 5c. a bushel, \$1.67 a ton, but the actual rate is frequently less. Last fall it was 4c. from vessel at Buffalo to alongside vessel at New York. The Parry Sound road cannot charge more to Montreal, or it will get none of the traffic. It may be able to carry Manitoba grain to Montreal for that sum. But to say that, under a running agreement between the Dominion Government & the Parry Sound road, Manitoba grain can be shipped for 4 or 5c., at a profit to both carriers, from Parry Sound to Montreal & thence over the Drummond County road to Quebec & the round-about Intercolonial to St. John, 1,150 miles, with the cars returning empty, looks like a very wild assertion.

The Parry Sound road may possibly stand a better chance at carrying U.S. wheat to Montreal. It can employ U.S. steamers and barges between Duluth & Parry Sound, which will ensure a lower water-rate than can be obtained between Fort William & Parry Sound, where the traffic has to be carried in Canadian bottoms. Only here again the rate to Parry Sound will be higher than the rate to Buffalo, because the vessels carrying grain to Parry Sound will have to return empty, whilst those going to Buffalo have return cargoes. Everyone will rejoice if the Parry Sound road shall succeed in bringing a greater volume of U.S. grain to Montreal; but, to be candid, the prospect is not bright.

The best authorities, Canadian & U.S., whom I have been able to consult, say the true if not the only way of recovering the Manitoba traffic for the St. Lawrence route is for the C.P.R. Co. to put large grain steamers, with barge consorts, between Fort William & Owen Sound, running them in connection with the railway at Fort William & with a first-class ocean steamship line owned by the company at Montreal, so that the Manitoba shipper can get a through rate & through bill of lading direct from his elevator at Brandon, Morris, or Indian Head to Liverpool. This, it is believed, would give Montreal a pull over the U.S. route which she can hardly hope to get in any other manner. What is of more moment, it would add to the value of all the grain annually produced in the Canadian Northwest by reducing the cost of transportation of the surplus for export. It would bring the Manitoba wheat grower, the Montreal or Toronto buyer & the English wheat-broker closer together, & enable them to handle the crop to better advantage all round. At the close of navigation grain stored at Owen Sound or Montreal could be shipped over the C.P. line to West St. John. The distance would be: Owen Sound to Montreal, 460 miles; Montreal to St. John, 480; total 940—a long rail haul, to be sure, but with this vital fact in its favor, that it would be merely part of a continuous rail & water haul in the same

hands from Manitoba to the United Kingdom, a distance of 4,500 miles. As it is, the C.P. ceases to have any interest in the grain once it reaches Fort William. The transportation from Fort William to Montreal, & the transportation from Montreal across the Atlantic, are separate & distinct transactions.

Such a plan would not call for any fresh canal expenditure by the Dominion. The grain steamers of the C.P. would not enter the Welland but go straight to Owen Sound. It would be immaterial whether the Welland or the canal below Kingston were deepened or not. One of the most eminent waterway engineers in the U.S., a man familiar with the Great Lakes & the St. Lawrence route, wrote to me the other day:

"We all know how cheaply the C.P.R., with its railway lines running from ocean to ocean, can carry merchandise across the continent—what an advantage it has over the so-called transcontinental roads in the U.S., which have to receive freight from, & deliver freight to, other roads that have the hauling half way across or more. On the same principle the C.P.R. could carry wheat from the place of growth in Manitoba to Fort William & thence to Liverpool on its own steamships from Montreal at a rate which no other route or combination of transportation interests that I know of could touch. When Montreal was closed it could fall back on St. John, where it has already built up a large export business, & which would become a still more important seaport if it were the winter terminus of C.P. ocean vessels. Given a C.P. steamship line at St. John in winter, fed with Manitoba wheat, it ought to carry a great deal of the Ontario & Quebec produce which now goes to Europe from Portland & Boston.

"The navigation laws, compelling British trade to be done in British bottoms, were repealed long since, as unsound in principle. I am sure there is no economic heresy in the doctrine that the trade of a country should be carried by that country's own land & water routes if the services can be performed by them as cheaply as by the routes of a foreign nation. Looking at Canada all over, a country of length without breadth, with her western provinces separated from the eastern by uninhabited if not uninhabitable stretches of desert, while lying for hundreds of miles alongside our hustling Prairie States, of which, indeed, Manitoba is the northern projection, it seems to me she, of all countries, ought to keep her carrying trade in her own hands if she can. For a like reason, she ought to keep her seaboard provinces in closer touch with the rest of the country by establishing a winter port there. Were I a Canadian Minister I should not vote a dollar to a Canadian Atlantic service except on condition that it fulfilled the ends here outlined—that it regained for Canadians the carrying of their own harvest in the Northwest, & promote the solidification of the country by uniting Manitoba to Montreal & St. John. In my judgment, the C.P.R. is the only agency that can establish & successfully operate a steamship line capable of doing this, simply because it alone has the machinery to work with—a transcontinental road all the way from Vancouver & Winnipeg to Montreal & St. John, affording unequalled facilities for feeding Canadian ocean steamships & for carrying the cargo from the place of origin to Europe at lowest cost. The wheat crop for export of the Canadian Northwest amounts at present, I understand, to 20,000,000 bus. annually. If by the project just outlined only 5c. a bushel were added to its value & to the value of the wheat not exported—and that is a rather low estimate—the payment of a subsidy of \$1,000,000 a year to the C.P. ocean line would be recouped to Canada 2 or 3 times over every year."

I have no idea what the views of the C.P.R. Co. are, nor, indeed, whether the scheme admits of being worked out or not just now;

but the opinion of this distinguished U. S. authority is worth considering by the Co. & by the Government.

Under any circumstances it is time to reconstruct Montreal harbor. We should also abolish the canal tolls & wharfe charges. There are no tolls on the Erie Canal, & no harbor dues on grain at New York, whereas the canal tolls on the St. Lawrence route & the Montreal wharfe charges amount to $\frac{1}{2}$ c. a bushel. The immense sum which Canada has spent on the St. Lawrence above & below Montreal cannot be considered well-invested till Montreal is able to supply a quicker ocean service with lower rates, so that the Canadian exporter may have something like as good a chance as his U. S. competitor. Anyone can see that the west end of the harbor is in a hopelessly congested state. The Grand Trunk has one track by the Wellington bridge, the C. P. one from Hochelaga. This is all the access the railways have to the wharves & harbor, & they are prohibited by a by-law which to a stranger must read like a bit of Chinese legislation, from moving cars except at night. The prime requisites of a harbor are, first, channels deep enough to admit vessels of the largest size; second, such arrangements for loading & unloading that vessels may get in & out with the least possible cost & delay; which, of course, implies that the railways shall have plenty of room for storing, shunting & running cars alongside the ships. London has 10 miles of docks; Liverpool 8 miles, which have cost \$200,000,000; Glasgow 6 miles, cost \$65,000,000; at New York the wharves are distributed over a frontage of 15 miles, at Baltimore of 6 miles, & at Boston of 4 miles. The principal wharves at Boston, the Cunard & Allan, are not in the city proper, but have been built at some distance from it, on the other side of a channel, for the purpose of providing the railways with more convenient access. At Portland the wharves are spread over a frontage of 8,000 ft. At Montreal the frontage in the west end, where the older shipping firms are in possession, does not, I am told, exceed 3,500 ft. Yet the famous plan no. 6 actually proposed to crowd 14,000 ft. of wharves into that space, although at the east end a magnificent stretch of unoccupied river front is available for wharves, warehouses, elevators, railway lines & all the other apparatus of a great port.

Montreal is served for the most part by steamers of the old-fashioned type of 4,000 & 5,000 tons. There are larger ones, but very few. Such vessels cannot carry freight at as low a rate as the modern steamer of 8,000 tons & upwards which does business at New York & Boston.

The Railway & Engineering Review says: "Even more noteworthy than the recent attempts to make the trans-Atlantic journey at high speed is the evident decision of the companies that, other things being equal, it pays to build steamers of enormous size. Excepting the White Star ship Oceanic, which is building, the Kaiser Wilhelm der Grosse is the largest vessel since the Great Eastern. The older vessels, which ranged from 300 to 400 ft. in length, are completely outclassed. A good idea of the tendency to build immense vessels may be gained from the following table, in which the largest new steamers of leading lines are compared with the famous Great Eastern:

Names.	Tonnage.	h.p.	length.
Kaiser Wilhelm der Grosse.	11,000	28,000	649
Kaiser Friedrich.	10,000	24,000	640
Oceanic.	17,000		704
Lucania.	12,000	18,000	620
St. Louis.	11,000	20,000	634
La Touraine.	10,700	17,000	620
Fort Benham.	8,000	15,000	500
City of Rome.	8,411	15,000	500
Teutonic.	7,000	15,000	500
Great Eastern.	8,000	15,000	500

"And the next marine monster, the Oceanic, when completed, will be 50 ft. longer than the

Kaiser Wilhelm & 12 ft. longer than the Great Eastern."

Putting Manitoba aside for a moment, see how this affects the farm staples of Ontario. Here is the average ocean rate per ton on cheese & butter from Montreal & Boston to Liverpool, from May 7 to Oct. 30, 1897:

	Cheese.	Butter.
From Montreal.	21s. 9d.	26s. 9d.
" Boston.	13s. 3d.	13s. 3d.

All the export cheese & butter of Ontario does not go to Liverpool; a great deal goes to London & Glasgow, & to these ports Boston rates average less than rates from Montreal. It is likewise true that rates on flour, hay & cattle from Boston are lower, as a rule, than rates from Montreal. All of which means that the Ontario farmer loses a large sum annually by reason of the existing condition of things at Montreal, & would be benefited probably more than any one else were the Ottawa Government to take the harbor in hand.

New York is asking Congress to deepen the ship channel in that harbor from 30 to 35 ft. "Our prestige would be gone," says a shipping man, "if when the 'new vessel,' the leviathan of the future, arrived at Sandy Hook we could not admit her." The expenditure by the U.S. Government on improvements in New York, exclusive of armaments, has been as follows, to June 30, 1897:

Hudson River, above New York.	\$1,800,000
Harlem River.	1,030,000
East River & Hell Gate.	4,370,000
New York Harbor channel.	1,750,000
Total.	\$8,950,000

The North River improvements at New York, carried on by the city, involve the construction of 16 piers & an outlay of \$18,000,000. The U.S. Government completed in 1892 the work of deepening the Baltimore harbor channel to 27 ft., & is now engaged in deepening it to 30, the cost of this latter work being estimated at \$2,500,000. At Boston the United States Government is deepening the principal channel to 27 ft. At Philadelphia, which is 100 miles from the open ocean, the U.S. Government has just completed a ship channel 26 ft. deep at mean low water, at a cost of \$2,500,000. Down to 1896 the U.S. Government had spent \$2,500,000 on the harbor at Buffalo, \$2,125,000 on the harbor at Chicago, \$1,700,000 on Oswego harbor, \$1,500,000 on Cleveland harbor, \$600,000 on Duluth harbor, \$1,100,000 on the harbor at Michigan City, & \$1,200,000 at Toledo.

At Montreal the entire expenditure on the harbor has hitherto been borne by the harbor itself, the interest on the debt being paid from wharfe dues, which, notwithstanding a recent reduction of 20 per cent., are a perceptible burden on commerce. The Ottawa Government has not spent a dollar on our national port; it has spent over \$60,000,000 on the canals leading down to it, & on the St. Lawrence channels below, but the harbor itself, the key of the situation, is left to the mercy of local effort.

The policy of the day is to trade more with Europe & less with our own continent—a policy forced on us by the Dingley Act, which, although Mr. Dingley might deny the soft impeachment, is to some extent an expression of U.S. dislike, not of us as Canadians, but of our connection with England. If, however, trade with England is to be profitable, & there is no denying that it is subject to the natural drawbacks incidental to all trade carried on at long range, it is obvious that we must have as quick & as cheap an ocean service as the people of the U.S., whose commodities have the same free access to our own & the British market. And I for one am unable to see how such a service can be established at Montreal till the Dominion Government takes hold of the harbor & plans for a thoroughly modern footing, as the Government at Washington is

along with the chief seaports & lake ports of the U.S. In proposing to utilize the east end of the Harbor Mr. Laflie is moving in the right direction, but he should go further, & ask Parliament to assume the debt incurred for past, present & future improvements. That done, & the C.P.R. induced to co-operate with the Government in founding a fast passenger & freight service, so that wheat may be shipped direct from Manitoba & Fort William, Minnesota & Duluth, to Liverpool by the St. Lawrence route, Montreal will once more be in the running as an ocean port; while the farmer of the Canadian Northwest, together with the farmer of Ontario, will be benefited to a very important extent indeed.

Miscellaneous Navigation Notes.

A marine slip costing \$8,000 to \$10,000 is being built at Rat Portage, Lake of the Woods.

The steamer Filgate has been purchased by the Montreal & Cornwall Navigation Co. & will be run as an excursion boat next season.

The Toronto agent of the Dominion Steamship Co. states he has been advised that the line will run between Liverpool & St. John, N.B., this winter, owing to the breach of its relations with the G.T.R., in consequence of which it will not make Portland, Me., its American terminus.

The latest addition to the Sincennes-McNaughton line fleet is the powerful tug, Virginia. She was built for work in the Lower St. Lawrence & carries surface & salt water condensers. She is built of oak, lined with pitch pine, is 107 ft. 3 in. in length, has a beam of 24 ft. & a depth of hold 10 ft. 8 in.

The Canadian-Australian Steamship Co. is said to be applying for an increased mail subsidy, based upon the large increase in the bulk of the mails since calling at New Zealand ports. The Dominion Government was at first not particularly impressed with the claim, but investigation has shown that not less than 300 to 400 bags of mail matter are carried on each trip from New Zealand, & there being no room for them with the other matter from Australia, state-rooms have to be utilized for their storage.

A London, Eng., cablegram says: "The plans for the short steamship route between Milford Haven, Wales, & Paspebiac, Que., are progressing. The Canadian Steamship Co., working in conjunction with the Atlantic & Lake Superior Ry. Co., has announced that, pending the completion of a line of 21-knot steamers of the 1st-class, steamships of a somewhat less power have been chartered, with which to make the journey between Milford Haven & Paspebiac in a little over 4 days. The Ry. Co. is completing docks at Paspebiac for the largest ocean steamers, & the Great Western Railway Co. of Eng. is arranging for special express passenger service to London."

There is likely to be further competition in the steamship business between the Pacific Coast & Japan & China. A line from San Diego, via Honolulu to Yokohama & Hong Kong, is said to be an assured fact, the Atchison, Topeka & Santa Fe Ry. working in close connection with it & probably giving it financial assistance. The Co. has been incorporated as the California & Oriental Steamship Co., capital \$5,000,000. It is said negotiations are on for the purchase of 2 vessels in England, that there will be sailings from San Diego every 25 days, & that the service will include Manila if that port is ceded to the U.S. Some years ago the Santa Fe operated a line of steamers across the Pacific. The venture, however, was far from successful. Since then the road has been asked to put up money for steamship lines, but has so kept out of the business until now.

ELECTRIC RAILWAYS.

British Columbia Electric Railway Co.

The 2nd ordinary general meeting of this Co. was held in London, Eng., last month. The Chairman of the Co. in addressing the meeting said: I regret we are again obliged to forego the pleasure of recommending a dividend. Your directors have come to the conclusion that, although we have a small surplus profit in hand, it is more prudent to apply it to reserve fund than to divide it up amongst shareholders. I am aware shareholders are getting tired of constantly remitting money to B.C., & receiving no return upon it, but I heartily trust this will be the last occasion on which I have to meet you without recommending, at all events, some small return on the money you have invested. I feel myself how disheartening it is to have remitted, as this Co. & its predecessors have, upwards of £400,000 without ever having drawn one single penny out of B.C. up to the present day. I feel that I am trespassing on your good nature to a certain extent & on your confidence in the country in asking you to remit another £100,000 for the Benefit of Vancouver & Westminster. I am, however, emboldened to do this by the very satisfactory assurances & willingness to subscribe further money which many shareholders have shown, & by their inclination to back their opinion as to the great future which is in store for B.C. by subscribing further capital. I feel, too, every confidence that the smaller shareholders will come forward just as liberally as the larger ones have done when we have the opportunity of applying to them to take up their proportion of further shares.

It is a pleasure to be able to state that in spite of our not being able to give you any dividend this year, the issue of our £100,000 of stock has already been practically assured. This money we propose to devote towards putting Vancouver into a satisfactory position with regard to electric power, as we shall have done in Victoria by September. I think there is no doubt we shall have as fine & liberal an installation of electric power in these two cities as is possessed by any cities of their size in the whole world. We are helping ourselves as well as helping them in taking these steps, because by promoting the prosperity of these cities we insure an increase in business, & the advantages to a city of having a cheap, regular & reliable electric supply immediately tends to increase its prosperity, & consequently attracts fresh settlers inasmuch as it enables it to compete with all the other cities who are competitors. By this means we enable our cities to do their business on the cheapest possible terms, as an efficient power enables all branches of business, whether it be manufacturers, mills, or any other works where a power is needed, to compete successfully with the commerce of the world.

Our improvements for the year, besides the construction of the Vancouver Power House & the construction of an entirely new metallic circuit for power business, & the increase in the power itself involved, includes the construction of 2 small additions to our railway. The first is an extension from Westminster City to the small town of Sapperton. Although at present we cannot say that we expect to earn more from it than the amount of interest on the cost of the construction, yet our board are desirous of meeting their constituents as far as they possibly can in all such matters where we are not actually losers, & we hope that the construction of the branch will induce fresh settlers & fresh business to spring up along it, & thus make it a paying investment in time. The second extension is a very small one, being the Denman Street Line in Vancouver, from Robson street to the beach. This is a very short extension, but one which

the board believe will prove a considerable increase of traffic in the summer months.

One word as to the criticisms which have been levelled against our management. We have heard a great deal said about the very large proportion which our expenses bear to gross revenue when compared with similar companies in Canada. I have taken out a list of the principal companies' percentages, & I find they run from the Toronto Railway's 48.81% & the Montreal's 55.05, the Ottawa Electric Railway 67.67 & we ourselves show 68.01%. You will see, however, in our figures that the heavier expenses are shown in the early months of the year, and since then we have made steady improvement, & we trust we shall be able to reduce the expenditure at any rate to 63% during next year. No effort on our part will be wanting to bring about such a result. I am afraid I cannot hold out to you hopes of doing as well as such big companies as the Montreal & Toronto, or even as well as the London, Ont., company, which has, if anything, a smaller constituency than our own. At the same time, no effort of ours shall be wanting in our endeavor to reach this state of economy, & if we cannot succeed in it this year it will be our aim to do so in the future, & there is some encouragement to the shareholders in the fact that there is substantial room for improvement in this respect. When we do succeed in making this improvement it will mean a near dividend for the shareholders.

The Co. has had on the whole a good year. The returns have been very satisfactory in proportion to the population of the cities, & as I have said, the percentages of expenses have been gradually decreasing; but in order to make the necessary economies we have had to expend a very large amount of money on construction & improvements of electrical apparatus. Electrical science has developed so rapidly that the apparatus installed 7 or 8 years ago is now out of date; & while not being useless, it is very uneconomical, & all companies are replacing the obsolete types with new types of machinery, which in a short time show large economies in fuel & labor. For this reason our company will undoubtedly do better hereafter owing to the many improvements already made. For one thing, these improvements have made our securities a sound investment; but I do not forget that our shareholders have not yet received the benefit of our labors & this is accounted for by the fact that we have been obliged to sink into fresh improvements every penny we have succeeded in earning, although we have employed the very strictest economy in our daily operations. And this course, I fear, will have to be pursued for some years; but we may notwithstanding be able to give some return to our shareholders on the money they have invested in this Co. in the near future. It only remains for me to move, "That the report & accounts be received & adopted, & that the surplus of profits be apportioned as recommended therein."

The motion was adopted, as was also the proposal to raise an additional £100,000. R. M. Horne-Payne & F. S. Barnard were re-elected directors. It was decided to make the new issue of stock in £10 shares.

The official test of the new plant which the Co. has installed at Goldstream, near Victoria, took place Aug. 23, the power being turned into the station at Rock Bay. The work was not then quite completed, but the trial was in every way satisfactory & indicative of the extent of power available when the plant is fully completed. The Victoria Times says the work of installing this extensive plant, which has occupied several months, was undertaken & carried out by the Co. itself. A number of Eastern Canadian & U. S. companies had contracts for the supplying of wire, machinery, etc., but the work as a whole has been conducted by the Co. under

the superintendence of Mr. Hasson, of San Francisco. The polling & wiring is now complete, a distinct telephone service connects Goldstream station with the city offices, & the 2 wheels which will provide power have been placed in position. Accommodation is provided for a third wheel should necessity arise for any additional power.

One great improvement is promised under the new system, which will be appreciated by the large number affected by it. Three distinct circuits will be established, 1 for the tram cars, 1 for power, & a 3rd for light. These will be independent of one another & a heavy drain on the car service will thus have no effect whatever on the light or power. Hitherto when extraordinary demands were made in the service for power for the tram cars, as for instance during summer concerts at Oak Bay, the extra power required was drawn from the lights, which suffered in consequence. This defect will be entirely obviated by the reform proposed. Some other improvements are also contemplated in regard to lighting. The new plant will afford the Co. all the power it requires for the various uses to which it is devoted, with a good reserve fund for emergencies. A large part of the present plant on Store street will be retained in case of accident to the Goldstream plant, but this is merely a precaution & is not taken because of any fear that it will be required. A dynamo & 2 of the engines will in all probability be removed to Vancouver, where additions to the present equipment are urgently required.

D. A. Shiles, who has been connected with the Vancouver & New Westminster tramway since its opening, has been appointed superintendent of traffic for the B. C. E. Co. at Vancouver, in place of C. Aird, resigned.

Manitoba.

Winnipeg River. A contemporary which ought to be better informed says that: "An electric railway from the mouth of the White-mouth River to points on the Winnipeg River & the transmission of power to Winnipeg, is in contemplation by a company of Winnipeg capitalists who propose to utilize a portion of the water power on the Winnipeg River for this purpose." Seeing that the mouth of the White-mouth River is in the woods some 12 miles north of the C.P.R. main line, it would be interesting to know how that distance is to be traversed. No one lives along the route of the suggested line except Indians & a few trappers until the Hudson's Bay Road at Fort Alexander, near Lake Winnipeg, is reached. The scheme must have originated in a reporter's very fertile brain.

Ontario Lines.

The Hamilton, Grimsby & Beamsville has asked Barton Township Council to allow it to remove its rails on Maple Avenue, between Trolley St. & Sherman Avenue, & continue the line on Main St. to Trolley St. & along that street. The Co. asks this to avoid 2 sharp curves. The request is meeting with strong opposition from the St. Ry. & residents in the section interested. It is said the St. Ry. Co. wants the use of Main St. to continue its line to Bartonville.

Hamilton Radial. This Co. & Sudbury Township Council have patched up their difference over the Beach-sprinkling question for this season, the Co. promising to have a sprinkler in operation by June 15 next, & the Council withdrawing its action at law.

Hamilton Street. Following up the directions of the people, as expressed at the polls, to extend this Co's franchise until 1928, the City Council introduced a by-law which had a stormy passage. A number of amendments were moved, such as to extend the time for the use of limited tickets from 5 to 7, & to give 10 limited tickets for 25c., the vote being a tie. It was decided that the Co. should carry firemen free. An amendment that it should carry all school children for 5c. for the round trip was lost. The hours of labour for employees were fixed at 60 a week, and wages at 15c. an hour for regular work & the same for overtime.

Lanark County. The ratepayers of Perth have defeated the Lanark County Electric Ry. bonus by-law. A scheme is now on foot to build an electric road from Carleton Place to Lanark.

London. The earnings for July were \$10,659.50, against \$10,617.50 a year ago. The small increase is attributed to the fact that there was one more working day last year compared with this year, & a couple of circuits which will figure in the August earnings this year. The earnings for the first 7 months this year were \$57,265.75, against \$53,577.28 for the corresponding period.

TORONTO RAILWAY CHAMBERS.

The City Council will proceed against the St. Ry. Co. to restrain it from permitting advertising in its cars.

St. Catharines & Niagara Central. This steam line, which has been in trouble for some time (see July issue, pg. 118) has been sold to Haines Bros., of New York, who, it is said, make a business of buying up bankrupt railways, putting them in first-class running shape, & then operating them. It is the intention to operate the road by electricity. Good coaches will be put on, & the trip from Niagara Falls to St. Catharines made in 40 minutes. Various changes to the road-bed itself will be made. The trestle work at Merritt & Thorold will be done away with, & the road run on the ground, the motor cars being able to overcome grades which steam cars could not do. The G.T.R. at Merritt will be crossed on the level by means of interlocking switches. The plans include the extension of the road to Port Dalhousie.

The Niagara Falls Park & River Ry. has commenced to supply power to the new corollary works.

The Oshawa Electric Ry. will likely be extended to the suburb of Cedarville.

The Co. is building a siding to J. O. Guy &

Co.'s elevator, which is being supplied with power for its machinery by the Co.

Ottawa St.—This Co., which has been having trouble with its employees on account of hours & wages, has decided to pay 15 c. an hour to employees of 3 years' standing, 14 c. to employees of 2 years' standing & 14 c. for those of less than 2 years' standing. This it is thought will prevent a strike, as it meets the demand of 80 out of 136 motormen & conductors. Spare men will be allowed 13 c. an hour, but the Co. will not recognize the Union. In this settlement both sides made compromise that enabled the employees to come out of the negotiations with a considerable gain, their day having been reduced an hour without any corresponding reduction in wages.

It is expected the Co. will extend its line from Rockliffe Park to the rifle range next year, the Dominion Government having promised to furnish free old steel rails taken up from the Intercolonial Ry.

The suburb of Britannia wants the Ottawa Co.'s lines extended to that place.

The Peterboro & Ashburnham St. Ry. & all property thereto belonging, including the franchise, was sold at sheriff's sale, Sep. 12, at the suit of James White, to Messrs. Hazlitt, Bradburn & Stevenson & the Walsh Estate, for \$20,000. These parties are members of the present Co., & hold a judgment against the Co. for \$50,000. The cars are now being operated.

St. Catharines, Merritt & Thorold. A change has taken place in the ownership of this line. Heretofore the stock was all held by G. Dawson, St. Catharines, & G. Symmes, Niagara Falls. Mr. Symmes has sold out to Mr. Dawson. H. C. Symmes, who has managed the road, will retire Oct. 1. The extension of the line to Port Dalhousie is talked of.

Sarnia. At the annual meeting, Aug. 24, the following were elected: President, J. S. Symington; Vice-President, S. A. Macvicar; other directors, J. Flintoff, J. H. Jones, J. Cowan, F. Smith; Secretary & Manager, H. W. Mills. It is said the statement of affairs submitted was very satisfactory.

Thamesville to Rondeau. An electric line from Thamesville, via Morpeth & Ridgeway, to Rondeau Park is talked of.

Toronto Ry.—The gross earnings of this Co. are as follows:—

	1911	1910	Increase
Jan.	\$7,141.41	\$80,210.20	\$73,068.79
Feb.	69,744.61	82,077.67	12,333.06
Mar.	78,801.45	78,888.33	86.88
April	73,759.38	86,868.83	13,109.45
May	82,401.51	92,070.35	9,668.84
June	91,035.41	94,119.32	3,083.91
July	105,381.04	91,035.41	14,345.63
Aug.	93,224.33	110,300.54	17,076.21

Upon the total receipts for August the Co. pays 10% to the city. Under the agreement the Co. pays \$100,000 on amounts up to \$1,000,000, & 10% on the next \$500,000. The million dollar mark was passed in July. Last year the receipts reached about \$20,000 in excess of \$1,000,000. The fiscal year between the Co. & the City closes Aug. 31.

The Co. has declared a dividend of 1% for the quarter ended Sep. 30, payable Oct. 1.

The Co. carried 1,879,298 passengers from Aug. 29 to Sep. 10, not counting transfers. These were the 2 exhibition weeks; the receipts were \$10,000.

The Co. has had difficulties arising out of a judgment by Judge Ferguson on the dispute between it & the City as to what constitutes the "turn-outs," which are excluded by the Co.'s agreement from the track allowance of \$1,000 on single track & \$1,600 on double track, paid

by the Co. to the City. The Judge ruled in favor of the City's contention as to the nature of a turn-out & against the Co.'s contention that turning and connecting tracks & street intersections constitute turn-outs. Certain other questions of counter-claims were decided in favor of the Co.

The Co.'s assessment appeal against \$79,000 for its poles & wires in Ward 2 has been adjourned sine die. It is before 3 county court judges. So far evidence as to value has been given by Mr. Kynock & E. Mackenzie for the Co., & by Mr. Van de Mark, electrical engineer, Detroit, for the City. The latter said that more than 50 large U.S. cities use girder rails, thus enhancing their value, while the other witnesses rather limited their value as scrap-iron. The pivotal point in this test trial is the value of rails, poles & wires per se, not their value as contributing to the working of the road.

Laidlaw, Kappelle & Bicknell, solicitors for the T. Ry. Co., have taken proceedings to restrain F. G. Lear & E. A. Macdonald from publishing, exhibiting, or making use of letters, &c., alleged to have been abstracted by Lear while in plaintiffs' employ as stenographer. It is said the matter which it is sought to enjoin consists of copies of letters dictated by W. Laidlaw to be sent to his partner, G. Kappelle, some of which were not even sent. It is alleged that when Lear left plaintiffs' employ he took the shorthand note books away with him & subsequently divulged their contents to Macdonald. Plaintiffs have obtained an injunction, which is being appealed against.

The City Council has petitioned the Provincial Government to appoint a commission to investigate the charges of irregularities in connection with the granting of the street railway franchise, provided the evidence forthcoming warrants such a step.

The illustration on page 193 shows the office building recently erected by the Co. at the corner of King & Church Streets.

Toronto Suburban.—The troubles between this Co. & the village of Weston were explained in our Aug. issue, pg. 166. In addition to stopping its cars at the eastern boundary, before entering the village, the Co. has ceased supplying power to light the village streets.

Brockville.—The Brockville Times says: "There is no reason why an electric railway connecting Brockville with the summer resorts up the river & with Prescott below should not pay. The local traffic on such a railway would be large & a great many tourists would travel over the line if it were properly advertised. There is no doubt that such a railway would bring many customers to the merchants of Brockville. Light freight cars as well as passenger cars could run over it, & farmers could thus send their produce cheaply & conveniently to town."

The Hull & Aylmer Co. has given notice of application to the Dominion Parliament for a charter for a bridge between Hull & Ottawa, to enable it to get into Ottawa. A vigorous lobby defeated its bill last session.

The Metropolitan Co. is anxious to engage in electric lighting & is seeking franchises from the municipalities along its railway.

Province of Quebec.

Montreal Island Belt Line.—A special general meeting of shareholders was held recently to divide the undertaking into sections as authorized last season; to authorize the directors to withdraw & cancel the existing bond issue; to authorize a new issue, & after providing for the old issue to dispose of the balance as may be deemed necessary. The proposed bonds will be secured by the execution of a mortgage deed upon the whole of the property, assets, rents & revenues of the Co.

Montreal Park & Island.—This line will be sold by the Sheriff Sept. 22. The Co. has during the past summer had some cars on the Carterville route, which ran at the rate of 45 miles an hour.

The difficulties between the Co. & the municipality of St. Louis have come to a crisis. In the action taken by the municipality to annul its contract with the Co., Judge Charland rendered an interlocutory judgment ordering the Co. to comply with the terms of the contract as interpreted by the municipality within 2 months. That judgment was taken to the Court of Appeal & to the Privy Council, but without success. Consequently, counsel for the municipality moved, on Sept. 12, for final judgment. That motion was opposed on the ground of irregularity, & the case was taken en delibere. Meanwhile the municipality has been served with an intervention on the part of D. Morrice & A. Thibadeau in their quality of trustees for mortgage bondholders. In the event of the intervention being set aside, & the opposition to the motion for judgment being dismissed, the regular course will be for the Co. to be called to show if the interlocutory judgment has been complied with. It is stated in this connection that tickets at reduced rates have recently been issued by the Co.

Montreal Street.—The gross earnings are as follows:—

	1897.	1896.	Increase.
Oct.	\$116,292.09	\$109,110.38	\$7,182.71
Nov.	110,929.60	100,818.57	10,111.03
Dec.	113,128.91	103,116.02	10,012.89
	1898.	1897.	
Jan.	110,140.83	89,620.55	10,520.28
Feb.	102,625.49	89,951.68	12,673.81
Mar.	114,677.91	99,441.87	15,236.04
April	110,819.37	103,045.93	7,773.44
May	123,508.09	116,337.03	7,171.06
June	133,164.61	130,676.78	2,487.83
July	129,245.92	143,986.62	14,740.70
Aug.	143,801.19	131,431.77	12,369.42
	\$1,308,535.01	\$1,227,537.20	\$110,279.21

The Co. has extended its line along Berri St. to Bonsecours Market & along Amherst & Berri to the wharf.

On Sept. 16 one of the Co's storage sheds in the centre of its yard at Hochelaga was burned, together with the contents, consisting of 60 cars of the winter equipment & 7 sweepers. The loss is estimated at from \$150,000 to \$200,000. Insurance \$90,000.

Sherbrooke.—R. R. Smith, of Worcester, Mass., has been appointed Manager, succeeding L. E. Whitehead, resigned.

Electric Railway Items.

The Halifax, N.S., Tramway Co. has declared its 7th quarterly dividend at the rate of 6% per year, payable Oct. 1.

J. D. Fraser, of Ottawa, Ont., has been elected a member of the Executive Committee of the Street Railway Association of America.

It is stated in Montreal that Jas. Ross has succeeded at last in his Birmingham St. Ry. negotiations, and that the line will be converted into an electric tramway without delay.

Electric railways in Canada have shown a wonderful development during the past few years. On Jan. 1 last there were 35 electric railways in operation, with a total mileage of 583. The number of passengers carried in 1897 was \$3,800,000 as compared with 16,170,000 by the steam railways on their mileage of 13,000. The paid-up capital of the electric railways in Canada is \$18,700,000.

Trolley car competition has injured the New York Central's regular & excursion traffic to near-by points, particularly Niagara Falls, Lewiston & Lockport, & to counteract the popular feeling for trolley rides the Passenger Department has announced a reduction in rates to the points named of about 50%. The Central is now selling round trip tickets from Buffalo to Niagara Falls for 50c., to Suspension Bridge, 60c., & to Lewiston & Lockport, 75c.

TELEGRAPHS & CABLES.

Pacific Cable Matters.

A Sydney, N.S.W., dispatch dated Aug. 22 announced that the premiers of Queensland, New South Wales & Victoria had met in conference & discussed plans for a Pacific cable, & decided to make the definite offer that if Great Britain & Canada together would guarantee five-ninths of the cost of laying the new cable, they would recommend to their respective Legislatures to contribute one-ninth each, asking New Zealand to contribute the remaining one-ninth.

A committee of the New Zealand Legislature has reported in favor of adopting the above-mentioned proposal, that colony to contribute one-ninth of the cost. The committee also recommends that Canada be trusted with the construction, administration & maintenance of the cable, on the understanding that the contributing colonies are to be entitled to representation & votes on matters of policy of the management, & that the cable is to be jointly owned & controlled by the contributors.

In the Imperial House of Commons last month Mr. Provand asked the Secretary for the Colonies whether he could inform the House of the present position of the negotiations relating to the proposed cable from British Columbia to the Australian Colonies. Mr. Chamberlain, in reply, said: "We have no proposals from Canada or from South Australia & New Zealand. The premiers of the remaining 4 Australasian colonies have joined in a resolution that their Colonies will favorably consider the proposal for a Pacific cable, provided that Canada & the United Kingdom will each contribute 1/2 of the cost. Until we have formal & definite proposals from all the Governments concerned, Her Majesty's Government cannot proceed further in the matter."

R. Bafort, writing to the London, Eng., Times, says:—"The problem of the protection of British interests in the Far East, menaced by astute, unscrupulous rivals, is daily becoming more urgent. Will you allow me to point out that an important factor in this problem is the projected all-British Pacific cable, the immediate establishment of which has become imperative? Both Imperial & Colonial interests demand it. Canada & Australasia are willing to participate with Britain in its cost. It would liberate Colonial cablers from the present crushing cable corner. A cablegram from Vancouver to Melbourne has to tour the world, costs over 6s. a word, & is often subject to disastrous & exasperating delays. By the direct Pacific cable it would cost 2s. a word & arrive within the hour. Until this alternative cable is laid, our Australian Colonists will frequently be compelled to depend on the shaky Siberian land-lines for telegraphic communications with the Mother Country. Those lines are controlled by Russia. Naval & military experts assert that our foreign-controlled cables would certainly be cut by our enemies during any crisis. This might imperil the very existence of outlying portions of the Empire. Britain thus needs a strategic cable system free from foreign control. Commerce needs a system free from the deadly grasp of the monopolists. If the Pacific route existed, the cabling public would save nearly £225,000 a year. In 8 years this sum would pay for the new cable. The project is perfectly practicable from the electrical, engineering & financial standpoints. The control of Pacific cable communication should by right devolve on the British pioneers & principal constructors of the world's sub-marine cable system. To allow another nation to forestall us by executing this great work would constitute a most humiliating abdication of our recognized position as lords of the ocean depths. Finally, by a mutual effort, Britain, Canada & Australia can

establish this communication without the slightest cost to their taxpayers. Under these circumstances, would not the Imperial Government be quite justified in taking the initiative in this project, which is generally considered to be ripe for execution? Recent official declarations on the part of Australasian Premiers prove beyond doubt that such action would meet with a cordial response from the Colonies concerned."

A New York dispatch of Sep. 2 said: "At a meeting of directors of the Pacific Cable Co., held at the office of the J. P. Morgan Co., Sep. 1, plans were considered for the establishing of cable communication with the Philippines, the Asiatic Coast, Japan & Australasia, via Hawaii. Surveys for the duplicate cable, via Sitka & Aleutian Islands, were ordered. J. A. Scrymser, President of the Pacific Cable Co., will sail from Vancouver for Japan Sep. 12."

A San Francisco dispatch of Sep. 10 said: "Arrangements have been made for the construction of a cable between San Francisco & Honolulu & from there to Yokohama. There will be a monopoly between the two latter points."

Canadian Pacific Telegraphs.

The copper wire from Montreal to Vancouver was completed September 16, & is now being worked as a direct circuit right through, doing away with all intermediate repeating, & enabling the Co. to render very fast work. Business can now be handled between Toronto, Vancouver, Victoria, Rossland, Nelson, and other far Western points almost as quickly as between Toronto, New York & Montreal.

This new line was very fully described in our May issue, pg. 82. The actual distance covered is about 2,900 miles, constituting probably the longest direct land line circuit for daily work in the world. To pass across this immense distance signals only occupy one-fifth of a second. Canada now only needs the Pacific cable to make her telegraphic communication one of the foremost in the world. Speaking on this subject, a few days ago, Lord Brassey said: "I have no recent advice with respect to the cable. I may say that the Australian colonies are anxious to improve their postal & telegraphic communications, & are not unprepared to contribute."

The telegraph line along the Crow's Nest Pass Ry. has been completed from Lethbridge, Alta., to Cranbrook, B.C., & from Nelson, B.C., to Kuskanook, B.C., leaving a gap of 75 miles, which will be finished this month.

In announcing the close of the recent international yacht races, between the Challenger & the Dominion on Lake St. Louis, the daily papers, commenting upon the efficient service rendered by the Co. by which bulletins were minutely received, highly complimented Superintendent Kent for the admirable telegraph arrangements which enabled them to give each incident as it became visible, so that those who read the bulletins had the news almost at the instant it happened. The operators, H. Goddu & Mr. Richardson, at Dorval & Beaconsfield, were in full view of the events described.

A circular recently issued by Local Manager Christie, in Victoria, B.C., says:—"We recently completed the laying of a splendid new 3-conductor cable, which connects Departure Bay with English Bay near Vancouver. From Victoria or Departure Bay our wires run along the E. & N. Ry., & from English Bay to the Vancouver office along one of the city streets. This makes the main artery of communication with the outside world very secure from interruptions. We are now at work rebuilding the line between Victoria & Departure Bay & stringing an additional wire, which gives us 3 wires to Vancouver direct. To the U.S. side we have recently laid a cable, which gives us, via Port Angeles, direct

connection with Port Townsend, Seattle & way offices. The Victoria office is equipped with a set of quadruplex apparatus (by which 2 messages may be sent & 2 received on 1 wire, simultaneously), 2 duplexes ($\frac{1}{2}$ a quadruplex), & several sets of single apparatus. We have a large & competent staff of operators, clerks & messengers. Vancouver office, our main point of distribution, has 5 wires to the East, & with the completion of the new copper wire, now in course of construction, will have 6. Vancouver has 1 duplex working direct to Montreal, 2 duplexes to Winnipeg, local wires direct to Kamloops, Donald & Rossland, a quadruplex to Portland, $\frac{1}{2}$ of which is used to San Francisco direct, & a duplex & single wire to Seattle. From San Francisco to the East we have 2 duplexed copper wires."

The telegraph line from Winnipeg to Portage la Prairie to connect with the Lake Manitoba Ry. & Canal Co.'s line to Dauphin was completed Aug. 28, & messages to the Dauphin line are now sent direct from Winnipeg, in connection with the C.P.R. Telegraphs.

Telegraphic Advertising.

When the Western Union Telegraph Co. & the Postal Telegraph & Cable Co. see fit to place a considerable sum of money annually in advertising, there seems to be some hidden reason that is unseen by the public even after a close scrutiny.

It is easy to think one sees absolutely no reason for these competitive monopolies advertising. Of course through these agencies millions of telegraph blanks that are headed with printed matter, setting forth the number of offices reached by wire, are strewn among the American people. Boys in every city, wearing uniforms, advertise in a local way. The blue & white signs at every small railway station recall to the traveller that he is yet in communication with home folks.

In all the telegraph & electrical journals will be found full-page advertisements of both the Western Union & Postal Telegraph Companies. The Baltimore & Ohio Telegraph Co. & the old Mutual Union, as well as other small companies & organizations that have sprung up, & eventually been taken in by the greater ones, without exception tried the advertising medium of rate cutting, but it never paid. The Postal Co. is a living example of the fruits of advertising. It is now the greatest competitor the Western Union ever had, but it does not deem it wise to discontinue advertising, & besides the electrical magazine advertisements, from time to time printed slips are enclosed with every telegram sent out, calling attention to the service of the company.

It may well be said that this is but the result of competition or rivalry, for there are but two competitors of any consequence in the telegraph field. Aye, 'tis true. But is not advertising in itself the outgrowth of rivalry & competition in every business? When great monopolies see it necessary to advertise, & do advertise, rest assured there is something in it.—W. Fogarty, in Profitable Advertising.

Western Union Lines in Canada.

The Western Union Telegraph Co. has about 3,000 miles of pole line, 8,000 miles of wire, & 213 offices in the Maritime Provinces. The Co. covers the whole of Nova Scotia & New Brunswick, with the exception of the portion of the latter province situated on the I.C.R. west of Moncton, which is served by the Great Northwestern Co. The W.U. handles the land business of all the Atlantic cables, except those of the Commercial Cable Co. The affairs of the Co. in the Maritime Province are managed by D. C. Dawson, who is Superintendent at St. John, N.B.

Between St. John, N.B., & North Sydney, N.S., 430 miles, the Co. had 250 miles no. 9 B. & S. gauge copper line & has this year built 180 miles more, completing the entire distance, so as to be better equipped for the heavy cable traffic. The Co. is reconstructing its pole line between Fredericton Jct. & St. John, along the C.P.R. right of way, & also between Moncton & Sussex, N.B., on the I.C.R. This work will be completed this season.

It is expected the W.U. line from Woolley, Wash., via Fairhaven, Blain & New Westminster, will be completed to Vancouver & offices opened for business at Vancouver & New Westminster early in October. It is said the Co. will extend its Vancouver Island lines from Victoria to some point on the northeast coast of the Island, with a view to catch Alaska & Klondike business.

A Representative Canadian Telegrapher.

G. F. Macdonald, of Ottawa, Ont., who was recently elected Vice-President of the International Association of Fire Alarm & Police Telegraph Superintendents, was born in Bytown, now called Ottawa, in 1848, & is therefore a Canadian by birth, & of the old Highland stock. He entered the service of the Montreal Telegraph Co. on May 1, 1863, 35 years ago, & continued in the service until 1874, when the city saw the necessity of a fire alarm system. Mr. Macdonald built the system & has remained at the head of it ever since. He still takes a great interest in commercial telegraphy & holds the position of Secretary to the Fire & Lighting Department of the City of Ottawa. He also represents the underwriters for safe wiring in Eastern Ontario. When he entered the telegraph service the paper & register ruled supreme. He conveyed to the citizens of Ottawa the sad news of the death of President Lincoln, & heard Professor Morse's last message: "Peace on earth, good will toward men." Mr. Macdonald is one of the most companionable of men. At the recent Elmira meeting of the Fire Alarm & Police Telegraph Superintendents, he was one of the active spirits, & his gentlemanly traits of character secured him the friendship of every delegate present.—Telegraph Age.

Alaska Telegraph & Telephone Co.

The Electrical World says: "The Alaska Telegraph & Telephone Co., which was incorporated under the laws of California in July, 1897, by San Francisco capitalists, has, after overcoming much opposition, secured a franchise. The Canadian Government grants the Co. the right to construct & operate telegraph & telephone lines in Canadian territory over the Chilkoot Pass, running along the lakes & up the Lewis & the Yukon Rivers to Dawson City. The line will start from Juneau & extend to Dyea, thence in a northerly direction over the Chilkoot Pass. After following the line of the rivers to Dawson, it will be continued as far as Circle City, which will be the terminus. The total length of the line & branches is estimated at 1,000 miles. Construction will be commenced very soon, & the line rapidly pushed to completion. The Canadian Government is to have free use of the line. T. Reichert, formerly Surveyor General of California, is President, & J. F. Fassett, Secretary." Up to the time of going to press we have been unable to verify the foregoing.

Telegraph Office Changes.

Opened: Avonmore, Ont.; South Finch, Ont.; Kiskisink, Que.

Closed: Caledonia Springs, Ont.; Grimsby Park, Ont.; Hudson, Que.

EXPRESS.

The Arctic Express Company.

Details of the registration of this Co. in British Columbia, as an extra provincial company, were given in our Aug. issue, pg. 148. It may be added that the directors are Judge Struve, J. R. Winston & H. J. Ramsay, of Seattle, Wash.; & F. M. Rattenbury, & A. S. Potts, of Victoria, B.C., Mr. Rattenbury being the Manager. It is said a considerable amount of the Co.'s stock has been sold in B.C., at the par value of \$1 a share.

The Co. is, says the Vancouver World, doing a series of strong log hotels every 30 miles from Skagway to Dawson City, Yukon, & provisioning & equipping these with a large quantity of goods. Provisions & goods have been forwarded & are being distributed by the steamers. When completed a man can travel in & out of Dawson in comparative ease. Apart from these hotels, a man coming out of Dawson last year, & this year also, must buy his provisions, feed for dogs, tents, stoves, blankets, etc., & buy a costly team of dogs to haul them out again, pitching camp each night after his long walk, hunt for firewood, feed his dogs, all with infinite labor, & at an enormous cost, never less than \$1,000, & ranging from that price to \$1,800, according to the scarcity of dogs in Dawson. Not many can afford to travel this way, & none will ever dream of undergoing the cost & fatigue this year when the new posts are established, as a man can leave Dawson with nothing but what he stands up in. The charge has been fixed for the through accommodation at \$250, & whilst this sum will afford a good profit to the Co., it will also be infinitely cheaper than any other means of communication.

The Co. has secured a contract for carrying in the U.S. mail for 4 years. This will bring an annual revenue of \$80,000 for a fortnightly mail. It is expected the Canadian mail contract will also be secured. Express & newspaper service to the Klondike will also be carried on.

Following are the Co.'s express rates from Victoria, B.C., value being limited to \$25:

SUMMER RATES, MAY 15 TO SEPT. 15.

	To Dawson City.	To Circle City & Weare.
1 to 5 lbs..	\$1.00	\$1.50 a lb.
5 to 10 lbs..	.75	1.00 "
10 to 100 lbs..	.50	.75 "

WINTER RATES, SEPT. 15 TO MAY 15.

To Bennett & intermediate points, \$ 1.50 a lb.	
To Dawson City "	5.00 "
To Circle City "	10.00 "
To Weare "	15.00 "

When a shipment exceeds \$25 in value 5 additional is charged.

MONEY & VALUABLES.

To Bennett & intermediate points	1½%
To Dawson City	2%

Death of Gilman Cheney.

Gilman Cheney, Vice-President of the Canadian Express Co., died in Montreal Sept. 14, leaving a widow and a son. He was born at Hillsborough, N.H., in 1822. At the age of 17 he was apprenticed to one of the large cotton manufacturing companies of Manchester, N.H., where he remained until 1849, the year of the Californian gold excitement, when he joined the rush to the Pacific Coast. Two years of digging for fortune in the California sands gave him all the experience of that kind of life he desired, & he came home in 1852, subsequently coming to Canada as a representative of Rice & Co., express forwarding agents. This company was afterwards known as the British American Express Co., & later became the Canadian Express Co. In 1880 Mr. Cheney became its President, succeeding his father, B. P. Cheney, who was the

first President. In 1892 Mr. Cheney became a member of the Board of Trade, & until his recent illness was one of the best known figures in Montreal business circles. He was prominently associated with the Merchants' Cotton Co., of which he was at one time President. He took an active interest in benevolent institutions, & besides being a director of the Board of the Montreal General Hospital, was the principal founder of the Sailors' Institute.

The Dominion Express Co. has opened an office at Edmonton, Alta., which is situated on the north side of the North Saskatchewan River. The office on the south side of the river is at the terminus of the Calgary & Edmonton Ry., at South Edmonton.

The Dominion Express Co. has opened a route on the C.P.R. Crow's Nest Branch, between McLeod, Alberta, & Cranbrook, B.C., & has established agencies at Pincher Creek, Alta.; Bull Head, Cranbrook, Fernie & Wardner, B.C. It has also extended its route on the Montreal & Ottawa section of the C.P.R., between Plantagenet & Ottawa, Ont.

Henry Sanford, Vice-President of the Adams Express Co. was recently married in New York to Mrs. Olive Burchard, widow of Dr. T. H. Burchard, & daughter of S. Wilmot, of Newcastle, Ont., ex-Dominion Commissioner of Fisheries. Mr. Sanford, who is aged 68, has been a widower for many years, & Mrs. Burchard, who is about 35, was a friend of his daughter & made frequent visits to his home in Bright, Conn. Mr. Sanford became strongly attached to her, & after her husband's death he became a frequent visitor at the Buckingham, where Mrs. Burchard made her home when in New York.

TELEPHONES.

The Bell Telephone Company.

The protest of the Co. against being taxed for areas in Toronto may result favorably to the Co., the City Solicitor having advised that the Co. entered into an agreement with the city by which it is exempted from payment of charges for area space.

It is said the Co. has decided to establish a long-distance service in Manitoba, & that the line mentioned in our Aug. issue, pg. 168, as having been started from Carberry to Neepawa, is the first step in the work. When the whole service is finished it is expected there will be communication between Winnipeg, Portage la Prairie, Neepawa, Minnedosa, Rapid City, Brandon, Carberry, Souris, Boissevain & Morden. The Co. already has a line between Winnipeg & Selkirk, 24 miles, & another between Winnipeg & Stony Mountain, 13 miles.

In Oct., 1892, the Co. secured a franchise in Brantford, for 5 years, at \$450 a year. This has not been renewed, & negotiations are still pending between the Co. & the city. In referring to the matter the Brantford Courier says: "As far as Brantford is concerned the People's Company could come here to-morrow and stand an equal chance with the Bell in securing the franchise. How far it is in the interest of business men & private houses to have a duplicate telephone service is a moot question. However, one thing is sure. The day has gone by when municipalities are going to be paid any substantial sum by the Bell people for an exclusive franchise."

The Co. recently offered the city corporation of London, Ont., \$1,000 a year for a 5 years' exclusive franchise. This would be simply a renewal of the franchise heretofore held. The Co. has reduced the rate for house service unlimited to \$20 a year; druggists & doctors, \$25 a year; business telephones remaining at the old rate of \$40. The People's Telephone Co. of London, which recently ob-

tained a 15 years' franchise from the city, is trying to get its capital stock taken up there. So far no work appears to have been done towards establishing an exchange. This Co. proposes to charge \$12 for house telephones, limited service, & \$26 for business service, with a 2c. call rate.

In a recent interview the Manager of the Ontario Department of the Co., speaking of the city of Hamilton, said: "It is very doubtful if the Co. will ask for a renewal of its exclusive franchise in 1902, when our present franchise expires. The strong probability is that the Bell Co. will not seek for exclusive franchises in any Canadian town in the future. Its position is so impregnable that there is not the slightest danger of any permanent injury to its business by the competition of rival companies. Such competition can only be temporary, spasmodic & isolated, & cannot possibly succeed. Then why should the Bell Co. trouble itself to secure exclusive franchises?"

Telephone Items.

The ratepayers of Neepawa, Man., have voted a bonus of \$6,000 for a new telephone system.

The Citizens' Telephone & Light Co., Rat Portage, Ont., has ordered a 2,000 light single pole alternator.

The White Pass & Yukon Ry. is about to install a telephone system along its completed section, starting at Skagway.

Notice is given of application for incorporation of B. A. Scott & others, of Roberval, Que., as the Roberval Telephone Co., with \$10,000 capital.

It is reported that a telephone company will be formed at Gore Bay, Ont., to connect with Meldrum Bay, Silver Water & Evansville. The distance is about 58 miles.

The telephone line between Carberry & Neepawa, Man., referred to in our Aug. issue, pg. 168, was built by W. M. Boyd, of Carberry, who is now managing the line.

The New Westminster & Burrard Inlet Telephone Co. has completed its Boundary Creek line as far as Greenwood Camp, B.C., giving through connection to Spokane, Wash. The Co. expects to have the line completed to Greenwood City this month.

The Dominion Government has recently laid down the Pelee Island telephone cable out to the Dummy Light, Point Pelee, & put a telephone instrument in the Dummy itself. By this action, vessels may, at a moment's notice, wire intelligence of any casualty which may occur, or of the passing of any special steamer, boat, raft, etc. The Pelee cable, as now laid, extends to the east side of Pelee Island in a straight line, to a point about a mile south of Pelee Island Light. It is also south of the "middle ground" & all reefs in the north channel. From its landing on Pelee Island, the line extends to the life-saving station at the south end of Pelee Island, & the life-boat can be launched in a few minutes at any hour of the 24.

It is said the Spokane Falls & B.C. Telephone Co. is to have a rival. The Inland Telephone Co., it seems, has endeavored to purchase the line between Rossland, B.C., & Spokane, Wash., & failing in this, now threatens to parallel the existing line. Ex-Governor Bell, of Nevada, in a recent interview at Spokane, said: "It is the intention of the Co. to extend the lines wherever business may be found in this section to justify it. We have poles here & at Loon Lake for the line to Rossland & Republic, & will have 2, perhaps 3, gangs of 25 to 30 men in the field this week. The lines should be in working order in 40 days if our plans do not miscarry. We branch off from Meyers' Falls or Kettle Falls to Eureka & from thence will probably extend to Conconully."

VOL. I., No. 8.

TORONTO, CANADA, OCTOBER, 1898.

\$1 A YEAR.

The C.P.R.'s Vice-President.

Thomas G. Shaughnessy, an excellent portrait of whom is given on this page, was born in Milwaukee, Wis., of Irish parentage, Oct. 6, 1853. He started in the railway service in the purchasing department of the Chicago, Milwaukee & St. Paul Ry. in 1869, subsequently becoming General Storekeeper of the line, a position he held when W. C. Van Horne left the Co.'s service in 1881 to become General Manager of the C.P.R. In 1882 Mr. Van Horne selected him as General Purchasing Agent of the C.P.R., with headquarters at Montreal. After occupying that position for some two years he became Assistant to the General Manager, & then in succession Assistant General Manager, Assistant President, & then a director & Vice-President. He is also director of a number of other companies in which the C.P.R. has interests.

In religious belief Mr. Shaughnessy is a Roman Catholic. He resides at 1149 Dorchester St., Montreal, & has as a summer residence at St. Patrick, Que., the house similarly occupied for so many years by Sir John Macdonald. He is a member of all the chief clubs in Canada.

A biographer has pertinently remarked of Mr. Shaughnessy:—"From the first day of his life as a railway man, there was no doubt in the minds of those who knew him that he would be a success. The qualities of his mind are thoroughly modern, & fit exactly the service of this greatest branch of modern public service. Ardent & untiring, he has the ability to do much work, & his shrewd common sense & prodigious memory enable him to guide that work to the very best advantage."

Manitoba & N. W. R.

In our July issue, pg. 126, we mentioned that the bonds of this Co. had been secured by a syndicate headed by E. B. Osler, M.P., Toronto, & gave a good many particulars about the line, its financial statistics, earnings, &c. In September we were enabled to state (pg. 178) that W. Hendrie, of Hamilton, was also a member of the syndicate, & that in addition to the bonds, the interests of the Allan family, of Montreal, had also been secured by the syndicate, giving them possession of the road. As we then foreshadowed, H. M. Allan, of Montreal, who was one of the receivers, has retired, & Mr. Osler's partner, A. M. Nanton, of Winnipeg, who was the other, has been appointed sole receiver. The old board, headed by A. Allan, President, & H. M. Allan, Vice-President, has retired, being succeeded by the following:—President, E. B. Osler; Vice-President, W. Hendrie; other directors, H. C. Hammond, R. A. Smith, W. D. Matthews, A. R. Creelman, Q.C., F. G. Osler, & G. C. Loveys. Messrs. Osler & Matthews are both C. P. R.

directors. Messrs. Hammond & Smith are members of the firm of Osler & Hammond, Mr. Creelman is a partner of Mr. Osler's brother, B. B. Mr. Loveys is the accountant of the McCarthy, Osler & Creelman firm, & F. G. Osler is E. B.'s son, & is in his office.

It is said that Mr. Osler & his friends have been quietly picking up the bonds of the M. & N. W. for several years past. In Jan. last, probably fearing that the Northern Pacific or some other line might step in ahead of them & secure control, they made an offer through Coates, Son & Co., of London, Eng. to pay 86 per cent. for each £100 certificate, on condition that they secured a clear majority of the bonds. Coates, Son & Co. did not

property, which, we understand, was considerably exaggerated. We are officially informed that all the Co. intends to do this year is to make some very necessary repairs to the road-bed & to some bridges, including the placing of the bridge across the Assiniboine River at Millwood on a permanent foundation. This latter, however, may not be done before next spring. A couple of stalls will be added to the roundhouse at Minnedosa & the same at Portage la Prairie, & small stations will be built at Macdonald & Franklin. Thirty stock cars of the most modern pattern are to be added to the equipment.

We still adhere to the opinion expressed in our July issue, that this line will ultimately be either sold or leased to the C.P.R. & operated as a branch of that system. Certainly with Messrs. Osler & Matthews on the M. & N. W. board, the line is not likely to fall into anti-C.P.R. hands.

A meeting of the Winnipeg creditors of the Co. was held there recently, at which E. B. Osler was present & stated that there was a large sum due to H. M. Allan for working expenses, & that a considerable amount would be required for putting the road in proper repair, etc., which he claimed should be charged to working expenses. The result would be that the amount of money available in the Receiver's hands would only pay a comparatively small amount upon the creditor's claims. H. M. Allan, he stated, was selling out his claim for some 40c. on the dollar. The purchasers of the road were anxious to treat the local creditors in a much more liberal manner than outsiders, & as soon as the proposed act of the Dominion Parliament, which would be applied for next session, was granted to the purchasers to take over and consolidate all the interests in the property, the Receiver would pay the Winnipeg creditors the par amount of their claims without interest. This offer was unanimously accepted by the creditors present.

Rhodes, Curry & Co., Amherst, N.S., have an order to build 15 cattle cars for the Quebec & Lake St. John Ry.

A. G. Peden has resigned the auditorship of the Canada Atlantic, which he has held for 15 years, & will retire from railway service. He was with the old St. Lawrence & Ottawa at one time.

The Maritime Board of Trade recently considered the promotion of tourist travel in the Maritime Provinces, the subject being introduced by H. L. Chipman, agent of the Plant Line at Halifax, & adopted a resolution urging local boards to devote attention to the subject by the formation of associations for the purpose of advertising their localities, entertaining visitors, & securing the establishment & improvement of hotel accommodation necessary to keep pace with the increasing travel.

THOMAS G. SHAUGHNESSY.

disclose the names of the persons for whom they were acting, & this, of course, gave rise to all sorts of rumors. The bond-holders promptly accepted the offer, & about £490,000 of bonds out of a total of £540,000 were transferred. Then the Allan family had to be dealt with. They had sunk a very large amount in the road & owned practically all of the Co's capital stock, besides owning the rolling stock, which they held in the name of the Canadian Improvement Co. The Osler syndicate bought these interests out. It is announced that there will be no change in the general policy of the Co., & for the present at least no change in the officials. A despatch from Winnipeg recently announced a very extensive programme for improvements to the

TO ADVERTISERS.

The steam & electric railways, the steamship, express, telegraph & telephone companies in Canada are large buyers.

Their purchasing agents and other officials throughout the Dominion, from the Atlantic to the Pacific, are on THE RAILWAY AND SHIPPING WORLD'S subscription list.

It is the only one paper that reaches them all.

If you want to do business with any of the companies mentioned above, an advertisement in these columns will prove a good investment.

Sir William to Sir Rivers.

A letter written by Sir Wm. Van Horne to Sir Rivers-Wilson, on the eve of the latter's departure from Canada, after his recent inspection trip, has been made public as follows:

MONTREAL, Sep. 1, 1898.

DEAR SIR RIVERS,—In order to guard against any possible misunderstanding, I beg leave to state in writing our position concerning the questions we have recently discussed. The two main questions between our respective companies are:—

1st. The existing demoralization of transcontinental & local passenger rates.

2nd. The future use of the G.T. line between Toronto & North Bay as a means of connection between the C.P. Co.'s lines in Middle & Southern Ontario & its main line.

The 1st question is of immediate & pressing importance to the G.T. & the C.P. Cos., & to all of the trunk & transcontinental lines as well.

The 2nd question is a domestic matter in which lines other than the G.T. and C.P. are not necessarily interested.

As regards the 1st question, the C.P. was indisputably the party attacked, & while we felt quite justified in our demand that rates & conditions ante bellum should be restored as a condition precedent to a meeting of the lines interested, looking to a new arrangement, we proposed later on that disinterested arbitrators should determine whether the rates & conditions should be restored in whole or in part, or not at all, as a condition precedent to such a meeting. The fairness of this was recognized by your own Co., which assented to it, as did all the other lines interested, save two of your western connections—the Great Northern & the Northern Pacific. So matters stood until, quite recently, a proposition from a disinterested source was made to the lines interested that the transcontinental passenger rates should be restored & the question of differentials to the C.P. submitted to arbitration, & pending such arbitration the C.P. should be allowed $\frac{1}{2}$ the differential it formerly enjoyed. We indicated our willingness to join the other lines in the restoration of rates on these conditions, & we have indicated to you our willingness to agree that as between the C.P. & G.T. all passenger rates should be restored at the same time to the ante bellum basis.

You have emphatically stated that the termination of the North Bay arrangement by the G. T. had no connection with or relating to the transcontinental rate question. Certainly the question of the future use of your North Bay line for our traffic has no relation to the transcontinental rate matter.

Whether or not we shall make use of your North Bay line for our Ontario traffic, instead of using our own longer line as we are now doing, or instead of making a new & shorter line of our own, we cannot permit anybody to determine for us. That is not a proper subject for arbitration. We may or may not be able to agree with you for the use of your line, but there is no reason why negotiations concerning this matter should in any way be complicated with or delay the settlement of the passenger rate difficulty.

Yours truly,

W. C. VAN HORNE, President.

Sir C. Rivers-Wilson, G.C.M.G., President
G. T. R. Co.

Commenting on the above on Oct. 15, when it was made public in England, the Financial Times said the C. P. R. was not so utterly unreasonable in its attitude as would be inferred from words uttered by Sir Rivers-Wilson in his recent speech.

The Financial News expressed the opinion that if Sir Wm. Van Horne refused much longer to arbitrate there would be a grave suspicion that he was swayed more by personal feeling than by real regard for the interests of C. P. R. shareholders.

A London cablegram of Oct. 17 said:—"Sir Rivers-Wilson will not let the C. P. R. side of the case, as set forth in Sir Wm. Van Horne's comments on the rate war, pass unnoticed. He is preparing a lengthy reply. All correspondence relating to the North Shore line & the rate war will be issued late to-night. In the reply it will be denied that the G. T. is responsible for the rate war. The blame is placed on the U. S. roads. The C. P. R. seeking to penalize the G. T. is declared to be neither equitable nor practical. Sir Rivers-Wilson will ask for a restoration of local rates now that the transcontinental difficulty is ended. Further, the G. T. President will offer to submit differences to arbitration, suggesting as the board of arbitration the Joint Traffic Association & ex-Attorney-General Olney of the U. S. to refer all matters in dispute."

Pacific Coast Passenger Rates.

Transcontinental passenger rates were restored by the C.P.R., Sep. 5, to about ante bellum figures, but it would appear that the war is likely to break out again at any moment. The C.P.R. Passenger Traffic Manager stated early in Oct. that the U.S. lines were again cutting rates, & now the Great Northern makes a similar charge against the C.P.R. General Passenger Agent Whitney, of the G.N., has addressed a letter to the Chairman of the Western Central, Trunk Line, East & New England Passenger Associations, charging that the C.P.R. Agent at Dyea, Alaska, had as late as Oct. 1, sold orders on Seattle for tickets from that point to Minneapolis for \$10, the lowest point reached during the war. The letter intimated that the Great Northern might be forced to protect its own interests. It is charged that with this low rate the C.P. secured all the miners returning from Alaska. It is said the Western U.S. lines will attempt to convince the Interstate Commerce Commission that the C.P.R. has not kept its promise to restore & maintain rates. The Great Northern & Northern Pacific may decide to make an open reduction in rates to meet those of the C.P. The Eastern lines & those reaching St. Paul hope the transcontinental rate war, which cost them millions of dollars, will not be renewed.

The C.P.R.'s Passenger Traffic Manager stated on Oct. 19 that he had sent in his reply to the Great Northern's charges to the interested associations. It was to the effect that the accuser was making mountains out of mole hills. The fact of the matter was, he said, that they had not had time to notify their Alaska agent of the restoration of rates. As soon as the news reached Dyea of the present condition of affairs the cause of the complaint would be removed.

The Ontario Rate War.

So far the C.P.R. shows no sign of restoring local rates in Ontario, & the Passenger Traffic Manager has publicly stated that so long, to use his own words, "as the G.T.R. shows a disposition to play into the hands of the U. S. lines, against the interests of the Canadian Northwest, by diverting traffic to the U.S., so long will the present form of punishment for the G.T.R. be maintained." With the restoration of western rates, the C.P. has to compete with the G.T. on even terms, so far as rates are concerned, in the Manitoba & Northwest business. This is something the C.P. has never had to do before, & it is undeniable that upon even terms the G.T., with its U.S. connections, is bound to secure some of the business that has hitherto gone to its rival. One result of the restoration of rates to the west is sure to be that the C.P. will lose some of its business there, & the same will occur in regard to Manitoba travel. Under these circumstances the C.P. is probably anxious to secure from the G.T. a differential on Manitoba business, & it is said in railway circles that it is withholding the restoration of rates in Ontario in order to force the G.T. to come to its terms.

Canadian Ticket Agents' Association.

The annual meeting held at Ottawa, Oct. 12 & 13, was well attended, over the usual average number being present, as well as a large number of travelling representatives of U.S. lines. The following officers were elected: President, W. E. Rispin, Chatham, Ont.; 1st Vice-President, S. O. Perry, St. Thomas, Ont.; 2nd Vice-President, G. Duncan, Quebec; 3rd Vice-President, W. H. C. McKay, St. John, N.B.; Sec.-Treas., E. de la Hooke, London, Ont.; Auditor, S. H. Palmer, St. Thomas, Ont.; Executive Committee, J. A. Macdonald, Arnprior, Ont.; W. H. Harper, Chatham, Ont.; C. E. Morgan, Hamilton, Ont.; T. Long, Port Hope, Ont.; A. Calder, Winnipeg.

It was decided to hold the next meeting at Winnipeg, Oct. 13, 1899. The following presentations were made: To W. T. Dockrill, Travelling Passenger Agent C.P.R., gold watch; to Alderman Black, Chairman of Reception Committee, gold-mounted umbrella; to J. A. Walsh, Assistant General Passenger Agent, Canada Atlantic, gold-mounted walking-stick, the two latter being for attentions during the meeting.

Washington County.—This line, which was described in our June issue, pg. 100, is almost completed. The branch to Eastport, Me., has been completed, giving connection with Calais, Me., & with the C.P.R. at St. Stephen, N.B. The rumor that this line is owned by Russell Sage, of New York, is denied, but it is expected that it will be amalgamated with his South Shore Line, running between St. Stephen & St. John, N.B. He controls a charter for a bridge over the St. Croix River, which would have to be built to connect the 2 lines. The J. P. McDonald Co. Calais, Me., are the contractors & H. J. Ensling is their Superintendent.

C.P.R. Freight Differentials.

The arbitrators on the question of whether the C.P.R. should be allowed a 10% differential on transcontinental freight rates, held a preliminary meeting at the Auditorium in Chicago, Oct. 11. J. W. Midgely, ex-Chairman of the Western Freight Association, represented the C.P.R., W. R. Day, Special Counsel to the Interstate Commerce Commission, represented the U.S. lines, & E. S. Washburn, President & General Manager of the Kansas City, Fort Scott & Memphis Ry., was the third arbitrator, chosen by the other two. It is said considerable friction arose over the question of whether the hearing should be an open one, & it was decided that it should be behind closed doors.

The arbitration opened Oct. 12, when R. Kerr, Traffic Manager of the C.P.R. lines west of Lake Superior, & Freight Traffic Manager Bosworth, presented the case for their Co. They argued that the C.P.R. labors under many disadvantages in laying down freight on the Pacific coast, particularly at San Francisco & at points farther south. The road has no direct inlet to the country south of Vancouver & Portland, Ore., & it is obliged to reload from cars to boats & break bulk in order to make shipments to points off its own rails. For these reasons it contends that it should be permitted to make lower rates than competitors which do not labor under such disadvantages.

Third Vice-President Stubbs, of the Southern Pacific, occupied the whole of Oct. 13 & part of Oct. 14 in stating the case for the U.S. lines. He said that at first the C.P.R. might have labored under serious disadvantages as compared with its U.S. competitors. It had no direct connections to the district south of its terminal on Puget Sound, its track was new & not in good condition, it could not make as fast time as the other roads, & it was new to the field. For that reason it was permitted to make lower rates than the U.S. lines, not by agreement, but by sufferance. Ever since its inauguration as a transcontinental line it had insisted upon making rates lower by 10% than its U.S. competitors. He argued that the disadvantages under which the C.P. line labored at first no longer are in evidence. He claimed that it operated on an equal basis with the roads of the U.S. If it is at a disadvantage as compared with the Southern Pacific for south Pacific coast traffic, the Southern Pacific is at an equal disadvantage in competing with it for north Pacific coast traffic. For these reasons he argued that the C.P.R. should be obliged to make as high rates for hauling freight from points in the U.S. to Pacific coast territory within the bounds of the U.S. as the U.S. lines make. He pointed out that while Congress makes every provision for domestic shipments in U.S. ships it permits a foreign railway to enter the U.S. & take freight destined to other points in the U.S. at rates which U.S. roads cannot make. Mr. Stubbs' argument was for the entire abolition of a differential in favor of the C.P., & an insistence that it should be compelled in freight business, as in passenger business, to make the same rates as are used by the roads of the U.S.

On Oct. 19 it was announced that the arbitrators had decided that the C.P.R. was not entitled to a differential, the decision being worded as follows:—

The undersigned, who were appointed arbitrators, under the following resolution, adopted at a meeting of interested lines, which convened at Brown's Palace Hotel, Denver, Colo., Aug. 22, 1898, viz.:

"Resolved, That provided the C.P.R. will join with the U.S. lines in a co-operative agreement designed to secure the maintenance of reasonable rates on the freight traffic interchanged with San Francisco, Cal., by other points in the U.S. & Canada, that the

lines here represented will submit to arbitration the question of whether the C.P.R. is or should be entitled to a differential under the rates made by the U. S. lines for the carriage of the freight in question, and if any differentials, what those differentials shall be. The board of arbitration to consist of 3 members, 1 to be selected by the C.P.R., 1 to be selected by the American lines interested, they 2 to select a 3rd, & that the decision of 2 members of said board of arbitration shall be final, conclusive & binding upon all."

After hearing the evidence & arguments of the interested parties, & having duly considered the same, respectfully submit their decision as follows:—The C. P. R. is not nor should it be entitled to a differential under the rates made by the U. S. lines for the carriage of the freight in question.

EDW. S. WASHBURN, W. A. DAY.

I do not concur in the above conclusion.

J. W. MIDGLEY.

THE C.P.R.'S POSITION.

On Oct. 21 Vice-President Shaughnessy made the following statement in regard to the decision:—"The arbitrators have rendered a decision adverse to the C.P.R., but we are told that the decision is based upon a technical construction of the language of the resolution that purported to describe the question which was to be left to arbitration. That resolution, after reciting certain provisions, reads:—"That the lines here represented will submit to arbitration the question of whether the C. P. R. is, or should be, entitled to a differential under the rates made by the U. S. lines for the carriage of the freight in question." It appears that the arbitrators held that, under this language, the only question they could try was whether the C.P.R. had an inherent title to a differential, & that they could not go into the question as to whether, under existing conditions in accordance with railway practice on this continent, the Vancouver route should be considered a differential. The Co.'s Traffic Manager, who attended the Denver meeting at which the resolution was passed, clearly understood that it contemplated a bona fide submission to arbitration of the material business question, & not merely a technical philological interpretation of the word 'entitled.' No sane man would claim that the C.P.R., or any other railway, had an inherent title to any differential.

"If we are correctly informed as to the basis of the arbitrators' decision the question must be submitted again in such form as to obtain a decision on the broad merits.

Intercolonial West Bound Freight.

It was recently stated in Montreal that arrangements had been made whereby all west bound through freight originating on the Government system would be turned over to the G. T. R. at Montreal, instead of being given to the C. P. R. at St. John, N. B., as was heretofore the case, & that in return for this the G. T. R. would give the I. C. R. its share of freight bound east, more especially export cargoes of grain & the like.

Enquiry at Intercolonial headquarters fails to elicit any further information than that "part of the statement is true & part is not."

The Traffic Manager of the G. T. R. informs us that the statement is not altogether correct, & that the facts are that the G. T. R.'s agreement with the Government system is based upon the ordinary railway principles of exchange, & contemplates that the Government line will take advantage of its long haul from the East to Montreal, & there exchange the traffic with the G. T. R., the latter agreeing to give the Government railway traffic at Montreal instead of hauling it to Chaudiere Jct., as was done in the past.

The U. S. Roadmasters Association.

At the annual meeting of this Association at Denver, Sept. 13 & 14, the following officers were elected: President, T. Hickey, Michigan Central; 1st Vice-President, J. M. Meade, P.R.R.; 2nd Vice-President, C. B. Teller, D. L. & G.; Sec.-Treas., J. B. Dickson, C. & N. W. President Hickey is Roadmaster of the M.C.R., at St. Thomas, Ont. The Times of that place says he is a native of Ireland & came to America with his parents when 7 years old, settling at Angona, Indiana. In 1872 he took his spade in hand & began to transfer gravel & real estate from one point to another. At night he found rest in one of the sleeping cars attached to a work train, afterwards he became a section boss & was promoted to be a Lake Shore road train conductor. Not long afterward he secured a position as extra gang foreman on the M.C.R., then became Assistant Roadmaster & finally General Roadmaster, which position he has held ever since. He has been prominent in the history of the Roadmasters Association during the past 15 years.

I. C. R. Official Changes.

Since pgs. 204 & 205 of this issue, on which some appointments, &c., were announced, were printed, the following information has reached us.

General Freight Agent Wallace issued the following circular Oct. 19:—"W. Robinson has been transferred to Toronto as General Traveling Agent. W. G. Robertson has been appointed Division Freight Agent, St. John, N.B. His district will extend St. John to Moncton inclusive, north of Moncton to and including Eel River, east of Moncton to and including Spring Hill Jct. and Point du Chene Branch. D. A. Story has been appointed Division Freight Agent with headquarters at Halifax, N.S. His district will extend Halifax to Salt Springs inclusive, Truro to Sidney and North Sydney, and the Oxford, Pictou & Pictou Landing branches."

Further particulars about Messrs. Robinson & Robertson will be found on pg. 205. Mr. Story was station agent at Halifax.

General Passenger Agent Lyons issued the following circular Oct. 21:—"H. A. Price, District Passenger Agent, Halifax, has been transferred to Montreal, with headquarters at 143 St. James St. Territory, Dalhousie and west. J. B. Lambkin, District Passenger Agent, Montreal, has been transferred to Halifax, N.S., with headquarters at 132 Hollis St. Territory, east of Dalhousie."

It is said M. L. Tracey, Moncton, becomes Superintendent of car cleaning over the whole system.

Intercolonial Equipment.

Contracts for 3 postal & baggage cars, & 4 baggage cars, all 60 ft. long, have been awarded to Rhodes, Curry & Co., Amherst, N.S. A contract has also been let for 6 second-class sleeping cars. There are not any particularly new features on any of these cars.

The Railroad Car Journal stated in its October issue that a contract had been given the Wagner Palace Car Co. for 28 passenger cars. General Manager Pottinger informed us on Oct. 17 that this information was not correct.

Tenders have been asked for 15 consolidation locomotives, which will be modern in every respect, & conform to the best American practice. They will weigh, in working order 160,000 lbs., & have driving wheels 56 ins. diameter. One of them will be fitted with the Cleveland patent cylinder arrangement, the other experimental. Tenders & engines shall have wheels to be wrought iron; main driving

wheel, centre of steel, all others of cast iron or steel cast iron. Axle boxes & cross heads of cast steel. Iron tender frames with heavy 10 in. channel beams. M.C.B. automatic couplers to be applied on both engine & tender. Toughened steel crank pins & piston rods. Steel cab. Westinghouse train signal. Muffled pop valves. Metallic packing all around, including air pump. Chime whistle. Double latch reversing lever.

It was recently telegraphed from Moncton that Mechanical Superintendent Joughins had sold to the Government road, through a Montreal agency, trucks for 400 freight cars, or that trucks of his invention were to be used on that number of cars, & that he would get a royalty on them. We have looked into this matter carefully, & are satisfied that there was no foundation for such a statement. Steel trucks are to be used, but not Mr. Joughins'. An order has been given to a foundry to make for trial use 10 pairs of trucks, of a pattern designed by Mr. Joughins. It is a pity that political papers cannot confine themselves to legitimate criticism of the policy adopted by the political head of the road without singling out permanent officials for attack. Mr. Joughins came to the I.C.R. with an excellent reputation, & it is most unfair that unfounded charges of this nature should be made against him.

Equipment Notes.

The Erie & Huron cars are being given an overhauling at the L. E. & D. R. R. shops at Walkerville, Ont.

The Manitoba & Northwestern Ry. is about to add to its equipment 30 stock cars of the most modern pattern.

The G.T.R. has started work at its Point St. Charles works, Montreal, on the 1st of 6 large modern locomotives. They will be practically the same as the Moguls recently purchased by the Co. for the lines west of the Detroit & St. Clair rivers, of which we gave a full description in our May issue, pg. 61, & an illustration in our June issue, pg. 89.

Sir Wm. Van Horne's Western Trip.

Sir Wm. Van Horne left Montreal Oct. 3, on his annual trip to the Pacific Coast, being accompanied by Principal Peterson, of McGill University; R. B. Angus, one of the C.P.R. directors, & W. W. Ogilvie, the flour mill owner. At Winnipeg the party was joined by E. B. Osler, M.P., another C.P.R. director, who had gone on a day or two ahead, in connection with matters relating to the purchase of the M. & N.W.R. by himself & associates. Western Manager Whyte met the President at Fort William & accompanied him to the Pacific Coast & back. The trip was made by special train, going over the short line from Montreal to Ottawa, thence by Fort William to Winnipeg. As usual, Sir Wm. travelled most of the way by daylight only, so as to see the whole of the lines. From Winnipeg a rapid run was made over the southwestern branches, the actual running time for the 410 miles being 9 hours & 15 minutes. On returning to Winnipeg from this run Sir Wm. said that the appearance of the country had undergone a great change in the past few years. The solitary farm-house of five years ago was now a village, & the village of a few years ago was now a town substantial & prosperous. There was plenty of wheat on all sides, but the farmers in many instances were late in stacking.

THE KETTLE RIVER RAILWAY.

The President & his party, as well as the Council of the Board of Trade, were entertained at luncheon at the Manitoba Club by A. M. Nanton, President of the Winnipeg Board of Trade, who, in proposing Sir William's health, alluded to the community of in-

terests that exists between the C.P.R. & the people of the west, & said that, owing to its geographical position, Winnipeg ought to secure the trade of the rich mining regions of British Columbia.

Sir William, replying, discussed the question of the trade of British Columbia, which he said belonged naturally to the merchants of Winnipeg, & not to the traders of Spokane. He thought the best means of insuring that trade to Winnipeg, was by shutting out U.S. railway competition in British Columbia, which would divert the smelting business south of the line & allow the Spokane merchants to secure the trade. Last session a Mr. Corbin applied to the Dominion Parliament for a charter to build a railway to do this very thing. Parliament had, however, fortunately, thought Sir William, refused the charter. The Winnipeg Board of Trade had helped the C.P.R. in its fight before Parliament to keep foreign competition out, & the Co. had succeeded. But the Corbin interest had passed into the hands of the Great Northern Ry. Co., & another application would be made to Parliament next session for the charter. He trusted the Winnipeg Board of Trade would again be willing to lend a helping hand to keep the road out, as it would be in the interests of the merchants to do so.

IN AN INTERVIEW AT WINNIPEG

Sir William stated that the road-bed east of there was in magnificent condition; improvements were being constantly made & the permanent way was never in so good a condition as at the present time. From Fort William west, preparations for a double track were being made, & all the bridges & culverts were being widened & strengthened with this end in view. The whole line was being gradually laid with 75-lb. steel rails, which were more than sufficiently strong for any strain that they would be subjected to.

As to improvements in Winnipeg he stated they were going on all the time. There were other needs more important for the present than a new station, & these were being attended to. Within a few years, however, he

ventured to say that this much-talked-of new station would become a reality, & when the Co. did decide to build one, it would be one of which Winnipeg would have no cause to be ashamed. It might become necessary to enlarge the present building to a size enabling it to answer more fully for present needs, & these alterations might possibly be made in the near future.

With regard to the fast 100-hour trans-continental service, of which so much was heard this summer, he said the time was not quite ripe for inaugurating it. Within a year he hoped the traffic would warrant such a service being put on. The roadway & rolling stock were quite equal to supplying such a service, or even one 28 hours faster; it was merely a question of volume of traffic.

From Winnipeg the party went direct to the Pacific Coast, spending some days

AT VANCOUVER & VICTORIA.

At the former place Sir William stated to an interviewer that the Co. would build a solid structure at New Westminster, & do what it could toward building up the city. Vancouver would soon have its handsome depot complete. The city had not had what could really be called a station before, & now it would have one that would not only be useful, but in addition, would be one of the finest buildings in the city. If Vancouver had pressed for a station some time back, another temporary building would have been put up. A good structure that would last 10 or 15 years, one that would have to do for several years yet, but not a really permanent depot. It was often the case that a city, by insisting on a new station before the Co. was ready to expend the money on it, only got another temporary structure, instead of a finer permanent building which would have been put up had it waited a year or two. When the Co. did build a depot, it tried to combine commodious & convenient premises with a handsome structure worthy of any city.

From the Coast the President & his party returned by way of Kootenay Lake & the Crow's Nest line, reaching Montreal Oct. 23.

IMITATIONS. PAGE FENCING HAS 'EM.

like every article of great merit. But none of the imitations equal the Page in quality of material and construction. Page fencing is made of coiled steel wire of highest grade. The cross wires are in one piece, and wrapped around the horizontals. Ours is the only fence that will not be injured or destroyed by snowbanks. If you want a cheap fence, buy barbed wire or one of the imitation woven fences. If you want a fence that is the best, and one that is much the cheapest in the end, buy the Page. The Page Wire Fence Co., Limited, Walkerville Ont.

FINANCE, MEETINGS, &c.

The Grand Trunk's Semi-Annual.

In our Sept. issue we gave the Secretary's official notification of the result of the operations for the ½-year to June 30, since which the full report has reached us as follows:

The revenue statements & abstracts of working expenses are rendered on the amended basis adopted in the last ½-year's accounts. The accounts for the ½-year ended June 30, 1897, have been similarly adjusted for the purpose of comparison.

The following summary shows a comparison of the ½-year's revenue account with that of the corresponding ½-year, ended June 30, 1897:—

June 30, '97.		June 30, '98.
£1,756,566	Gross receipts, as per account no. 7.....	£1,871,733 19 1
1,196,643	Deduct—Working expenses, being at the rate of 66.46%, as compared with 68.12% in '97...	1,243,883 8 4
£559,923	Net Traffic receipts..	£627,850 10 9
14,469	Add—Amount received from International Bridge Co., Saginaw, & Muskegon bonds, & interest on bonds, &c., of Central Vermont Ry., of interest on securities of controlled lines acquired by the issue of G.T. 4% debenture stock.....	12,930 12 9
5,856	Interest on Toledo, Saginaw, & Muskegon bonds, & interest on bonds, &c., of Central Vermont Ry., of interest on securities of controlled lines acquired by the issue of G.T. 4% debenture stock.....	5,253 11 11
3,087	Interest on securities of controlled lines acquired by the issue of G.T. 4% debenture stock.....	3,087 10 8
65,102	Balance of general interest account.....	64,840 3
5,957		16,709 14 6
£654,395	Net revenue receipts..	£730,672 10

Following are the net revenue charges for the half year:—

Rents (leased lines).....	£78,174 10 6
Interest on debenture stocks & bonds of the Co.....	431,771 18 8
Interest on debenture stock & bonds of lines consolidated with the G.T. Co., & interest on Michigan Air Line bonds.....	80,648 16 5
	7,750 0
	£593,345 11 7
Amount advanced to Chicago & G.T. Co. under traffic agreements towards payment of interest on its bonds, ½-year to June 30, for which interest coupons are held.....	£8,392 1 4
Amount advanced to Detroit, Grand Haven, & Milwaukee Co., towards payment of interest on its bonds, under agreements, ½-year to June 30.....	22,282 9 4
	30,674 10 8
	£624,020 2 3
Leaving a surplus of.....	106,651 18 7
	£730,672 10

There was a balance at the credit of net revenue account on Dec. 31, '97, of £10,289 2s. 3d., of which \$50,000 or £10,273 10s. 5d. has been appropriated as the contribution for that ½-year towards the revenue proportion of the expenditure for the reconstruction of the Victoria Jubilee Bridge, leaving a balance of £15 2s. 10d. This amount, added to the surplus for the past ½-year of £106,651 18s. 7d., makes a total amount available for dividend of £106,667 1s. 5d.

The directors recommend the payment of the full ½-year's dividend on the 4% guaranteed stock, which will absorb £104,395 17s. 6d., leaving £2,271 3s. 11d., to be carried forward to the next ½-year's accounts.

The net revenue surplus for the ½-year ended June 30, '97, amounted to £2,708 12s. 10d. The result of the past ½-year's operations shows, therefore, an improvement of £103,943 5s. 9d.

The following table exhibits a comparison of the receipts for the ½-years ended June 30, '98 & '97:—

Description of Receipts.	1898.	1897.	Increase.	Decrease.
Passengers.....	£ 112,730	£ 107,015	£ 5,715	£ 25,080
Mails & express...	90,665	88,913	1,752	

Freight & live stock	1,285,819	1,180,549	99,270	
Miscellaneous.....	52,991	13,189	39,802	

£1,871,734 £1,756,566 £115,168

The increase of £39,802 in miscellaneous receipts arises from rentals received from the C.P.R. Co. for use of the G.T. line between Hamilton & Toronto, from the Wabash Co. in respect of the running arrangements between Windsor & the Niagara Frontier; & from the Intercolonial Ry. for the use of the line between Ste. Rosalie & Montreal. The decrease of £25,656 in the passenger receipts is partly attributable to the running arrangements above mentioned, for which, however, a set off is obtained in the rentals paid by the several companies; while some portion of the decrease is the result of the reduction in local rates during the greater part of the half year.

Traffic Statistics.	1898	1897.	Increase.	Decrease.
Passengers carried.....	3,009,641	2,948,309	61,332	
Average fare per passenger	2s. 11d.	3s. 2d.	23d.	
Tons of freight & live stock	4,437,449	4,049,878	387,571	
Average rate per ton.....	5s. 9½d.	5s. 10½d.	3d.	
Total earnings per train mile	51.32d.	50.65d.	0.67d.	

The average receipt per ton per mile on the entire freight business was 0.66 of a cent, compared with 0.65 of a cent in the corresponding ½-year.

The working expenses, including taxes, amounted in the ½-year to £1,243,883, or 66.46% of the gross receipts, as compared with £1,196,643 or 68.12%; an increase in amount of £47,240, but a decrease in the proportion to the gross receipts of 1.66%.

The following table exhibits a comparison of the revenue expenditure, including taxes, under the heads of the revised classification, for the ½-years ended June 30, '98 & '97:—

Description of Expenditure.	June 30, '98.	June 30, '97.	Increase.	Decrease.
Maintenance of Way and Structures	£180,980	£102,156	£78,824	
Maintenance of Equipment.....	224,187	209,477	14,710	
Conducting Transportation.....	709,678	738,326	11,352	
General Expenses	50,717	51,184	—	467
Total.....	£1,165,562	£1,101,143	£64,419	
Percentage of Gross Receipts..	65.80	67.24	—	1.44
Expenditure per train mile.....	33.76d.	34.06d.	—	0.30d.

The charge for taxes amounted to £12,315 compared with £15,500, a diminution of £3,185, in consequence of the appropriation of £3,082 in the corresponding ½-year on account of the "State of Maine Tax Suspense Account" being now unnecessary, that account having been finally closed on Dec. 31, '97.

The train mileage of the ½-year compares with that for the ½-year ended June 30, '97, as follows:—

Description.	June, '98.	June, '97.	Increase.	Decrease.
Passenger.....	3,069,188	2,984,677	84,511	
Freight.....	5,127,515	4,409,397	718,118	
Mixed trains.....	557,120	929,578	—	372,458
Total.....	8,753,823	8,323,652	430,171	

The G. T. gross receipts for the ½-year show an increase of £115,168, or 6.56%; the working expenses, including taxes, an increase of £47,240, or 3.95%, & the train mileage an increase of 430,171, or 5.17%.

The working stock in service is as follows:—locomotives 811. First-class cars, ordinary, 372; dining 4; parlor 8, with compartments; smoking 35; baggage 27. Second class cars, ordinary, 149; immigrant sleeping, 11. Post office cars, ordinary, 19; with baggage & smoking compartment, 55. Baggage cars, ordinary, 163; with smoking compartment, 14. Horse boxes 2. Total passenger cars, 859. Box cars, brake vans 372; goods, 15,732. Cattle, 1,208; platform & coal 6,180. Total freight cars 23,492. Not used for traffic, auxiliary & ice scraper cars 101, snow

ploughs 69, dump cars 171, boarding cars 21, cinder cars 50, grand total 24,763. Of these the following are out of service: ordinary, 1st class 61, ordinary 2nd class 48, post office 5, horse boxes 2, brake vans 27, cattle cars 97, platform & coal 337, dump 85, total 106. No additions to the stock have been made at the expense of capital during the ½-year. Sixteen engines have been sold or broken up, & 20 new engines of modern type & increased capacity have been purchased on revenue account during the ½-year. There remained at June 30, '98, 16 engines in excess of the official stock. Three passenger cars, 500 thirty-ton box freight cars, & ten refrigerator cars have been provided at the expense of revenue, in part replacement of cars broken up. There remained out of service at June 30, '98, a balance of 23 cars in the passenger, & 4 cars in the freight equipment. At the end of the ½-year there was an amount of £27,440 3s. 10d. at the credit of the locomotive renewal fund, & of £58,102 11s. 11d. at the credit of the car renewal fund.

The charges for capital account for the ½ year amounted, less credits, to £93,944 8s. 7d., the chief items of expenditure being £53,194 8s. 9d., charged on account of the reconstruction of the Victoria Jubilee Bridge, & £39,158 9s. 6d. for the further equipment of engines & freight cars with air-brakes & automatic couplers, in compliance with the Safety Appliance Act.

Bonds of the Co. (Hamilton & North Western), amounting to £409,400, bearing 6% interest, matured on June last, of which £399,500 had been presented for payment, or exchanged for 4% debenture stock at the end of the ½ year. The substitution of 4% debenture stock for these 6% bonds will effect a saving in interest charges from June, 1, '98, of upwards of £8,000 a year.

The President reported to the proprietors, at the last general meeting, that in addition to the reconstruction of the Victoria Bridge at Montreal, it had been deemed necessary for the more efficient & economical conduct of the traffic to authorize the renewal during the next 2 or 3 years of the bridges on the section of the line between Montreal & Portland, & it has also been determined to renew certain bridges on the southern division used jointly by the Wabash Co.

The proportion of the expenditure for reconstruction of the Victoria Bridge, properly chargeable to revenue, has been fixed at £110,000, which, together with the cost of renewing the bridges between Montreal & Portland, & on the southern division, it is proposed to charge to revenue account, spread over a period of at least 5 years, so as to obviate any undue increase in the maintenance charges in any 1 year.

There had been expended to June 30, '98, on account of these renewals, an amount of £57,816, of which £10,274 has been as already announced, charged against the net revenue balance at Dec. 31, '97, & £15,402 is included in the maintenance charges for the past ½ year, leaving £32,140 at the debit of Bridge Renewal Suspense Account on June 30, '98.

The International Bridge at Buffalo it is also intended to renew at an early date, the cost of which will be charged against the revenue of the International Bridge Co.

The reconstruction of the Victoria Jubilee Bridge has progressed satisfactorily, & it is expected that the new double track will be available for traffic by Jan. 1 next. Meanwhile the traffic is being conducted over the single track as heretofore.

The gross receipts of the Chicago & G.T. Ry. Co. for the ½ year to June 30, '98, amounted to £376,387, against £301,436 in '97, an increase of £74,951. The working expenses were £294,541, against £262,591, an increase of £31,950; the net profit being £81,846, against £38,845, an increase of £43,001. The net revenue charges for the ½ year were

1898, against £88,410 in 1897. There was, therefore, a deficiency in meeting the net revenue charges of £8,302, as compared with a balance of £17,074, being an improvement of £41,682. The above deficiency of £8,302 is payable by the G. T. Co., under traffic agreements. The number of passengers carried during the half-year was 530,084, against 529,177, an increase of 9,907, or 1.87%; and the passenger train receipts, including mail and express receipts, were £84,806, against £79,795, an increase of £5,011, or 6.28%. The quantity of freight moved during the half year was 1,122,161 tons, against 809,368 tons in 1897, an increase of 312,793 tons, or 38.64%, and the receipts from this traffic were £291,205, against £221,404 in 1897, an increase of £69,801, or 31.53%.

The gross receipts of the Detroit, Grand Haven & Milwaukee Ry. for the ½ year to June 30, '98, were £86,470, against £96,220 in '97, a decrease of £9,750; the working expenses were £71,379, against £78,634, a decrease of £7,255, leaving a balance of £15,091, against £17,586, a decrease of net revenue of £2,495 compared with the corresponding ½ year of '97. The net revenue charges for the ½ year were £37,373, against £37,670 in '97, so that there was a deficiency in meeting the net revenue charges of £22,282, as compared with a deficiency of £20,084 for the corresponding period of '97. The number of passengers carried during the ½ year was 228,832 against 242,963, a decrease of 14,131, or 5.82%; and the passenger receipts, including mails & express receipts, were £34,993, against £37,203, a decrease of £2,210, or 5.94%. The quantity of freight moved was 309,930 tons, against 288,394 tons in 1897, an increase of 21,536 tons, or 7.47%, and the receipts from freight traffic were £47,581, against £52,606 in 1897, a decrease of £5,025, or 9.55%.

The President & Vice-President have recently returned from a visit to Canada & the U.S., in the course of which they inspected various portions of the system & conferred with the General Manager & the other chief officers on many matters of interest to the Co. They also had conferences with the Canadian Pacific authorities for the discussion of the differences existing between the two Companies. Pending, however, a settlement of the transcontinental rate war between the C.P.R. & the American lines, no agreement could be reached. That controversy being now happily terminated, there would appear to be no valid reason why the local passenger fares reduced by the C.P.R. should not be restored, & all other points of difference in connection with the North Bay route be adjusted. Nego-

tiations with these objects in view are still in progress, which it is hoped may result in a settlement on a mutually satisfactory basis or in an agreement to submit all points of difference to arbitration.

On June 30, 1898, the G. T. Ry., including lines east of St. Clair & Detroit rivers, & the Detroit & Michigan air lines, comprised 3,506 miles of roadway; 408½ miles of 2nd track; & 759¾ miles of sidings, a total of 4,674¼ miles. Of this, all was laid with steel, except 26 miles of track & 58¼ of sidings which have iron rails.

English financial papers generally comment most favorably on the report.

The Financial Post & the Bullionist both predict a future of prosperity for the Co.

The Financial News says the report undoubtedly is a very satisfactory showing, & that the shareholders must admit that they owe a heavy debt of gratitude to the new management.

The Financial Times says it exhibits a healthier condition than for years past, & affords justification for regarding the future with cheerfulness, but adds that the Co., in granting running arrangements to the Intercolonial, has deliberately invited into its territory a competitor which may be able to give more trouble than was bargained for. Neither the Wabash nor the Intercolonial, it thinks, has so far had the worst of the running arrangements.

THE HALF-YEARLY MEETING.

This was held at the Cannon St. Hotel, London, Eng., Oct. 13, Sir C. Rivers-Wilson presiding. As the directors entered the room they were loudly cheered by the large number of shareholders present. After reading the report Sir Rivers-Wilson referred at length to the revenue & working expenses of the line, remarking that the ½ year under consideration was the best the Co. had had since 1890. He referred to the very advantageous agreement with the Wabash, which had proved satisfactory to both roads, & said the Government had acted most wisely in its agreement with the G.T.R. regarding the entry of the Intercolonial Ry. to Montreal. The G. T.'s arrangement with the Central Vermont Ry. was virtually completed. The G.T. had secured all it had fought for. A trifling offer had been made to make the disused belt line at Toronto a bicycle track, but no satisfactory offer had been received for the purchase of the land. He regretted he had no message of peace & conciliation to bring from the C.P.R. The G. T.'s offer to submit the whole question to arbitra-

tion was refused, & the C. P. would continue to cut rates in Ontario & Quebec until the G.T. had come to an agreement on the question of passenger transportation to the North-west territories. It was absolutely impossible for the G.T. to accept the conditions imposed. They must leave Sir Wm. Van Horne's action to be judged by public opinion, & perhaps, also by the C.P. shareholders. The G. T. Co. was capable of taking care of itself. While in Canada he had noticed a great augmentation of traffic in the Muskoka district. He spoke in the highest terms of General Manager Hays & his staff. American interests would not allow the removal of the bonding privilege existing between Canada & the United States. He hoped that as a result of the deliberations of the International Commission, just adjourned at Quebec, bonding privileges would be included in a treaty, so as to remove the question from the field of American politics. He was frequently applauded during his speech.

Vice-President Jos. Price, endorsed Sir Charles' eulogy of the General Manager & his staff & said he found the track & other property in excellent condition.

Wm. Baker struck a discordant note by asking a number of questions, to which curt answers were given. These answers, however, satisfied the meeting, which adopted the report almost unanimously.

On the day after the meeting The Financial Times said editorially that Sir Rivers-Wilson's speech was not altogether cheerful, though it was optimistic in parts. The outlook for the G.T., it added, did not appear so rosy as it did a few days before, a fact made evident by the market.

The Financial News said it was a great pity that Sir Wm. Van Horne did not realize the great change that had taken place. The G.T. would no longer submit to the dictation of the C.P.

MEETINGS OF AUXILIARY COMPANIES.

The annual meetings of the various companies which make up the Grand Trunk system west of the Detroit & St. Clair Rivers were held during the 1st week in October, General Manager Hays attending them all. The following officers were elected:—

DETROIT, GRAND HAVEN & MILWAUKEE.—President, C. M. Hays; other directors, E. W. Meddaugh, C. Buncher, J. Pridgeon, jr., & W. J. Spicer, Detroit; G. B. Reeve, J. Hobson, C. Percy & F. H. McGuigan, Montreal; Secretary-Treasurer, J. H. Muir, Detroit.

CINCINNATI, SAGINAW & MACKINAW.—President, A. W. Wright, Alma; Vice-president,

INSURE IN

The Canadian Railway Accident Insurance Co.

OTTAWA, ONT. A PURELY CANADIAN CO.

Total.....	1,256,473	1,320,369	63,896

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase on decrease.
Jan. \$1,674,372.04	\$1,156,744.45	\$515,627.59	\$142,284.49+	
Feb. 1,403,596.98	1,070,929.62	423,667.36	38,844.28+	
Mar. 2,070,479.06	1,326,245.55	753,233.51	233,020.67+	
April 1,542,888.88	1,113,770.99	429,117.89	113,710.89+	
May 2,233,999.16	1,326,336.85	926,662.31	51,092.47+	
June 2,324,101.41	1,377,144.67	946,956.74	98,144.67+	
July 2,053,363.27	1,320,674.48	732,688.79	183,670.08+	
Aug. 2,216,865.29	1,327,838.41	883,026.88	121,380.23+	

\$15,858,247.72 \$10,090,855.22 \$5,767,392.50 \$181,433.02+
+ Increase. - Decrease.

The approximate earnings for September, 1898, were \$2,341,000, against \$2,279,000 in September, 1897, an increase of \$62,000.

AUXILIARY LINES.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—The approximate earnings for Sept. were \$485,947, as compared with \$393,573 for corresponding period, an increase of \$92,374. For the 9 months ended Sept. 30, they were \$2,931,528.24, as compared with \$2,625,853.49 for corresponding period, an increase of \$305,674.75.

DULUTH, SOUTH SHORE & ATLANTIC.—The approximate earnings for Sept. were \$169,648, as compared with \$152,756 for the corresponding period, an increase of \$16,892. For the nine months ended Sept. 30, they were \$1,375,009.26 as compared with \$1,184,880.27 for the corresponding period, an increase of \$190,128.99.

MINERVA RANGE, HANCOCK & CALUMET.—The approximate earnings for Sept. were \$35,304.45 as compared with \$26,943 for the corresponding period, an increase of \$8,421. For the nine months ended Sept. 30, they were \$265,001.57 as compared with \$213,341.05 for the corresponding period, an increase of \$51,660.52.

White Pass & Yukon Railway.

As mentioned in our Sep. issue, pg. 179, the British public were recently invited to subscribe for \$7,500,000 of debenture stock for the construction of the line, the American Manager of the Co. informing us that the issue had been successful. The prospectus which has since reached us was issued by the British Yukon Mining, Trading & Transportation Co., offering £250,000 of debenture stock, which will be a 1st charge on the 1st division of the line, from Skagway over the White Pass to Lake Bennett, about 50 miles. The rate of interest is 6% & the contractors guarantee to build the line to the summit of the mountain, which has an elevation of 2,800 ft. The Co. is work-

ing under 3 charters, one obtained from Canada, another from British Columbia, and a third from the U. S. The first surveys were made in 1896. Since then Sir T. P. Tancred has had charge of the surveys. C. J. Hawkins, C. E., & J. C. Christie, C. E., endorse the opinions of the experts employed. J. Price, Vice-President of the G. T. R., is one of the directors; Hon. S. C. Glynn, director of the North London Railway Co., is another besides other equally prominent business men in England. Canada is represented by E. Hanson, of Montreal. An act of the U. S. Congress, giving bonding privileges to Alaskan ports, was signed by the President May 14 last. The railway, when completed, will go to Fort Selkirk. It is intended to build a telegraph also. "The great advantage of the White Pass route," the prospectus claims, "is that the navigable waters flowing to the Yukon River are reached in less than 50 miles from Skagway Harbor, & through communication will be obtained with Dawson & the Yukon & Klondyke gold fields by boat in summer & by sledges in winter, even before the completion of the line to Fort Selkirk."

Financial Notes, &c.

Alberta Ry. & Coal Co.—The annual meeting will be held in London, Eng., Oct. 17.

Calgary & Edmonton Ry. Co.—The company operating for Aug. was \$3,017.68, as against net earnings of \$12,057.38 for the corresponding period. This loss was caused by the large increase in expenses, \$14,878.97 being spent in maintenance of way & structures. Total expenses for Aug. were \$21,737.88, as compared with \$13,274.71 for corresponding period.

The annual meeting called for Oct. 5 was adjourned till Oct. 17, & then was again adjourned till Oct. 26, at Toronto.

Canada Atlantic.—At the annual meetings of this Co. & its auxiliary, the Ottawa, Arnprior & Parry Sound Ry. Co. at Ottawa Sep. 27, the only business done was the re-election of the old boards with the same executive officers. The meetings were adjourned until Nov. 29, "awaiting the receipt of certain reports."

Canada Central. Twenty-five \$100 mortgage bonds of £500 & 64 of £100 each, in all £16,000, have been drawn for payment at Speyer Bros., London, at £105 per £100.

Central Vermont. A re-organization was made by which all opposition to the immediate re-organization of the Co. will be withdrawn. The plan accepted by the 1st mortgage bondholders & the Grand Trunk will be carried out, with such modifications as will give the 1st mortgage bondholders par value in the new 1st mortgage 4% gold bonds. The interest will be guaranteed by the traffic contract with the G. T. (July, pg. 177.)

Dominion Atlantic. The company's earnings were \$58,600, compared with \$55,400 for corresponding period. For the 9 months to the end of Aug. they were \$320,068, as compared with \$310,790.

The annual meeting of the company will be held at Toronto, Nov. 9.

Great Northwest Central. The annual meeting will be held at Toronto, Nov. 9.

Kootenay Ry. & Navigation.—The remaining 60% on issue of \$1,000,000 of debenture stock payable in equal instalments Oct. 10 & Dec. 10.

Northern Ry. of N.B.—The company's earnings for the 9 months to the end of Aug. were \$1,000,000, as against \$875,000 for the corresponding period. The annual meeting will be held at Richibucto, N.B. J. D. Pinney is Secretary.

Qu Appelle, Long Lake & Saskatchewan.—The net loss in operating for Aug. was \$2,728.78, compared with net earnings of \$236.06 for the corresponding period.

Quebec & Lake St. John.—The earnings for July were \$5,022 over corresponding period.

Quebec Central.—The net earnings for the 8 months to Aug. were \$80,995, compared with \$716,207 for corresponding period.

Quebec, Montmorency & Charlevoix.—A special general meeting will be held at Quebec Nov. 2 to ratify & confirm the resolution passed at the special general meeting Sep. 13, whereby the directors were authorized to issue 1st mortgage bonds for \$1,000,000 in part payment of the purchase price of the property of the Montmorency Electric Power Co.

This Co. will apply to the Governor-General in Council at Ottawa, Dec. 2, for approval of the purchase made by the Co. of the property of the Montmorency Electric Power Co., on Sep. 15.

Toledo & Ottawa Ry.—The following item is going the rounds of the daily press: "A Company that is being formed to purchase the Toledo & Ottawa Ry. is said to be backed up by the Grand Trunk. This line is now being built between Toledo & Detroit, & the idea is to have it connect with the G.T. at Detroit & make it a G.T. line. This would give the Grand Trunk an entrance to Toledo. The road is at present in the hands of a receiver." We are informed that there is no truth whatever in the statement that the G.T.R. is connected with the matter, & further that the line is merely an electric one, which is being built as a speculation by people who think they can dispose of it to some of the railways connecting with it at Toledo or Detroit.

Victoria & Sidney.—The annual meeting was called for Oct. 19 at Victoria, B.C.

White Pass & Yukon.—The remaining 50% on issue of 6% 1st mortgage debentures was due in London, Eng., Sep. 30.

RAILWAY PROJECTS.

Ashcroft to Cariboo.—A British Columbia paper says the charter for a line from Ashcroft, on the main line of the C.P.R., 204 miles east of Vancouver, to Cariboo, a distance of about 220 miles, which has been in existence for some years, has been taken over by an English Co.

Elk River to Revelstoke.—British Columbia papers say application will be made for a charter for a railway to connect with the Crow's Nest Pass Line of the C.P.R. between Wardner & Elk River, to run up the east side of the Kootenay River to Windermere, thence west to cross the river & up Toby Creek, then over the Selkirk Range to the foot of Lake Duncan, then up the Lardo River to Trout Lake, & from there north-west in as direct a line as possible to the Arrowhead Branch of the C.P.R.

Kootenay Railway & Navigation Co.—A Kootenay paper says this Co. will locate a line from the foot of Houser Lake to the Upper Duncan River, up as far as Hall Creek, which will open up an immense district.

Taku & Atlin Lake Tramway Co.—F. G. White, L. P. Duff & F. A. Bennet give notice of application for incorporation of a company under this title, under the British Columbia Tramways Co. Incorporation Act, to build & operate a tramway from the junction of the waters of the Atlin River & Taku Arm, Cassiar District, along the north side of the Atlin Valley, to the junction of the Atlin River & Atlin Lake, with power to build & operate branch lines, also telephone or telegraph lines.

Trail to Salmon River.—Gallagher & Wilson, solicitors, Nelson, B.C., give notice of

application to the B.C. Legislative Assembly for the incorporation of a company to build a railway from, at or near Trail to Sayward on the Columbia River, thence to Salmo, thence following the Salmon River to its junction with the Pen d'Oreille River, with power to build branch lines, telegraph & telephone lines, & to carry on an express business.

Toronto Elevated Ry.—McPherson, Clark, Campbell & Jarvis, solicitors, Toronto, give notice of application to the Ontario Legislature for the incorporation of The Toronto Elevated Ry. Co. with power, subject to the consent of the municipalities affected, & subject to all other existing rights, to construct & operate a system of elevated railways in Toronto & adjoining municipalities, & in conjunction therewith a system of surface street railways in Toronto & other municipalities within a radius of 50 miles of the city.

The Winnipeg & Stony Mountain Ry. Co. has been incorporated under The Railway Companies Incorporation Act (Manitoba) to construct & operate a line from the main line of the C.P.R. west of Winnipeg, between Winnipeg & Bergen Stations, northwesterly about 2 miles. The capital is \$10,000. The directors are C. H. Campbell, D. E. Sprague, W. McKenzie, W. A. Windatt & C. H. Erderton, Winnipeg.

Intercolonial Railway Changes.

The long rumored & well deserved promotion of J. E. Price, Superintendent at Truro, N.S., has come at last, General Manager Pottinger having issued the following circular on Oct. 14:

"J. E. Price has been appointed General Superintendent of the Intercolonial Ry., with headquarters at Moncton, N.B. The superintendents of districts, the superintendent of the parlor, sleeping & dining cars, & the Car Accountant will report to & receive their instructions from him.

"W. Rennels has been transferred to the Halifax & St. John District as Superintendent in the room of Mr. Price.

"G. M. Jarvis has been appointed Superintendent of the Moncton & Ste. Flavie District. "These changes take effect Oct. 17."

It is said Mr. Price's salary will be \$2,500 a year, & Mr. Jarvis' \$1,600.

G. M. Jarvis, who has been appointed Superintendent at Campbellton, N.B., has been Chief Despatcher at Moncton. It is said he will be succeeded as Chief Despatcher by H. B. Fleming, who will be succeeded by C. W. Price.

A. Le Blanc, of Shediac, has been appointed Freight & Passenger Canvasser.

Assessments In Toronto.

The assessment of a large number of corporations operating in Toronto has been considerably increased this year, as will be seen by the following examples:—

	1897-98	1898-99
Bell Telephone Co.	\$100,000	636,149
C. P. R. Telegraphs	8,317
Metropolitan Railway Co.	1,200
Tor. Ry. power house...	75,000	196,000
Tor. Ry. Co., Wards 1 to 6, rails, poles, wires, etc.....	537,137	596,380
G. N. W. Tel. Co.....	20,000	32,000
Toronto Ferry Co.....	13,064
Toronto & Mimico Electric Ry.....	10,410

Back Numbers Wanted.

We are anxious to obtain a few copies of the May & June issues of THE RAILWAY AND SHIPPING WORLD, the supply of both issues of which at our office has been exhausted, & through an oversight insufficient copies were retained for our files. If any of our readers who have copies of either or both of the numbers mentioned will mail them to the publication office, 33 Melinda St., Toronto, we shall esteem it a favor & will endeavor to return the obligation in some way.

W. H. Smith has been appointed General Auditor of the Canada Atlantic & Ottawa, Arnprior & Parry Sound Rys., vice A. G. Peden, whose resignation is referred to on pg. 205 of this issue.

Hamilton Abbott, of the Victoria, B.C., office of the C.P.R. has been promoted to the Passenger Agency at Portland, Oregon, vice B. W. Greer, appointed Freight & Passenger Agent at Victoria.

Established 1831.

Annual Capacity 1,000.

Baldwin Locomotive Works.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings: Like parts of different engines of same class perfectly interchangeable.

Electric Locomotives and Electric Car Trucks with Approved Motors.

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

RAILWAY APPOINTMENTS, &c.

Bellingham Bay & British Columbia.—J. J. Donovan, who is Vice-President & General Superintendent of the Bellingham Bay & Eastern, has also been appointed General Superintendent of the B. B. & B. C. R., to succeed C. L. Anderson, resigned.

Canadian Pacific.—B. W. Greer, Passenger Agent at Portland, Ore., has been appointed Freight & Passenger Agent at Victoria, B. C., succeeding G. L. Courtney, appointed General Freight & Passenger Agent of the Esquimalt & Nanaimo Ry.

Grand Trunk.—General Superintendent McGuigan issued the following circular Sep. 26: F. C. Kenny having resigned, the office of Trainmaster is abolished. A. S. Begg is appointed Superintendent St. Clair Tunnel & Terminals, embracing Port Huron Tunnel & City, & Fort Gratiot yards in Michigan, also Sarnia Tunnel & City & Point Edward yards in Ontario. He will also assume the duties of Agent at Port Huron Tunnel, at present performed by Mr. Kenny. Office Port Huron Tunnel station. His orders will be obeyed accordingly. Effective Oct. 1.

Sumner Hopkins, Manager Grand Trunk Despatch, announces that J. P. Faurot has been appointed Travelling Agent of the same, with headquarters at Brush St. Depot, Detroit. Appointment effective Oct. 1.

Trainmaster F. L. Corwin, Detroit, announces that C. H. Bevington is appointed Chief Train Dispatcher of 27th, 28th, 29th Districts & C. S. & M. portion of 25th District, vice V. A. Cooper resigned. Effective Oct. 1.

General Superintendent Loud announces that C. J. Haigh having been appointed Manager Reading Despatch, Fast Freight Line, A. E. Rosevear is appointed Freight Claim Agent, with office at Montreal. Effective Oct. 1. Mr. Haigh came to Montreal from Buffalo as Freight Claim Agent. Mr. Rosevear was Accountant of the Reading Despatch at Detroit.

Intercolonial.—Wm. Robinson, Division Freight Agent at St. John, N.B., has been transferred to Toronto as General Travelling Agent in place of N. Weatherstone, who will be retired. Mr. Weatherstone has been in the employ of the Government railways for many years & much sympathy is expressed for him among railway men, it being felt that the removal is entirely owing to political reasons. Mr. Robinson was at one time G.T.R. Agent at Ingersoll, Ont., & afterwards Agent of the Great Eastern Line at Detroit, which position he gave up to enter the Government railway service when A. H. Harris became Traffic Manager last year. It is said Mr. Harris gave Mr. Robinson a 5 year contract, at \$2,000 a year. We are informed that it is probable the division office in St. John will be continued. It is said the duties pertaining to it will be discharged by Mr. Robertson, who has been agent of the I.C.R. at St. John for many years.

B. A. Ward, Chief Train Dispatcher at New Glasgow, has been transferred to the dispatcher's office at Moncton; L. S. Brown, of Campbellton, succeeding him at New Glasgow, & A. Dunn, of Moncton, succeeding Brown at Campbellton.

Queenston Heights Bridge.—Beatty & Co., Solicitors, Toronto, give notice that application on behalf of the Queenston Heights Bridge Co. will be made at the Department of Railways & Canals, on Nov. 21, for the approval of the Governor in Council of an agreement between this Co. & the Lewiston Connecting Bridge Co. of New York State, in relation to the bridge to be constructed across the Niagara River at Queenston Heights, under the Act of Incorporation of the Queenston Heights Bridge Co. as amended.

Personal Mention of Railway Men.

J. H. Burgis has been appointed acting city passenger & ticket agent of the G. T. R. at Chicago, vice L. R. Morrow.

F. S. Brown, M.C.R. Yard Master at Montrose, has been appointed Trainmaster with headquarters at St. Thomas, Ont.

F. C. McLeod, foreman in the G. T. R. erecting shop at Toronto, will be located in London, where he will be associated with Locomotive Foreman Mauer.

Lady Pauncefote & Miss Pauncefote, wife & daughter of the British Ambassador at Washington, were the guests of Sir Wm. & Lady Van Horne in Ottawa recently.

J. S. Glassford, of Brockville, general agent & yard master at Brockville for the past 2 years, has been given a position under G.T.R. Superintendent Cotter at Detroit.

Mrs. T. G. Shaughnessy & Miss Alice Shaughnessy, of Montreal, were passengers on the Parisian for Liverpool the first week in Oct. Miss Shaughnessy goes to complete her education in England & on the Continent.

On Oct. 8, on the eve of his marriage to Miss M. Marshall, J. J. Rose, Travelling Passenger Agent of the C.P.R. at Toronto, was presented with a cabinet of silverware by the town & outside agents of the Co. in Western Ontario.

F. P. Macdonald, recently promoted from the Assistant Superintendency of the C. S. division of the M.C.R., to the Superintendency of the Middle Division, has removed with his family from St. Thomas, Ont., to Jackson, Mich.

R. H. Cushing, C. E., has been appointed temporarily assistant engineer on the I.C.R. It is said he will look after the terminal work at St. John, N. B. He was employed as Assistant Engineer on the I. C. R. some 10 years ago.

Wm. Kingsford, C.E., who died recently at Ottawa, aged 79, was connected with the building of the Lachine Canal, the Hudson River Ry. & the Victoria Bridge at Montreal. He was also a historian, having written the "History of Canada up to the Union of the Upper & Lower Provinces in 1841."

J. McVeigh Lumsden, who died Sep. 27 at Galt, Ont., where he lived for many years after retiring from farming in that county, was a brother of H. D. Lumsden, of the C. P. R. engineering staff, & of Sir Peter Lumsden, the gallant soldier who did splendid work in India, & of the late Sir Henry Lumsden.

Collingwood Schrieber, Deputy Minister of Railways, left Ottawa at the end of September, going by the C.P.R. to the Pacific Coast, inspecting the Crow's Nest Railway en route, & intending to return by way of San Francisco. He had as guests on his private car Hon. Mr. & Mrs. Dobell, of Quebec; Mrs. L. K. Jones, & Miss Gwynne, of Ottawa.

The Editor of the Northwest Magazine writes:—"I hope that D. C. Corbin, of Spokane, in retiring from railroading, takes with him a competency. He is a man of energy, courage & mental capacity, & as a developer of new regions he has made a mark in Idaho & Washington, & also in British Columbia, which will cause him to be long remembered. When he began to build his railway to the Coeur d'Alenes, there was absolutely no way of getting into that region except over a bridle-trail or by poing a boat up Pritchard Creek from the river. He afterwards opened the Trail Creek & Kootenay mining regions in B.C. by building his Spokane & Northern Ry. As a promoter of legitimate transportation enterprises, he took a high rank. He did not build railways to speculate in their stocks, but to develop the country where he lived."

A Tribute to Sir Wm. Van Horne.

The Winnipeg Tribune of Oct. 4 had the following:—"Sir Wm. Van Horne, the distinguished head of the C.P.R., is once more in the city on his annual tour of inspection over the Co's property. Whatever differences of opinion may exist as to the policy pursued by the Co. there is but one opinion with regard to the singular ability with which the great railway is managed, & the feeling of our people towards the President, & indeed towards all the chief officials, who are men of marked ability, is one of kindness & respect. That feeling, we believe, is to a large extent emphasized towards the President himself. In administering the affairs of the C.P.R., Sir William has in no way departed from the general ethical standards that prevail in the financial world.

"Sir William is something more than a railway man; he is a patron of & a connoisseur in art. Indeed, he is no mean artist himself, as all who have either examined his pictures or spent an hour in his studio recognize. It is a pleasant sight to see the man whose capacious mind has been deeply engrossed all day in the consideration of railway matters, spending his evenings in his studio, busy with his brush, producing excellent works of art, which he takes pleasure in distributing amongst his most intimate friends. His fine home in Montreal is a veritable art treasure house, Sir William having surrounded himself with many of the beautiful things of the earth. He has one of the most valuable collections of Japanese pottery that is to be found on the continent. Many of the specimens are very rare & of great value. Many an evening has Sir William spent painting a catalogue of his collection, reproducing on paper the rich, rare & varied tints of the pottery itself. Sir William is a many-sided man, being thoroughly posted on the various questions of the deepest material concern to the public, & being an excellent & voluble talker, an evening spent in his company is profitable & enjoyable. Personally there are few more amiable & enjoyable companions than Sir William. The public see the brusque, business side of the man, but those who enjoy social intercourse with him, recognize & appreciate his amiable, social, liberal & charitable qualities."

Spokane & Northern Changes.

In our Aug. issue, pg. 147, we gave particulars of the changes in the directors & officials of the above-mentioned line, consequent on its transfer under the control of the Great Northern (U.S.). At the end of September meetings were held at Nelson & Rossland, B.C., at which the directors of the two auxiliary lines of the system which are situated in B.C. were changed as follows:

NELSON & FORT SHEPPARD RY.—President, W. H. Thompson; Vice-President, C. Shields; Secretary-Treasurer, F. W. Bobbett; Directors, W. H. Thompson, F. H. Mason, A. Allen, Major Dupont & C. Shields.

RED MOUNTAIN RY.—President, W. H. Thompson; Vice-President, C. Shields; Secretary-Treasurer, F. W. Bobbett; Directors, W. H. Thompson, F. H. Mason, J. D. Farrell, Major Dupont & C. Shields.

Mr. Thompson is Division Counsel of the G.N.R. at Seattle; Messrs. Mason, Farrell & Allen are all of Spokane, & were stockholders in the B.C. roads under the Corbin regime. Mr. Shields is already known to our readers. Mr. Bobbett is J. J. Hill's appointee & has his office at Spokane.

Trainmaster Cunningham of the G.T.R. at London, Ont., has resigned.

THE QUEBEC BRIDGE.

Preparations for Early Construction.

At the recent annual meeting of this Co. in Quebec the financial statement showed capital stock subscribed, \$216,300. Receipts, \$50,303.00; expenditure, \$21,044.82. The following were elected: President, Hon. S. N. Parent; Vice-Presidents, R. Audette & Hon. R. R. Dobell; other directors, H. J. Beemer, J. Breakey, V. Boswell, J. B. Laliberte, G. Le Moine, Hon. G. A. Paquet, H. M. Price & N. Rioux; Treasurer, J. Breakey; Secretary, U. Barthe.

It was decided to at once invite tenders for the construction of the work.

THE DIRECTORS' REPORT

was as follows:—The last 12 months have been well employed. A good deal of preliminary business had to be despatched to put the Co. in such a shape as to enable it to call for tenders for the construction of the proposed bridge. The capital stock had to be completed, & calls on same made in compliance 60-61 Victoria, cap. 69. The financial statement which will be submitted will show that that part of our duties has been successfully accomplished.

There were also to be completed the technical studies & surveys essential to the execution of our enterprise. The surveys then in progress to connect the bridge with the railway systems on both sides of the River St. Lawrence, & of the bridge site itself, have been completed, with the plans and profiles of the same, & also those required by the Railway Committee of the Privy Council before approving of the bridge site, so as to show width of spans & clear headway required for navigation purposes; which have since been deposited according to the law, & approved by the Railway Committee & the Governor-General-in-Council.

Considerable expenditure has been forced on the Co. for making test-boring of the river bed at the most suitable points for pier locations, which work has been completed, & without which it would have been impossible to design any part of the foundations of the structure, particularly as all previous investigations and reports on the local conditions of the river at the bridge site were erroneous & entirely misleading.

General plans showing certain limiting dimensions & other essential data, with printed circulars, forms of tender, complete specifications for foundations, piers, & superstructure are now being sent to intending contractors, notice having been received on Sep. 1 that the specification for superstructure had been finally approved by the Chief Engineer of Railways & Canals.

It was your directors' intention to invite tenders at an earlier date this season, but they had to wait until the test borings were completed, in order to be able to furnish full specifications & data to the tenderers. The unavoidable long time spent in the submarine test borings which were commenced last winter well demonstrates the excessive hardness of the bottom of the river at the boring points. It is quite evident that, if that bottom was sand, as reported by some, it would not have taken 6 months of continuous work, from Feb. to Aug., to bore 9 or 10 useful holes at the different pier spots. As a matter of fact, the samples of material taken out from those holes through the core drills show that the bed of the St. Lawrence, where borings were made, is almost entirely composed of boulder gravel, the same material as that on which were built the immense cantilevers of the Forth Bridge in Scotland. Such river beds are so tough that the ordinary drills used at first last year could not penetrate through more than 4 or 5 ft.; wherefore the directors decided to secure the services of a specialist, Mr. Stearns, of Brooklyn, with a powerful plant of steam pumps & diamond drills. Even with that improved machinery the work went on with such difficulty that in some cases it took 3 weeks to bore a single hole.

This work being to the general advantage of the country, as it is designed to complete an important network of railways, is entitled to the generous assistance of the federal & provincial governments & of the city of Quebec. The sacrifices made by the Co. in the past, but more especially since last year, give it so much more right to such help. It can boast of having done its full share by taking bravely the initiative of a work of such importance & elaborately preparing all the preliminaries. Your directors are firmly convinced that when the time comes to face the financial question they will be substantially supported by those whose assistance was promised.

They have recently petitioned the Dominion Government for a subsidy of 33⅓% on the cost of the enterprise, & they have been assured that the subsidy will be voted next session.

Your directors might also take this opportunity of recalling the reasons which have caused the selection, since ratified by the Government, of the Chaudiere site in preference to all others. It is not a question of feeling, nor of preference, but purely & simply a question of engineering, on which most people must admit their incapacity to deal with the question. It is quite natural to desire that the proposed bridge be built as near as possible to the actual limits of our city; but it is equally obvious that when undertaking the construction of such a costly bridge, one should look to the narrowest point of the

river, & as a matter of fact the Chaudiere site is the narrowest point of the St. Lawrence on its whole length. The first consideration is the opening of a direct & constant all rail communication, in all seasons, & at all hours of the day, between the two shores of the St. Lawrence, which for a long distance east & west are deprived of that sort of connection. Business interests in this part of the Province are constantly complaining that railway tariffs are discriminative against them. A bridge at the Chaudiere will remove this objection by connecting the railways of both shores, by increasing traffic & consequently creating a legitimate competition in freight rates, & it will considerably reduce the freight account of the city & district of Quebec. It is the intention of the Co. to have its own independent line to give all railways access to the city. The location question is one of engineering, on which we must take the opinion of professional men. It is fully covered by the reports of Messrs. Shanly, Schrieber, Gauvin & Hoare, from which extracts are annexed to the present report.

Your directors have but a few remarks to add to these authorities. They would be the first to rejoice if it was practicable to build the bridge nearer the city. But it is a manifest impossibility. The question has been sufficiently considered, with all the elements of sound comparison, the local conditions such as the depth & width of the river at the different proposed sites, being well-known facts which cannot be altered by civil engineers. A bridge opposite the city would require a clear channel span of over 3,000 ft., supported by gigantic piers which could not even be built outside of navigable waters; it would moreover require a tunnel line underneath the city through the promontory, & on both shores trains using the bridge would have to make long & useless circuits to connect with the existing railways & to get at the shipping level. As to the Island of Orleans, that route is at once thrown out of consideration by a simple comparison of its 15,000 ft. of steel structure with the 3,310 ft. of metal as required for the Chaudiere bridge. The capital of this Co. & its range of resources are too limited for such gigantic schemes to be entertained. Before having the necessary capital subscribed, the revenue prospects have first to be determined, & your directors consider they have safeguarded the stockholders' interests when they decided to keep within practical limits. Their only choice was whether a bridge at Chaudiere, or no bridge at all.

They preferred the former, because they were convinced that what retarded the progress of the city & district of Quebec was the lack of free all rail connections the year round, which object would be as well gained by a bridge at Chaudiere as opposite the city,

F. E. CAME - Montreal

Office—17 Place d'Armes Hill

Office of the Quebec Bridge Company
(Limited.)

QUEBEC, September 20th, 1898.

Sealed proposals for the construction of a combined Railway and Highway bridge across the River St. Lawrence, near Quebec will be received by the undersigned, until noon, Monday, January 2nd, 1899.

Forms of tender, with circular of conditions, specifications, &c., can be had on application to the undersigned.

The Company does not bind itself to accept the lowest or any tender.

ULRIC BARTHE,
Secretary.

& at all events certainly better attained by a bridge at Chaudiere than by no bridge at all. It is obvious that when the railways on the south shore can come to Quebec they will not lose the opportunity, & that the centre of gravity of such a well-situated seaport as ours cannot be displaced. Since 1891, the estimated cost of the bridge has been very materially reduced in consequence of the reduction in price of all kinds of bridge material.

Accompanying the report were the following professional reports.

OPINION OF WALTER SHANLEY, C.E.

In 1889 the Co. had a report made by W. Shanley on the three routes as designated below. Here are the comparative figures given by Mr. Shanley:

WIDTH OF RIVER HIGH WATER.	
The Citadel.....	4,281 ft.
Pointe a Piseau.....	5,468 "
Chaudiere.....	2,590 "
EXTREME DEPTH OF WATER ON PIER SITES.	
The Citadel.....	132 ft.
Pointe a Piseau.....	125 "
Chaudiere.....	43 "
EXTREME HEIGHT OF PIERS FROM BOTTOM OF RIVER TO UNDER SIDE OF BRIDGE.	
The Citadel.....	282 ft.
Pointe a Piseau.....	275 "
Chaudiere.....	193 "
STEEL BRIDGING, RIVER SPANS AND SHORE VIADUCTS.	
The Citadel.....	5,291 ft.
Pointe a Piseau.....	6,850 "
Chaudiere.....	3,100 "

Mr. Shanley continues as follows:—"The figures set out above make it plain to be understood that in respect of all natural difficulties the 2 lower sites, the Citadel & Pointe a Piseau, stand at an immense disadvantage when compared with the upper, or Chaudiere crossing. Construction plans applicable to each place have been sufficiently far advanced to allow of fairly correct comparative estimates of costs being made and the result leaves no room to doubt that the river could be bridged on the Chaudiere line for several millions less than at either of the two lower points. The difference between the cost of the Chaudiere project, carried out in its entirety, and that of either of the other proposed bridges is so immense that to speak of the two latter as rivals of the former would be a misnomer. . . . Except at Chaudiere, any attempt to bridge the river must be attended with risks; notably the risk of under estimating cost because of the great height (upwards of 130 ft. in clear water) of the under surface portions of the structure which would have to carry the vast piers, or towers, rising to a height of 150 ft. above high tide level. In view, then, of the many millions certain expenditure that a bridge anywhere below the Chaudiere would involve in excess of a bridge at that point and in view of the risks and uncertainty of cost sure to attend the attempt to bridge the river anywhere else, and, finally in view of the commercial aspects of the project, I feel compelled to record my belief that the construction of a bridge either on the Citadel line or on the Pointe Piseau line is practically impracticable. In these days of great bridge spans by means of the Cantilever system, or principle, there are, so to speak, no engineering obstacles to prevent the bridging of the St. Lawrence on the Chaudiere site. The one main Cantilever span would have a stretch of 1,400 ft. The great bridge over the Firth of Forth, now nearing completion, has two openings of 1,700 ft. each."

OPINION OF COLLINGWOOD SCHRIEBER.

Following is an extract from a report prepared by the Chief Engineer of the Department of Railways & Canals, Feb. 18, 1891, after a special visit to Quebec. Speaking of E. A. Hoare's estimates on the cost of a bridge at the Chaudiere, the Chief Engineer says in substance:—"This site is really, it appears to me, unobjectionable."

At the Pointe Piseau & Point Diamond sites 2 piers will stand in the channel, which may be objected to by the shipping interests. That at Point Diamond strikes me as very objectionable. The proposed site at the Island of Orleans may, I think, fairly be ruled out, as it would undoubtedly be very costly to construct. That it is feasible to construct a bridge over the river near Quebec, there is no manner of doubt."

The comparative figures given by Mr. Schriber are as follows:—

	Chaudiere.	Pte. Piseau.	Pt. Diamond.
Extreme length of bridge...	3,420 ft.	6,754 ft.	5,866 ft.
Width of river (water edge to water edge) high tide...	2,300 "	5,600 "	4,200 "
Width of river (water edge to water edge) low tide...	1,800 "	4,000 "	3,000 "
Deepest water in channel at low tide...	43 "	122 "	123 "
Height above high water...	150 "	170 "	170 "

ISLAND OF ORLEANS SITE.

	High Tide.	Low Tide.
Width of south channel	5,000 ft.	4,000 ft.
" " north	8,000 "	2,000 "
	13,000	6,000
Deepest water in south channel at low tide...	92 ft.	48 "

OPINION OF C. E. GAUVIN, C. E.

In his annual departmental report, dated Nov. 2, 1896, Hon. E. J. Flynn, then Premier of the Province & Commissioner of Public Works, made a very favorable mention of a report prepared under his instructions by Mr. Gauvin, Superintendent of Surveys in the Crown Lands Department, which was a very complete review of the different sites proposed for the Quebec Bridge. After summing up the different bridge plans then submitted, Mr. Gauvin concluded as follows:—"To simplify this examination I will, first of all, eliminate two sites which can have no chance of success in the selection which will eventually be made: 1st, That of the Island of Orleans, owing to the great length of the two bridges, that over the north & that over the south channel; to the consequent very heavy cost of maintenance of these two works, whose total length would be 15,075 ft., nearly 3 miles, that is to say about 5 2-3 times the length of the Chaudiere Bridge; to the serious obstacle to the navigation of large vessels which would be presented by the bridge over the south channel, with its 16 piers in the river, which would, moreover, greatly impede the movement of the ice; finally to the drawback which would result, especially for a line of such importance as that of the Quebec Bridge, of having to cross the River St. Charles over a drawbridge to enter the city, a drawbridge being the only means of crossing that river; 2nd, That at Pointe a Piseau (Sillery), because if an expenditure of \$12,500,000 is to be incurred, it would be as well for a few hundred thousands of dollars more to build the bridge at Quebec itself. The choice, therefore, remains between the site at Cape Diamond & that at the Chaudiere. From a technical point of view, the Chaudiere site is far superior to its Quebec rival; the length of the bridge there would be only half that of the bridge before the city, and the foundations of the piers of the first would reach only a depth of 40 ft. below the highest waters, while the supports of the 2nd would have to go down to 135 ft. below the same level. As a result, it is also the Chaudiere site which offers the most advantages as regards expense. According to E. A. Hoare, the cost of the bridge there would be only about 4-10 of that of the bridge before Quebec."

Further on the same engineer says:—"A bridge thrown over the river at Cape Diamond would undoubtedly present a magnificent appearance, and would, beyond contestation, possess advantages, as regards communication between Quebec & Levis, which a bridge at the Chaudiere, for instance, could never have. In the case of a construction of such importance, I would not have the aesthetic

question entirely put aside; but as the bridge would not be thrown over the St. Lawrence merely to produce an artistic effect, or for the purpose of establishing a constant means of communication (not by railway) between the population of Quebec & Levis, I doubt very much whether consent would be obtained to spend from \$5,000,000 to \$6,000,000 for those two considerations, which, after all, are but secondary. What is the chief, I may say the only, object of a bridge over the river St. Lawrence at Quebec? Is it to have direct & uninterrupted communication between the populations of Quebec & Levis? No. The chief object of the bridge at Quebec, or in its vicinity, is to connect the networks of railways on the north & south shores, & also to provide for the three great lines, the Grand Trunk, the Intercolonial & the Quebec Central, a means of reaching the port of Quebec itself, that is to say, those vast docks which have been built at such great expense in the estuary of the river St. Charles, & which possess so many advantages for loading & unloading cargoes, & which are so admirably situated with a view to future enlargement. This is the main object of the bridge. Now, the Chaudiere site is, beyond doubt, that which will enable us to attain that end at the lowest cost. The importance now possessed by the steam ferry between Quebec & Levis is chiefly due to the fact that there is no junction at Quebec between the railways of the north & those of the south shore. When this junction will be affected—whether at Quebec or at the Chaudiere matters little—when freight & passengers for Quebec by the Grand Trunk, Intercolonial & Quebec Central can reach their destination without transshipment, & likewise when freight & passengers from Quebec destined for points on those lines can take the railway at Quebec itself & avoid the transshipment to which they are now exposed, it will be seen that what will remain of the traffic between Quebec & Levis will be inconsiderable; too inconsiderable, in fact, to justify an additional expenditure of from \$5,000,000 to \$6,000,000. It is quite probable, moreover, that a bridge at Cape Diamond would only very imperfectly accommodate the purely local relations between Quebec & Levis; for to reach by the bridge from the commercial part of Quebec, the lower town, to that of Levis, the portion situated at the foot of the cliff & vice versa, it would be necessary to make a long detour, to ascend a height of 170 ft. above the level of the river on one shore & descend the same height on the opposite one. We may thus believe that, in most instances, it would be much quicker & consequently more economical to cross the river in a steamboat, as is now done, than to make use of the bridge. It is therefore certain that, in the question of the selection of a site for the bridge, the consideration of purely local communications between Quebec & Levis can have but a slight influence."

Mr. Gauvin then answers certain objections brought up against the Chaudiere site in the report of Mr. Bonin in 1890, in which it was contended that during the construction of the bridge a new centre of population would form at a certain distance from Quebec which would become a connecting point of railways. Mr. Gauvin refutes that statement as follows:—"If the bridge be built before Quebec, during its construction a new centre will be formed in the vicinity of the work on the heights of Levis, which are admirably adapted for the purpose—the fact must not be overlooked that, on the Quebec side, a tunnel will immediately follow the bridge—when the work is ended this centre will become a terminus of the line; there will be the real junction of the C.P.R. & the other lines on the north shore with the railways of the south shore. Quebec will then, as it were, be served only by a secondary line ending in a cul-de-sac

& the trade of Quebec will be transferred to the new town so formed. To such an objection against the bridge before Quebec, the supporters of the latter will assuredly not fail to answer that the thing is impossible; that in any case at whatever spot the bridge may be built, Quebec, the seaport, must be the terminus & the point of junction of the railways on both shores; & they would probably add that if the transatlantic steamers & a flotilla of small vessels could reach the heights of Levis as easily as they reach the wharves of the Harbor Commission, it would then be very different, & that under such circumstances only, could Levis dispute, with any chance of success, Quebec's claim to the honor of becoming the great commercial centre of the eastern portion of the Province. Now, in this order of ideas, what is not possible for Levis is not more possible for Cape Rouge, & this fear of seeing the trade of Quebec transferred to Cape Rouge, in the event of the bridge being built near the latter place, seems to me unfounded."

Another objection, that, with a bridge at Chaudiere, railway trains would only pass through Quebec, is thus answered by Mr. Gauvin: "We may be certain of one thing, that, even with the bridge before the city, freight or produce from the west shipped to points east of Quebec, or vice versa, would proceed direct to their destination. These goods would not have to undergo an unnecessary stoppage or transshipment merely because they passed through Quebec. We must not lose sight of the fact that freight trains merely passing through Quebec would bring in nothing to the city. Let us suppose, for instance, that the traffic on the eastern section of the C.P.R. should increase to such an extent that that line would bring an average of 100 freight trains daily to the port of Quebec. It would be a very fine thing for Quebec; but, I ask, what good would these hundred freight trains passing through ancient Lorette do to that place? None whatever. What advantage would the city of Quebec derive from trains merely passing through it? I do not see any. They would rather be a drawback on account of the noise, the smoke & the impeding of traffic in the streets through which the bridge line would run. I am told that in Toronto a movement has been commenced amongst its population to compel trains which merely run through the city without stopping to pass outside of its limits, the people being absolutely deafened by the noise caused by an almost uninterrupted succession of trains from which they derive no benefit. As to freight trains from Quebec, they will proceed to their destination as well if the bridge be at the Chaudiere, as if it were in front of the city itself."

"The junction line of the Quebec Bridge on the north shore has a peculiar feature which deserves special mention: that is the tunnel. Tunnels are always costly works (the one in question would probably cost not less than \$1,000,000), & they are very costly in maintenance, owing to the artificial ventilation which has sometimes to be kept up in them, & also to the constant watching they require. In my opinion, tunnels, & above all, curved ones, such as that needed for the Quebec bridge, should be avoided as much as possible. It is true that the final location of the junction line of the Chaudiere bridge with the C.P.R. has a tunnel under St. Foye Hill; but in this res-

pect there is a marked difference between the Quebec site & the Chaudiere site, which is to the advantage of the latter. The Quebec tunnel is inevitable, while for the Chaudiere bridge it can easily be dispensed with by slightly lengthening the junction line, & this solution, a much more economical one than the tunnel, would suffice for a long time for traffic requirements."

OPINION OF E. A. HOARE, C.E.

Under date of Sep. 3, 1898, the Bridge Co's Chief Engineer, reported: "As instructed by the board of directors, I beg to report on the results obtained from test boring at the site chosen for a bridge to be built across the River St. Lawrence above the Chaudiere basin, & to state the effect that the formation of the river bed will have on the pier foundations. The formation within the limits of high water was found to consist of rock underlying compact boulder gravel, with pockets of finer gravel nearer the surface. On the south side, above high water mark & extending from the cliff for a distance of about 150 ft., a pocket of clay containing boulders was found overlying the rock at a depth of about 80 ft. The minimum depth to the rock below river bed at any point within high water mark was found to be about 40 ft. The piers for the short approach spans will be on surface rock. The 2 main piers & a third pier will be the only piers that will be built within the limits of high water mark, & they will all be clear of the navigable channel. The piers for the centre span will be in 20 ft. of water at low tide, the foundations for which will be sunk from 50 to 60 ft. into an unyielding bed of boulder gravel by the pneumatic caisson process, which, comparatively speaking, is not uncommon for bridges of a similar size. The 3rd pier will be close to the north shore where the river bed is above low water. The foundations for this pier will be constructed in open caisson sunk about 16 ft. below river bed into the boulder gravel. Pier foundations on the south side between high water mark & the cliff will be of ordinary construction on dry land founded on the hard clay already mentioned. If it should be considered advisable to increase the channel span beyond the minimum allowance of 1,600 ft., to about 1,800 ft., & change the general design to suit, the 2 main piers would then be in 7 ft. of water, & it would only be necessary to sink the foundations from 30 to 35 ft. below the river bed. The plan to be finally adopted will depend upon the comparative merits of the proposals to be received from bridge construction companies. There appears to be a prevailing impression in some quarters that the maximum depth of the borings indicate the levels at which the foundations must be laid, that such is not the case is obvious from what has already been stated."

"It should be unnecessary to refer again to the old story of the best bridge site after so many well known opinions have been given in official reports. Nor should it be a perplexing question to conclude from the figures below that the Chaudiere is the only site that is not a commercial impossibility. The physical features of the Chaudiere & city sites compare as under:

Total length of bridging at	Chaudiere...	3310 ft.
	Quebec....	5100 "
Width of river at low water at	Chaudiere	1900 "
	Quebec	"
	(between wharves)...	3942 "

Width navigable water at Chaudiere... 1400 ft.
Quebec..... 3900 "

"The above figures should be self convincing without further comment. No reference, however, has been made to depth of water at any other site than the Chaudiere. The deepest water at low tide at Quebec for piers of channel spans equal in length to that proposed at Chaudiere will exceed 120 ft. Two piers would have to be placed in navigable water, which I have reason to know would not be permitted, thereby placing advocates of the Quebec site upon the same footing as the Co. formed for bridging the Hudson at New York were placed by the U. S. Government, the latter being compelled to design their bridge for unobstructed navigation between pier heads which required a clear span of 3200 ft. between towers; & even with this limiting span for the Quebec site 2 piers would still remain in navigable water but closer to shore. What I have stated applies equally to the advocates for the bridge at the Island of Orleans. Assuming an allowed limited channel span of about 3500 ft. at either of the 2 sites the supporting towers at either place could not be built in less than 40 to 50 ft. of water at low tide, & just consider the comparative cost of such a long span. The Chaudiere site has superior advantages for railway connections, which is of paramount importance to the City of Quebec. It is not the highway of foot passenger traffic that is going to enhance the commercial prosperity of the city, although this may be a very desirable convenience if it could be had at a reasonable outlay. The Chaudiere line will connect at a concentrated point with all the railways on the south shore, traffic from which can be taken to Quebec by either of 2 lines, one passing into the city along the coves on the north side of the river, & the other by St. Foye Village entering the city by the St. Charles River valley. The grades on both will be very favorable for all kinds of traffic. When this is accomplished a union station should be established for all railways centering at Quebec. With reference to the railway connections with a bridge at Quebec. You may not be aware that a costly tunnel will be required to connect the north end of the bridge with suitable ground to reach the terminus, & the elevation of tracks at the south end of the bridge will be about 160 ft. above the Grand Trunk, making a connection with their system impossible except by a very round about way."

It may be added that Chaudiere is up stream from Quebec about 6 miles. It is expected the bridge will cost from \$3,000,000 to \$4,000,000.

The Co. has invited tenders for the work to be sent in by Jan. 2 next. The tenders are to be accompanied by designs, & the Co. will consider tenders for a suspension bridge with stiffening trusses, & for a cantilever bridge with ordinary viaduct approaches; for the former tenders are to be accompanied by specifications adapted to that class of construction, with stress diagrams & other plans sufficiently detailed to enable a proper comparison to be made with other designs. The tenders & designs for both cantilever & suspension bridges are to be based upon the specifications prepared by the Co.'s Engineer. The Co. requires the option of dispensing with the 2nd railway track, electric tracks & roadways for the present.

CANADIAN ROADMASTERS ASSOCIATION.

At a meeting of roadmasters held at Smith's Falls, Ont. Sep. 15, 1897, it was decided to organize The Canadian Roadmasters Association, the membership to be confined to roadmasters & assistant roadmasters in good standing on any regularly operated railway in Canada, members to be admitted by a majority vote of the Executive Committee. The membership fee was fixed at \$2. The officers elected were: President, W. Shanks; Vice-President, J. Jelly; Secretary, J. Drinkwater; Treasurer, J. Brennan. Other members of Executive Committee: A. McAuley, J. Shanks, W. Kelly, R. Shanks.

The 2nd meeting of the Association was held at Ottawa Sep. 20, 1898, President W. Shanks in the chair, there being a fair attendance of members.

In opening the meeting the President said: It is generally known that roadmasters are good speakers. It is customary for the chairman of such a meeting as this to open the proceedings with an address, but I am relieved very much on this score because I see many other better speakers than myself here to-day, & I will therefore make my address very short. I would say before proceeding to routine business that I am very pleased to see the large attendance at our meeting, though I would rather it had been a good deal larger. There is no doubt that meetings of this kind, if properly conducted, will prove beneficial both to ourselves & to the roads we represent. As I am not a speaker myself, & there are many here who are, I will not take up your time further, but will proceed with the regular order of business.

The Secretary read the minutes of the first meeting, also the Treasurer's statement, both of which were adopted. The roll was then called.

COMMUNICATIONS.

The Secretary reported having written to the management of the various Canadian railways requesting that facilities be given their roadmasters to attend the meeting, & read a number of replies, including the following:—

C. M. HAYS, General Manager G.T.R., wrote:—"I am sorry to learn that the Association did not select a more central location, convenient to the officers of our line, as in that event we should have been glad to have had as many of our roadmasters attend as could be conveniently spared from their work, but in view of the fact that the latter part of September, the date set for the meeting, is an unusually busy period for all of our roadmasters, of which you are doubtless aware, I fear that most of our men will not find it convenient to attend, as, with the exception of 1 or 2, it would mean an absence from duty of 3 or 4 days at least. If the next meeting could be arranged to be held at a more convenient time & place, central to our line, I would be glad to have as many of our roadmasters attend as could find it convenient."

D. POTTINGER, General Manager Government Railway System, wrote:—"There is no objection to our roadmasters attending the meeting of the Association if they desire to do so, & if the Chief Engineer can spare them from the work. We have a good deal of work going on at this season of the year & it will not be closed up in September, & it is not always convenient for the men looking after such work to be away from it."

W. WHYTE, Manager C.P.R. Western Lines, wrote:—"The date of your meeting is about the very worst time of the year for our roadmasters to leave their tracks, as our fall rush of traffic will then be on us. However, applications from any of our roadmasters will, no doubt, be considered by their Superintendents."

T. TAIT, Manager C.P.R. Eastern Lines, wrote:—"I am very glad, indeed, to hear that

the roadmasters in Canada have formed an Association with the object of discussing matters in connection with the maintenance of roadbed, &c., as I think that such discussions & exchange of experience & opinions cannot but be productive of good results. I have written our general superintendents asking them, on application from their roadmasters, to give as many of them as they can spare leave of absence & transportation to enable them to attend the meeting at Ottawa."

E. J. CHAMBERLIN, General Manager Canada Atlantic & Ottawa, Arnprior & Parry Sound Rys., wrote offering to extend the courtesy of those lines to roadmasters attending the meeting.

T. HICKEY, Roadmaster Michigan Central, wrote regretting inability to be present owing to the Roadmasters Association of America meeting at Denver, Col., Sep. 13 to 15, & suggesting that future annual meetings of the Canadian Association should be fixed so as not to clash with meetings of the U.S. Association.

OFFICERS ELECTED.

The following were elected by acclamation: President, W. Shanks, C.P.R., Carleton Jct., Ont.; Vice-President, J. Leslie, O. A. & P. S. Ry., Ottawa; Sec.-Treas., J. Drinkwater, C.P.R., Winchester, Ont. Other members of Executive Committee: J. Shanks, C.P.R., Montreal; W. Wallace, C.P.R., Ottawa; M. Keefe, O. & N.Y. Ry., Ottawa; J. R. Brennan, Gatineau Valley Ry., Ottawa.

The Secretary's report showed a membership of 31, the following line being represented: Canadian Pacific, Intercolonial, Canada Atlantic, Ottawa, Arnprior & Parry Sound, Gatineau Valley, Pontiac & Pacific Jct., Central Ontario, Michigan Central, Manitoba & Northwestern.

THE DUTIES OF SECTION FOREMEN.

The committee, J. Shanks, J. Brennan & J. Leslie, reported as follows: The duties are in summer to keep track in proper surface, level & line, renew ties, also change broken & worn-out rails, keep switches & frogs in good order & keep same properly blocked to prevent trainmen from getting caught in them, to keep all track bolts properly tightened, keep all farm & all public crossings in repair, also do light repairs to right of way fences, keep track to good gauge & adze down ties on curves where rails roll outward, keep ditches properly cleaned out. In winter to keep track properly shimmed up & prevent same from spreading, keep all switches & frogs & sidings clear of snow & ice, see that snow plough signs are put up & kept up all winter at crossings, keep the right of way clean & tidy & free of old ties, brush, weeds, &c. Foremen should ride over their sections on passenger, light or freight engines when opportunities occur, say once a week.

MR. JELLY.—Is this report supposed to cover the whole of a section foreman's duty?

THE PRESIDENT.—This report was drawn up that it might be discussed & amendments proposed if necessary.

MR. JELLY.—In moving the adoption of this report I would like to make a few remarks. I presume that different roads have different rules in connection with these matters, & I also presume that none of them have more for their foreman to do than the C. P. R. has. However, I think the report as a whole, as far as I can see, is all right. Nevertheless, the duties of a section foreman very often exceed those mentioned, but I think the chief duties are enumerated.

MR. MORIN.—I notice one very good idea in this report; that is the suggestion that foremen be permitted to ride on engines over their sections. Permission should be given to section foremen to ride on engines or passenger trains over their sections, so that they will be able to see all the bad spots on the sections. If this could be arranged with the

superintendents it would be a great benefit to the roadmaster & to the company. Another thing, I think that section foremen should visit all of their sections after a storm or high wind, & should go over the section personally both day & night. Just at present I do not notice anything else that calls for special mention.

MR. DRINKWATER.—Referring to the point taken by Mr. Morin, as to foremen riding over sections on engines, I may say that this has been the custom on our division for about a year. It was an understanding arrived at with the General Superintendent, and the Locomotive Department were advised to allow section foremen to ride over their own sections & such parts of adjoining sections as was necessary, on engines pulling passenger trains. This has been practiced on our division for about a year, & I find that it has been very beneficial. Of course you sometimes get a foreman who is afraid to ride over any section but his own (laughter), but there is much difficulty experienced in picking out bad spots without doing so. We all know how difficult it is for a foreman to locate a bad spot unless he knows within half a mile or so of where it is, & this new arrangement has brought about a great deal of help to section men, & gives roadmasters considerably less to do, & of course that is what we are all after. (Laughter.) I was under the impression that this was being practiced all over the system.

MR. JELLY.—Might I ask if it was through the order of the Superintendent that this was arranged?

MR. DRINKWATER.—It was arranged through an order of the Superintendent & Master Mechanic to allow section foremen to ride on engines over their own sections from one station to another, & we have instructions to have them ride over their sections at least once every 2 weeks.

MR. MALLOY.—I approve of this report as a whole, but, like Mr. Jelly, I think there are many duties of a section foreman other than those named. Besides these duties it is certainly the duty of a section foreman to go wherever his duty calls him, & at any time. However a section foreman's duty is very well expressed in the report, though there are many unforeseen duties which are perhaps hard to get at & express. I am in favor of adopting the report as it stands.

MR. KELLY.—I have very little to say, but like those who have spoken I think there are many duties of a foreman which are not included in the report, though I am in favor of adopting it as a whole, & think perhaps that it is not necessary to name all the duties which a foreman may be called on from time to time to attend to. For a foreman to ride on an engine over his section once a week is a very good thing, & as Mr. Morin has said, I think all foremen should go over their sections after a heavy storm.

MR. KEEFE.—I favor the adoption of the report as it stands, as I think it covers practically all the duties of a section foreman. It is a standing rule with some companies that a sectionman is at liberty to ride over his section on an engine, & as far as visiting track after storms or high winds is concerned, it is the usual custom, I suppose, to go over the section if there is any prospect of danger whatever.

THE PRESIDENT.—I think that the report covers about what our rules cover, with the exception of riding on engines. I think this would be a very good feature.

The report was then adopted.

REMARKS ON THE REPORT.

The committee, R. Shanks, W. Kelly & J. Jelly, reported as follows: We believe in close supervision of our sections & that the supervision should commence to run off at the same point on the track that the section commences.

mentees, the elevation to run off $\frac{1}{2}$ in. to each 25 ft.

On very sharp reverse curves perhaps this might not be enough if the distance between curves would permit more, & where this distance is not long enough the speed should be reduced.

We are not in favor of elevating any curve more than 6 ins., where trains do not attain a maximum speed of 35 miles per hour.

For a rate of 35 miles an hour we would elevate the curve 1 in. for each degree up to 3 degrees. For 4 degrees add $\frac{3}{4}$ in. & $\frac{1}{2}$ in. for each additional degree above 4 degrees.

We consider no rule can be laid down that will meet all cases, & the elevation may have to be varied according to circumstances. For a rate of 50 miles an hour elevate the curve $1\frac{1}{2}$ in. to the degree up to 3 degrees. For 4 degrees add 1 in. & for each additional degree add $\frac{3}{4}$ in.

On all curves raise the outer rail rather than depress the inner.

The adoption of the report having been moved, it was discussed.

MR. DRINKWATER.—I do not wish to be too inquisitive, but there are a few portions of the report that I do not understand very well. I can raise no objection to the substance of it, but the 1st paragraph is not very plain to me. I do not thoroughly understand it, nor the following: "Elevation to run off $\frac{1}{2}$ an inch to every 25 ft." On very sharp curves, or reverse curves perhaps this would not be enough. I believe in curve easement at the tangents, & that elevation should commence to run off at the same point on the curve that easement commences.

MR. R. SHANKS.—That is, your elevation would start to decrease at the point where your curve starts to ease off?

MR. DRINKWATER.—Yes. I think this report meets my views fairly well, judging from my small experience of curves, for I have been fortunate enough to have a road so straight that I can see from one end of it to the other. It is true that no rule can be laid down that will meet all cases. Any of us who have had any experience—we have all had some I suppose—know that this is the case. On a curve on a $1\frac{1}{2}$ grade, or whatever grade it may be, a train going down grade, whether freight or passenger, will run 45 or 50 miles an hour, & going in the other direction will run maybe 15. In other cases trains run from 45 to 65 miles an hour in both directions. There are many instances of this kind in 150 miles of road that only close attention & practical experience can deal with properly. This has been my experience, & I think that one clause in the report covers that point.

MR. MORIN.—I am waiting for some of the older heads to say something on curves. I think there is a good deal of judgment to be used in ascertaining correct elevation. It depends a good deal on where the curve is located. If it is on a down grade it would, of course, require more elevation than on the top of grade where the speed would not be so

great. I believe the elevation mentioned is not too much for sharp curves, where the outside rail gets worn. I believe that in a case of that kind the curve should be well elevated & well braced on inside & outside. I would like to hear from some of the old hands who have been at the business a long time.

MR. KEEFE.—From what experience I have had of curves, & we have some pretty bad ones on the other side of the river, I would say that I have been accustomed to give from $\frac{1}{2}$ to $\frac{3}{4}$ of an inch to a degree, & found that sufficient. In many cases I have had to take elevation out of curves on a grade down to $\frac{1}{2}$ an inch, sometimes less. The fast trains would require more elevation, but the slow trains dragged over the top of the inside rail. In regard to running out elevation on curves, I have struck places where we have had to run out at the rate of an inch to the rail, but I presume you do not get that on the C.P.R. or some other lines, & in fact on the new line which we are building here the curves are very light. I have always found that wherever track was elevated from $\frac{1}{2}$ to $\frac{3}{4}$ of an inch that we had to take the elevation out on account of tipping the inside rail. As Mr. Drinkwater says, it is necessary to use a good deal of judgment on account of the different speeds of trains.

MR. R. SHANKS.—Have you had no trouble with the outer rail cutting on grades of which you speak, with $\frac{1}{2}$ to $\frac{3}{4}$ inch elevation?

MR. KEEFE.—Yes. Also with the inch elevation; with the inner rail.

MR. JELLY.—Would it not be better to tip the inside rail, instead of having the rail cut?

MR. KEEFE.—It does not make any particular difference.

MR. LESLIE.—There are some very considerable curves in our line. I find that to elevate for 50 or 60 miles an hour for 8 degrees is as near as we can come at it. We have curves between Depot Harbor & Eganville 8 degrees, & between Eganville and here the sharpest curves are four degrees. I elevated them for 60 miles an hour & found it sufficient. The inner rail is now showing slight signs of wear on heavy grades. I elevated for 45 miles an hour & found it too much for heavy freights crawling up grade at a slow rate. I think this question is a pretty hard one to decide on, & it depends, of course, on the circumstances what elevation must be given. Passenger trains running at 60 miles an hour & freights crawling along at 15 to 20 miles require different treatment, & it is hard to provide for both. We feel like giving more elevation when trains are running fast.

THE PRESIDENT.—On what speed is the report based?

MR. R. SHANKS.—On a speed of 35 to 50 miles an hour.

MR. DRINKWATER.—What do you take for a basis in starting easement of curves?

MR. R. SHANKS.—The only way that you can work it successfully is that you can hold your curves in. Of course the proper way to get easement is to put it in in constructing the

road. If you do not ease your curve in you will certainly sharpen your curve.

THE PRESIDENT.—How you are going to ease a curve without changing the whole curve I do not understand.

MR. DRINKWATER.—Would it not be simply taking work away from the engineer that he had left undone at construction to do that.

MR. R. SHANKS.—We are not disputing that the work should have been done by the engineer.

MR. DRINKWATER.—If you take a 3 degree curve it is easier than a 4 or 5 degree, but the points are the same as the centre. If you ease the curve you make the points of curve easier than you make the centre; you can ease it in either way. If you line the whole curve in you make another curve; you do not change that one at all, you make another one. I do not take the position that the curve is not easier, but you do not make the points any easier than the rest of it. If you put in easement you do not leave the same curvature at the points as in the centre, & leave the centre where it was. That is exactly what the engineer would have done if he had made that style of curve when the road was under construction.

MR. R. SHANKS.—We do not recommend the changing of all curves, but the easement of curves.

MR. JELLY.—The curve could be lined all the way around, & then easement could be made on the end, & curvature made the same as formerly, & have an easement on the end as well. But of course if you ease portions you certainly make the balance of it sharper.

THE PRESIDENT.—If the easement is put in when the road is constructed then you have something that is worth something. Then you commence to slacken elevation where easement commences, so that your train will pass on to curves without getting that knock which it is so customary to get when striking curves. First your car comes over on a straight line where it should not come over, & there is no question in my mind, but that if we had roads laid out with easement they would ride much better, but I fail to see how you can get this & have curve ride well unless the whole curve is eased. That is my opinion in connection with easements. So far as elevation is concerned I find that I cannot get good results at 50 miles an hour with less than an inch to a degree up to at least 4 degrees. If you get beyond 4 degrees I would not be in favor of putting an inch to a degree. I am of the same opinion as one of the road masters (I forget his name) of the New England Roadmasters' Association, that is that after you get a certain elevation, I think it is 7 inches, that I would not elevate over that. Where it is necessary to elevate over 6 or 7 inches, you must reduce speed.

The report having been adopted, the meeting adjourned till the following day.

RAIL JOINTS.

The committee, J. Drinkwater & W. Shanks, reported as follows: In connection with our

The Mail Job Printing Co.
THE RECOGNIZED LEADING..... LIMITED
RAILROAD AND STEAMSHIP PRINTING
HOUSE OF CANADA
 FOR ESTIMATES AND SAMPLES, ADDRESS
RICHARD SOUTHAM, MANAGER, TORONTO

**Engine Packing
 Magnesia Pipe Covering
 Oils and Grease**

WILLIAM C. WILSON & CO., 24 Front Street East, TORONTO.

work there is no one thing of so much importance, or that affects tracks so much, as the joints. Considering from this fact the importance of the subject & the amount of money, time & study that has been expended on attempting to perfect rail joints, & yet your committee are strongly of the opinion that the best that has been produced that they have had practical experience with is still lacking, or has failed to fully meet the requirements. Our experience is from the old wrought iron chair to the plain fish-plate with the tie directly under the joint. Then came the 2 tie angle bar & later the 6 hole 40 ins. angle bar supported with 3 ties, & later still the 44 ins. angle bar supported the same as the 40 ins., with 3 ties, & at present we have a 4 hole angle bar supported on 2 ties.

Our experience has been that wherever joints have been supported with a tie directly under them, whether with the plain fish-plate, or the 3 tie 6 hole angle bar, the results have been better than with the 4 hole angle bar with the joint suspended between ties. The new angle bar with 4 bolts & 2 ties, suspended joint, is, we consider, a decided improvement over the old one in its general make-up. Instead of slats in the edges for spikes the holes are through the web or flange. This gives the full benefit of the 4 spikes against spreading, but with the improvements in this joint over the old 2 tie suspended joints we have been unable to see where the defect has been remedied, or the cause removed, or the necessity provided for that we have found to exist with a suspended joint.

The 40 & 44 ins. angle bars have the appearance of a waste of material, & this of course means expense for which no benefit is derived.

Up to the present our experience is & we beg to report, based on experience, that the suspended joint has been a failure, & even with the improvements on the present suspended joint we do not feel free to recommend it as being all that it should be, but, to the contrary, believe that they must get their support from underneath, and we consider that the energy spent & the efforts put forth to produce a satisfactory joint have not been productive of the result desired.

The adoption of the report was moved:

MR. JELLY.—I have had in use the 44-inch angle bar supported joint, also the 4-hole joint non-supported, & I find so far that the supported joint 44-inch angle bar is the best I have used. I do not at all approve of the suspended joint. With the old style we have had in use 56-lb steel, & have had the suspended joint & also the plain angle bar, & you could tell the very first rail length when you had left the suspended joint. The rails with the supported joint were in good order when the others were all battered down in the joints & in very bad shape. I consider that there is a difference of at least 3 years in the life of the rail between the supported & the suspended joints in favor of the supported joints. Of course, so far as the joint is concerned, I do not know that the long angle bars meet with my entire approval. I find that it is too long & that the quarter gets down at the back about 5 or 6 ft. from the joint, & I find that is the weak point. Of course you cannot shorten up the angle bar so long as you have 3 ties under it, but, so far, that is the best rail joint I have had anything to do with.

MR. R. SHANKS.—From what experience I have had I do not favor the suspended joint, but at the same time I cannot altogether approve of the 44-inch bar. I find that in quite a number of cases you have to tighten up bolts. Like Mr. Jelly, I have had a good deal of trouble with the rail giving back from the end of the bar about 2½ ft.

MR. KELLY.—I am much of Mr. Shanks' opinion. I find some difficulty with the 44-inch angle bar. The expansion is the greatest difficulty. I do not find the rails giving

so badly in the quarters, but the expansion is very troublesome. The 73-lb rail has a much higher neck than the lighter one, & with it the suspended joint makes a fairly good joint when well-tested, but with the light rail I think that the suspended joint is a complete failure.

MR. LESLIE.—We have about 80 miles of 44-inch angle bars & about 50 miles of suspended joints on our Eastern Division. My opinion is that the long angle bar with supported joint makes the better joint. We have not had a very great experience with either long or suspended joints, & do not know what the results may yet be; but up to the present the long angle bar has in my opinion proved to be a good substantial joint. Of course, as Mr. R. Shanks said, there may be a tendency to prevent the expansion from closing, thus causing the rail to sink where the shoulder is weak. I find that this is the case very often. Still it comes nearer to making a good substantial joint than anything I have had anything to do with.

MR. MALLOY.—In regard to the question of joints, I am of the same opinion as many others who have spoken, that is that we have not a perfect joint yet. The 40-inch angle bar, though, I find is the nearest perfect that I have yet seen in my experience as a foreman. The only objection I have to the 40-inch angle bar is that I have to expend extra labor on our rails back from about 2½ to 6 ft. from the end of fish plate to give it more support. We always give that part of the rail the preference in order to keep it from sagging down. Otherwise this is the best joint I have ever used. I have always found that the supported joint was the best & gave the most satisfaction, & have always noticed the difference when you got on to the suspended joint, even when sitting in a coach. As far as expansion is concerned, I have had very little experience with the 40-inch bar where the shoulders were narrow, but I did find that the bar hugged the rail the tightest of any angle bar I had anything to do with. However, I do not altogether approve of it, as there is far too much support for the rail back from the end. The full strength of the fish plate is in that part of the rail more than it is at the extreme point. Otherwise I believe it is the best joint we have as far as I have had any experience.

MR. BRENNAN.—I would prefer the plain strap to any other for my part, but I have had little experience with suspended or supported joints.

MR. J. SHANKS.—I have had some experience with the iron angle bar used on 60-lb. rails, & find it to be a complete failure, as the rails cut into the angle bars so badly that they are split right up & down the same as if there was no support under the head of the rail at all. Of course the old plain fish plate did very well with the 56-lb. rail when supported by a good joint tie. As for the angle bar, for the heavier 72-lb. rail, I could not really find any fault with that. As far as I have had any experience of it it has answered the purpose very well. I have not been bothered any with rails bending, but I think it is a waste of material, & might be shortened up to about 40 inches or as short as could be used on 3 ties to prevent the creeping of the rail. As for throwing out of line on account of hot weather, I have not been troubled with anything of that kind, but this may be caused from a number of trains going over the road, which shakes them around considerably & causes rails to creep. With only a few trains it might possibly be worse, & in using the 40-inch angle bar, or something as short as we can use to use slots on the next side to the joint, I think it would be an improvement to use the ¾ bolt with a square nut. As to the hexagonal nut I do not think very much of it, as it is impossible to keep wrenches in good enough condition to tighten up the bolts properly, & it is only a matter of time until

some of them will become nearly round, which would make it impossible to tighten them, & they would have to be renewed. As for the suspended joint that we use on the 73-lb. rail, there is no doubt it is a great improvement over the old iron ones we used to use on the 60-lb. rail, as we get the strength of our inside spikes on account of being directly through the angle parts of the fish plate. At the same time I think that the rail as a general thing batters worse on a suspended joint both on heavy & light rails.

MR. MORIN.—I have not had much experience with 72-lb. steel rails. I have only been a little while with Mr. Shanks, & have not had much time to learn about joints. Of course I have always had the old 56 & 60-lb. rail with straight fish plate & angle bar fish plate, & find the old angle bar of very little use. The old fish plate answered fairly well with the 56-lb. rail. I have not had much experience with these new fish plates. With double tracks I think it would be a very good idea not to have both ties the same size on the joint, but have one large & one small, because when the wheel gets off one end of rail the other goes down more. Where there is good ballast we used 73-lb. rail with 4 bolt holes, & results are pretty good as long as the joints are properly fixed & the ties pretty well together—not more than 4 inches between each. There is a good deal of trouble on account of ties not being properly fixed up & bad ties being used. Of course the old straight fish plates would answer better for such places.

An amendment by Messrs. Jelly & Graham, that the report be laid over for future discussion, was carried.

MISCELLANEOUS BUSINESS.

MR. LESLIE.—Some years ago the New England Roadmasters' Association adopted the principle of putting the big end of tie in side of curves. No doubt some of the roadmasters here can enlighten us as to this practice. I have been trying that method & would like to ask gentlemen here what their opinion of this is.

THE PRESIDENT.—I think it would be well to have this subject brought up at our next annual meeting.

MR. CARON exhibited to the members his patent nut lock.

It was decided to hold the next annual meeting of the Association at Toronto on the third Wednesday of September, 1899, & the following subjects were decided on for discussion, the names appended to each being those of the Committees appointed to report on them.

1. TRACK TOOLS.—J. Drinkwater, A. McAuley, & W. Shanks.

2. EXPANSION OF DIFFERENT WEIGHT OF RAILS.—J. Shanks, J. Graham, & J. Leslie.

3. PLACING OF TIES & TRIMMING BALLAST.—E. Murphy, T. Hickey, & J. Malloy.

The question of publishing the proceedings in pamphlet form was left to the Executive Committee.

On motion of Messrs. Jelly & Graham it was decided to recognize THE RAILWAY & SHIPPING WORLD as the organ of the Association.

On the motion of the same members a resolution was adopted expressing condolence with the family of the late Mr. Thomas Newman, C.P.R. Roadmaster at Schriber, Ont.

THE PRESIDENT.—Before closing I would like to say a few words in connection with the Association. I believe it was organized for the purpose of getting together & discussing railway matters, which would eventually prove a benefit to each member & also a benefit to the roads represented by roadmasters who attend these meetings. Now, I think the roadmaster is in perhaps a little different position than any other employe of a railway. In fact, he is in rather a peculiar position. He is all right when he starts from the beginning as

section hand & can look up to the foreman to get advice & information. If he is a bright, intelligent man, in the course of time he will become capable of taking charge of a section. Then, when he has charge of a section, he has the benefit of the experience of the roadmaster & can get information from him in regard to railway work which will help him very much in his progress. But when he gets to be a roadmaster he is in a different position altogether. I fail to see who we are going to look to to get any information from that will be of any benefit to us with regard to the practical side of our work. I do not wish to say anything that will seem to throw any reflection on superintendents or engineers, but as you all know, as a rule at least, superintendents, managers of roads & engineers & all such officials have not started at the foot & worked up. Of course there may be a few exceptions. I know of one at least who became manager of a road who started as a brakeman; & I know of one, in the United States, who reached the position of manager who started as a section hand. But that is not the rule. Our superintendents start as a rule as operators. From that they become despatchers, & from despatchers, trainmasters, superintendents, etc., but they never have any experience in connection with our work. On some roads roadmasters come directly under the engineer. The engineer, as a rule, has the theory of his profession from schools & colleges, but he has not practical experience, & therefore the roadmaster has no one to go to for advice in connection with his work, & for this reason I believe that this Association will open up a way in which roadmasters can get together & receive the benefit of the views & experience of other roadmasters who have perhaps been in the business many years longer & placed in such circumstances as to be able to gather together more information. Some roadmasters are placed off on side lines where there is no chance of seeing neighboring roadmasters, & cannot get information that they very often would like to have. I trust that this Association will, to a large extent, rectify that loss, & I think we will work together harmoniously & try to benefit each other, & that the Association cannot fail to result in a benefit to all of us. I do not think there are any of us who feel as though they had learned the whole business & cannot learn any more. There are none of us but can keep on learning from year to year. I would like to have our officials know that it is the object of this Association to improve roadmasters along these lines, & I think that when they know this they will only be too glad to assist us & to do all they can to further the objects of the Association. Now, there is another point I want to refer to, that is that roadmasters are, I think, tied up a little too closely. It is very seldom that a roadmaster gets out on another line to see how another man is doing his work. I think if a roadmaster could get out once or twice a year that he would take more pride in his own work & would certainly get the benefit of, perhaps, in a great many cases, more experienced men, men who have been in the business longer, & I think if our railway officials saw it in that light they would make it a point to let us get out a little more than in the past. I know that I never have passed over a line but I have noticed things that I did not consider any improvement on what we had on our own line, but, on the other hand, I never passed over another line but I saw improvements, & I think that as a rule roadmasters make a point to see how other roadmasters are doing their work when passing over other roads. There is another point, of course it would not affect all roadmasters, but in a great many cases it does, that is that roadmasters are kept in their offices doing office work when they should be out on the road. Of course there are a great many who have clerks, but a great many more

who have not. I think it is a mistake on the part of officials that roadmasters are not furnished with clerks, so that they can spend the whole of their time on the line, where they are supposed to be. In a great many cases roadmasters are kept in their offices for 2 or perhaps 3 days from the first of the month until returns are all in & work is completed. To my mind during these 2 or 3 days it is very easy to lose more to the company than it would cost to pay a clerk for the whole month. I would like to hear the opinion of other members regarding these matters.

MR. KELLY.—I think you have expressed our views so fully as to make it unnecessary for us to say anything more on the subject.

MR. J. GRAHAM.—Our company furnishes clerks.

MR. J. SHANKS.—What mileage has the Canada Atlantic?

MR. J. GRAHAM.—183 miles of track.

MR. LESLIE.—I have 130 miles, & am supplied with a clerk.

MR. MALLOY.—I would like to ask if it would be constitutional for roadmasters of electric railways to become members of this Association?

THE PRESIDENT.—On looking over the constitution I do not see anything to prevent this; it would entirely depend upon the definition of the word "railway;" but I think the duties of roadmasters on electric & steam railways are widely different.

The meeting then adjourned.

Constitution & By-Laws.

The following were adopted at the first meeting at Smith's Falls, Ont., Sep. 15, 1897:

The object of the organization is to secure more perfect harmony among roadmasters, to impart more general information, & to promote the general welfare of each other & of the roads represented by the members.

ARTICLE I.

Section 1. The name of the organization shall be the "Canadian Roadmasters' Association."

ARTICLE II.

Section 1. The officers of this Association shall be a President, Vice-President, Secretary & Treasurer, & Executive Committee of seven, including the President, Vice-President, & Secretary & Treasurer. The President shall be Chairman of the Executive Committee.

Sec. 2. All the officers shall be elected by ballot at the annual meeting. A majority of all the votes cast shall be necessary for a choice.

Sec. 3. The President, or, in his absence, the Vice-President, shall preside at all meetings. In case of the absence of both President & Vice-President, the members may elect a President to act pro tem.

Sec. 4. The Secretary shall keep the records of the Association & Executive Committee, audit all correspondence, & issue notice of all meetings of the Association & Executive Committee, & collect all fees & dues, pay them over to the Treasurer, taking his receipt therefor.

Sec. 5. The Treasurer shall keep the accounts & be charged with all the funds of the Association, & disburse them under the direction of the Executive Committee. He shall, at the annual meeting, or at any other time, if required by the Executive Committee, furnish a statement of funds, income & expenditures to the Association.

Sec. 6. All bills against the Association must be approved by three members of the Executive Committee before they shall be paid.

Sec. 7. The Executive Committee shall have the general management of the Association. Three members of this Committee shall con-

stitute a quorum at any regular or special meeting of the Committee.

Sec. 8. Vacancies can be filled pro tem by the President, or permanently by a majority vote of the members present at any regular or special meeting.

Sec. 9. All officers of the Association shall continue in office until the close of the meeting at which their successors are elected.

ARTICLE III.

Section 1. Regular annual meetings of the Association shall be held at some place in the Dominion of Canada, on the ... Special meetings may be called by the Executive Committee, or by vote of the members at any regular or special meeting. Seven members shall constitute a quorum of all meetings of the Association.

Sec. 2. The order of business shall be as follows:

1. Reading of minutes of last regular & intervening meetings of the Association.
2. Secretary's Report.
3. Treasurer's Report.
4. Roll Call.
5. Enrolment of New Members.
6. Reading of Communications.
7. Election of Officers.
8. Report of Committees.
9. Unfinished Business & Miscellaneous Business.

Sec. 3. The place of holding next annual meeting shall be decided by a vote of members present, or by the Executive Committee, of which all members shall receive due notice.

ARTICLE IV.

Section 1. Any Roadmaster or Assistant Roadmaster, in good standing on a regularly operated railroad in the Dominion of Canada, on securing the majority vote of the Executive Committee present at any meeting of that Committee, or majority vote of members present at any regular or special meeting of the Association, and signing the Constitution and By-laws, paying an entrance fee of two dollars, shall become a member of the Association, & shall remain so as long as he pays all dues and assessments promptly, unless expelled.

Sec. 2. Whenever the fee shall prove insufficient for the current & necessary expenses of the Association, then the Executive Committee shall cause to be levied on each member a further assessment, the whole to be approved by a majority vote of the members present at any regular or special meeting.

Sec. 3. Every member of this Association shall be notified by the Secretary at least two weeks previous to a special meeting of the Association & of his assessments; if he shall fail to pay the same on or before the next annual meeting, he shall then cease to be a member of this Association, unless his dues are paid or remitted by a vote of the members at any regular or special meeting.

Sec. 4. Any member may be expelled from this Association by a two-thirds vote of the members present at any regular meeting.

ARTICLE V.

Section 1. Any portion or the whole of these By-laws may be amended or others substituted instead, by a two-thirds vote of all members present at any regular or special meeting of the Association.

Canada Metal Co.—W. G. Harris, the enterprising proprietor of this Co., has shown commendable enterprise in restarting after the disastrous fire which destroyed the premises on William St., Toronto, on Sep. 18. The Co.'s 7 furnaces were buried under 15 ft. of debris, but are again in full blast, & the Co. will very soon catch up with its orders for solder, babbitt, piano-key leads, stereotype, linotype, & monoline metal.

THE APPLICATION OF ELECTRIC POWER ON TRUNK-LINE RAILWAYS.

By George Forbes.

In accepting the invitation of the Editor to write an article upon electric traction with special reference to its probable extension to trunk lines, it is not my purpose to instruct engineers in the duties of their profession, or to suggest to manufacturers any new directions in which to work, but simply to give those who are financially interested in railways the results of disinterested and careful study and extensive calculation. After casting a retrospective glance over what has been accomplished I will endeavor to indicate the directions in which electric traction is advancing, & to state in broad & general terms the conclusions that I have arrived at as to the cost of works & facility of carrying them out.

In dealing with this subject, it must be borne in mind that circumstances differ. The street railway has developed to a marvellous extent in America, whereas in some European countries it has not found general favor. The cause of this lies largely in the differing circumstances. Countries are also affected in varying degrees by the amount of their suburban traffic, while the introduction of electric traction must also depend on the amount of underground communication in large towns. And other special features arise, such as the facility of obtaining water power for generating electricity, or the difficulty of getting water for the generation of steam.

The first town to be thoroughly equipped with electric street railways was Richmond, Va. (in 1878, on the Sprague system), & from that date their development has been by leaps & bounds. Moreover, it has been continuously in the same direction, & while competitive systems have at various times come forward & may prevail at some future time, yet the overhead trolley system has so far almost monopolized the field. The consequence is that the general methods of working have remained tolerably uniform, although there have been decided improvements in the details of machinery. In the U. S., where this development has been most rapid, the systematizing of methods has become as complete as in the case of steam railways, & this applies to construction as well as equipment. The figures showing the present state of development are startling to those who have not yet realized them. It is impossible at present to get details of what has been done up to the present moment; the following figures are for 1895, up to which date sufficiently correct estimates have been prepared. At the end of 1895 in the U. S. there were 12,583 miles of electric street railways in operation. The capital invested in electric street railways at the same time was \$1,400,000,000; the net gross receipts, \$164,250,000; expenses, \$113,500,000; number of passengers carried, 3,000,000,000. These figures alone are sufficient to impress anyone accustomed to deal with the development of large industries.

A good many years ago I was in attendance at a meeting of electrical engineers in New York, & after numerous statements had been made about the progress of electric street railways in the United States, I was invited to give information as to what was being done in England. I then confessed that progress in electric tramways on the other side of the Atlantic had been very slow, but I described the principal development of electric traction which had taken place, & characterized it as being on new lines, saying that possibly this single instance might turn out to be almost equal in value to the street railway work which had already been described. I referred to the City & South London Railway, which cannot be looked upon as a tramway in any sense of the word, but

is a solid railroad properly constructed, its great distinction from the electric tramways being in the fact that the trains were hauled by electric locomotives. Several of my brother engineers in America grasped this fact at once, & were quite prepared to admit that, in the development of the electric locomotive, of which this was the first step, there might be a future worthy of comparison with what had been done in the propulsion of individual cars on street tramways. No assertion was made that the adoption of the locomotive was opening a new era; the statement was simply that the London experiment was one of great interest to all electrical engineers who wish to have a hand in moulding the future of this department of engineering. Since that date electric locomotives have been used on many railways. The facts are not generally known to the public, & it is not out of place here to refer to special cases.

NIAGARA FALLS PARK AND RIVER RY.

This railway is 12 miles long, of double-track, resembling in every way the standard adopted by the Canadian Pacific Ry. The maximum speed attained is 30 miles an hour. Trolley wires are used. There are 2 motor houses: one at the falls, worked by water-power; the other a small auxiliary station at the Queenstown end of the road, with steam plant. There is 15 minutes headway between cars, the average speed, including stoppages, being 13 miles an hour. Locomotives, in the ordinary sense of the term, are not used, but 22 motor cars supply this service, & are followed by trailers, etc. Some of the cars, when fully loaded with passengers, weigh more than 20 tons. There are 8 regular stopping-places along the line, furnished with platforms.

This railway has been referred to, not because of any special merit which it possesses, but because it is not a street railway, & because it shows a method of working. In fact, reference is made to it partly to draw attention to the extremely objectionable feature of it. When water power was available, it was not good policy to use steam power at a distance of 12 miles. Of course, if the electric pressure were only 500 to 600 volts, there would be a great waste of energy or an enormous expenditure of copper in carrying the current to even that short distance; but there would have been no difficulty in transmitting electrical power at high pressure, transforming it down, & converting it into a continuous current. This would have saved nearly the whole expense of working the steam plant. It is important to give attention to this matter of the use of water power on trunk railways. There has been an absurd hesitation to undertake the transmission of power to great distances. If engineers who have had experience in the transmission of power & in the conversion of alternating into continuous currents would look into this question they would be convinced that where water power is available it is generally economical to transmit electrical power hundreds of miles for working railways. As an example it can be proved that, if the railway companies of Scotland were to combine to work their trunk lines by means of electric motors, the electric current being developed by the water power which exists in that country, then the whole of that service might be carried on without the use of steam locomotives.

Another lesson to be drawn from a careful consideration of the subject is that the waste of coal on steam locomotives is not by any means compensated by the extra cost & loss of power in electrical transmission. Estimates have been prepared which show that not only is the cost of copper prohibitive, but that the efficiency of the electric system renders the consumption of coal with stationary engines about as great as with locomotives. This is certainly not the case. The cost of electric

transmission, when properly affected, is not comparable with what it is as calculated on the lines adopted in the past; & on the other hand, the efficiency of dynamos & motors has not been sufficiently considered in street railway practice in the U.S. A very large part of the success of the Liverpool Overhead Ry. is due to the high efficiency of the electrical machinery.

THE BALTIMORE TUNNEL.

This is a section of the Baltimore & Ohio Railway which it was found desirable to work electrically. The tunnel runs under Baltimore city, & is 7,339 ft. long, 27 ft. wide, & 22 ft. high. There is a steady grade of 0.8% from south to north. The passenger trains are pulled through the tunnel, & the freight trains are pushed the entire distance, steam locomotives in the latter case assisting them in the open. The calculations were for a maximum weight of 500 tons per passenger train, including locomotive, with a speed of 35 miles an hour; for freight trains, a weight of 1,200 tons & a speed of 15 miles an hour. The locomotives have 4 gearless motors, 2 to each truck. All the freight & passenger trains are run through the tunnel by electric locomotives. The following are examples of what has been done on this line: A train weighing 1,125 tons was hauled up a gradient of 42 ft. to a mile by the electric locomotive. At the end of 1 minute the train was moving at 10½ miles an hour. In another case, with a total weight of 1,068 tons, the electric locomotive gave a drawbar pull of 25,000 lbs. as measured by a dynamometer; with a speed of 11½ miles per hour, & a train of 1,600 tons, the drawbar pull was 45,000 lbs. On another occasion a train weighing 1,900 tons was started in the tunnel, & the maximum drawbar pull was 60,000 lbs. at 12 miles an hour. This case is cited as showing that electric locomotives are capable of doing all that can be done by steam locomotives. The first locomotive has been running steadily since Aug. 4, 1895.

NANTASKET BEACH ELECTRIC RAILWAY.

The electric railway is a branch of the New York, New Haven & Hartford Ry. It is 7 miles long, with some sharp curves, & there is a gradient of 34 ft. to the mile. There are stops about every quarter of a mile. Motor cars are used with trailers, with a drawbar pull amounting in some cases to 8,000 lbs. Further extensions of this railway in the same direction have been made, with the use of a third rail between the ordinary rails as a conductor for electricity. These extensions are from New Britain to Berlin & from Hartford to New Britain. There are 22 grade crossings, at each of which the third rail is replaced by underground cable. This electric railway is cited as the first instance of the supplanting of steam by electricity on a standard American railway.

LIVERPOOL OVERHEAD RAILWAY.

The length of this line is 6¼ miles, of standard gauge. A third-rail conductor is laid between the ordinary rails. There are 2 motors on each train, 1 at each end, each motor being of 40-horse power. This line was designed with the utmost care. The machinery was not taken from stock patterns, but specially designed to give high efficiency, the benefits from which have been thoroughly appreciated. This line deserves consideration as comparable with the one next to be considered, & as illustrating the advantage of applying motive power to the wheels of the train instead of to a locomotive, wherever possible. It can be shown that the greatest advantages are attained when the electric power is applied to every axle of the train, & this is the direction in which engineers 10 or 15 years ago expected that electric traction on railways might be developed. The inconveniences & expense, however, of replacing the whole of the old

rolling stock by new, & the unsuitability of the system generally to existing lines as worked by steam, have rendered the use of a locomotive of the utmost importance in all applications to railroads where steam has been used.

CITY AND SOUTH LONDON ELECTRIC RAILWAY.

This railway has $3\frac{1}{4}$ miles of double line. It is driven by electric locomotives, each of which has 2 motors, giving in all 100 horse-power. A third rail is used for the electric conductor. This was the first electric railway introduced in London, & its operation has been studied by engineers & railroad men with great interest.

The remarkable economy of operating the Liverpool Overhead Ry. has surprised all those whose experience in electrical traction has been limited to street railways. The reasons for this excellent performance lie partly no doubt in the cheapness of fuel & of labor, but far more in the good quality of the track & the care taken in designing & supplying efficient machinery.

The examples chosen must not be looked upon as an exhaustive list of cases where electric traction has been successful in competition with steam. They are typical cases, each illustrating some point which it is desirable for the public interested to have knowledge of. There has been no example of a long trunk line worked electrically, but, from the examples already given, it can be taken as thoroughly established that this is not due in any way to want of capability in the electric locomotive. The reason why trunk lines have not been worked by electricity is that, rightly or wrongly, those who have had the matter to decide have considered the cost of transmitting electric power too great. There would be nothing experimental in carrying out such a work, & the estimates of cost can be made out with the greatest accuracy. In an article like the present, intended for business men, as well as technical experts, such estimates should not be introduced; but it is necessary to draw attention to the fact that, in a great deal that has been written on the subject, it has been assumed that the electric pressure upon the feeders is only some 600 or 700 volts. Without assuming to advance any new idea upon the subject, I may cite as indisputable the fact that the feeders may be supplied with current at 10,000 volts or more, which may be in the form of continuous current, but which is more manageable as an alternating current. At different stations along the line it would be reduced in pressure by means of transformers, & converted into continuous current by means of a commutating machine. It is in this point that machinery for working the proposed system has been the least developed. The commutating machine now on the market, introduced first by Mr. Shuckert in Germany, & applied in various factories at the Niagara works, is usually called a rotary transformer. It does its work admirably, but it is expensive, cumbrous & requires continual attention. This last fact renders it impossible to lay such machines along a trunk line at distances of a few miles. But I have prepared the designs for a transforming & commutating machine free from all the defects referred to, which can be manufactured at small cost. For years I have impressed upon manufacturers the desirability of such a machine, & it is only a matter of time when they will find that it is to their own interest to provide it. Viewed in the light of the adoption of very high electric pressures, the cost of transmitting the power electrically is not at all the serious matter that it has been considered, but, in spite of this fact, human inertia may prevent rapid progress in the direction of working trunk lines electrically. After wide experience & a laborious study of the whole question, my opinion is that, as a rule, electric locomotives, with the power de-

veloped by steam, would, if the work were carried out on proper lines, be cheaper than the steam railroad up to a distance of between 40 & 50 miles from the power station. If water power were available for generating the electricity, the distance at which steam power would begin to be the cheaper on a busy line is several hundred miles. These statements are the result of calculations with coal at \$1.50 a ton. This economy arises from the well-known fact that in the best trial tests of locomotives 5 lbs. of coal are required for the horse-power hour, & from the fact equally well known, that so good a result is rarely attained, in nearly every case the consumption of coal being several times as much as that indicated. These conclusions, however, do not give much encouragement for the substitution of electricity for steam, except in special cases. A time may come when special railroads will be built over long distances to be worked electrically, & in that case there are advantages of a totally different character which will favor electricity, depending upon the fact that the locomotive will be abolished & power applied to every axle of the train.

In 1881, in the course of some correspondence from the Paris Electrical Exhibition to the London Times, I drew attention to the possibilities of electric traction on railways. That article was really the summary of a lecture which had been delivered before Anderson's College, in Glasgow, in 1879. In that article I drew attention to the remark made by Captain (now Sir) Douglas Galton, in the concluding paragraph of his report on experiments conducted by himself & Mr. Westinghouse on the air-brake when used with trains going at high speed. In that report Sir Douglas Galton said: "The advantage which thus evidently ensues from utilizing the adhesion of every wheel of a train suggests the further consideration as to whether it would not be a more scientific arrangement, as well as more economical in regard to the permanent way of railways, to utilize the adhesion of every wheel of a train for causing a train to move forward, instead of depending for the moving force upon the adhesion of one heavy vehicle alone—namely, the locomotive." I then pointed out that this fertile suggestion might be carried out by the employment of electric motors on the wheels or axles of each carriage. I further pointed out that such a system would result in a saving of wear & tear of the permanent way, a diminution of shocks & injuries to passengers & goods, & a facility in going around curves. Besides this, the wheels would not slip when going up steep inclines, & in starting from a station, speed could be obtained in a small fraction of the time now required. As a secondary advantage, the construction of the permanent way would be very much less costly. This is undoubtedly the way in which an electric railway should be worked. It was supported by able engineers, & many of us can remember the admirable writings of Mr. Sprague upon the subject, in which he made it abundantly clear that such a system of traction would be beneficial in every way.

Although the method of working just described is ideal, it can be applied only to a trunk line about to be constructed in total independence of existing steam railroads. If anything is to be done on a large scale with trunk railways, it must be by means of locomotives, & the advantages of an electrical system using locomotives are not nearly so great as in those cases in which electricity is applied to every axle of the train. It is owing to the great importance of these considerations that so much money has been spent on, & attention devoted to, the Heilmann locomotive, in which steam is generated on the train for the purpose of creating an electric current to be applied to motors driving all the wheels of the train. Without saying that this compli-

cated system has proved a success, still there is no doubt that those who have invested capital in the experiment have been satisfied that there is enough advantage in this method of propulsion to justify the carrying on of extensive experiments. The whole of the advantage lies in the fact that power is delivered to every wheel of the train, no advantage being gained from the cheaper use of fuel at a stationary engine.

The examples given, while they indisputably show that electric traction, under certain conditions, is well able to compete with steam, are not sufficient to overcome the natural conservatism which holds to existing methods.

Hitherto reference has been made chiefly to the great trunk lines, but special attention must be given to the conditions of suburban traffic. Most of us remember, not so very many years ago, the surprise with which we learned that several short steam railways were having to give way to the electric tramways which had been started. In later years it is the great steam railway companies which have been noticing with alarm that their receipts are being largely diminished by the competition with electric tramways for suburban traffic. That this competition is so successful is due to several causes. One is that the natural roads & streets have been employed for the purpose, so that little or no purchase of land has been necessary. But, perhaps, the most important cause is the rapid succession of independent cars which becomes possible under this system, affording a great convenience to the travelling public, & enabling them in many cases to start from their places of business in town & be landed at the doors of their houses in the suburbs. These are very serious matters from the point of view of the railway companies, because many of the companies are really dependent for their profits upon suburban traffic, & if this source of revenue is to be taken away, it will seriously endanger the financial position of the railroads as a whole. These matters have become more evident in the U.S. than in any other country.

At the first glance it seems almost impossible for a railway with fixed railway stations to be able to compete in convenience with an electric tramway, passing along the ordinary thoroughfares, picking up & letting down passengers at all parts of the journey. Most persons, however, who know the conditions of traffic in the neighborhood of large towns in the U. S., will probably agree that this matter of convenience does not apply to every household, & that householders want, so far as this point is concerned, would be fully met if the stopping places on the trunk line were in direct communication with the local street railways of the place.

A great deal has been written upon the comparative cost of working the suburban traffic upon trunk lines by steam & electricity. The question of a slight difference in cost one way or the other is of far less importance in the matter than the question whether it is possible for the suburban lines to run independent trains at a shorter headway—a system practically impossible with steam locomotives, but advantageously workable from a central electric power station. If the public felt certain of being able to find a car or train ready to take them along the well-laid trunk railroads to their destination, so that they would never have to wait more than a few minutes at the station, there is no doubt that a great preference would be shown for travelling along these well-equipped lines. This appears to be the only solution that affords the railway companies a hope of escape from the competition which they now have to face.

It must not be forgotten that there are some cases where electric traction is perfectly certain to take the place of steam, but, as a rule, there are special cases. Such super-

sedure will never be possible with trunk lines, except where water-power is easily available. For a railway through a desert there cannot be the slightest doubt that electric locomotives would facilitate, not only the construction but the working of the lines. During a recent visit to, & inspection of, the military railways on the Upper Nile I was impressed with the enormous difficulties of carrying the railway from Wady-Halfa across the desert, where no water could be obtained for a distance of 230 miles, to Abu Hamed. The difficulty consisted in the fact that, after the first 150 miles had been laid, for every train carrying rails & sleepers there had to be 3 or 4 trains carrying coal & water to supply the locomotives. I took occasion to impress the fact upon the authorities, & to show that, if the construction were to be entirely carried out as proposed, from the Wady-Halfa end of the line, it would be almost essential to work by means of electric locomotives. While these pages are being written, the Sirdar has succeeded in capturing Abu Hamed, & doubtless the most important result of this success is that it enables him immediately, during the flood-season, to carry rails & sleepers to Abu Hamed, & to carry on the construction of the line from both ends, so diminishing the difficulty which threatened.

Another case in which electricity is bound to supplant steam is that of underground railroads, especially in London; & the great increase in the number of electric railroads in London is the surest evidence that before long the whole of the underground system will change from steam to electricity. This change would have been accomplished long ago were it not for the expense of the transition stage, & certain difficulties which attached to the necessary change from steam to electricity on trains coming from the country into the underground system of London. These difficulties have been much exaggerated, & there is really nothing to prevent the immediate introduction of electricity in the underground system of London.

The conclusions derived from study extending over many years are as follows:

In cases where water-power is always available within a few hundred miles of a trunk line of railway, it is probable that economy would be served by introducing electric traction.

In the case of an independent system of railway to be constructed in a new country utterly unaffected by the traffic from steam railroads, power can be applied to every axle of the train; wherefore it will be economical in such a case, in construction & in operation, to use electric propulsion in preference to steam.

For desert railways, where water cannot be obtained, electric traction is eminently suitable.

In underground railways, such as the Baltimore Tunnel & the London underground system, where economy is not so important as convenience & comfort, electricity must be employed; & where such railways are to be constructed, economy makes electricity advisable.

In cases of suburban traffic electricity would help to overcome the competition with street railways by supplying the public with separate & independent cars running at very frequent intervals on a well-maintained track.

Engineering Magazine.

The Miles Canyon Tramway, which was built by an English company under a charter obtained last session of the Dominion Parliament by A. A. Clark, of London, Eng., has been in operation this season & is reported to have done well. It was built to avoid the rapids of the Lewes River between Marsh or Mud Lake & Lake Labarge. It is worked by horse power & has wooden rails.

ELECTRIC RAILWAYS.

British Columbia Electric Ry. Co.

Last month we published the speech of the Chairman of this Co. at the annual meeting in London. The directors' report was not then before us, but has since come to hand. It is the 1st annual one & the accounts appended to it are up to Mar. 31 last. Copious extracts from it will doubtless interest our readers & are appended.
